"Bill, Bill! Hullo, Bill! Come, it is daylight. Get up and put on the teakettle. I want to get out to Joe Clark's by seven o'clock, and we have got to pack a week's grub, a hunk of pork, four loaves of bread, a little tea tied up in a red flannel bag, corned beef, salt tied up in a rag, brown sugar in a tomato can, mustard-box full of butter, blacking-box full of angle-worms, frying-pan, a three-quart pail, belt and sheath knife, two tin dippers, two army blankets, one axe and gun. "And we started up the river on foot by Frank-Rice's Mill to the road that leads to Clark's. This was Bill's first moose hunt, and we felt gay that morning, especially Bill. We passed Clark's about eight o'clock in the morning. Uncle Joe came out and says: "Good morning. I suppose you are going for a moose?" and Bill spoke up and said that was the calculation, which made Uncle Joe laugh outright, and then wished us good luck and a big moose. Then we took the Maitland road, which is an old road that was cut by the Government years ago to Maitland, a back settlement of the south shore of Nova Scotia. We followed this road until we struck the west branch of the South Stillwater, then followed up the stream to three small lakes, which we found when surveying and named Faith, Hope and Charity, for the greatest of these is Charity.

We found an open meadow near the stream where the high water had killed the growth and everything was dry stubs, limbs and dry underbrush. I told Bill I guessed we would call here to-night; so we went in onto the high land, built a fire, made tea, toasted some bread on a long stick and ate supper. Bill said that was as good a supper as he wanted. I comprehended his talk thoroughly, because I had been in the woods before. It will give a person an appetite to travel in the woods all day, like a goat, and they will eat anything. "Now, Bill, while I am making a moose horn, you gather some dry wood, for we must go out on the bog in about an hour, and when we come back in the morning we shall want breakfast without much work. I guess it is going to be a good night for calling; the wind is going down with the sun, and there will be a heavy frost to-night. Bill, you fill that pail full of water to carry out on the bog, while I cut a little spruce tree to stick up for us to sit under, so when the moose comes, he will see the bush and will not see us. Come, it is time we was out there; you take the two blankets and water, I will take the axe, and rifle, and horn. Now, Bill, I want you to keep under them blankets and not make one mite of noise if a moose comes. Now, I will try the horn: *Wough! wough! w-o-u-g-h.* Eight o'clock and not a sound from any quarter; I will try again: *Wough! wough! wough!* No moose here, Bill.

"I guess we are not far enough back in the forest. Newell's Bog is a good place. There! did you hear that, what was it? It was a dry limb cracked, there it is again; it is a young moose; he is shy; he will not come out in sight. I can always tell those young fellows. He will keep within hearing all night. Now, I will try the horn again: *Wough! wough! wough! wough!* There, there is one coming.

"*Hoo! hoo! hoo-ah!* That is an owl; they are the biggest nuisance I know of when a fellow is calling moose. We might as well get under the blankets as to try any more; that devilish owl will keep up his noise as long as we use the horn. *Hoo! hoo! hoo-ah!* There he is again; I am going to take a nap. Good night, Bill, if a bear takes you in the night while I am asleep, you sing out."

"You bet I will; say, is there bears around here?"

"Yes, any amount of them, John Iles and I killed an old buster not five miles from here."

"Do you suppose they will come after us to-night?"

"Oh, shut up your hash-trap, I was almost asleep then; you go to sleep, I will look out for all the bears, as long as I have old Sweepstakes by my side.

"It is ten o'clock; I must have a nap. Come Bill, turn out and let us go in on the high land and get breakfast. I have been up more than an hour cruising around the head of the bog looking for game. I found that moose track that broke the dry limbs last night. He was about a three-year-old. After we get through breakfast and the sun takes the dew off the grass we will go over to the head of the east branch, called the Mississippi. I know of a big meadow there and we will take things easy, catch some trout, and get all ready for fun to-night. Bill, where is that blacking box of angle worms; I am going to try for some trout. Oh what a big one, did you see that? Give me another worm. There, that is some, lad, he is as much as fourteen inches long. How many of them can you get away with at one meal, Bill?"

"About three, I guess."

"All right, here is another one. I suppose some of them Boston fellows with their split bamboo $30 fish pole would laugh at us catching trout with an alder pole six feet long with worms for bait. But I tell you, Bill, them city chaps are splendid fishermen while they are tipped back in their chairs smoking a segar in the club house. If they can get any more fins, feathers or fur, especially if the fur is moose fur, they have got to stop on a bog all night, and don't you forget it. How many trout have we got?"

"I have dressed seven and there are four more."

"All right, and here comes another one. Bill, build a fire right here, and we will have a frying pan of them speckled beauties for dinner. I wish I could holler loud enough to make my brother Hod hear, I would tell him I was eating trout. He lives in Lynn, Mass. He is an awful lad with a fish pole. I have known him to wade all day and fish and not get a bite, go home all tuckered out and dream of big pickerel, and pull out the next day, gritty as a chaw of tobacco rolled in the sand, for another wade around the same lake. My pluck don't hang on under such circumstances. Come, Bill, there is two more for you to eat and you are done. All right, pack them up; we shall find use for them. I like cold trout. Now we will go over to the meadow. It is most four o'clock. By the time we get tea it will be time to call. I guess we will have better luck than we did last night.

"Come, Bill, hurry up and get that tin pail full of water and I will cut a bush; now, step in my track. Here is a good place; I will stick the bush in this knoll. The wind is all died down, and it is one of the nights made on purpose for calling moose. Now, Bill, if you hear anything don't sing out loud the way you did last night. *Wough! wough! wough!* Now listen: *Hoo! hoo! hoohoooh!* There is another devilish owl. They say everything is made for the best; I should like to know what they are good for. I tried to eat one once with little Jim Muse, when we were over on Tusket River exploring, and he was a little the toughest eating I ever experienced. Wal, here is a try again. This horn does not exactly suit me: *Wough! wough! wough!* Now listen: *Hoo! hoo! hoohoohaa!* I will kill every owl I see after this. No moose to-night, Bill. There is a little air drawing to the west, and that is bad; a moose goes to leeward if he had to travel forty miles and swim across the Atlantic Ocean. I have had that game played on me more than once. I guess we will go into the woods on that spruce knoll and build up a fire and have a regular old-fashioned smoke. I guess we will go over to the Northeast Stillwater to morrow night. I am going to sleep and not get up to-morrow morning until the sun has taken all the dew off the grass."

"Come, Mr. Mayo, ain't you going to get up? Breakfast is ready." My gracious, it is seven o'clock; I don't wonder I slept sound, it is the first nap I have had since I left Bear River Bridge, with both eyes shut. Bill, what have you got for breakfast?

"Pilot bread, tea, trout, butter, sugar, candles and soap."

"I shouldn't think by the looks of your face you had soap for breakfast."

"I haven't been to breakfast yet."

"I thought you had, Bill; I saw you chewing something."

"That was tobacco."

"You do beat the devil; a boy fifteen years old and your hash-trap full of tobacco before breakfast. Well, Bill, I am going where there is moose tracks before I settle down to call another night. We will go back to the Mississippi and follow the Maitland road east, then strike for the old burnt land. I can see the Stillwater."

"Are you going to catch some more trout?"

"I guess not; we shall not want any heavier load to carry. "Just look here, Bill. Who has been along here in the grass? I will bet it is John Iles and old 'Squire Billy Harris. Iles told me old Mr. Harris wanted him to go with him. It looks as though six or eight men had gone up the meadow. I am getting all wet with the dew on the bushes and grass. I guess we had better stop here and wait about an hour until the sun dries the grass. Hark! hark! What is that noise? Listen. It sounds like some one getting into a boat with oars. I will bet it is old man Harris and his crew that made the tracks we saw up the meadow. Let us go down to that little cove and look across to the landing place and see who it can be. Now, Bill, step in my tracks and we will go easy. Just look. There is Iles, old man Harris, Bill Henshaw, and five or six more. Just wait a minute until I untie my moose horn from my belt, and I will make Iles think there is a moose out here sure. *Bugh! bugh! bugh!* Just look. Iles has grabbed his gun and is getting out of the boat. *Bugh! bugh! bugh!* He has taken off his shoes and is making motions to the rest of his crew to keep still and not get out of the boat. See him creep along on the rocks snug down to the water. I guess it won't do to let him come any further; he might shoot one of us; so I will sing out at him. "Don't you shoot this way, you old seed you. Ha! ha! ha! ha! I thought you was an old moose hunter, John. I did not suppose a green-horn like me could fool an old moose caller. Hullo, boys. How do you do, Mr. Harris? Where are you all going?"

"We are bound home. We was up to the head of this long meadow last night, but did not get anything."

"What are you going home for? I think to-night will be a good night."

"Oh, wal, old Mr. Harris wants to go, so we must go to please him."

"John, suppose you stop with Bill and me, and let them take the boat and go."

"Now, Mr. Mayo, I want to tell you what a time we had last night. We went to the upper end of that meadow and all sat down under a big hackmatack tree and I commenced calling but got no answer, and the rest began to get their blankets over them, and I took my gun and climbed up most to the top, and I could see all over the meadow, and I had not set there more than fifteen minutes before I saw a moose come out of the woods away up on the right-hand side of the meadow, and he was coming right straight for us (now don't you know if you had been with me we would got that moose) and then I heard old man Harris commence to snore in his sleep, and then I dropped one of my shoes down to signal them to stop their noise, and it struck old man Harris right on his nose, and he yelled out as loud as he could bawl, and away went the moose. And then I got down, and the old man's nose bled like a butcher."

"I guess it was not a very high tree."

"Oh, yes, I was up as much as thirty feet."

"Now, Iles, I always thought you would lie, and now I know you will. Any man that would tell me that one of those shoes could fall thirty feet and strike a man on the nose when he was flat on his back and not have his head broke, is a little too thin entirely."

"Wal, you can believe it or not, it is a fact."

"Iles, I am bound to have a moose before I leave these woods."

"We can get one just as well as not if we only think so and mean business."

"So I say, and I should like to go over to that big bog where Morehouse and I got that big moose."

"Now, don't you know, I believe we can go up to the upper end of the meadow where I saw that moose last night and call him back."

"It it no use to try that moose, he is more than ten miles off before this time, but we might get another one."

"Mayo, let us try it anyway."

"All right."

"Now, don't you know, Mr. Mayo, if you had been with me we might have got that moose just as well as not."

"It is going to be a nice night to call, not a cloud in the sky and the wind is all dying out. Now, Iles, you do the calling to-night, and if you get an answer just call me, and I will get old Sweepstakes out and down his house. Iles, I don't have any faith in this place."

"Now, don't you know I am going to have an answer the first time I try this horn."

"Here, here, Bill! put out that match, you must not smoke while we are out here on the bog."

"Why not?"

"Because a moose would smell it four miles to windward and forty to leeward."

"Mayo, Mayo, come wake up."

"Is there a moose coming?"

"No, I think we had better go into that burnt land and build a fire, Bill's most froze."

"I have had quite a nap, it is almost two o'clock, you see all around that side is burnt and a thick hedge of green alder skirts the meadow. We can go just behind those alders, and if we hear anything on the meadow we can creep through the alders and not be seen. Oh, this is a nice place to build a fire; plenty of old burnt wood to start a fire with. What is that noise? Just look. John is sound asleep and snoring. Bill, roll him over five or six times and make him stop that noise. Wal, wal, I declare Bill is gone to sleep too. I guess they watched for the moose all night. Probably he thought he would shoot the moose while I was asleep, but I am rather inclined to think Sweepstakes would speak if a moose should come out on the bog.

The sun is just coming up in sight; it is a splendid morning. If they will sleep now without snoring, I will sit here by this little fire and listen for game. There is something very fascinating in the grand old forest, especially when you know there is large game in the vicinity, and you have old Sweepstakes by your side. There, I hear some kind of a noise on the meadow and peak through the alders. What in the world is that? there is something in the brook coming down this way. I cannot see the animal, but whatever it is, it is catching hold of the bushes, and slapping them down into the water. It must be a bear wading down the brook, driving the trout down where the water is very shallow, so he can catch them. I will run out and sit in the tall grass, and when he gets close to me I will let old Sweepstakes speak to him. Now, Mr. Bruin, come on; I am all ready to receive you with a hearty welcome. Here he comes around the turn in the brook; down goes that alder bush slap into the water on this side; down goes them hardhocks on the other side. What a splashing noise this still morning. O, my, it is not a bear but two otters driving the fish down this way. What scooting and scampering. I have got to fire at them on the jump; so here she goes. Both otters went to the bottom, and I could see them scooting under water faster than I could get through the tall grass and brush up the brook, the way they came.

"Say, Mayo, what did you fire at?"

"I heard the greatest splashing in the brook up the meadow you ever heard, and thought it was a bear, but it was two otters."

"Why didn't you kill them?"

"O my, they was on the jump so I could not get a bead on them. That is the first time I ever saw otters on a spree like that. They were bound for a fish dinner, if there were any in the brook."

"I declare Iles and Bill are asleep again. All right as long as they don't snore. I wish I could get another crack at them otters. There, I hear something in the water down by that old lower dam. I will creep down there. I will bet it is another otter. I see him now; it is a muskrat. I can draw a fine bead on you."

"What, did you fire at another otter?"

"No, it was a muskrat, Bill, bring me one of them long burnt poles from that burnt land, so I can fish him out. Now, William, you get a kettle of water and make some tea, and we will have breakfast."

"Mayo, that is a nice muskrat skin. What are you going to do with the hindquarters of that muskrat?"

"I am going to eat it.

"What, eat a rat?

"Yes, sir; a muskrat is just as nice as can be. After I roast this you taste it and see."

"No, sir; you don't get any of that stuff down my neck."

"Iles, this is nice eating. There, I have ate both them hind-quarters, except that piece here; try that, Bill."

"No, I thank you."

"Here, just taste it, you don't know how good it is."

"No, sir, it would make me throw up my breakfast."

"You are as dainty a set of hunters as ever I got acquainted with; cannot eat a nice piece of muskrat, well cooked, with butter, salt and pepper on it. I wish you had been with my chum and me in Wisconsin. We lived three days on porcupine without anything with it; not a mite of salt nor a dish to cook it in. I guess if you could have had a piece of this rat then you would have eaten it without finding fault."

"Mayo, how is it? I hear you and Bill met a moose last fall most out to Clark's."

"Don't mention it. That did almost kill me, Bill. I was going home from Mack and Welsh Camp. When I started I thought I would take George Mayo's little shotgun, thinking I should not see any game, only partridge. When we got about a mile from Clark's I saw some large animal coming into the road about twenty rods ahead of us; I thought first it was a horse. Bill was in his shirt sleeves and had on a red shirt. I stopped, and Bill came behind me, and says: 'What is that in the road?'

"I said, 'That is a five-year-old moose. Bill, get right behind me, and look over my shoulder, and don't move one mite, nor wink, nor breathe, but stand just as still as a stump,' and I commenced saying: 'Oh, dear! oh, dear! if I had only taken the rifle! Oh, dear! Bill, have you got a bullet?' 'No.' 'Oh, dear! have you got a small knife that I can get into this gun? Oh, dear! I wish I had an iron ramrod. Oh, dear! I wish I could see a stone that would go into this. Oh, dear! see him coming right up to us—he is not more than ten rods from us. Don't be frightened, Bill. Keep still! keep still! Oh, dear! If I had only taken the rifle. Oh, dear! if I had some coarse shot! There! he sees us. Just look. I never had such a nice chance to kill a moose in my life. Oh, dear, oh! There he goes off on the walk. Just look. I could shoot him a dozen times with the rifle.' I tell you what it is, Iles, that hurt me bad. I don't believe I shall ever get over that, if I live to be a hundred years old. I never want to get catched in that situation again. I should rather ask a woman to be my wife and have her say, 'No,' right out loud. Yes, sir—upon my word and honor, I would. How far is it over there? About three miles. It is only nine o'clock. Let us go over there and get all ready before dark. You might as well throw this horn away; mine is the best one, and we only want one. This is a hard place to travel in, Iles. Can't we get there without going through this skunk-spruce bog?"

"No, this is the nearest way to go there."

"Oh thunder, Iles, if you hadn't held onto that limb as you did it would have killed me. It switched back and took me right across the eyes. Here is a brook; suppose we stop here and get dinner?"

"All right, I will get dinner to-day if you two will wait upon me.

"Yes we will."

"Bill, you get some wood and start a fire, Iles, you get out that three-quart pail, rinse it out and fill it full of clean water."

"And what are you going to do?"

"Me, I am going to get dinner. What have you got there, Iles?"

"It is white loaf sugar Now, don't you know, Mr. Mayo, that is just the best stuff to carry in the woods with you and eat when you are traveling to keep you from being faint and hungry?"

"What have you got in that other bag?"

"That is brown sugar."

"Wal, Iles, you are a brick with a gilt edge; two kinds of sugar, two kinds of cake, butter and doughnuts out here in the woods. I don't wonder you weigh 250 pounds, especially if you do not work any better for other folks than you did for me when I took the leather for a pair of boots to your shop, and it took you six weeks to make one pair. Oh, yes, that is all right, I forgot that was a part of a cobbler's trade.

"Come, it won't do for us to lay here and smoke too long, for we might not hit that bog, and have to hunt for it, so let us be moving. After about two hour's travel we came to a large bog; it was dry and we would sink into the moss about six inches.

"Iles, let's go over to that large rock where those trees are, a regular island in the middle of the bog."

"All right."

"Now, Iles, you call, as you have got nothing but an old shotgun, and if a moose shows himself in this bog, down comes his house."

"Mayo, how much does that old rifle, or Sweepstakes, as you call it, weigh?"

"It weighs just fifteen pounds. Come, Iles, get that moose-horn out and sound the joyful noise, because there is to be a moose jubilee here to-night. The sun is set, and not a cloud in the sky."

"All right, Mayo, here she goes. I am going to call and get an answer the first time. Now don't you know it is just such a night as it was when Jim Morehouse and I killed that big moose? Now don't you know that is just the same old shotgun that I shot him with?"

"Don't call too loud the first time, Iles. *Wough! wough! wough!* Now listen. Oh, Bill, stop that coughing."

"I could not help it; I got a piece of tobacco down my throat."

"Here, stick your head under that blanket there."

"Mayo, how long has it been since I called?"

"Just twenty minutes; try it again: *Wough! wough! w-o-u-g-h! wough-wough!* It is no use, Iles, we should get answer before this."

"Listen; I heard something."

"Yes; there, did you hear that?"

"Yes."

"Bugh! bugh! bugh! Yes, sir, that is the old fellow himself; he is way over on that hardwood ridge at the other side of this bog. There, he has stopped to listen. Hold on, Iles, don't call yet; wait twenty minutes sure; now, try him again, Iles, and call loud, just as though there was not a moose within forty miles of us: *Wough! wough! w-o-u-g-h! wough! wough!* There, listen, he is knocking down an old dry tree. Here it fall. Holy Moses what a noise! There he is coming on again. Hear his horns strike the trees. Iles, just look at Bill, he trembles worse that the woodchuck when old Dime had him by the back of the neck. You need not be frightened Bill, old Sweepstakes will stop him. My soul, what a noise! I should think the whole woods was coming down. He is coming like a war horse. There he is; what a pair of horns! my, what a buster he is! Keep down Bill, and keep still as long as he is coming straight for us. Iles, isn't he a beauty; those shanks belong to me, Iles."

"Now, don't you know that is counting your chickens before they are hatched?"

"So, Iles, just as soon as I fire you stand right up and let him have it. He never will get off the bog after I fire; but the safest way is just as good as any. There, he is near enough, and I am going to let Sweepstakes speak to him." Bang!

"I don't see him, Mayo, where has he gone?"

"There he is, don't you see him, Iles, out there to the left about ten rods; he has turned tail to us and stands still. Bang! there he is yet, standing there; load soon as you can; hurry up there, he is down; you need not hurry any more, he is our meat, sure. Here, Bill, keep away from that moose, or you will get knocked over."

"Why, isn't he dead?"

"We don't know that yet; I guess I will cut his throat and the blood out of him. Iles, that moose knocks the spots off of that one you and Morehouse killed, don't it? Now, don't you know it?"

"Just about the same, only this one's horns spread a little wider."

"Now, boys, let's go on to that knoll right there and build up a big fire, and roast that moose's shin bones and suck the marrow out. It is the first thing old moose hunters do after the moose is dressed. Come, turn out, it is all daylight; we will try a moosesteak and then pack up our duds for home.

Only think, Ike, we have got fifteen miles to lug them horns through the brush. I would not do it for them, Ike, you may have them if you will carry them out."

"All right, I'll take them. Bill, we will take the muffle or nose, and what steak we can carry and start."

We got to Conrad Milliner's at seven o'clock in the evening, and hired Bill Henshaw to take his horse and haul us five miles home to Bear River Bridge, and little Bill Ike got enough moose hunting to last him a whole year. John Ike carried the horns about half way out and sold them to Mr. Mack in a logging camp for a barrel of flour, and that was the last moose ever shot by HIRAM P. MAYO.

SPORT ON THE "ARKANSAW" PRAIRIES.

MY companion is a disabled Confederate soldier, but curiously a staunch "black Republican," though not a "Yank." He went into the confederate army when a mere boy of sixteen, fought bravely, was shot through the right arm near the shoulder, which has always been a little tender but of good use to him. John has bagged many "bah" and buck in the Mississippi swamps, but now his good right arm is "in a sling," but he makes a valuable companion for a lazy man's hunt on the prairie.

With my team and ambulance we started for the prairie only a half a mile away. The weather for the past week has been all that one could ask, perhaps a shade too warm in the early afternoon, but clear and bright, with cool, brace ing nights. A fine rain a week ago, placed water in a few of the more permanent little ponds on the prairie, and brought down from the north a small flight of mallards, green wing teal, wood ducks, bitterns, jack snipe and golden plover. (John is from Louisiana and calls these last papahottes.) The morning is bright, the air cool, and from horses up to setter pup we all feel that this world was not made in vain.

The grass on these prairies this fall is a thick mat about two feet high, with the seed stems of the grasses five to six feet high. In this grass a dog is nearly useless, for you can't see him from the wagon but a short distance, therefore chickens and quails are hard to find, so we keep our dog near at hand. The surface of these prairies is very smooth, and one can drive pleasantly anywhere.

We wanted ducks; we were tired of chickens, squirrels and quail, so we drove to the first little pond. When within a hundred yards of it I told John to hold the dog and drive the team on one side of it, and I would slip up to the other side and try for a shot. I sneaked up through the grass, rose up, and saw six fine mallards on the further side of the water, too far, I thought, for an effective shot, but I pulled the trigger very hard and banged away. They all rose, but one soon weakened and tumbled in the grass. We both marked her down carefully, but she had flown about twenty rods, and as one spot on the prairie is very like another, we had a tedious time finding her—my pup don't like ducks unless they are cooked. This was one of the heaviest mallard hens I ever saw, and as fat as butter. We next flushed a large covey of quail. They flew into the brush, where I missed four shots straight—after shooting awhile in the open I miss in the brush, and *vice versa*.

We drove to another little pond and pursued the same tactics. The grass is so high about these ponds that we could not see if there was any game in them when standing on the wagon seat, if a few rods away. I walked right in until I could see the water, where I saw eight mallards feeding as unconcernedly as if there was not a deadly pot-hunter within a mile of them. I waited until two drakes came into line and fired, and then wilted another as they arose. Then got into the wagon, drove into the water, and picked them up. This is just too too awfully nice for duck shooting.

These little ponds all have firm bottoms and little or no mud. One can drive his team through them as well as anywhere else, therefore shoot and retrieve his ducks from the wagon all day without getting in mud or water. The three last ducks were all drakes (as Pat would say), two young ones and an old one also very fat. These little prairie ponds are all full to repletion with "tadpoles" or "polywogs" (the young of toads), and young crayfish, with their margins covered with weeds and grass loaded down with seeds, a perfect paradise for ducks, in which they fatten in two or three days.

John had marked down the remnant of the last bunch of ducks in a "puddle" or pond a half a mile away. We started for them, and tried them the same as before, but they flushed from the noise of the wagon, and again I was forced to strain my gun by an extra long shot, but I drew about four feet ahead of the leading drake and tangled him all up, and down he came.

I have the notion that I can kill a duck as far with my old rickety, cheap, nine-pound Bonehill twelve-bore as any ten or twelve of decent weight, but I am not one of those blarsted fools who say that they can kill a duck every time 75 to 85 yards. One may sometimes kill them as far as that, but it is really cruel to pepper away at ducks beyond a reasonable limit; 40 yards with No. 6 shot in the fall of the year, for river or "shoal water ducks" is, I think, the limit of a reasonable distance. One should shoot to kill, and not to wound, and lose the meat. Luckily for the ducks the tyro shooting at passing ducks at long range aims directly at the ducks or other birds, and the shot passes harmlessly clean behind them, while the experienced ducker would hit but probably only wound. I will illustrate. The evening of this same day as I and John were driving in from the prairie we saw a bunch of five teal settle in a pond; we wanted just one more duck for the Major, so we started for them on the same plan described, thinking that these might be mallards in the pond. There was but little cover on the side that John drove the team on, and they flushed wild from the wagon, as they crossed in front of me a long long way off. I fired in the way of experiment. I held about eight feet ahead and five feet over the leading duck and killed the hindmost and lower duck dead in the air. John was astonished, so was I, so were two passing teamsters. John declares it was fully 100 yards, I would know how far it was if I had measured it.

The duck was hit with two shot, one through the head, the other in the body, both fatal. If I had shot at those ducks I would have missed them, and that reminds me: All the reporters of the field trials on chickens this fall, except one, used this expression: "The bird was flushed and shot *at* by Jones, and missed." Now if Jones had shot *at* the bird he would surely have hit it (?) The exceptional man wrote: "Jones fired and missed." And I have been missing the line of my hunt. Well, we got ducks enough except the one for the Major, and such juicy, fat young mallards (we gave all the tough old drakes to our neighbors). During the day I "shot *at*" but missed several jack snipe (Wilson's snipe). They were the strong old cocks of the first flight, with a line of flight very like a corkscrew.

We had a heavy rain last night, which gave us a heavy flight of ducks and more water. There is "protracted meeting" in town, the chickens are "all cat up," fresh meat must be had for the preachers, and John and I are detailed to furnish it, so we must be off in the early morning. How we make the ducks, chickens and snipe suffer I will relate in another chapter. BYRNE.

CROCKETT'S BLUFF, Ark., Oct. 29.

ONTARIO DEER SHOOTING.

Editor Forest and Stream:

With interest and pleasure I read the protest of "H." in last number of FOREST AND STREAM against "Nutmeggers" huntingin Ontario previous to October 1, interest such as the victim takes in the hangman's adjustment of the knot, and with pleasure that an opportunity is offered to rise and explain; but in order to explain I must confess breaking the laws in another instance, which led our party astray this time. One year ago I visited this section in company with a party of ladies and gentlemen. We were then on a pleasure, and not on a hunting tour, but we gentlemen of the party concluded to step off at Renfrew for a three days' hunt, leaving our wives at the hotel. This was about September 23d. Our landlord and our guide both informed us that the law was off September 15. They seemed to be very positive about it, so we made no further inquiries. We had our hunt and brought a deer back to the hotel and dressed him off before a number of townspeople. We were unconscious of having committed an unlawful act, and no one enlightened us. This is not because we had heard the adage, "where ignorance is bliss 'tis folly to be wise," for I believe in game-laws as strongly as "H." does.

We were only two days earlier this year, supposing the laws to be the same, in fact our guide said they were. We now find that we transgressed in both instances, but the people about that section seem to understand that the law is off the 15th.

Of course law does not recognize ignorance as a shield for crime. (And I consider it a crime to break a sporting law as much as any other.) "H." has rendered a just verdict, but I have no doubt he will generously send in a recommendation for mercy before sentence is pronounced.

In this connection I will say that in my judgment the Northern Ontario laws deprive the sportsman tourist of a great deal of pleasure and do not protect the deer, merely reserving them all for the wholesale slaughter made by the practical hunter when cold weather arrives.

October 1 is too late in the season for a party to enter the Ontario woods for pleasure. The law should give pleasure parties the right to kill deer sufficient for camp use commencing with September 15, and in the far north September 1 would not be too early. The only time when deer can be successfully hunted is after the falling of the leaves and through the cold weather, when none but the regular hunter thinks of visiting the woods. The law as laid down to-day practically says to all of us who seek health and recreation during the beautiful and unequalled September days: "Gentlemen, you seem out of health, and we welcome you to the pure, invigorating air of these mountains and forests; breathe it without stint and enjoy it to your heart's content, but you must bring your own provisions. We have plenty of deer, but they are all engaged, and we are pledged to reserve them for our hunters. The slaughter will commence with the advent of cold weather. If you must have venison, we advise you to go home and buy it later by the car load at five cents per pound. It will be infinitely cheaper for you than to beat about the bush at this season of the year. Were it not reserved you would find it like looking for a needle in a hay-mow to discover a deer in this dense foliage."

The law fixes no limit to the slaughter and shipment of deer throughout the season when the poor deer are almost as much at the mercy of an experienced hunter as sheep in a slaughter pen. I know of hunters who kill their twenty-five and thirty deer a week. It seems like sending a man to jail for stealing one hat on Monday and to Congress for stealing 500 on Wednesday. B. G. A.

CONNECTICUT, Nov. 6 1882.

SHOOTING OVER COCKERS.

A DAY WITH ANGLO-SAXON.

RECENTLY I was favored with a letter from a sportsman (?) living in one of your Eastern cities, asking if I could supply him with a "pure bred or pure blood cocker spaniel, trained to hunt ruffed grouse or other game birds, and by yelping causing them to light on trees, holding them there and thereby enabling them to be shot." I replied that none of my dogs were so highly educated as that, and he would have to look elsewhere than my kennel to fill that order.

A dear old friend of mine, John W. Kelly, of Woodstock, Ont., undertook to train one or two young cockers for me, and I have just returned from a visit to his cosy home, having been invited to come and see what progress the youngsters were making. He is an old Devonshire man, and I am doing him the scantest justice in saying that a keener, more thorough-going and experienced all-round sportsmanever handled a 12-bore.

It was a picture to see him leaving the kennels in the morning, with his team of lovely cockers frantic with joy at the sight of the gun, and dressed in his old shooting togs that had seen many a day's hard service. He might have stepped out of one of the plates in that rare old work "Daniel's Rural Sports." How carefully he saw that the cockers were comfortably deposited in the wagon behind us, and how well they knew the treat in store for them.

We had a pleasant drive of nine or ten miles behind a pair of spanking ponies before we could arrive at any place worth trying for game, but old Anglo-Saxon knew every foot of country surrounding, having shot over it every season for twenty-five years. The great progress of farming and drainage has naturally thinned out the game.

"We might get a pheasant or two here," says Kelly, pointing to a likely looking clump of bush near a side or concession road. "Tommy, you hold on to Jet and Judy, and we will take old Tip and see if we can't start something. Tip 'll find it if there's anything there. Now, then, Tip! Tip!! Come to heel, sir! Steady," for Tip is now in a too eager frame of mind for proper business. "He will have the wire edge worn off before lunch. You hold along that ridge to the fence by the pines and keep a sharp lookout." Presently Tip's musical voice begins to whimper, and in a few moments he bursts out into full tongue. Whirr!! "Mark!" Bang! Bang! Tommy has his hands full trying to hold Jet and Judy and look after his ponies, too, as the young ones are fairly mad to hear the fun going on and not have a hand in. He who has not experienced the electric thrill that speeds through his nerves as the noble grouse whirrs through the October woods, while with flashing eyes and muscles braced he throws his breech-loader to his shoulder, and rapid as thought follows their swiftly disappearing wings for an instant ere he pulls the trigger, to be gladdened by the sight of the flying feathers and the long, slanting tumble of his victim, has yet to experience a sensation worth all the nostrums and elixirs civilization has invented for re-invigorating jaded humanity. But to shoot the regal grouse out of a tree! Faugh!

"How many did you get?" cried Tommy, as we returned after an unsuccessful search for the two that got away scatheless. "Only one, but he's a daisy." "I wish you would take Jet and Judy. I can't keep them in the wagon, and they will strangle themselves trying to get after you." "They'll get plenty to do by and by."

We drove about a mile further along a beautiful country road, through a landscape decidedly English in character, with the additional beauties of the gorgeous coloring of the hard wood foliage that is never seen in the old land, and which the hand of Birket Foster could so well depict, to some likely cover for woodcock.

All the cockers were now thrown off, and I set myself to watch with interest how Kelly had succeeded in training the young ones. And it was marvelous to see how thoroughly he controlled them even in their exuberant eagerness, with the "wire edge" on. They were never allowed to range out of gunshot, and it was a pretty and sportsmanlike sight to see them work to hand, the busiest little creatures in the world for the time being, their feathering tails carried low and beating about 500 strokes a minute. They put up two or three cock and we had a lively time bagging them. On the edge of the wood we scattered a bevy of quail, and had some delightful sport till lunch time picking them up singly. A great regret of Kelly's is that, so far, Jet hunts perfectly mute. "Man, if she'd only give tongue I wouldn't take $200 for her." To me her silence was an additional attraction, for I can't bear a noisy babbling spaniel. A little whimper to let you know the scent is hot is all I want.

By this time both dogs and men needed water badly, and we struck for lunch, having divided which with the dear little dogs, we, without delay, resumed our pleasant labor. "You get round to that corner by the fence. They'll fly like bullets for the big wood. Look sharp." I was invariably stationed just at the right corner for sport, and Kelly and the dogs drove all the game my way. Not having much practice, I missed many birds that I ought to have bagged, and wanted to change places with him sometimes, but as long as he was round the dogs would not work for me. Ere sundown of a most charming day, the cockers had done an honest day's work, and I felt proud of their achievements. "With a little more experience, and I'll give them every chance for the next month, you can take your dogs anywhere, and shoot any kind of game over them."

"Halloo, Jet! ware chase!" Jet was making legs after a hare as we plodded back in the gray dusk She obediently, though just a little reluctantly, came to heel and I petted my favorite all the way home, combing the beastly cockle burrs out of her beautiful silky ears.

"She's guid as she's bonnie." SIMCOE.

TORONTO, Canada, Oct. 26.

DEER HUNT ON THE YELLOW MEDICINE

THE Yellow Medicine is a creek that runs into the Missouri just above what is called the great bend of the Missouri. We started on Monday, the 26th of January, a party of five, with a sled and pair of horses with three led horses in tow, a box of hard bread, a side of bacon, coffee and sugar, a large pan of baked beans, the necessary blankets and buffalo robes, and an Indian tepee for shelter First and foremost of the party was Mr. D. W. Spaulding, clerk of the district and county courts of Lyman county, D. T., the most expert deer hunter of the Territory; then came Mr. Herbert, host of the hotel at Brule City; Mr. William R. Ervin, the famous rifle shot of the Missouri; David Forbes, a man who can forge a piece of iron equal to the next, and lastly your humble servant.

We started early in the morning, with the thermometer at 15 deg. below zero, which might seem rather cold weather for a sportsman to start out in for a sporting tour and a drive of fifty-five miles on the Missouri River. We drove a few miles on the ice and found the sleighing a perfect failure, as the snow was covered with sand, blown off the innumerable sand bars. After dragging the sled over five or six miles of sand, we at last found sleighing that we could ride, and we pushed along at a good gait; but when we arrived at Beaver Creek, about eight miles from the Yellow Medicine, where we were to leave the ice and go over the bluffs, we concluded to camp for the night at a wood-choppers' camp, as our horses were very tired. We got privilege to cook our rations and make our coffee in the log house. We took our tepee and spread it across some poles resting on the edge of the hay-stack, spread our blankets and buffalo robes on some hay and so made our camp.

The next morning we rose at daybreak, got a breakfast of fried bacon, hard bread and coffee, and started for the bluffs. A bitter cold morning it was, the wind blowing in one's teeth a young blizzard. I suppose the people of the coast would have little idea what it is to get up a gumbo bluff of the Missouri River. Imagine climbing up the roof of Trinity church with a pair of horses and sleigh, and have that roof from 100 to 200 feet in height, and you might form some idea of it. After getting on top we had a ride of about six miles to the plateau.

I will tell you something of our manner of dressing to stand the extreme cold of this country. I have a sealskin cap with ear-pads, then I have a buffalo coat with a huge beaver collar and cuffs; on my nether extremities I have beaver leggins, finished up with beaver moccasins, and outside of them I wear Arctic overshoes. With that rig I have ridden twenty-five miles with the thermometer thirty-five degrees below zero. We descended the cliffs into the Yellow Medicine bottom, and found an icehouse or root cellar in the old military camp at the old Red Cloud agency. The building was dug into the side of a hill, and was made of hewn logs, and covered. It was quite large enough to take in our horses and ourselves, and made a fine camp for a party of hunters in the winter.

We did not start out to hunt that day as it was too cold, but next morning we started on horseback for a day's hunt. After riding about four miles up the creek, we separated company and I rode my horse into the timber, and hitched him, and took a left hand fork of the creek for my ground.

After walking about a mile up the creek I found plenty of traces of deer where they had trod down the snow, and laid down, and soon I struck a fresh trail of three, and followed them through ravines and over gumbo bluffs, till I was tired out, but I did not come up with them. I came back down the creek, and returned to camp without seeing deer. The rest of the party came in, and with the exception of Spaulding and Stout, none of us had seen deer. They had started a band of four, but did not get a shot—a poor show for venison. We prepared our supper, lit our pipes, laid beside of our camp fire and told hunting stories till bed time, and then turned in. Early in the morning we started out. I had by this time made up my mind that deer hunting in this country was rather different from deer hunting of Louisiana and Maine. I had had the idea up to this time, that the deer were hunted in the timber, whereas they are found in the dry time in the ravines among the hills in the grass. This time I kept company with Mr. Stout. After we got a few miles up the creek, we again parted company, and Mr. Stout and myself went still further up the creek. I never saw so many signs of deer in my life. At one place in particular, where there was a depression in the bottom about fifty feet across, the snow was completely trampled down, and in the center was a small place, where they had a lick. We passed over places in the grass and brush where it looked as though a drove of horses had passed over the ground.

At last we struck a trail of eight deer, and followed them to the hills, when Mr. Stout took off his overcoat and strapped it to his saddle. I asked him if he was going to walk, and to my surprise he said no, he was going to ride and follow them. I had had a little experience of a deer trail the day before, and the idea of a horse following such a trail was a surprise to me. However, I followed suit, and we took our lariat ropes in our hands, and started up a gumbo hill with a pitch steeper than one to one; and when you take into consideration that these hills are cut with innumerable gullies from one to twenty feet deep, with perpendicular sides, and from one to fifty feet wide, you will see that riding a horse across such a country is not easy. I don't think there are any other animals except deer, mountain sheep or Indian ponies that could perform such a feat. I do not think there is a horse in the world that has the endurance of an Indian pony. These little animals are turned out on the prairie to shift for themselves. A barn they never see. The only feed that they get beside the prairie grass is the inside bark of the cottonwood tree, and, strange to say, they will grow fat on that. On such feed and treatment the pony can be ridden miles and miles, day after day, and go through places that a man would look twice at before he would venture. I passed around the sides of gumbo knobs where the snow crust was hard, and the only way to prevent slipping down from fifty to one hundred feet was by sticking my heels into the crust, and yet my pony went with perfect ease.

We went back into the hills about a mile, and as we were riding along a divide, Mr. Stout happened to turn his head, and, across the ravine on the opposite side of the next divide he saw one band of eight deer (whitetails) on the jump. He called my attention to this, and, I must say, I never saw a finer sight than those eight deer on the dead run. They were out of range of our .44 Winchesters, so we started on the trail. We followed them more than ten miles before we came up with them again, but they were up and away before we could get near enough to them. We were just rising up out of a gully in a ravine about fifteen feet deep that we were riding up to get a place to get out of, and they discovered us, and away they went again, so, as it was near night, we started for camp. Shortly after we were riding on top of a divide we saw Spaulding and Forbes, both without any deer. I thought again that our show for venison for supper was no better than the night before. We caught up to them at the sleigh, which we had taken up about four miles in the morning. Here we found a note from Ervin, that he had killed a white-tailed buck. My heart felt good (as the Indians say) at the news. Then Forbes said that Spaulding had killed four deer—one buck and three does—and left them in the prairie.

We drove into camp, and led our ponies, and that night we made a quarter of venison look "sick," and the bacon was at a discount, I can tell you. The next morning our other quarter went the way of the first, and we started with the sleigh after Spaulding's deer. Mr. Ervin was obliged to return home that day (Friday), and I let him have my pony. He left us on top of the hills on the prairie, and we went to the scene of the previous day's work, and there laid the carcases of the four deer. From where Mr. Spaulding stood to where the deer started from was about 75 yards; he shot the four deer, and the furthest one away from where they started was less than 100 yards, and he ran 15 or 20 yards before he fell. Besides the four deer that he killed, he shot a doe, and she rolled down the hill, and then got up, when he gave her another shot. She again rolled down the hill on the other side, and he, thinking her dead, paid attention only to the buck, and shot him, so that he shot and killed four deer, and put two shot through a fifth one. He stopped to take entrails out of the four, supposing that the fifth was in the other ravine, and to his surprise she had got away down the creek, and he lost the trail among other tracks.

While we were viewing the ground and Mr. Spaulding was showing me the ground and the way he shot them, Mr. Ervin came back and told me that he had killed two more bucks, and wanted us to go and see where they were as he wanted to keep on his way home. I got on my pony, and he kept on with me on foot. We went about three-quarters of a mile, and I saw across the ravine where we were two fine large white tail bucks. I got off my pony to take up the trail of the rest of the band, when Mr. Stout came riding up. He had just started a band and got two shots at them, and missed both. I left them and took up the trail and followed it till nearly night on foot, but did not come up with the deer, but found where they had laid down once. Late in the afternoon I found where some one had taken up my trail with a horse, and a more disgusted man you never saw than was myself at that time.

After following them all day over hill and dale, through ravines, snow crust, and snow drifts, and often through snow to my waist, to think that some one else had taken my trail. I turned around like a whipped cur and started for camp, twelve miles away. Soon after starting my knee gave out, and I would walk a short distance, then sit down and rest in the snow. I traveled till after dark, and if ever man looked for gumbo, I was that man. At last I found gumbo, and a plenty of it. I had taken to a ravine by this time, and it was so cut up with gullies that I had to take to the bottom of the main gully. I traveled for two miles or more where the water had cut through the gumbo in some places twenty feet deep, the sides of which were as perpendicular as the sides of a house.

At last I struck a creek, and thinking that I had struck the main one I looked at my compass for the direction of camp, but soon found out that it was not right. I was completely worn out by this time, and I found a nice pile of drift wood and concluded to stay there the rest of the night. I had used up my matches that were good, the rest having got wet with snow. I am too old an hunter to be stopped by such a small thing as that. I took off my vest, took out the lining, and placed it between two of the logs, and after firing two or three shots into it I succeeded in blowing it into a flame, and soon had a good roaring fire going. I stayed beside the fire until daylight, when I found that I was about three miles from camp. I got up and started for the place. I dragged along at a slow rate, and when I fell in sight I found the sleigh gone.

I went in and found a coffee-pot sitting there full of coffee, some hard bread, venison, matches and a cup. The fire was not out. I kicked the embers together, set on the coffee-pot, and pretty soon in stalked Mr. Spaulding, who had been out since daylight looking for me. I drank three cups of coffee, ate two hard bread, got on Spaulding's pony, he walking up the creek to where the sleigh was. After getting there we hitched up the horses and started by the way of the hills for home, which we reached just after dark. So ended our week's hunt. I think if I ever should start again on such a hunt I should keep my horse. I think, on the whole, that we had quite a successful hunt, seeing that neither of us had hunted the creek before, and the country was new to us.

LOWER BRULÉ.

A TRIP THROUGH NORTH CAROLINA.

HENRY and myself felt that we must make a new departure. We had hunted and shot so much over Virginia during the last ten years, that we wanted change of scene. We had shot squirrels in the Southwest, turkeys in the Alleghanies, partridges in the valley, old hares and robins in the Piedmont, sora and rail in the lowlands, blackbirds and reed birds on the James, shufflers and mallard on the Potomac, deer in the pinelands, canvas-back and redhead on the Chesapeake, brant, black duck, snipe and curlew off the Virginia Capes, wild pigeons in the mast forest of Bald Mountains, pheasants in the highlands, woodcock on the Rappahannock bottoms; we had killed bullbats, red-headed woodpeckers, and field larks in every county in the Old Dominion, and dropped our discharged shells in almost every precinct.

It was time to think of cruising in new seas, and then again the scarcity of game in our own State is alarming to the true sportsman. The interest taken in the full enforcement of the laws for the protection and preservation of game has died entirely out, from the fact that there is no law to enforce. The last Legislature, having run mad on politics and the election of State officers, had no time, they said, for any such trifles. So pot-hunters and scrub-shooters have played the old scratch with all kind of fur and feather, and where to shoot this fall and winter has become a serious problem.

It is no use to go to Cobb's Island for brandt and duck shooting. It is a thing of the past, and, to be candid, the cause and effect can briefly be told. The time was when royal sport could be had over the decoys, and a half a hundred brandt and black duck was a common bag for one tide, but good duck shooting, I fear, is forever gone at the Cobb's. It is now a famous oyster and clam station, and there are hundreds of men and scores of sloops and schooners that make the island their rendezvous; and every man of them has guns, and desiring to vary their menu with fresh meat, they kill the ducks in every conceivable way, and, of course, illegally. Their easiest and most practiced method is to shoot the ducks in the night time, and this unquestionably drives them off from their feeding grounds, never to return. Every year it grows worse, until these vandal clam-pickers and "oyster-snipes" have destroyed the finest shooting on the Atlantic coast.

I have been regularly to Cobb's Island for three winters, and with the most unsatisfactory results. I have frequently had to wait a whole week before I could go out shooting, for time, tide and sunshine have all to harmonize—if either of the three is wanting, it is no use setting the decoys. Then the weary waiting on the bleak island, that is but a barren sand bank in the winter time, with nothing to read, nothing to talk about, nothing to do but to meditate upon the sins of a misspent life; it is fearfully demoralizing, and one gets in the habit of a house dog, and yawns and sleeps in fitful slumber day and night.

Then every time you go out hunting, the guide charges you three dollars and takes half of your ducks. I have enough of duck shooting there—it simply don't pay—and after losing two or three weeks, and getting a few brant that cost me between five and ten dollars apiece, I have come to the conclusion to try my luck elsewhere. I hate to bid adieu to Cobb's Island, but in all truth it is time, money and temper utterly wasted; it is sad, but yet a frozen fact.

Hearing that there was fine shooting in Western North Carolina, a party of us determined to make a trip there, chiefly to shoot quail. But what point should we aim for? Neither Henry, Ned or myself had ever been in the State before, or rather, they had not, and my experience of North Carolina was a short visit, it is true, but so crowded with incident, that it will be a vivid memory as long as life lasts. It happened thus:

The scene was at Appomattox Court House; the time, a gloomy April morning in the sping of '65. Lee had sent in his flag of truce, and the news flew from lip to lip that the army of Northern Virginia was about to surrender. Surrender? A laugh of scorn and derision came from many who deemed our battalions invincible, whether combatted singly by overwhelming numbers, unlimited resources, starvation and wounds and death, or opposed by all. Surrender the grand old army of Northern Virginia, that incomparable body of infantry, as Swinton called them? It was as false as hell. Yet the whispers grew louder, and cheeks that never blanched before death, grew white to the lips now, and soon the news grew into a certainty. Many individual cavalrymen determined to break out of the surround and strike for Johnston's army in North Carolina. Sixteen in one squad charged through the line, and twelve, horsemen and steeds, went down; four escaped more or less wounded, and two horses gave out, and left but two cavalrymen, Jack R. and myself as reinforcements. We were both young boys, in a strange country, without a ration, both with flesh wounds, and riding the sorriest specters of horses ever seen.

"If we can cheat the buzzards," said Jack, driving his spur between the ribs of his skeleton steed, "we will make the trip, sure."

We reached Johnston after a few days' steady riding, and the General told us to go back to Virginia, give ourselves up, and return to our homes. We turned on the back track and aimed for Tarboro, a beautiful little town in North Carolina, nestling cosily on the banks of the Roanoke River. When within a few miles of the place, what a sight met our eyes! A whole division wagon train that had left Petersburg before the evacuation, filled and jammed with supplies, had tried in vain to reach Lee, and finding him environed by Sheridan's troopers, turned the caravan's head toward Johnston, and had traversed a good deal of the way, when they learned that the bottom had fallen out of the whole thing. Nor was this all. Two six-gun batteries and a regiment of infantry guarded the train. The guns were brand new and had never been fired. They were beautiful rifle pieces, fresh from the English foundries, that had run the blockade by way of Nassau. The caissons were bright and clean as new paint could make them, and the guns gleamed like gold.

A sad council of war by old comrades, that had come together by chance, was held in the recesses of the North Carolina piny woods. There was no officer higher than the Major, a young Virginian named Slaughter, who commanded the provision train.

The discussion was brief, for there was only one side to be argued. Lee had surrendered; Johnston was about to lay down his arms; Kirby Smith and Dick Taylor had an army in Louisiana, nearly a thousand miles away, so all chance of reaching him was futile; President Davis and his Cabinet were fugitives, and the Confederate government dissolved; there was but one course to follow, and that was for every man to disperse to his home.

A few hot-blooded, scatter-brained soldiers urged that a guerilla warfare should be inaugurated; but such a proposition was voted down by all the veterans present, who knew what a guerilla warfare really meant.

No time was lost. The meeting broke up, each man selected a mule or a horse, and mounting, rode away in twos and threes. Old comrades looked with lingering glances into each other's eyes, and their hands met in firm, warm, cordial pressure for the last time, and turning their faces—

"Some toward the setting sun have gone,
And some to the setting moon"—

they disappeared in the tortuous road, never to meet again in this world. In an hour the scene so full of a bustling life was almost deserted. There in the road stood the twelve guns with the appurtenances all complete and the chests filled with ammunition. They were the property of any who chose to claim them. Any enterprising farmer who chose had only to jump on a mule and bear away with him to his country home the finest rifled guns in the world, and he could celebrate the Fourth of July, Christmas, or his mother-in-law's birthday, or his tin wedding, as he minded to, in fine style. And then what splendid adornments to his grounds would be twelve brass and steel cannons encircling his mansion, and pointing their grim muzzles to every point of the compass. Ah me! I have often wished I had yanked two of those guns away quietly; nobody would have missed them and they would have been like Mrs. Toodles's door-plate, a handy thing to have about the house.

But more than that; there in the pine woods was a train of wagons a mile long, and over a couple of hundred mules, left, like the guns, for somebody to help themselves. Owing to a false report the officers thought that Sheridan's cavalry were but a few miles off, but the half a dozen scouts who remained all day by the wagons found out that there was was not a blue coat within twenty miles.

A few of us built our fires and remained over night with the train, looting the wagons and drinking some blockade whisky, the meanest I ever swallowed. The next morning we debated whether we should spike the guns and burn the wagons, but as the country people began to arrive we told them to help themselves, and then loading one of the field pieces under direction of an old artilleryman who had been transferred to the cavalry, we touched her off. The sound echoed and re-echoed through the vast pine forest and then died away in the far distance. Mounting our horses we struck for Virginia.

I claim that our small body of a half a dozen scouts were the final executors of the effects of the Confederacy, and we fired the last gun and last salute of the war.

* * * * * * * * * *

At the St. Claire, in Richmond, we met Mr. Mercer Slaughter, the genial ticket agent of the Danville Railroad. We confided our intention of seeking some hunting ground in North Carolina, for the reason that sportsmen were overcrowding the Old Dominion.

"Why don't you go to Western North Carolina?" he asked. "I hear that partridges abound out that section. Take a ticket to Gastonia, about two hundred and fifty miles from here, on the Richmond and Danville Railroad, and you will strike the finest game preserves in the country."

"All right," we said, "and we will start to-morrow night."

The train leaves the depot at 11:35 P. M. and reaches Danville, Va., at seven the next morning. We got a splendid breakfast here at the depot, such a rare thing in this section that the event ought to be chronicled, for during the space of ten days we never ate another palatable meal at a public house, and how we lived and suffered and fed on cold victuals and greasy food will be told further on. North Carolinians don't seem to know how to keep a hotel, or if they do, they take particular pains to hide that accomplishment from strangers.

After an all day travel through an inexpressibly dreary looking country we arrived at Gastonia, a little village in its infancy and dirt, in Lincoln county. We got out and looked around, and the scene appeard so uninviting that Henry positively refused to stop.

"I'll die of the blues if I remain here" he said. "I feel them creeping over me now."

Upon inquiry we found that twenty-one miles away was a town of some eight hundred inhabitants, called Lincolnton, which we could reach by a narrow-guage railroad that left late in the evening. Transferring our traps, we were soon bumping along at the lively rate of twenty miles an hour and just after dusk reached the depot.

An ancient Jersey wagon drawn by a steed that had been young once in the memory of man, was to be our conveyance. Piling on our traps, we started for town, a mile distant, a darkey going in front and lighting the way with a lantern. The old horse fell down eleven times between the depot and the hotel by actual count. Arriving at Lincolnton hotel, the only hostelry in the place, we got some cold bread and

bones for supper, and retired to rest, and in the agonies of indigestion dreamed that a darkey had caught us in a hollow tree and we were changed into a 'possum and the son of Africa was heaping rocks upon us.

The next morning we looked around us and strolled up and down the streets and alleys. Lincolnton is an antique village of the old Dutch type, and reminds one of the mouldy, mildewed cathedral towns that tourists stumble across sometimes in England. It stretches out a mile or more on each side of the road. Each house is a distinctive mark in itself, and its individuality is marked. Wide spreading trees at irregular intervals border each sidewalk and furnish grateful shade when the Lincolntonian smokes and dozes the sleepy, languid, sensuous hours of the day away. After dinner everything and everybody slumbers. The burghers tilt back their cane-bottom chairs, and, resting against the gnarled trunks, sink into dreamland, their pipes, dropped from nerveless hands, lie smoking or charring on the sward beneath. The house dogs lie at length in the sunshine, their fore paws covering their face to keep away the buzzing blue-bottle flies. The village cows in the land of Nod chew their cud in contented silence. The very town hogs, lying in their wallows, are sound asleep and in swinish forgetfulness dream. The very crows, winging their way over the village, seem to breathe the slumbrous air and would drop on the limbs of the nearest sycamore tree and rest content until the low sun warned them it was time to go to roost.

"Oh, if I only had a farm here," sighed Ned.

"You wouldn't live in such a spot six weeks unless you had a client to pick or a jury to spout to," responded Henry impatiently.

Then we all took drinks and waited and rested for an hour.

"Come along, gentlemen," responded Charley Cobb, "we will never get any birds if we remain here."

We moved on, and passing through a small field the dogs scattered, and suddenly the unusual sight was presented of three separate dogs standing at a separate point in full sight of each other. A hurried consultation ensued, and dispositions were made to attack. Fearing that the dogs might not stand staunch if they heard the guns, we determined to strike them, as Napoleon did the Russians at Borodino—all at once. Ned took one flock, Reid the second, and Charley Cobb and myself the third. With guns on the cock we advanced like skirmishers feeling for the enemy's position. The dogs stood each fast, but trembling with suppressed excitement. Just as Charley and myself closed in on them there came the noise of two tremendous reports that sounded like the firing of mortars. Then the two barrels of Reid's guns went off and our flock rose. Charley killed his brace of birds handsomely. I missed the first bird and got the other. Marking the covey where they lit, we turned to rejoin our friends. Reid was close by with one bird. We could not see Ned until close up to him, and then found him sitting on the ground, with his gun beside him, rubbing his shoulder.

"What is the matter, Ned?" we cried in a breath.

"Nothing, except this cursed gun brought in a cross action and filed a cross bill. I have enough of it. I don't want to shoot a gun that knocks the breath out of my body every time I pull the trigger."

"It isn't the gun's fault," we said, "it is the large load you put in it. Reduce the charge and an infant could shoot it."

We loaded up and for the space of an hour the sound of rapid firing was heard on every side. The coverts and the fields were full of birds, and the dogs were standing all the time. It was hot work, though, with the sun burning up the earth. The mercury was somewhere up in the hundreds. Two of the dogs, being setters, were completely played out, and stretched themselves in a branch near by, and panted and gasped as if their breath was near gone. We counted our game. Charley had eighteen, we came next with twelve, Henry had eight, Ned had a handful of feathers that he claimed to have knocked out of his bird, and had crippled a hare that had somehow gotten away.

We went into camp until evening brought a cooler atmosphere. Selecting a shady spot in a grove of trees we stretched ourselves on the green sward, and lighting our cigars enjoyed the burning of that weed that Raleigh describes as good for "ye mind as ye body."

For several hours we loitered in this charming spot. Afar off the clear outlines of the mountains marked the various chains that zig-zagged through the State, and a small creek rippled near, making a rhythmatic murmur that lulled one's senses to a perfect repose.

Ned grew poetical. "It was such a spot as this that Tennyson must have composed his 'Brook.' It would stir the soul of a savage. Yes, here is the spot."

"I'm done with town after this," he continued. "I will buy a small place and build my cot and live amid beautiful nature, and leave the world and its cities, with all of its snares and pitfalls, behind me."

"A sort of 'Vicar of Wakefield,' eh, Ned?" we put it.

"No," he responded, "not exactly that, but I mean to lead the life of a Virginia farmer. How happy it must be to have your cows, churn your own butter, raise your own mutton, have your own horses, plant your grain, raise your fruits and vegetables. Oh, it's the happiest life in the world!"

Henry Reid grunted, or rather he gave a disdainful sniff. "Oh, that's very pretty in theory," he said, "but I have tried it. I know; I have been there. The cows dry up, you have to buy your own butter half of the time, your sheep are bound to die of the scab or some such disease, the horses are always ailing and generally kick the bucket, your grain is ruined by the drought, the bugs destroy the young vegetables, and the cabbirds eat up all the fruit, and you have a never-ending fight against all creation. Farming! Not any in mine, if you please."

"That's because you did not take naturally to an agriculturist's life," responded Ned. "I do. I admire the profession that numbered among its votaries a Washington, a Jefferson, a Madison. No, the man who don't love the country is without a soul; he is fit for stratagems, treasons and spoils."

"Well, old man, answered Henry, "have your own way about it, but come on, the rest are ready."

The dogs as well as their masters, refreshed by their hour's rest, sprung to their work with a vim, and in a few minutes we were all scattered in the woods and brush.

Suddenly we heard Ned's voice in excited tones cry, "Come here, boys, come here!" We hurried to the spot.

"There," said Ned, pointing to a brush of briars in the bottom of a dry ditch, "there is the strangest animal I ever saw."

"What was it like?" we inquired.

"It was as large as a dog almost and about the color of one. He jumped down there before I could shoot, and he is in there now, you bet."

"It must be a 'coon," said Charley, "or a 'possum." I hazarded, "or a groundhog," cried Henry, who said as he got to the bottom of the chasm, "I'll find out in a minute." We bent over the brink eagerly and watched him as he threw away the pine brush. All at once the animal, with a snarl, jumped aside, and in a second gave us a dose of his quality.

Oh, my countrymen! Evil was the day and cursed the hour when we stirred up that P. C. Shades of the ancient city of Cologne, with its seventy-nine distinct stenches! what a fetid odor. All bad smells that entered our nose since boyhood, concentrated and condensed into one foul funk, could not match in a stinking offensiveness the scent of that foul *Mustela putorius*. The first sensation is one of deadly nausea, followed by a blindness and dizziness that lasts for some minutes. Then comes an utter, abhorrent disgust of everything, everybody, with the whole globe thrown in.

Every one of us caught it, and we all struck, by instinct, for an open field, where the smell could have free space to diffuse, and not be cramped or smothered by the bushes or woods.

After a half hour spent in profanity, there was another council of war. This time there was mutiny in the ranks, and each one wanted to do a different thing. Henry desired to kill himself, but was persuaded not; Charley wanted to strip and lie in the creek all night; Ned longed to blow his brains out, while the darkey, who was the only one untouched, stood a hundred yards off, with his nose in his hand, and hallooed to us to take off our garments and bury them under the water, and wait until he returned from the village with a full supply of clothes, both inner and outer, for us.

His advice was sound—in fact, it was the only thing we could do. The darkey went off like a shot, and we proceeded to follow instruction. Down in the deepest pools we buried our apparel, by placing rocks on them, only taking from the pockets our watches and money, which were affected strongly by the all-powerful perfume.

There we stood, a quartette of miserable-looking wretches—an antique group without the Greek pose.

Henry Reid would have his joke. Ned's figure caught his eye, crouched at the foot of a gigantic tree.

"I say, Ned," he commenced, "how sweet, fair and fresh is the country."

"Curse the country!" growled that individual.

"How Arcadianly delicate," went on Henry. "See the brawling streamlet that dances so brightly; it hides our clothes, 'tis true, but then it sparkles like a diamond."

"Confound the river!" snapped Ned.

Then an utter silence fell upon the crowd, and not until the boy appeared did we utter a word. We donned our raiment, and, upon the advice of Charley, placed our watches and money from the old suits in keeping of the darkey. Yet even with this precaution there was a certain indefinite sickly smell in the air that seemed to cling to our persons.

Just as we were about to start for the village Ned inquired how long the clothes would have to soak before the smell was out.

"About six months," was the reply.

"Great Scott!" he moaned. "I borrowed that suit from Frank Brackett, and it cost sixty dollars if it cost a cent, and I will have to pay for it. I'm done for!"

"Never mind, Ned," we said, consolingly; "you will have better luck next time."

"Next time will never come for this individual," he said, savagely; "I am going to leave to-morrow."

"What!" said Henry, "leave this beautiful Arcadian country that you were in love with?"

"I never want to see the country again," he replied.

"What! give up your dream of a farmer's life?"

"I would rather crack rocks on an avenue in the city than farm the finest freehold in the State."

"Surely, Mr. Burke," spoke up Charley Cobb, "you are not going to give up the fine shooting for such an accident?"

"You may designate it as an accident," he replied, "but I call it a fearful calamity. Beside, I have not had any fine shooting. My shoulder is black and blue, the skin is worn off my heel, and I am so lame I cannot walk; and those confounded birds fly so fast that before I can get aim at them they are out of sight. Then, again, I have no desire to meet another infernal cat."

"These are very rare in this section," said Charley Cobb. "It is the first I have seen for several years around here, and I am hunting over these grounds all of the time."

"It would be just my luck to stir up one on every hunt," answered the lawyer. "No, I have had enough, with plenty left over. I am going home to-morrow, and I never want to lay my eyes on the country again as long as I live."

We marched sadly back to town, and at the nearest drug store Ned bought a bottle of cologne with which he drenched himself, and thus overcame by one odor the scent of another. The next day he returned home, accompanied by Reid, who was summoned back to his bank by a telegram.

A few days' hunt around Lincolnton in company with Charley Cobb convinced me of the great abundance of partridges (quail) in Western North Carolina. The birds abound, and in such quantities as I never saw in Virginia. There are but few sportsmen in the whole section, and the quail have nothing to prevent their multiplying. A noticeable fact this season is the scarcity of hawks. I did not see but one the whole time I was shooting. Now what I call a profusion of game is this: The coveys are numerous and rarely counting under fifty birds, and they can be found on every hand. To give an instance, Mr. N. F. Cobb, Charley's brother, who is an enthusiastic and accomplished sportsman, tells me that he often finds as many as twenty coveys in one day's hunt. Speaking by the card, from my own observation, I found more game in Western North Carolina than I ever did in the most favored localities of Virginia. From Charlotte, North Carolina, clear to the great French Broad, is a region that will give the most exacting huntsman a perfect satisfaction. Those desiring information may write to Charles Cobb, Lincolnton, N. C., who will cheerfully give them all necessary points.

There is one serious drawback to sportsmen going to North Carolina on the Virginia Midland and Richmond & Danville route, and that is the enormous charge for carrying dogs. The Chesapeake and Ohio road makes no charge on dogs.

To parties visiting North Carolina I would advise them to go from Washington to Richmond by the Alexandria and Fredericksburg Railroad, then to North Carolina by any route that is the cheapest, thus avoiding the heavy tax that the Virginia Midland lays upon the dogs. The Richmond and Danville is the shortest and quickest route.

I cannot conscientiously advise any brother sportsmen to go to the only hotel in Lincolnton, unless, indeed, he has the dyspepsia and cannot eat, or has a stomach like an ostrich and can fill up on slop and wittles. There are several private families in and around the town where tourists and sportsmen can get board at a moderate price, and Mr. Cobb can, I presume, engage quarters for them.

Well, I have had my say, and like Captain Jack Bunsby, "what I says I stands to." I can only repeat, if you want splendid partridge shooting on real game preserves, where nine coveys out of ten have never been shot at, go to Western North Carolina, take your own dogs and ammunition and liquids; get in with the people, avoid hotels as you would a leper house, obtain board at some private house where there is a cheerful host, pretty daughters and accommodating son to show the bearings, and you will have as much sport during the months of November and December as your ardent soul could wish.

I have written a long letter, but like Gratanio, I can exclaim, "Beshrew my soul, but what I tellist is the truth."

CHASSEUR.

VIRGINIA, October, 1882.

PHILADELPHIA NOTES.

THE quail shooting season opened in Delaware and New Jersey Nov. 1, and many of our sportsmen of the Quaker City are away at the present writing. Birds are plentiful in both Maryland and Delaware, but in some localities I hear there are a number of small birds "in the large coveys." This would indicate a second hatching, which has very likely been the case during the past breeding season, as it was an exceptionably good one.

The deer in New Jersey have been protected by law for the past two or three years, and no shooting of them has been allowed, consequently they have increased in considerable measure. Mr. Geo. Vannato, of Barnegat, N. J., who is one of the most persistent deer hunters of his State, tells me in the section where he has been in the habit of hunting before the passage of the prohibitory law the deer have become very numerous. He bewails the having to wait another year before he can go into "the drive" again, as it is not until November, 1883, that the open season begins.

Brant and geese are now appearing in greater numbers on the New Jersey coast, and good shooting will be had when favorable winds prevail. Just now the brant are having a quiet time and pleasant weather, with no blustery winds to keep them on the move.

Duck shooting has been good in the Barnegat and Tuckerton bays, which takes in the waters from Barnegat to Little Egg Harbor inlets. Your correspondent has not heard of the result of opening day at Havre de Grace, Gunpowder and Bush rivers, but from the reports that reached Philadelphia of the number of blackheads and redheads that have already taken up their quarters on their noted feeding grounds, the fun must have been great. Canvasbacks have not arrived there to any great extent, the weather having been too pleasant.

My Massachusetts friend, who gave me information regarding the deer on Cape Cod, also tells me that at Wood's Holl, opposite Martha's Vineyard, there are now great bodies of brant. Would not this show that there remain yet many fowl to come southward and stop in our bays as autumn and winter progresses?

Ruffed grouse in the Lehigh Valley, Pa., region have not came down from the high tablelands yet. There is plenty of feed still on these elevated grounds, and it will not be until cooler weather that they will be found at the foot of the hills. HOMO.

PHILADELPHIA, Nov. 3.

MASSACHUSETTS.—Harwich, Oct. 28.—Have been down on the Cape here for a short time, and although I have not made any large bags of birds, I have had some fine sport. One morning this week I shot, with a light single-barrel breech-loading shotgun, eight snipe on a small meadow near here, and the next morning two. Have shot quite a number of quail and ruffed grouse and a few stray black duck. Quail are quite plentiful, and some very good bags have been made. Many black ducks have been shot in the ponds. The largest number killed with one barrel was nine. A number of coots and sheldrakes have been shot the past week, but not so many as would have been had it not been for the rough weather. Blue-wing teal have been taken in small bunches, but not as many as usual. A few winter yellow-legs are on the marshes yet. The number of yellow-legs and woodducks taken here for the past two months has been very small compared with that of other seasons. Since writing the above, your correspondent has been told of two persons that shot, in Brewster, one day this week, forty-four quail.—CHESTER.

A SIDE HUNT.—Clinton, Mass., Oct. 28.—The Clinton Sportsman's Club held their first annual field day on Thursday. G. W. Goss and G. A. Sampson as captains, each chose an equal number of men and started in pursuit of game. The side that scored the smallest number of points to furnish a game supper for the club at the Clinton House last night. They were allowed to start at midnight Wednesday and meet at the Clinton House hall at 9 A. M., Friday, with the game. They all met as per agreement with an amount of game that was creditable to the club. It fell to Goss's side to furnish the supper, as they were beaten by five points, he scoring 1,595 to 1,600 for Sampson. Each side started in twos and threes, and some went singly. The supper was served at the Clinton House at 9 o'clock last evening. Game counted as follows: 'Coon, 73; gray rabbit, 25; duck, 25; partridge, 25; owl, 15; crow, 15; quail, 15; woodcock, 15; gray squirrel, 15; red squirrel, 5; blue jay, 5. The game and vermin killed were: 2 'coons, 3 owls, 1 duck, 8 crows, 27 ruffed grouse, 4 woodcock, 21 quail, 23 blue jays, 8 rabbits, 74 gray squirrels, 79 red squirrels.

NEW YORK.—Oswego, October 30.—Four members of the Ontario Shooting and Fishing Club, N. A. Wright, O. S. Osterlout, P. O. Wright and C. A. Tanner, have just returned from a two days' trip to the club's preserve, at Little Sandy. They report wild celery growing in abundance, and fine ducks in large flocks, and I have no reason to disbelieve them, for they are all sportsmen of the highest order. One very convincing argument is that they brought home with them 83 fine plump stall fed beauties, such as redheads, bluebills and butter-balls. There have been but very few woodcock, snipe and ruffed grouse killed in this county this season.—VETERAN.

MICHIGAN.—Fife Lake, Nov. 7.—Deer are quite plenty in this vicinity; over fifty have been killed this fall, within ten miles of town. The largest buck ever killed in this vicinity was shot within one mile of town, weighing 268 pounds dressed. He had six prongs on his horns; he was a noble buck. The controversy in your columns in regard to the custom of hounding vs. still hunting is interesting to read, but I don't think will make many converts on either side. I give you an example of hounding. Two weeks ago a party went from here a few miles out, taking four dogs. Deer were plenty when they went, and had been all fall. These parties were gone ten days and got seven, six does and one buck. Last week they tried it again, and came back, with one small fawn and one dog, reporting no deer to be found. I saw a "moss-back" from that section of the country, who said that two of the dogs that he knew of stopped, *sudden-like* and were there yet; and I don't know as I blame him for stopping them. I received a letter from Game Warden Higby, just before the law expired, telling me he would be here. I had written to him in regard to coming. I had two sure cases of violation of game law, knew where the birds were, but he did not appear. One of the cases is particularly aggravated, namely that of J. A. Clark. He has hunted and fished here for seven years, in and out of season, last year killing seven before the law expired, and this year three. He is "well fixed" for this world's goods, but prefers to hunt or fish for the market. He sold venison openly on our streets the last week in September. A slight flurry of snow fell here November 2. Plenty of partridge, but no ducks; song birds all gone.—W. E. M.

SOME GUN BARRELS CONTAIN STEEL.—Philadelphia, Pa., Oct. 29.—To my great regret, I find that my friend "Dick Swiveller" thinks that there is "no such thing" as "Damascus steel" and "laminated steel," as steel is "utterly unfit for shotgun barrels, as not combining lightness with strength;" "highly dangerous to use in any climate," etc.; "the fine iron and the mild steel," when forged, gives us, in the resulting "tubes," iron. "The laminated steel figure in barrels cannot be as safe as Damascus; * * * like the latter, the steel is reduced to fine iron," etc. Now, these statements are incorrect. I wish no discussion with my esteemed friend. The subject of "steel" and its manifold conditions is grand and limitless. But let me say: Possibly about one-half of the metal in a pair of first-class "laminated steel" or "Damascus steel" barrels is steel. We may call the whole "gun iron" very properly; but the proportion of steel which went in comes out steel—very mild steel, of course, but not "iron," by a long shot. Steel as used (in its various forms) in the finest weapons, big and little, which the world can show, does combine "lightness with strength." It rules the world. Barrels of the material known as "laminated steel" are not "fine iron," but, *e. g.*, half iron and half steel. They are quite as safe as "Damascus."—W. MCK. HEATH.

PENNSYLVANIA NOTES.—Allegheny, Oct. 29.—A heavy frost made its appearance here last Tuesday, bringing with it flocks of ducks to the water outside of the city limits, and several bags of no mean proportion have been made by hunters. The farmers in the rural districts, a few miles from the city, complain that the hawks and owls are present this year in large quantities and are causing fearful destruction to game. Bass fishing in Chartier's Creek is splendid this year. I was paddling in its waters in a Rob Roy canoe, some time since, and the bass almost jumped into the boat. Rabbits are present this season in legions, and will serve admirably to resort to in case one fails to secure other game. A number of loyal sportsmen, who have been "putting in their time" at Kankakee during the last few days, claim that game there is very plenty, and they substantiated their claim by dealing out ducks with a lavish hand. Clay pigeon matches are becoming quite frequent, and the fragments of red clay on Herr's Island and the Exposition grounds prove, without a doubt, that Pittsburgh and Allegheny possess sportsmen who need not be ashamed of themselves.—C. A. R.

SECOND BROODS OF QUAIL.—Fort Apache, Arizona, Oct. 26.—The articles in your issues of Sept. 14 and Oct. 12, "on second breeding of quail," induces me to write of some of my own experience in Indian Territory and the State of Texas. Let me first state I have been a devoted lover of "Bob White" for many years, have watched his habits closely, and many times have known a pair to raise two bevies in one season. Twice in the Territory, that is, two consecutive seasons, I watched two nests in the first, and one during the second season. In both cases—I should say the three cases—there was a second brood by the same pair of quail. Five years' experience there convinced me that in almost every, if not every, case the mother bird lays a second nest of eggs. In Texas it is well known that two broods are hatched each season, and some think three are, often. My experience in Texas was very extensive, in the north, southwestern and western parts. I always had fine dogs, both pointers and setters, and "Bob White" has for years been my favorite game, and many of them have fallen to my gun.—G. W. S.

SQUIRREL RIFLE.—Allegheny, Pa.—One of your correspondents, some time ago, inquired for information in regard to a rifle that would be suitable for hunting in general, and for shooting gray squirrels in particular. I have been experimenting with a .22 caliber first, and then with a .32 caliber, both Remington rifles, and I find that I prefer the .32 caliber far above the .22, for although the .22 c. will pick a squirrel from a tree in a very neat manner, the .32 c. will do the same with better execution, make a cleaner shot, and as it carries a larger ball and more powder, its force is a certain per cent. greater and its trajectory correspondingly less in an equal ratio, though while this change takes place there seems to be apparently no perceptible difference in the mutilation of the game, while at the same time you have a rifle that will kill much larger game, if need be, at longer range.—C. A. R.

OHIO.—Delta, October 30.—Ruffed grouse are very scarce in this section. Have been out several times and failed to find any except a few old birds. Cannot account for it unless it was the cold, wet weather we had last spring. Quail are quite plentiful, and we expect some glorious sport in a few days, as soon as weather gets a little cooler.—H. H. Q.

PENNSYLVANIA.—Berwick, October 30.—Game is on the increase here. Grouse are more plenty than for the last four seasons past. Quail are quite plenty all over, where there has not been any for several years. Rabbit, plenty, and I look for sport after November 1.—SUBSCRIBER.

CONNECTICUT.—Plymouth, Nov. 6.—Game has been and is now quite plenty around here this fall. There are gray squirrels, rabbits, foxes and 'coons. Quail have been more numerous than for a number of years, but partridge and woodcock are not very plenty; the latter were quite plenty in the early part of the summer, but after the law was off I could not find one there or any where else. Ducks are very plenty on Litchfield Pond. Men that have lived near the pond for years say they never have seen so many in all the time they have lived there as they have seen this year. We have had quite good sport killing gray squirrels; some days we got fifteen and never less than ten, and one day we shot an albino squirrel. He was all white with the exception of a light gray streak down the back about one inch wide, just back of the head, which narrowed down to a point at the root of the tail; he had pink eyes.—F. C. B.

MIDLAND PARK, N. J., Nov. 3.—Rabbits plentiful. Got into several large bevies of quail and brought some to gun.

Camp Fire Flickerings.

"That reminds me."

ONE hot day in June we were catching haddock in Anoplis Basin about a mile off the Digby, Nova Scotia, shore. Chet, after taking a turn of his line around his hand, had lain down in the bottom of the boat with his hat over his face as a protection from the noon-day heat of the sun, and was fast asleep. George had hooked a big skate and by a good deal of give and take managed to get him alongside without waking Chet. We pulled in Chet's line and fastening his hook firmly through the skate's tail, then let him go. Quickly laying down and feigning sleep we waited developments. We had not long to wait, when Mr. Skate ran the line out and it brought up on Chet's hand over the gunwale, the trouble began. He first sung out "Let go," and began kicking some imaginary enemy, but when he got belt upright with his eyes fairly open and realized the situation, he let out line with a "Jerusalem crickets! Great Cæsar! I've got him this time! Get up here, boys, I've got a hundred pound halibut hooked. Heavens, how he pulls. Why don't you fellows keep awake and tend to your fishing, you sleepy lubbers? See what I get by keeping wide awake and on the watch. When I go fishing I fish, I don't spend half my time snoring. Come, wake up and give a hand here."

After a long fight, Chet thought his fish was about tuckered and nearly to the surface, he yelled "Stand by with the gaff, boys; clear away between the main and forward seats; put both gaffs into him, steady, now, and we will show the natives at Bear River the biggest halibut ever caught in" ——. Chet had run on thus far in his excitement when the skate hove in sight tail foremost. I had commenced the second stanza of the Comanche war whoop and George was rolling in the bottom of the boat, when Chet, with the very devil boiling from his eyes, dropped his line and darted for the boathook; but divining his intentions, I was too quick for him, and forcing him back over the decking forward, George and I held him until the fight melted out of his eyes and he owned up sold.

Ever after if we wanted Chet to come down we only had to say, "Chet, let's put both gaffs into him." H. L. M.

Did any of you around the "Camp Fire" ever see white woodcock? Oh, yes, I have. I saw a pair of very fine ones once, perfectly white, and this is how it occurred. Phil. L., as genial soul as ever lived, years ago had charge of the messengers in the office of the old American Express before the big fire. Phil. was a bachelor, fond of horses, dogs and birds, particularly the latter. Canary birds from the Black Forest of Germany, mocking birds and redbirds from the sunny South, none but the purest and rarest specimens, were allowed to occupy the beautiful cages that graced his bachelor quarters. Occasionally some cage, carefully wrapped up and marked with the mysterious "D. H. a. c. P. L." would be found among the out-bound "run" of some messenger and consigned to some far-away agent, to be returned in due time labeled "Keep from cold," "Please feed and water." These came to be known among the boys as "Phil.'s pets" and were always well cared for, so that when one arrived Phil. generally had quite a crowd of lookers on about the office when the wrappings were carefully removed from the latest and rarest specimen, while all passed judgment upon size, plumage, color and markings, and probable musical or other good qualities.

One day one of the boys on the Dubuque night run asked Phil. how he would like a pair of white woodcock, adding that the agent out at Blanktown had a pair of beautiful ones that he thought he could secure for him if Phil. would like them to add to his collection, and would supply a cage. Phil. was delighted, but almost doubted the truthfulness of James, because in all his experience in the woods he had never heard of such a rarity, though he had heard of white deer, and even white quail and white blackbirds, but pure white woodcock, and two of them! That settled it. When the run went out that evening there was a good cage bearing the mysterious ciphers "D. H. a. c. P. L.," and tagged for the agent at Blanktown. When it came back, a day or so after, the usual curious crowd of messengers and office clerks gathered about while Phil. carefully untied the strings which held the paper with which the cage was wrapped to protect the birds from the cold, and there, curled up in a warm nest of soft moss, lay, sure enough, a pair of real whitewood cocks!—beer faucets. The roar that followed the discovery is often echoed to this day whenever some of the old hands have retold the story. But don't you tell who sent you this. DORSAL FIN.

We were sitting around the fire just before turning in, and relating experiences, telling stories, etc., when Chant, one of the party, said, "One of the greatest stories I ever heard was told me by a hunter I was talking with one day. An old man wanted his son to become a crack shot, and got a rifle for him. But the boy was afraid to shoot it, so the old man got him an air rifle that carried about a B shot. The boy practiced on shooting frogs, but could never kill any. One day he saw an old frog sitting on a log, and he took fair aim and fired. The frog slightly turned his head, but no more. The boy shot several times with the same results. Finally he caught the frog with red flannel and a hook and found all the shot inside of him. Come to find out, the frog saw the shot coming, thought they were flies, and swallowed them all." OSIOLIO.

Any one having furs for sale would do well to write to Ramsey Macnaughton, 3 Howard street, N. Y. See advertisement.—*Adv.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Grayling, *Thymallus tricolor and T. montanus.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius.*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca fluviatilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, 2 species.
War-mouth, *Chænobrytlus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Tautog or blackfish, *Tautoga onitis*
Bluefish or taylor, *Pomatomus saltatrix.*
Smelt, *Osmerus mordax.*
"Sea trout," *Cynoscyon carolinensis.*
Drum, *Pogonias chromis.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

And first, I shall tell you what some have observed, and I have found to be a real truth, that the very sitting by the river's side is not only the quietest and fittest place for contemplation, but will invite an angler to it, and this seems to be maintained by the learned Pet. Du. Moulin, who, in his discourse on the fulfilling of prophecies, observes that when God intended to reveal any future events or high notions to his prophets he then carried them either to the deserts or the seashore, that having so separated them from amidst the ess of people and business, and the cares of the world, he might settle their mind in a quiet repose, and there make them fit for revelation.

IZAAK WALTON.

CARP AND TENCH—ON THE TABLE.

AH, those were jolly days of old,
When feudal earl and baron bold,
And princely guest of high degree,
Vassal and serf and henchman free,
Assembled at the chieftain's call
To banquet in baronial hall.
The toesin sound from battlement
O'er hill and dale and wood was sent,
The banner'd turret called to arms,
The castle bell rang out alarms,
That all should gather at the board
Ere they should brandish spear and sword.

The liveried servitors would place
The boar-head slaughter'd in the chase,
Set venison-haunch on silver plate,
Bring great sirloin in pomp of state,
Bear flagons of the frothy ale,
Bring creamy mead-bowls to regale,
Bring blood-red juices of the vine,
The ripe, the old, the rosy wine;
But chief of all, on mighty dish,
Was plac'd the carp, the prince of fish

Right well did dainty churchmen know
To rear fat beeves, rare fruits to grow,
To breed in convent moat and trench
The bulky carp, the luscious tench,
To fill their ponds with pike and dace,
And all the wealth of finny race.
At matin hour, at vesper chime,
And at the mid-day feasting time,
How pleasant at the festive board,
Where capons smok'd and wine was pour'd
The brown-baked dish of carp to share,
The epicure's delicious fare.

Good trenchermen, I ween, were they,
Ready to gormandize or pray,
To patter prayer, or tell the bead,
Or riot in luxurious feed.
A stalwart race, those monks of old
Of wondrous bulk, of mighty mold.

When sumptuous board was duly spread,
The portly abbot at its head,
Boasting for guest the mitred priest,
Or learned prelate at the feast,
Would grandly bid, in accents sharp
The serving-men bring in the carp.

Ah, hooded monk and cowled friar,
Carousing by the blazing fire,
And feeding on all viands rare,
A delicate, delicious fare,
Draining the cup of brimming ale,
Your thirsty palates to regale,
How grand your state in priestly stall,
In peasant's hut or noble's hall!
Ah, little of such joys remain
For you, in England's modern reign!

ISAAC MCLELLAN.

THE FISH OF CENTRAL LAKE.

Editor Forest and Stream:

Since reading in your issue (of Aug. 3d, I think) of the loads of "herrings" which could be dipped up in pails, baskets, etc., at the head of Central Lake, I have wondered if "Kingfisher" would put in an appearance on the tenth of November, prepared with a dipper, and desirous of laying in his winter's stock of American sardines. I should have thought little of the matter, had not the writer expressed a desire that the multitudinous migration of these fish should be explained by scientific men.

The facts are that the thing is overstated. I heard that old herring story years ago, but my observation has failed to confirm it. I have known the place for some years, and it has not been possible within my knowledge for anyone to dip up these fish without some carefully contrived appliances, and even then no one has been able to take them in large numbers, though I have seen several persons try it, I think about half a barrel was the largest quantity taken by anyone within my knowledge.

The migration of these fish is analogous to that of the "bluebacks" in the Rangeley Lakes in Maine, at least they moved up the streams about this time of year when I was there, in 1857, and the same thing takes place with a similar fish in Squam Lake, N. H., and probably in most of the other northern lakes of any size.

The want of time has prevented me from attempting to

identify these fish. I can probably send you specimens if desired. What our friend "Kingfisher" will see if he is here on or about the tenth of November, will be a scattering shoal of fish moving up stream, and he must always remember that it is but seldom that anyone is found in the rural districts, (or for that matter, in cities) whose methods of observation are sufficiently accurate to be trusted by scientific men, even setting aside a very general propensity to exaggerate, when speaking of the doings or habits of fish and game.

I have no doubt that these "herrings" are common to all the lakes of the Intermediate Chain, as well as Torch Lake, and probably also Grand Traverse Bay, but it has happened that they were more likely to be observed at this point than any other. X.

CENTRAL LAKE, Mich., Oct. 27, 1882.

BASS FISHING IN FLORIDA.

ON several occasions I have referred to bass fishing in Florida, and shall allude to it again for the benefit of those who are disposed to indulge in the capture of large and gamy fish. The bass referred to is the *Sclenops velliatus*, known as the redfish in the Southwest, channel bass of Florida, and red drum on the Jersey coast. They are good biters, full of pluck, and worthy of the notice of those who wish to engage in the capture of a fish characterized by strength, pluck and persistent fight; like many other game fish there is no sulking. My memory may fail me, but my impression is, that for strength and a "long pull, a strong pull and a pull altogether," they about equal my old friends, the striped bass of the North. One advantage attending the channel bass fishing at the points to which I shall refer, is that they are all large, are plentiful, and ever ready to appropriate a piece of mullet or the half of a hard-back crab. Chumming and shedder crabs are not necessary.

I prepared a full supply of tackle for the capture of bass and tarpon, and was supplied with a heavy bass rod and a nine-foot, heavy bethabara wood rod. I had my basket packed, and was ready to start, when I indulged in an attack of dengue, or breakbone fever, and, as a consequence, lost the best fishing during the first three weeks of September.

On Wednesday, September 27, I proceeded to Mayport, and found a strong northeast gale blowing, causing very high tide, and a tidal current of four miles per hour, preventing the use of rod and reel, and I was forced to use a hand-line. On Thursday I anchored near Mile Point, and soon landed eleven bass, averaging thirty pounds. They were biting freely, and the last one hooked weighed forty pounds. Between his struggles to escape and the rapidity of the current, the anchor separated, and I was forced to cease fishing for the day. While fishing for bass I hooked a tarpon about six feet in length. He indulged in a few frantic rushes, and in a jump cleared the water six or seven feet, and when he struck his native element, the snood, consisting of a 72-thread, cable laid cotton line, had been cut by his scissor jaws. Soon after I hooked one of about the same size, and in bringing him to gaff, the hook tore out, and enjoyed the privilege of seeing him depart.

On Friday morning I could only secure five small mullet for bait, but proceeded to my usual fishing point. I had in my basket a rig for tarpon, consisting of three short and three long links of piano wire. To each short link I had soldered three 3.0 Virginia hooks. My boatman solicited the privilege of "trying for a tarpon." On a board I had wound 700 feet of line for the purpose of playing the racers. He baited the hooks with the half of a large sea trout, and with a large float allowed the bait to drift thirty yards astern. I instructed him to unwind the line and have it nicely coiled on the bottom of the boat ready for the first rush, if he secured a bite. He neglected to carry out my instructions; a tarpon seized the bait and the ball opened. The boatman braced himself and held on to the board; and the fish snubbed and jumped, and between the two they parted a new 72-thread cotton cable laid line. The hooks "No 6750. 3.0 file point extra strong Virginia hooks," supplied me by Shipley & Son, of Philadelphia, and the piano wire snood stood the test. I used my five mullets, captured five bass averaging 23 lbs., and departed for home. The smallest of the sixteen fish weighed 19lbs., and I may remark that it was the smallest one I have thus far captured at Mayport. I referred to the No. 6750, 3.0 hook and I have no hesitation in stating that they are the best tempered and strongest hook I have ever used, and are worthy of the notice of those who indulge in the capture of large fish.

Our bass fishing lasts about two months, but is best from the 1st to the 20th of September. If our Northern fishermen would visit the locality referred to, they would be surfeited with sport. In the surf at Pelican Island they can hook larger fish than at Mile Point, and at the mouth of Pablo Creek small bass, ranging from five to fifteen pounds. At the jetties, on the last of the ebb, slack water, and young flood, by using shrimp for bait, fishermen can capture, with rod and reel, from fifty to one hundred sheepshead, ranging from one-half to two pounds.

From New York, by New York and Savannah steamers and S. F. & W. Railway, this city can be reached in about forty-four hours. Excursion ticket, $43.50; fare from Jacksonville to Mayport and return, $1.50; board at Burroughs' Hotel, from $10 to $12 per week; boatman and boat, $2 to $2.50 per day—aggregate expense of a three weeks' outing, less than $100. If the parties were disposed to be economical, board could be obtained at a private house for $5 or $6 per week; boat hire, 50 cents per day; fishermen could catch their own crabs, purchase mullets for 15 cents per string, and shrimp at 10 cents per quart, for bait. The cost for the trip, if persons paddled their own canoe, would be less than $70.

At Mayport and Pilot Town there is a daily mail, and at the latter a telegraph station; steamboat daily to this city; health of the locality excellent; bathing superior on the beach; nights cool; heat of the day not oppressive; insect pests but seldom annoying; and last though not least the fishing is excellent. If fishermen were not disposed to indulge in the services of a fisherman, they could hire one named McMullen for a day, and ask him to take them to the shell bank near Mile Pond, and to the one opposite the old light house. While anchored the piscators could take bearings on the shore and at any time find the "drops."

JACKSONVILLE, Fla., Oct. 31. AL FRESCO.

LARGE VIRGINIA BASS.—Leesburg, Va., Nov. 1.—The bass fishing here is extraordinary. I've just seen a bass caught by Mr. Thomas Edwards, weighing six pounds and two ounces, twenty-two inches long, and sixteen inches in girth. The measurements are mine, and the fish was weighed by Dr. Edwards. Strings of twenty-five, thirty, thirty-four, thirty-six, etc., have been brought in by different parties this week, one string of twenty-three estimated to weigh seventy pounds. I don't want to get into any difficulty, but sign my name in full.—THOMAS WILLIAMSON.

LAKE ONTARIO BASS FISHING.—Medina, Orleans County, N. Y., Nov. 3.—Quite a mine of wealth and pleasure has been discovered the past summer, in Lake Ontario, ten miles north of this place. There is a sand bar located about three quarters of a mile out in the lake, on which the water is six or eight feet deep. Someone conceived the idea of going out there to fish for bass. Happy thought. It proved to be a success, and many fish have been caught. Lately they have been taking mostly maskinonge. Several large pickerel have also been caught by trolling. A party went down from here a short time ago, and brought home over 100 pounds of fish, others have been when the lake was rough and had poor luck. It would not be surprising if there are other bars along on the lake that might be developed into good fishing grounds next season.—SAL NITER.

FLORIDA BASS.—Lawtey, Florida, Oct. 25.—The statements I make can be verified by writing to the parties whose addresses are given in connection with this letter, who are the men that caught the fish in question. Col. V. J. Shipman and Walter Todd, of this place, and I. Shipman were fishing in the Grass Lakes, distant some thirty miles. These lakes are perhaps as well stocked with fish as any waters in Florida. The Colonel hired a man with his boat to take him out alone, with the idea of making the biggest catch. He caught a good many bass weighing from three to six pounds, and finally an eight-pounder. That was enough for the Colonel. They pulled ashore, when, fish in hand, he marched up to camp. But his father, I. Shipman, had caught a bass that weighed twelve pounds, and other parties there caught some equally as heavy.—KNICK.

Fishculture.

THE NEW YORK FISH COMMISSION.

THE annual report of the New York Fish Commission for 1881 is just before us. It opens with a sketch of fishculture by the secretary of the board, General Sherman, and goes on with a sketch of the State hatchery at Caledonia, with which our readers are familiar. Concerning that prolific trout stream on which the hatchery is located, the report says:

Six miles above the point where Caledonia Creek enters the Allen stream the water in midsummer often wholly disappears from its rocky bed. It is supposed it falls into the caverns in the rock, and after an underground passage of several miles reappears in the springs which are the apparent source of Caledonia Creek, and traversing that stream to its mouth, are restored to Allen's Creek. The water in its underground passage is kept at a low temperature and receives an additional impregnation of lime, with which it is found always largely charged. The theory of the underground passage is strengthened by the fact that when the water is lowest at the point where it disappears, the springs at the head of Caledonia Creek discharge with nearly the same freedom as in seasons of wet.

The Caledonia purchase includes about six acres of land and water, and is quite sufficient in extent for all the necessary purposes of the commission. The water immediately above the hatchery now has a slight fall, or rapid, to which an additional elevation is given by a timber dam. This gives through the artificial ponds and through the hatchery buildings a discharge copious and free. During the last year it was found necessary to rebuild the artificial ponds, the timber lining of the old ones having become much decayed, and some changes in form and size being desirable. The work was done mostly by the regular employes of the hatchery at times when interior work was not necessary. The whole cost of materials and labor was about eight hundred dollars.

The commissioners have made some comparisons in the weight of different kinds of fish raised in the State hatchery, which they record as a matter of interest. At three years old, the largest salmon trout attains a weight of one pound eight ounces. Brook trout of the same age weigh one-half pound. California trout, one pound. Hybrids from the male brook trout and the female salmon trout, one pound. No doubt in wild waters the weight would be much greater.

"The commissioners are inclined to doubt, from the facts brought out in their correspondence, whether much benefit has resulted from attempting to stock small streams in populous neighborhoods, even though they may have been formerly good trout waters. This class of streams may have been suitable fifty years ago, when the population was sparse and the existence of large forests at the head prevented the rapid evaporation which now occurs in consequence of the destruction of the live timber. The changes consequent to the clearing up of the new country have not only greatly decreased the volume of the spring streams, but have changed the temperature of the waters, so that they are no longer capable of sustaining fish like the trout kind, that must have pure cold water or they languish and die. The same changes have diminished the supply of the animal food which is necessary to their healthy development.

The commissioners have noticed that the best results of stocking have occurred where the waters, whether of lakes or running streams, have been of greatest extent. This is proved in the case of Otsego, Cayuga, Canandaigua and Hemlock lakes, and the waters of the Fulton chain in the northern wilderness. Nowhere has the deposit of trout fry been attended with such marked success as in the waters in and bordering that great forest. These possess all the elements necessary to the perfect development of fish life. In these extensive bodies, fed from pure and never failing springs, and supplied with all the forms of animal life best adapted for fish food, the growth of the trout proceeds with thrice the rapidity of the same species in the smaller waters of the settled country, and all the processes of nature in connection with their development and increase proceed in a corresponding ratio.

In regard to the stocking of Bisby Lake, in the Adirondacks, the following is taken from the report of the Bisby Club:

"In the summer of 1879 a large consignment of the fry of the land-locked salmon from the State hatching house at Caledonia, en route to Bisby Park, had reached as far as the head of Woodhull Lake, where our trail commences. The day was one of the hottest of the summer: the fish had been nearly twenty-four hours on the journey; the stock of ice with which they had been refreshed on the way had given out and no more could be procured. Night came on; a mile and a quarter overland remained of the journey and the fish were dying by hundreds. No springs were near, and the water of the lake at the shore was of too high a temperature to revive or save them; so, as a last resort, they were conveyed to deep water and committed to their native element. No more was thought about them; the probabilities being that all had perished. But shortly after the disappearance of the ice last spring several fish were caught near the shores of a species unknown to the resident fishermen. A specimen was brought to Bisby Lodge, where it was at once identified as a true land-locked salmon. It had all the markings of the *Salmo salar*, or salt-water salmon, and weighed nearly a pound. They showed themselves again in the fall; this time in the Woodhull stream below the lake, to which they had found egress through the open gates at the dam. They had probably been on their semi-annual run and were striving to return to the lake when caught just at the mouth of the gates. Several attempts have been made to plant the land-locked salmon in the waters of this State, but this is the first that has shown promise of success. It establishes beyond question the fact that the waters of our Northern wilderness are congenial to this fish."

In the winter of 1882 the club had reports of the taking of a number of these fish through the ice on Woodhull. Specimens, each eighteen inches in length, were sent to one of the commissioners. Two, fresh caught and preserved on ice, were forwarded to Mr. E. G. Blackford's annual exhibition held in Fulton market. They are thus spoken of in a letter from the secretary of the club, Mr. H. H. Thompson, to one of the commissioners:

"As soon as Mr. Blackford got sight of me he hastened to say that a box had been delivered that morning with a card he could hardly make out but he thought he could show me some fish from Bisby. And sure enough there were spread on a silver dish two of the handsomest fish I ever saw, and which attracted a great deal of attention. For outline, coloring, and plump firmness of flesh there was nothing in his exhibition to rival them. There was a four-year specimen of the same species from Caledonia, but it was nowhere in comparison, being pot-bellied and light on the under side. Ours were clad in dark, glistening steel from head to tail; top of head as black as ink, and a touch of beautiful bronze on the cheeks. Blackford had never seen such handsome land-locked salmon. I don't know what other lakes might produce, but Woodhull takes the palm up to this time. The food must suit them, and the color of the water and soil puts on a dress that is perfectly lovely."

These are the fish that were thrown into the broad lake to save their lives, if possible. It is worthy of consideration whether the mode of deposit had not something to do with the success of the enforced plant. The young of the trout family are usually deposited in small, still tributary waters in order that they may find suitable food and shelter and be exempt from the accidents to which they would be liable in larger waters. These seem to have found all the requisite food in the open water of the lake, and it is quite probable that they had exemption there from predatory enemies that might have been encountered in the streams.

There are other lakes in this wilderness that are still better adapted to land-locked salmon than Woodhull; but their success in this water makes it certain that they may be made an incalculable addition to the native supply of these waters.

Concerning the identity of the smelt and the frost fish of the Adirondacks the report corrects an error which originated in our pages by the fact that a true smelt was sent from Vermont to the office of FOREST AND STREAM for identification at the same time that an inquiry came concerning the "frost fish" of the Adirondacks, and the letters were unaccountably mixed, and we answered the man who sent the frost fish that it was a smelt. The fact is, that while both belong to the Salmonidæ, the "frost fish," *Prosopium quadrilaterale*, is a fish that grows to the weight of a pound or more, and is closely related to the white fish of the lakes. Speaking of the frost fish, the report says:

Give any of the old guides or fishermen of the Moose River chain his choice between a trout and a frost fish, and the chances are nine out of ten that he will choose the frost fish. Something of this preference may be due to the fact that the frost fish comes but once a year, while the trout "ye have always with you."

The frost fish take their name from their habit of running from deep water in the frosty months of the autumn to cast their spawn. This is the only season they are never caught or seen by the fishermen. They are taken usually in pens or weirs formed by building a sort of close picket fence across the stream where they run at points a few feet apart. In the lower fence is a gate of the same style of construction. This is opened at night, which is the only time the fish run, and closed as morning approaches. The fish enter in great numbers. They cannot get above the upper wicket, and as it is contrary to their instincts to run down till their spawn is cast, they become securely imprisoned. They are taken out of the pens in scoop nets. Many are slightly salted and kept for winter use by the guides and local fishermen; and whether fresh or salted are a toothsome morsel.

Much of the correspondence of the commission is in relation to the German carp, about which inquiries come daily. Many applications, also, are made for the fish, which the commissioners are unable to supply, as they have no facilities for raising them, and entertain doubts whether it is a good policy for them to cultivate carp for distribution, as the fish are not suited to our native waters.

One of the commissioners, however—Mr. Blackford, who from his relations with the United States Commission and his business connections as a dealer in Fulton market, has opportunities for procuring supplies occasionally for distribution—has given this fish without cost to the State, a dissemination which will probably test its value for the latitude of New York.

Two hundred and thirty carp of the leather species have been received from the United States Commission. An account of the distribution of these will be found in the appendix.

The few kept at the hatchery are in a pond with some other miscellaneous stock. The Caledonia waters are too cold for carp, and in order to give them a fair trial, ponds would need to be constructed quite different from those in use for other fish.

In the matter of fishways, in which the State is very deficient, we note that the commissioners have approved of the style known as the McDonald fishway, which, as they say, has been approved by the best pisciculturists.

Regarding the proposed hatchery at Cold Springs, Long Island, they say:

A committee, consisting of the new commissioner, Mr. Blackford, and Mr. Roosevelt, was appointed to examine the spring streams on Long Island with reference to the selection of the best site. With the assistance of Mr. Fred Mather, a thorough examination was made in the years 1880 and 1881. The report of Mr. Mather was submitted to the full board and the site recommended by him was chosen. Mr. Mather's report will be found in the appendix. This report has been published in our pages.

The site selected is at Cold Spring, on the north side of the island, thirty miles distant from Brooklyn, and having convenient communications by both land and water with other portions of the island. This site has the especial quality of good and abundant water. It is near to the seashore, but sufficiently elevated to be beyond reach of the tides and ocean swells. The land belongs to Mr. John D. Jones, of a family long resident on Long Island and widely known there and in the adjacent great cities. It was formerly occupied for a hatching-house of sufficient size and reasonable convenience.

A liberal lease of this property was given to the State, free of rent, by Mr. Jones, for the period of ten years, for the purpose of the commission, and the commissioners take this appropriate opportunity to tender to Mr. Jones their earnest

acknowledgements for his generous act, and to express to him the hope that through his liberality trout may become as plentiful on Long Island as they were in the days of his boyhood.

In conclusion the commissioners say: It is not the office of the New York Commission to enter upon scientific investigations in embryology and other principles lying at the foundation of animal life. Their allotted work is to raise and distribute fish to stock the depleted waters of the State; and when they report what they have done to this end, their mission as editors is ended.

To the United States Commission are wisely left the great problems in fish science, from the solving of which we are to look for greater light to guide our work. That commission, with its learned head, its corps of eminent scientists, and its liberal government support, is adequate to this work, and will doubtless perform it in a manner which shall not only greatly assist state effort, but do honor to it in the broad field of science.

Tables of the sales of fish in Fulton Market and a list of the fish commissions of the different States complete the report. It is illustrated with badly executed plates of fish which mar an otherwise good report. The only good and valuable plates which this commission ever published were those of Prof. Lintner on the insects of Caledonia Creek, in the report for 1878.

BENJAMIN P. HOWELL.

ON the morning of the 10th of October, Benjamin Paschall Howell, M. D., one of the Commissioners of Fisheries for the State of New Jersey, died at his late residence in Woodbury, in the seventy-fourth year of his age. Dr. Howell was born November 26, 1808, in Gloucester county, N. J.

His father, Colonel Joshua Ladd Howell, commanded a regiment of Jersey troops during the last war with Great Britain, and died shortly after the declaration of peace. His mother, formerly Anna Blackwood, of Haddonfield, N. J., was a stepdaughter of Col. Joseph Ellis of revolutionary fame.

At an early age Dr. Howell commenced his studies at the academy in Woodbury. Later he studied at Rutgers College, then took up the study of medicine under his eldest brother, Dr. Samuel L. Howell, professor of anatomy at Princeton College, and finally completed his medical training at the University of Pennsylvania in 1831. After which, for a year and during the prevalence of the cholera in the Philadelphia Alms House, he was resident physician in that institution, and as such discharged his duties with great skill and courage.

After practicing his profession for ten years in Philadelphia, he removed to his home in New Jersey, and while continuing to practice, he soon became identified with the fishing interests of the State. Both on the Delaware and in the Legislatures of New Jersey and Pennsylvania, almost single-handed, for many years, he combatted the encroachments of the shad gill-net fishermen, who, although paying no taxes to the State, looked upon its rivers as public domain, and claimed the right to fish in all parts of their waters, at all hours and in all seasons, regardless alike of the law, of the proprietary and riparian rights of those interested in shore fisheries, and of the sanctity of the Sabbath. While the shore fishermen were compelled by law to cease operations between set of sun on Saturdays and twelve o'clock Sunday nights, to stop fishing for shad on the 15th of June, and were subjected to the taxation of their fishing grounds and tackle.

For many years, also, he successfully opposed certain manufacturing combinations in their efforts before the Legislatures of Pennsylvania and New Jersey to obtain the right to construct a dam across the Delaware above Trenton, at the head of tide, well knowing the fishing interests of both States would suffer thereby.

It is, therefore, not going too far to say that mainly to his constant vigilance and the legislative enactments which he fathered, are due the prosperous conditions of the shad-fishing interests of these States.

In 1870 his services to the State were acknowledged in his being appointed the first Commissioner of Fisheries for New Jersey (in company with Dr. Slack, of Bloomsbury,) by Governor Randolph, under the act of that year creating the commission, and he continued to hold his commission uninterruptedly up to the time of his death.

In Dr. Howell the State has lost an efficient and untiring officer, unobtrusive and retiring to a fault, and one whose integrity has never been questioned. An able, accomplished and benevolent physician.

His large circle of friends mourn the loss of a thorough gentleman of the old school—a type fast disappearing—whose courteous bearing was ever noticeable and admired, while his family, whose grief is the greatest, mourn for the head, of which they were justly proud.

RAPID GROWTH OF TROUT IN COLORADO.

DENVER, Colorado, Oct. 29, 1882.

Editor Forest and Stream:

I drove down to-day to the State fish hatchery, and there learned some facts which are so astonishing to me that I take the liberty of dropping you a note, in the belief that they may interest some of your readers. The enterprise of artificially hatching trout, to maintain in some measure the stock in our mountain streams, was started about one year ago, under an appropriation of $5,000 from the State Treasury, to last two years. A site was secured eight and a half miles down the Platte from Denver, where some springs break out along the foot of a low bluff bordering the river bottom. The first shipment of 150,000 trout eggs was received from New England Dec. 28, 1881. A second like shipment came two weeks later. Mr. Bogart, who was placed in charge and has so remained ever since, says the hatching was very speedy, and reached ninety-nine and eight-tenths per cent. of the eggs; 250,000 of the fry were distributed in various streams of the State, and the remainder are at the hatchery. There has been scarcely any loss. They occupy a ditch about three hundred feet long and from one to four feet wide, into which a dozen or more springs flow directly, and the outlet of which would probably fill a three-inch pipe. These fish, now from nine to nine and a half months old, are from seven to ten inches long, and there are many among them of half a pound weight each. They are making spawning beds, and will doubtless deposit some eggs this fall. Is not this a rapid growth and speedy maturity for trout? It seems so to me, and Mr. Bogart says he will challenge the world to beat it. He thinks no State ever before made such a success of its first attempt in fisheulture.

It is true these fish have been well cared for and well fed. They suffered for about one month from over-crowding before the distribution was completed, when there were over 150,000 in the space now occupied by the 15,000. I think the latter are too much crowded now. The more open water is literally filled with them, and as a stranger walks along the bank they fairly make it boil. They are fed twice a day on beef liver and lungs chopped up with a hatchet. Mr. Bogart says any of them will eat from his hand. A few thousand of the California rainbow trout were hatched, but they did not prove so satisfactory. Nearly all were distributed to three or four localities, and the largest lot was lost recently in transit. Their growth has not been as rapid as that of the New England trout, and Mr. B. says they are not so good a fish- that we do not want them.

Looked at in a peculiary light, this trout experiment figures about as follows: $5,000 appropriated; ten acres of land secured, with all needed springs and water supply, worth $500; improvements worth $2,000, with capacity for half a million fish at a brood; 15,000 fish on hand that would bring in the Denver market before New Year's Day $3,000; 285,000 fish placed in the streams of the State, and enough money yet on hand for this winter's hatch and to carry the concern along until next June. Pretty good. Or figure it this way: If the entire hatch could have been preserved and cared for as the 15,000 have been, there could have been cleaned up from the investment in one year $60,000. It looks profitable. We have been hearing for two or three months past that troutlings liberated in mountain streams in May and June last were being caught.

There are a few carp in a pond at the hatchery, but they do not grow very rapidly. Mr. Bogart says the water of this country is too good for them; that the trout is as easily raised and infinitely better, and where they will not live the black bass is the next best. He goes East soon for a supply of the latter.

The temperature of the springs at the hatchery is 54 deg. The head of water is three and a half feet. In the ditch where the trout now are the temperature has sometimes gone up to 56 deg. I didn't mean to string out so much. Pardon.

W. N. B.

GREENWOOD LAKE—The Greenwood Lake Association has issued a circular to the lovers of piscatorial spor on Greenwood Lake, which reads as "follows: This favorite fishing locality has very heavy drafts made on it every season, and our desire is that its reputation may not only continue, but be vastly enhanced. The Greenwood Lake Association assumes the responsibility, and will endeavor to preserve the reputation of the Lake for its fine fishing. This can only be done by liberal reinforcements to its scaly army of occupation. A moment's reflection should convince any thoughtful person that the constant warfare waged by the visitors to the lake, is a depleting process which must result in extermination unless guarded against. The association, therefore, desires to supplement the natural increase of the surviving fish by artificial means, thus also adding new and desirable varieties of game and toothsome sorts, and thereby improving this field of pisciorial sport. But this involves expense, and we appeal to you to lend a helping hand, believing you will reap a satisfactory remuneration with rod, line and hook during the succeeding seasons. Eight gentlemen have generously given ten dollars each, for this object, as the beginning of a purse to meet the necessary outlay. Please respond promptly to this (our earnest appeal to your angling generosity), to—P. M. MILLSPAUGH, Treasurer of Fish Fund, 51 Front street, New York."

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17. Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. Washington A. Coster, Flatbush, N. Y.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 1. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

EASTERN FIELD TRIALS DERBY.

The following is a complete list of the entries in the Derby, with a full description of each dog and the pedigree, so far as we have been able to obtain them. All were whelped in 1881:

1. BIZZORA. J. S. McIntosh, Pittsburg, Pa.—Red Irish setter bitch, July 8 (Biz-Flora).

2. LORNA DOONE. Spencer M. Nash, New York.—Orange belton English setter bitch, June 4 (Royal-Madge).

3. MOLLIE T. Henry Pape, Hoboken, N. J.—Orange and white English setter bitch, Sept. (Thunder-Loui).

4. COLONEL NOBLE. Chas. Antoine, New York, black, white and tan English setter dog, July 18.—(Count Noble-Nellie).

5. PEBBLE. Prof. H. J. Rice, Brooklyn, New York.—Blue Belton English setter bitch, Sept. 14 (Count Noser-Maple).

6. ISABELLA II. Wm. H. Thayer, Bristol, R. I.—Blue, gray and tan English setter bitch, May 31. (Schuyler-Isabella).

7. ELSA. Edward E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 6 (Drake-Countess May).

8. ROY. Edward E. Hardy, Boston, Mass.—White, with black head, English setter dog, June 9 (Pindee-Flora).

9. SIR JOHN. J. Otto Donner, New York.—Orange and white English setter dog, January (Ranger II.-Mallard's Belle).

10. DASHING BELLE. J. Otto Donner, New York.—White, liver ticked, English setter bitch, March 23 (Decimal Dash-Bessie).

11. MATE. J. Otto Donner, New York.—White and orange English setter dog, September. (Paris-Fairy Belle).

12. PRINCE ALBERT. A. H. Moore, Philadelphia, Pa.—Lemon and white English setter dog, April 25. (Leicester-Rose).

13. MEG. Charles J. Stewart, Jamaica, N. Y.—Red Irish setter bitch, July. (Chief-Beesey.)

14. FREDERICA. Francis P. Magoun, New York.—Black, white and tan English setter bitch, April 22. (Decimal Dash-Bessie).

15. COUNTESS MAY II. Luther Adams, Boston, Mass.—Black and white English setter bitch, April 12. (Drake-Countess May).

16. PEMBINA. Sidney Dillon Ripley, New York.—Blue belton English setter bitch, April (Pembroke-Royal Gift).

17. CHESTER. Major George R. Watkins, Brooklyn, N. Y.—Orange and white English setter dog, July 12 (Leicester-Crook).

18. CAPTAIN DORSETT. Major George R. Watkins, Brooklyn, N. Y.—Blue belton English setter dog, July 12 (Leicester-Crook).

19. BERTIE JARDEN. Major George R. Watkins, Brooklyn, N. Y.—Orange and white English setter bitch, July 12 (Leicester-Crook).

20. GARNER. Thomas Stodd, Catasauqua, Pa.—Red Irish setter dog, April (Elcho II.-Dell).

21. NANNIE. Thomas Stodd, Catasauqua, Pa.—Red Irish setter bitch, April (Elcho II.-Dell).

22. DUKE. George F. Gildersleve, Brooklyn, N. Y.—Black and tan setter dog, July 27 (Glen-Gipsy).

23. PRINCE PEPPIN. Wm. Tallman, Worcester, Mass.—Orange and white English setter dog, August (King Peppin-Livy I.).

24. ST. ELMO IV. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black, white and tan English setter dog, April 20 (St. Elmo-Clio).

25. LADIE FAYNE. Dr. S. Fleet Speir, Brooklyn, N. Y.—Blue belton English setter bitch, August 30 (Emperor Fred-Wanda).

26. MARQUIS DE COEEZE. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black, white and tan English setter dog, July 6 (Emperor Fred-Lizzie Lee).

27. GREAT PECONIC. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black, white and tan English setter dog, June 17 (Emperor Fred-Fascination).

28. MAIDA II. Dr. S. Fleet Speir, Brooklyn, N. Y.—Orange and white English setter bitch, August 22 (St. Elmo-Maida.)

29. CARLISLE TRAMP.—Dr. S. Fleet Speir, Brooklyn, N. Y.—Liver and white English setter dog, May 24 (Carlisle Bill-Carlisle Nell).

30. SPENCER. Dr. S. Fleet Speir, Brooklyn, N. Y.—Orange and white English setter dog, July 12 (Leicester-Crook).

31. LEICESTER CROOK.—Dr. Henry F. Aten, Brooklyn, N. Y.—Orange and white English setter dog, July 12 (Leicester-Crook.)

32. DASHING MASCOTTE.—Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter bitch, August 6 (Dr. Syntax—Neilson's Rose).

33. DASHING THEO. Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter dog, August 6 (Dr. Syntax—Neilson's Rose).

34. QUEEN PETREL. James H. Goodsell, New York.—Lemon and white English setter bitch, December 25 (Thunder—Petrel).

35. BELTITUS. James H. Goodsell, New York.—Blue belton English setter dog, March 17 (Rock-Meg).

36. CARLISLE STING. James H. Goodsell, New York.—Liver and white English setter dog, May 24 (Carlisle Bill-Carlisle Nell).

37. SALLY. W. A. Coster, Flatbush, N. Y.—Lemon belton English setter bitch, Sept. 10 (Belton-Blonde).

38. BYRON. Wm. Mahone, Jr., Peterburg, Va.—Red Irish setter dog, Aug. 11 (D'Jonce-Jane).

39. TIPTON. Conestoga Kennel, Lancaster, Pa.—Red Irish setter dog, April (Don-Clytie).

40. REED WIND'EM. Conestoga Kennel, Lancaster, Pa.—Black, white and tan English setter dog, May 29 (Count Wind'em-Norna).

41. CANADIAN BEAUTY. Conestoga Kennel, Lancaster, Pa.—Liver, white and tan English setter bitch, July 3 (Paris-Dawn).

42. SANDY D. Edward A. Spooner, New York.—Orange and white English setter dog, Nov. 23 (Dummy-Nell).

43. BECKY D. Edward A. Spooner, New York.—Orange and white English setter bitch, April 20 (Dummy-Nell).

44. BESSIE II. Richard Pancoast, New York.—English setter bitch, March 22 (Decimal Dash-Bessie).

45. BOB ATEN. H. E. Hamilton, New York.—Black and tan setter dog, March 31 (Glen-May).

46. GLENCHO. Dr. Wm. Jarvis, Caremont, N. H.—Red Irish setter dog, June 1 (Elcho-Norcen).

47. ZIP. Thomas Paton, New York.—Orange and white setter bitch, February.

POINTERS.

48. SENSATION, JR. J. Otto Donner, New York.—Lemon and white dog, February (Sensation-Daisy).

49. ABBESS. H. Clay, Glover, Toms' River, N. J.—Lemon and white bitch, April 27 (Dan-Psyche).

50. BONNER. John G. Hecksher, New York.—Liver and white dog, April 27 (Dan-Psyche).

51. LALLA ROOKH. Luke W. White, Bridgeport, Conn.—Lemon and white bitch, December (Sensation's Son-Grace).

52. TICK. George W. Post, Brooklyn, N. Y.—Liver and white dog, May (Bob-Dido).

53. CORKER. Westminster Kennel Club, New York.—Lemon and white dog, May 22 (Sensation-Polly).

54. JACK. John B. Marston, New York.—Liver and white dog, September 10 (Joe-Fan).

55. JILL. John B. Marston, New York.—Liver and white bitch, September 10 (Joe-Fan).

56. BERYL. H. Hall, Marlborough, Mass.—Lemon and white bitch, July (Glen-Clair).

57. MIDNIGHT. E. S. Wanmaker, Elmwood, N. C.—Black dog, June 13 (Chipps-Nettie).

58. DARKNESS. E. S. Wanmaker, Elmwood, N. C.—Black bitch, June 13 (Chipps-Nettie).

59. WALTZ. E. S. Wanmaker, Elmwood, N. C.—Lemon and white bitch, May 31 (Bob-Gleam).

60. SEFTON. A. E. Godefroy, Guymard, N. Y.—Liver and white dog, May 12 (Croxteth-Vinnie).

EASTERN FIELD TRIALS.

THE following entries for the Eastern Field Trials have been received in addition to those published last week:

MEMBERS' STAKE.

8. BILLY FLINT. J. Herron Crossman, New York.—Liver and white English setter dog, 4 years (Rob Roy-Waddington's Fanny).

9. TICK. George W. Post, Brooklyn, N. Y.—Liver and white pointer dog, 15 months (Bob-Dido).

10. DASHING ROVER. T. F. Taylor, Richmond, Va.—Black, white and tan English setter dog, 3 years (Dash II.-Norna).

11. DAN. Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter dog, 3 years. (Pedigree unknown).

12. PLANTAGENET. James H. Goodsell, New York.—Lemon belton English setter dog, July 16, 1880 (Dashing Monarch-Petrel).

13. DAISY LAVERACK. Jas. H. Goodsell, New York.—Lemon and white English setter bitch, June 19, 1879 (Thunder-Peeress).

14. DASHING MONARCH. John C. Higgins, Delaware City, Del.—Black, white and tan English setter dog, August 25, 1878 (Dash II.-Countess Moll).

15. DOLLY. J. E. I. Grainger, New York.—Lemon and white pointer bitch, age and pedigree unknown.

ALL-AGED STAKE.

20. TOM. Major George R. Watkins, Brooklyn, N. Y.—Orange and white setter dog, 4 years (Royal Duke-Bessie).

21. TRINKET. T. F. Taylor, Richmond, Va.—Black, white and tan English setter bitch, 2 years (Crack-Diana).

22. LONDON. H. Bailey Harrison, Tilsonburg, Ont.—Blue belton English setter dog, 2½ years (Paris-Lill).

23. DON. Elliott Smith, New York.—Lemon and white pointer dog, 3 years (Sensation-Psyche).

24. BAB. Elliott Smith, New York.—Lemon and white pointer dog, 3 years (Rush-Romp).

25. CHIEF. Max Weuzel, Hoboken, N. J.—Red Irish setter dog, 3 years (Berkley-Duck).

26. PLANTAGENET. Jas. H. Goodsell, New York.—Lemon belton English setter dog, 2¼ years (Dashing Monarch-Petrel).

27. DAISY LAVERACK. Jas. H. Goodsell, New York.—Lemon and white English setter bitch, 3½ years (Thunder-Peeress).

28. LACKET. Jas. H. Goodsell, New York.—Black, white and tan English setter dog, Sept. 26, 1878 (Rattler-Leda).

29. LINCOLN II. John C. Higgins, Delaware City, Del.—Lemon and white English setter dog, August 28, 1879 (Lincoln-Petrel).

30. DASHING ROVER. T. F. Taylor, Richmond, Va.—Black, white and tan English setter dog, 3 years (Dash II.-Norna.)

31. CROXTETH. A. E. Godefroy, Guymard, N. Y.—Liver and white pointer dog, 4½ years (Young Bang-Jane).

32. FOREMAN. Wm. Tallman, Worcester, Mass.—Black, white and tan English setter dog, 3 years (Dashing Monarch-Fairy II.).

33. SMUT II. T. M. Aldrich, Providence, R. I.—Black English setter bitch, 3 years (Trim-Smut).

34. RALEIGH. A. H. Moore, Philadelphia, Pa.—Red Irish setter dog, 4 years (Elcho-Rose).

35. LUNA MAY. A. H. Moore, Philadelphia, Pa.—Lemon belton English setter bitch, 3 years (Paris-Pearl).

36. LADY DUFFERIN. John G. Hecksher, New York. Lemon and white pointer bitch, 4½ years (Duke-Pan).

THE MASTIFF "GURTH."

WITH REMARKS ON POINTERS AND SETTERS.

Editor Forest and Stream.

I have the pleasure of enclosing photograph of my mastiff dog Gurth, winner of first prize in champion class at bench show of Westminster Kennel Club, New York, April, 1882.

The picture does not do him justice, as it fails to convey a true idea of his grand proportions and majestic appearance. His head looks too small. The swelling on the neck is the mark left by a severe blow or kick he received from a horse some months ago, in the side of the head, and which it was necessary to lance, and which will probably never leave him. When I return to New York I hope to secure the skillful pencil of an artist, and have my favorite's portrait handsomely executed.

I am glad you have so courteously expressed a willingness to publish Gurth's picture and dimensions. I am a great lover of all good dogs, sporting and non-sporting, and possess the finest specimens of the several breeds I most fancy, with the exception of the pointer, and for years my efforts to obtain one that pleases my eye (too critical, I fear) have been in vain. My friends say I should have my dogs "made to order!"

Your interesting and instructive paper has contained many pictures of setters and pointers, and, in fact, nearly all breeds of sporting dogs, but I have not as yet found the faithful mastiff, or St. Bernard, or Newfoundland, admitted to your gallery. Perhaps their masters have not knocked for entrance there. And so I make bold to say a word or two in favor of the larger dogs, those true and tried guardians, both of life and property, our intelligent companions in our walks, and who are ornaments to our homes. Why should not they find representation and championship in your columns? Let us cultivate and try to improve these larger breeds, just as useful in their way as the trusty followers of the gun.

I am a staunch advocate of the bench show, and believe, nay, I know, that we owe to the public exhibitions of dogs, and the award of prizes, the vast improvement made in the different breeds in the last twenty years, especially in the larger classes. Why, I remember that at our first bench show in San Francisco, Cal., where I have been living for the past eleven years, two of the judges who served with me on the committee of awards, did not know the difference between St. Bernards and Newfoundlands, or Ulmer dogs (miscalled Siberians) and bloodhounds, and yet one of these two good fellows was considered a grand judge of the canine race, because he owned several mongrels.

There is one mistake I think we do make, however, nowadays with our own setters and pointers. We breed too much for speed in the field and not enough for substance and bone. I quite agree with one of the correspondents in your paper, who said he didn't want quite so much "speed, but more muscle." At the last bench show of the Westminster Kennel Club, in New York, I saw setters and pointers which captured prizes, so ill-shapen in my eyes, that I would not care to own them. Their masters had been apparently satisfied to know that they had "blue" blood in their veins, and felt assured that this was sufficient to warrant their wearing the laurels of victory at a bench show, entirely irrespective of their stability or fitness for the field. It seemed to me they were willing to deteriorate their breed in order to win a few paltry prizes. And these dogs I refer to were not even handsome to critical and exacting eyes. They were too leaded, too sharp-muzzled, too narrow-chested, and not even deep-chested enough. They lacked muscle, and consequently endurance. But they were "beautifully feathered," and had coats, as one lady present expressed it, "as soft and lovely as her satin frock." One noted dog, a winner of first prize in the champion class, was feathered on his forelegs to the extent of seven inches, and on his tail I measured it (eight inches from the root) nine inches, long and very wavy, almost curly, indeed. Straight and silky, I have always been led to believe this feathering on the flag should be, and not too much of it. The ears of several of these so-called "splendid specimens of the setter" told undeniably of spaniel blood somewhere, and yet I saw their owners or keepers in the midst of admiring groups (principally ladies, I must confess) pull out this wavy feathering to show its great length, for their delectation. It did not look sportsmanlike, to say the least, or evince a knowledge of what a setter should be.

But never mind. Silence! silence! Those dogs are said to be Laverackes or Llewellyns, and you must be pleased with them! I went to the bench shows (being also an exhibitor there and prize winner in the non-sporting classes) purposely to purchase a setter and pointer, symmetrical in all points and pleasing to my eye, dogs of grand form and style, dogs whose loins and sterns were equal to their heads. I came away surprised and disappointed, except in one or two instances, and in those the dogs were "not for sale." I am speaking now more particularly of the English (imported) and native English setters. I found the same defects existing at the bench show at the Crystal Palace in London, England, in 1881. At both shows they looked too fragile and too much inbred, and there was only the one conclusion to arrive at, that the breeders had sacrificed too much to get a fashionable strain. Many of the pointers had the same appearance also, but not to the same extent.

Another great fault I found with both English and Irish setters, and most of the pointers, was excessive length of tail, so much so as to give the dog an unstylish and unsymmetrical look, when he was otherwise handsome and up to the standard; and some of these caudal appendages curled over the backs to an unsightly degree, giving to the animals a truly mongrel appearance. Others were crooked, but away to one side, or carried in a limp, limber sort of a way entirely at variance with what we look for in a well-formed setter. Many of the pointers had heads even as narrow across the ears as were those of the setters, while we know that the head of a well-bred and well-made pointer should be wider there than the setter's; and their tails, too, were of excessive length, not tapering toward the point like a wasp's sting, as they should, but in several instances curling at the tip and carried high over the back. One famous dog, winner of many prizes, whose name is a household word, had a tail more like a foxhound's than a pointer's; and in vain I sought for the occipital protuberance that should eloquently "speak for itself." And yet this dog is the fashion!

Where is the remedy for these defects? Can we not approach it nearer by more judicious breeding and crossing, viz.; select a dog with perfect head and shoulders, and cross him with a bitch whose loins and stern are faultless, thus paying less attention to sires simply because they are the fashion.

The picture of the pointer Drake in Stonehenge is my beau-ideal of what a well-made stylish pointer should be, and the picture of Rover in the same book is just what an Irish setter should be to my vision. I cannot say so much for the picture of the English setter Countess there, for as she is represented, she conveys to me the impression of an unstylish bitch, with an ill-shaped muzzle and the ears of a spaniel. Yet Stonehenge tells us she was "the most perfect thing he ever saw!" Perhaps the artist is to blame. While on this subject, have you not noticed how few good and true pictures we find of noted dogs in books already published? I think those in Vero Shaw's "Book on the Dog" the best. For instance, see the picture of Daisy on page 257, "Dogs of Great Britain and America." What an ill-shapen animal, with a neck like a duck and a tail almost as long as the body. And the picture of Colburn's Dash, page 382, same book, with legs like a giraffe and feet like a mountain lion! See again page 80, of Idstone. He speaks of Blanche, the setter there represented, (or rather misrepresented) as worthy to be "the original of a race of setters!" Now in that picture, Blanche looks more like a mongrel Newfoundland than anything else we can compare her to! Let us hope and pray that the next work upon dogs will be free from distortions such as those I have enumerated.

But, pardon me, I am wearying your patience, and must arrest my wandering pen. My excuse for this long and rambling letter must be my enthusiastic love for the dog and my desire to see him "faultily faultless," but not "splendidly well!"

Permit me, before I arrest my pen, to give you the measurements of Gurth (named after the swineherd in "Ivanhoe," you will recollect, who did such deeds of "derring-do"), and to express the hope that others who possess fine specimens of this breed or the St. Bernard will follow my example. I have sought all over Europe and this country for a grand specimen of the mastiff or St. Bernard, one that will correspond with my ideas of size and symmetry; but as noble or majestic a representative as Gurth I have failed to find.

DIMENSIONS, ETC.

Gurth is four years old. He is by Bruno, out of Bona, both imported and both grand specimens of the English mastiff; he weighs to-day 179½ lbs., and is not fat, simply in good, hard condition:

Height at shoulder	close to 34	inches
Height from loins to ground	33⅜	"
Girth of head	28½	"
Girth of neck	28	"
Girth of chest	43	"
Girth of loin	between 34½ and 35	"
Girth of hind legs round stifle joint	23	"
Girth of muzzle in front of eyes	18½	"
Length of head from occiput to tip of nose	13	"
Girth of arm	13	"
Girth of forearm 3 inches below elbow	11	"
Girth of pastern	7	"
Girth of body from shoulders round brisket	46½	"
Length from nose to tip of tail	77¾	"
Length of tail	20½	"

He is an excellent water dog, gentle, affectionate, and brave. Compare his measurements with those of the famous mastiff Wallace, in Vero Shaw's book, and you will be able to form some idea of his vast proportions.

STUART TAYLOR.

CHEYENNE, Wyoming, Oct. 12.

MR. STUART TAYLOR'S MASTIFF DOG "GURTH."

CHOREA.

BY PROF. J. WOODROFFE HILL, F. R. C. V. S.

CHOREA, or St. Vitus' dance, is a purely nervous affection and is the result, generally, of an irritable and impaired condition of the nervous system. It may be general or local. The limbs are frequently first observed affected; ultimately the body, face, and jaws may be involved, the latter exhibiting tetanic symptoms.

SYMPTOMS.

Chorea is denoted by a peculiar snatching or twitching of the part affected. If the brain is involved, the head is in continual spasmodic, tremulous motion, and may best be described as a fac-simile of an aged palsied person. It has been known, in human practice, to arise from sympathy and imitation. I am not aware of any instance in which a dog has so contracted it.

TREATMENT.

With regard to medicinal agents, the one most applicable to this affection is undoubtedly strychnia or nux vomica. I do not recollect a single case of chorea, taken in its early stages, in which I have failed to effect a cure with this drug. Great caution is, however, required in its administration. It should always be given at a stated time and after a meal. This is especially necessary where the doses have been gradually increased, otherwise a fatal result is likely to ensue. I could mention more than one instance in which death has occurred from neglecting this caution. In each the patient had been under a long course of strychnia, and the dose had been increased to more than treble the original quantity; by some mischance the drug was omitted for a day, and when next given it produced convulsions and death. The dose of strychnia, 1-20 to 1-10 of a grain; the nux vomica, from 1 to 2 grains. It is best, however, to commence below either of the minimums mentioned, and after the first three days gradually increase it. It should be given twice daily, in the form of a pill. If there is any difficulty in administering it, the liquor strychnia may be substituted, which contains half a grain to the drachm and may be proportionately divided.

Local remedies in chorea are sometimes beneficial. I have found setons exceedingly valuable. If the convulsive movements are confined to the hind parts, the seton should be inserted across the loins; if general, at the back of the head and loins. Counter-irritation along the spinous also serviceable.

Though in principle the hot bath, from its relaxing tendency, may appear wrong, it is, nevertheless, in chorea, occasionally attended with considerable benefit. It certainly affords relief in those cases where the convulsive movements are excessive, and so far I have found no after evil from its use. The less the patient is disturbed the better. Particular attention should be paid to the bed being dry and the bowels regular, two great essentials in paralytic affections. When abatement of the twitchings with returning strength is observed, a favorable issue may be expected; but the medicine should not be discontinued so long as any nervous affection remains, and it should be gradually, not suddenly, suspended. When the patient is able to walk, a short exercise each day may be given with benefit. The fresh air acts as a tonic, new scenery diverts the mind, and exercise encourages the natural habits and functions of the animal. Tinct. ferri and cod-liver oil is advisable after discontinuing the strychnia, until recovery is complete. The diet throughout must be nourishing and digestible, and forcibly administered if the patient refuses to take it.

Constipation is generally present in chorea, and is best relieved with enemas.

Occasionally rheumatism becomes associated with chorea, and then the heart is frequently complicated. In such case a cure is hopeless, but under judicious treatment and careful nursing the rheumatic and chorea symptoms may be considerably modified, and the animal's life thereby prolonged.

AN EASTERN COURSING CLUB.

UNTIL within a few years coursing has been to us almost an unknown recreation, but now California has taken the initiatory steps, and made this most enjoyable sport both attractive and beneficial. Clubs of gentlemen have been formed throughout the far West, and before many years shall have passed the English greyhound will hold as high a place in the estimation of every true sportsman as either the pointer or setter. It is doubtful which, in all England, has the greatest number of admirers, the turf or the coursing meeting, and a cursory glance at the coursing calendar will surprise even the most enthusiastic at the number of meetings held throughout all England, and the quality and number of dogs run. With Master McGrath at the head of a long list of noted winners, who was held at a price in the thousands of pounds (sterling), we find that $41,700 was paid for Princess Dagmar at Aldridge's auction sale held in December last, and this will give to us some idea of the value placed on noted winners. The vast amount of capital represented by these dogs, proves beyond question their value, and the pleasure of witnessing a meeting far exceeds a running race with horses, where, in the first, we ever see fair play and actual merit, while in the latter we too often feel convinced that the best horse did not win. From the moment the dogs are slipped till the race is won and lost they are absolutely free agents, for the winner must win of himself, and not from coaching and maneuvering, as we too often see displayed in sports commonly known as "gentlemanly trials."

To-day we have nothing approaching a coursing club in the East, while we have all the facilities for forming one. To those who live in this immediate vicinity, I would say that there are ample broad plains in and around New York, New Jersey and Long Island where a meeting could be arranged and run successfully, and I hope the many lovers and owners of greyhounds will not allow their dogs to be idle, but come together in friendly conference, and show they are not lacking either in spirit or enterprise. A glance at the entries at our dog shows will convince them that we have many really good dogs, and every year the number increases, while the quality is vastly improved. The expense attending the rearing and preparing the greyhound for the race is no more nor even so much as that required either for the pointer or setter for a field trial, and to those gentlemen who take their daily drive or ride on the road I would say no better companion could be given than their dog, who, at the same time, would derive material benefit from his run. I sincerely trust that those gentlemen in the East who either own or admire the greyhound will take the matter of forming an Eastern coursing club into consideration, and not let it rest dormant. Coursing is by no means essentially a gentlemanly sport, but one in which the fair sex takes as great and lively an interest in the contest as their gentlemen friends, and at the great meetings in England, from the "Waterloo" down, the number of ladies present bears a favorable contrast to the gentlemen. If some owners would like to have a friendly meet during the present fall, I will guarantee them full compensation for whatever trouble they may be subjected to, and once having demonstrated the fascination of this sport, I am sure they will not be slow in embracing it, and thereby appreciate the great enjoyment which it affords.

Rabbits are plentiful enough here, but if desired, the jack-rabbit of the West could be imported at a very small expense and planted in such localities as are best adapted for breeding, and at the same time suitable for coursing. To the sportsman who has never witnessed a rabbit or hare pursued by our fleet-footed, graceful and agile friends, I would modestly assert that he cannot fully appreciate what enjoyment and excitement is in store for him, and when once fairly initiated into its pleasure will wonder why so fascinating a sport has so long remained thoroughly unknown to us. I have made repeated efforts to bring some few owners together to discuss this subject, but the apathy displayed by them has tended rather to dampen my ardor than to add vim to my efforts. Still feeling confident of final success, I once more appeal to all lovers and owners of the greyhound to turn this subject over in their minds, and if my efforts are fruitful is of good results I shall feel not only satisfied but pleased to know I have added my mite to the great struggle to bring additional pleasure to every admirer of the dog.

H. W. HUNTINGTON.

BROOKLYN, Nov. 3, 1882.

FLORIDA DOG TRANSPORTATION.

Editor Forest and Stream:

Jack Frost will soon change the face of Nature in the North and West, and many sportsmen will hie to Florida.

With sportsmen the transportation and care of dogs are important considerations, and I resolved upon arranging for the canines. I communicated with the managers of our railroads, and in compliance with my suggestions they have made satisfactory arrangements regarding sporting dogs:

I am authorized to state that "sportsmen's dogs," if accompanied by owners, will be transported from Charleston, S. C., or Savannah, Ga., to Jacksonville, Fla., "at one-fourth passenger rates," and will be cared for by baggage masters. I may also state that conductors and baggage masters on these lines are prohibited from accepting any fee or compensation from any passenger for any service rendered.

I have arranged with the manager of the S. F. & W. Railway to transport "sporting dogs" from Jacksonville to any point on the lines of the company free of charge. Application for permit to be made to Capt. Haines, at office of company, in Astor Building, in this city.

In compliance with my request the general manager of the Jacksonville, Pensacola & Mobile Railway will, upon application to Mr. Ames, general freight and passenger agent, by sportsmen who contemplate visiting Middle Florida during the approaching game season, have their dogs transported free of charge.

I am instructed by Mr. Maxwell, the superintendent of the Transit at Tropical and the Jacksonville & Fernandina railroads, to state that his roads will extend like privileges to sportsmen.

I interviewed the passenger agent of the De Bary line of steamers plying on the St. Johns River, and he authorized me to state that sportsmen's dogs would be transported free of charge on the boats of this line, and I feel assured that a like privilege will be granted on other lines.

The other day Capt. Hendry, of Fort Meyers, informed me that the dredge of the Ochechobee Drainage Company will reach Lake Ochechobee by Nov. 1. The cut from the lake to the head of the Calloosahatchee River will be twenty-two feet wide, and will furnish boat navigation from Kissimme city, on Lake Tohopekaligee, to the Gulf of Mexico. The manager of the South Florida Railway authorized me to state that his company would transport boats not weighing over 500 pounds from Sanford to Kissimmee city for $1 per 100 pounds.

The completion of the railroad to Kissimmee city, and the canal from Ochechobee to the Calloosahatchee River opens up one of the most interesting boat trips in the United States. The climate is all the most exacting can ask, and the fishing, shooting and hunting are A 1. AL FRESCO.

JACKSONVILLE, Fla., Oct. 30, 1882.

THE MASTIFF.

THE mastiff is undoubtedly one of the oldest breeds of dogs extant, and for centuries has been regarded as the especial guardian of his master's property. Of late years this noble animal has been steadily winning his way, both in this country and abroad, in public favor, both as a watch dog and as a companion, and it is by no means a rare occurrence to find him the trusted companion and faithful friend of the "fairest and brightest in the land," as well as the beloved playmate and idolized pet of childhood's happy days.

Mr. Hugh Dalziel, in "British Dogs," says of him: "In general appearance the mastiff is noble and dignified; his strength is shown in his immense bone, large, square and well-knit frame, while the majesty of his carriage, his noble head, and the magnanimous expression of his countenance bespeak consciousness of power governed by a noble and courageous nature." Vero Shaw, in the illustrated "Book of the Dog," describes the mastiff as follows:

"The following detailed description and valuation of the several principal points or characteristics of this breed will be found in accordance with the opinions of the majority, if not all, of the most prominent breeders, exhibitors and owners of mastiffs.

General Appearance, Size and Symmetry.—In this we have to consider the special duties of the mastiff in the present day. He is no longer a savage, kept to bait "the bull, the bear, and the lion," as history (somewhat doubtful in its accuracy as to the last-named animal) informs us he was; nor the mere drudge of the butcher, to keep his wild and doomed cattle in the shambles, and fight for him when required; nor even the mere chained slave—the ban-dog of the country house—whose bay, however welcome to those who approached near home, must have had an awful sameness in it to the poor brute who, night after night, month by month, and year after year, listened to the echoes of his own dismal howl as he bayed the moon, or hoarsely barked warning and defiance to all who approached with predatory aim.

Now, although there are still enough and to spare of the ban-dog sort, who are by their owners called mastiffs, and may no doubt lay claim to possession of a fair portion of mastiff blood, they are impure, and suffer so from the cruelty of close confinement that they lose even the characteristics of the breed, which a kinder and more judicious treatment would develop, both in physical proportion and dignity of manner, and which are essential features of a mastiff of the present day.

The mastiff always has been the special guard of man's person and property, and the qualities demanded to fill that position of trust are: size, to impress with fear; the symmetry of well proportioned parts evidencing a combination of strength and activity; a disposition watchful and keen, but confident in its own strength; dignified and calm, save the warning bark, which fills every echo within its reach with its full tones, so unlike the yelping of the noisy cur.

As he is now also more used as a companion and personal guard than at any time in his history, his general appearance becomes more important, for nothing looks worse than a poor shambling, weak loined, cow-hocked dog. Therefore he must have size to give him a commanding appearance, a well-knit, compact frame, which gives symmetry, and the perfect condition shown in the firm flesh, clean and bright coat, while the superior feeding, grooming, and general care bestowed upon him now adds greatly to his beauty, and all combined make him the useful guard and ornament he is.

The head is, in the mastiff, even more than in most other dogs, a most prominent feature; and a dog with a bad head is at once condemned. The head is decidedly large, even in proportion to the immense carcase, although it does not now present the great contrast to the body to be seen in old prints, modern breeders having improved the dog in body from a gaunt and wolf-like to a square-built, massive animal. The head should be broad across the skull; the brow should be flat and not abrupt; the eyebrows rather prominent; the muzzle should be a medium length, cut off square, broad rather than deep; the lips should be full, but not so hanging as in the bloodhound; and the teeth, which should be white and strong, ought to meet as level as possible. Many good specimens are slightly undershot, which is however a decided blemish. While on this point we may refer to some remarks once made by the Rev. G. F. Hodson, who had judged this breed at the Alexandra Palace. On that occasion, Mr. Hodson, who had most properly turned out of the ring all the cow-hocked and undershot specimens, remarked that he was convinced good mastiffs were to be had without these defects, and he was determined not to be a party to the awarding of prizes to dogs so malformed. Subsequent events have proved the soundness of this decision.

The eye should be a medium size; it is generally a light brown or hazel. A deeply sunken eye is objectionable, and if the haw is shown it creates a suspicion of bloodhound cross.

The ears should be small, smooth, thin and pendent; and if black, as the mask should also be, it adds to the dog's beauty. The neck should be strong, muscular, and of fair length, and having no dewlap on the throat.

The Chest, Back and Loin.—The chest should be deep and moderately wide, but not so much so in proportion as his congener the bulldog, or it is apt to throw the elbows out. The back should be very strong, broad, and with strong muscles running along each side of the spine—those should be especially so connecting the back ribs with the hindquarters. The loin is thereby broadened and strengthened; and this most desirable point is also gained by having the ribs well set back. Some strains show a tendency to a tucked-up flank, which is one of the worst faults a mastiff can possess. Both chest and loins should measure well, the latter not quite a third less than the former, and about equal to the dog's height at shoulder.

Legs and Feet.—Strong and straight legs are an absolute necessity, and it is a point in which many excellent dogs fail. The fore legs are not so often crooked as the hind legs, but many good puppies give way at the ankle, and have to be destroyed. Therefore, the greatest care has to be taken in rearing this breed, and no mastiff should ever be chained if it is desired to exhibit him. Cow-hocks are also common, and a great eyesore, and this state is always accompanied with more or less wasting of the muscles of the hams, which gives a thin, almost wedge-like appearance to the hind quarters. Some judges, we believe several members of the Mastiff Club included, consider dew-claws no disqualification; they are, however, unsightly appendages, which should not be encouraged.

The Contour.—The recognized colors are brindle and fawn, and the latter at present holds the highest place in popular favor. When the fawn is bright, and the mask a decided black, with an entire freedom from white, the effect is very pleasing. Some of the fawns run into red, which is not desirable, and such as are of that color are generally coarse in coat. The brindles are of various shades.

The coat should be fine, short, and even, except along the shoulder, back, and tail, where it is stronger and longer.

The tail should be of great length, strong at the root, and gradually lessening, but not tapered as a pointer's is."

We give this week a likeness of the celebrated mastiff, Gurth, from a sketch by Mr. J. M. Tracy from a photograph. His measurements will be found in the letter of his owner, Mr. Stuart Taylor.

ETHICS OF FOX HUNTING.

[From the New York Herald.]

I AM tempted to trespass upon your space in the interest of fox hunting in the hope that I may be able to put the matter in a more favorable light than it seems to be viewed by some of your correspondents. As the letters which have appeared in the *Herald* in the past few weeks were brought out by the threatened action of the Newport Society for the Protection of Animals, I may begin by saying that I do not defend the manner in which the fox is used at these Newport hunts. On the contrary, I have persistently condemned it to the Hunt Committee, privately, however, for sporting reasons. The hunt here is a drag hunt and the fox is turned down at the end of the drag, with the mistaken idea that it gives a color of real fox hunting to the chase. As to the cruelty of it—the fox runs a few hundred yards and is then instantly killed by the hounds, as a rat is killed by a terrier, a weasel, a hedgehog or a skunk by the farmer's dog, or a rabbit by the fox himself, with neither more nor less pain or cruelty.

If it is maintained that no animal should be killed in this way for mere pleasure we must frown equally upon all shooting and fishing unless the game is absolutely desired for food, which is not even pretended by the great majority of those who shoot or fish for amusement. To those who deny the right of man to kill any animal for his pleasure no argument can be used to justify one kind of hunting, shooting or fishing rather than another; but if it is granted that such killing is permissible at all there is no sport in which, as Mr. King very well put it, so few animals are killed in proportion to the number of sportsmen. In shooting, scores of birds fall to each gun while scores of huntsmen are satisfied with one fox. Taking fox hunting in its regular legitimate form I doubt whether it is cruel to the fox in any way outside of the conditions of life in which he was created. The fox is essentially an animal of prey; his hand is against every one and every one's hand against him. He spends most of the time in which he is not asleep hunting and killing inoffensive rabbits and chickens, and he has been endowed with qualities which make him particularly attractive as an object of the chase. His speed, his extreme cunning, and ingenuity almost akin to reason make him so close a match for all the sportsmanlike means of hunting him that the contest is a fair and exciting one.

I believe that the idea of the fox being in mortal terror while being hunted is an entirely erroneous one. He is obeying the instincts of his nature for the preservation of his life, which he defends by wiles and ingenuity, and finally by fighting if he gets cornered, and is probably no more unhappy or alarmed than is any wild animal constantly on the alert for surrounding dangers. Pursuing or being pursued are the natural conditions of his existence. A young fox that has not had the experience of being hunted is often no doubt much bewildered and falls an easy prey to his pursuers, and that is the case with the young foxes used as a finish to a drag hunt; but an old fox that has been hunted several times is by no means in a state of fear, but is as cool-headed and wary as it is possible to imagine. All fox hunters know that a fox will sometimes run nearly all day, passing numbers of earths that are well known to him, and will take refuge only when he has had as much as he wants. An old fox runs just as fast as the hounds press him and no faster; when he has succeeded in throwing them temporarily off his track by some ingenious stratagem, he sits down upon a high, open place where he can keep his eye about him, rests himself and plans new means of outwitting his industrious but comparatively stupid pursuers, and in the majority of cases finally eludes them entirely. In the fox hunting portions of Pennsylvania, where the sport is carried on in the regular way, some of the packs hunt three days a week, and kill not more than half a dozen foxes in a season, because, the earths being all open, the fox can take refuge when he pleases. In English hunting the hounds kill about one out of three, regularly hunted, since to enable the meets to be held late in the day the earths of a given region are stopped the night before, and of that chance of safety the fox is deprived.

A long acquaintance with fox hunting leads me to believe that the pains and terrors of the fox are much exaggerated by those who know but little of the matter, and that his suffering is in no degree out of proportion to the suffering from fighting and being pursued of any animal in its wild condition. It is the natural state of such animals.

As to the cruelty to horses, which is one of the alleged objections, no man is cruel everywhere; he will drive a horse to death or work him when he is lame or use him for a purpose for which he is not fitted; but there is no more cruelty in riding a horse fitted for the purpose across country than on the road. He takes his chances of accident with the rider. He is not any more liable than he would be from kicks and bites were he turned out in a pasture with a dozen of his fellows, and he is not such a chicken-hearted creature as to mind a few knocks and scratches any more than his master. The rider who forces a tired horse beyond his powers justly runs a great risk himself, for there is no more dangerous fall than that which a used up horse gives his rider by rolling on top of him. As for the danger to the participants, the smooth, quiet life of the present time is the better for the introduction of pursuits which train the mind to chances of danger and accustom persons to face some risk without losing their heads. People who scream and faint when there is an alarm instead of doing something to help themselves and others are common enough to make one wish that everybody could be subjected to some training which would overcome such defects, and all the sports involving dangers which can be more or less avoided by the coolness or knowledge of the individual are good for such training.

The dangers of hunting are, moreover, exaggerated by those unfamiliar with the subject. With 160 packs of hounds hunting in England, followed by thousands of persons, the fatal accidents rarely number one or two a year and the serious injuries are not many—much fewer than those resulting from carriage accidents. The average person who thinks riding across country very dangerous steps without hesitation into the first livery stable carriage or hack, with strange horses, a strange driver and probably old, rotten harness, a thing which, I confess, I do with some misgivings.

There is no sport which educates the eye and the judgment of possibilities as well as cross country riding. Coolness, nerve, decision are all essential, and in a civilized community there are few opportunities for the cultivation of these qualities. One great advantage of hunting over most sports is the absence of the element of competition, which introduces bad feeling, jealousies and dishonesty. There is little or nothing of this in the hunting field. A man goes where he likes, stops at home when he likes, follows the run to the end or leaves it when he is tired, and this freedom adapts it especially to those who want to make part in the sport without the overdoing it. In games such as polo, baseball, cricket or lawn tennis one must play out whole games or matches if they are once entered upon, and keep in a certain training for the purpose, and what is intended for an amusement becomes frequently a tax upon time and strength, which puts it out of the power of many who would like to keep up such games to do so.

There is another important phase of the question which should not be overlooked. Among our social questions there is not one which seems to me of more importance than that of making and keeping country life attractive to the young men who are constantly tempted to the cities because they think the country dull. Encouragement of country sports, among which fox hunting stands pre-eminent, is most desirable in this respect, and to those who have been striving to do what is possible to foster outdoor sports it is most discouraging to find an opposition to them based upon what I cannot help feeling is a misplaced sentimentality. The lives of many foxes is a small consideration to pay for the advantages accruing from a cultivation of country tastes. American travelers never tire of admiring English country life and of lamenting that our society young men and women are the languid denizens of cities instead of ruddy country people, and still forget that it is the sports which they condemn that make possible English country life as they admire it. There has been a healthy reaction in this country lately in favor of outdoor amusements and improved health. It is not not now fashionable for our girls to be afraid of a mouse, to scream when a gun is fired or to indulge in the little frights which used to be considered ladylike and elegant, and the increasing taste for outdoor sports has had much to do with it. Ruddy cheeks, good appetites, the ability to walk, ride and drive are not bad things in a woman or a man, or a flimsy basis to build a successful life upon.

In this connection it may not be out of place to make a comment upon the action of the societies for the prevention of cruelty to animals. No one can appreciate more highly than I do the results of the labors of these societies in such matters as improving the methods of transportation of animals, in establishing watering troughs, and in educating the people to be humane; but there is great danger of going beyond the proper point and becoming arbitrary and oppressive, as in very many cases the societies or their agents have been. To use all means to persuade people to be humane is one thing; to invoke the aid of harsh laws in carrying out what are sometimes fanatical opinions is quite another. While we have been slowly improving in the direction of permitting liberty of action to individuals where it does not interfere with the comfort of others, and abrogating those oppressive blue laws which used to encumber our statute books, we have permitted these societies to assume powers which savor more of the Calvinistic days of Connecticut than of modern freedom. Laws which punish as crimes acts about which there is a wide and honest difference of opinion are always dangerous; they should be passed and executed with great caution, and should be narrowly watched by a people jealous of its liberties. Such laws, made with the best motives, frequently become the handles of fanatics powerful engines of oppression, as have religious laws throughout the history of the world. An example of this danger is the action of the societies for the prevention of cruelty to animals in England, which has so restricted the practice of vivisection as to hamper most seriously the physiological investigations which have so advanced medical science. In this country only the increasing watchfulness of the medical profession has warded off the same unfortunate result.

FAIRMAN ROGERS.

TETANUS IN THE DOG.

WHILE on a visit to Suffolk in August last, I was requested to examine a favorite pointer dog, the owner of which thought he was paralyzed, and expressed a wish to have him destroyed if his recovery was hopeless.

On examining the animal, to my surprise I found him suffering, not from paralysis, but from tetanus. He was lying down on his right side, the two front and the right hind hind legs being straight out and rigid as bars of iron. The muscles of his neck were quite rigid, and his jaws were partially locked, froth issuing from his mouth, and his eyes fixed and staring, pulse, taken at the femoral artery, about 108 and wiry. The left or upper hind leg was drawn close up to the belly, and, on asking if he had injured that leg in any way, I was told that he had been very lame on it for several days, and was supposed to have hurt it when jumping through an iron hurdle.

I examined the limb, and found a swelling at the point of the patella, or stifle-joint, very hot and painful, and the dog moaned feebly on its being touched. On account of the swelling I could not diagnose any fracture or dislocation. I told the owner it was a very bad case, almost hopeless, as tetanus had, in my opinion, arisen from the injury to the bone but expressed a wish to treat it, and he willingly consented. I had the swollen limb well fomented, and encased in flannel bandages kept moist with warm water, to which I added some opii tinct.; and by inserting a small funnel between his teeth, managed to give him a dose consisting of ol. ricini, 1 oz.; tinct. aconite, 5 minims; the same quantity of aconite to be given at noon and night.

I called to see him the next morning, and was surprised to find him sitting up, a more natural expression about his dyes, and evidently recognizing those about him. The swelling on the stifle was not so painful, and the limb a little more flexed. The rigidity of the muscles still continued, but his bowels had acted, and he evidently relished the liquid nourishment in the shape of beef-tea and warm milk, which was forced through his still closed jaws. I gave him tinct. aconite four minims, and left instructions for the dose to be repeated three times daily, and the fomentations to the stifle continued; also enjoining perfect quietude and confinement in a partially darkened room.

Two days after I again called, the dog was evidently much better; he could use his legs, with the exception of his injured one, could lap a little milk, the jaws not being so firmly locked, but the muscles of his neck were still rigid. As the treatment had been efficacious so far, I resolved to continue

it, giving the medicine twice daily instead of thrice. On seeing him two days after, I found the swelling in the stifle nearly subsided, the leg touching the ground, although not much weight was put on it. The rigidity of the muscles was considerably less, the jaws more apart; the dog was able to take a little solid food, and in a fair way towards recovery. I cft a stimulating liniament for the leg, and ordered the medicine to be continued as before. I did not see the dog again, as I had to go back to town, but a week after I heard he was very much better, the lameness nearly gone, though still a little stiff in the neck. I wrote and ordered the medicine to be given once daily, advising a little exercise.

Last week I had the pleasure of hearing the dog had perfectly recovered and was doing good work among the turnips. I believe tetanus is very rare in the dog. I had only previously seen two cases, occurring in fox-hounds from severe bites, both of which had proved fatal. With few exceptions it is invariably fatal in horses and cattle, and I thought the favorable termination of the present case rather uncommon. —*Herbert Cooper in Live Stock Journal.*

COCKER SPANIELS.—*Editor Forest and Stream:* I inclose circular which has been pretty generally sent to the cocker fraternity throughout the United States and Canadas. I have over forty bona fide names of those who have already subscribed for the proposed organization, with many others to hear from. I hope when the association gets well under way, that some compromise will be made with the A. C. S. C. and by uniting our forces we shall be able to take a grand stand in the interest of the "old time cocker" of which an old esteemed cocker breeder thus writes: "I shall be very glad to join a cocker club whose aim is to restore to us the old-fashioned cocker—small in size—a bright, active, merry little worker and in beauty unsurpassed. I think breeders have let the English idea of larger dogs run away with them, and we are now hearing of improved cockers of large size. I will join your club with pleasure, pay my fee and help." Several other letters I have received, all anxious to restore the olden cocker, which is and shall be the true and only aim of the new organization, so far as my influence goes. I cannot but think we shall be able to do good work in the interest of the old time cocker and finally restore him in all his pristine beauty and usefulness to those who have learned to appreciate him for those excellent qualities that attach to him from the past. Will you favor the cause by a publication of the within circular and the above letter, so that all cocker breeders and admirers may know the true intent of our contemplated organization which is even now an assured fact.—E. C. Franklin, "Senex." Following is the circular: "Circular to cocker breeders and admirers in the United States and Canadas—The present unsati-factory status of the cocker spaniel, and the frequent and repeated complaints so often publicly and privately expressed at the discordant standard of the A. C. S. Club, have created in the minds of cocker breeders and admirers general dissatisfaction. Indeed, the true type of the cocker has been so interwoven with other strains of the spaniel, that an entirely different race from the 'old time cocker' has sprung up and this offspring is fast dissipating the qualities and attributes of what was the pure cocker. To restore all that was beautiful and useful in the 'old time cocker,' and to once more crown him with the laurels of his former field and hunting qualities, and not from any personal advantages, a large number of cocker lovers have urged me to perform a duty that I hope to see placed in other more capable hands as soon as the clerical and organizing labors have been fully and fairly finished. Over one hundred names of dissatisfied friends of the cocker have written in no measured terms at what they believe to be an attempt to obliterate the cocker from the spaniel family. While all desire that the purity of the cocker shall be preserved, none reflect in the least upon the friends of the different strains of the spaniel family, who are perfecting the several varieties, hence there can be no disagreement with those who are breeding to a distinct type. Much has been done to elevate the type of the field spaniel in this country and England, and his superior quality to-day attests the careful and skilful attentions of his friends; would that I could say as much of the cocker. The elevation of the true cocker, unmixed with other varieties of the spaniel, and his restoration to his primitive condition, where so much of interest and pleasure surrounded him, is the sole object of those I here represent. As an earnest admirer of this bright, intelligent and active little friend of the sportsman, I solicit your influence for the formation of a club whose sole aim and purpose shall be, laying aside all selfish considerations, to form an organization for the generation and perfection of the olden cocker. The objects of the association having been set forth, I hope you are willing to become a member thereof and prove your admiration and friendship for the cocker by selecting the names of six cocker friends as a committee, to whom shall be intrusted the organization of said association. Please subscribe your name if you approve and forward circular to me with the six names chosen.—E. C. Franklin, 'Senex,' Ann Arbor, Mich."

COCKER SPANIEL IMPORTATION,—By the State line steamer State of Georgia, Dr. Niven has just imported a very important addition to his celebrated kennel of black cocker spaniels, in the shape of two bitches, Lass of Breda, whelped March, 1881, by Brish II. Brush—Lawson's Nellie) out of Nellie, a bitch already imported by Dr. Niven, whose arrival we chronicled at the time. It is enough to say of the lass of Breda that Dr. N. himself selected her and considers her the best specimen of black cocker he has ever seen. She is long and low, with a splendid head and well-feathered ears, and has what so many of our cockers lack, a good long neck, and does not trespass too much on the spaniel for her build. Her weight is twenty-four pounds. The other bitch, Dinah, is by Spring by Beverlee and a daughter of Kelpy Chapel. She is a handsome little bitch, with a good head and ears, rather short of body, but otherwise she is very good and ought to breed well with Dr. N.'s Frank. Her coat is perfect. Her weight is twenty pounds. Lass of Breda is in whelp to Don, recently imported by the Hornell Spaniel Club. There was also on the same vessel a natty little Irish terrier bitch belonging to the Doctor that will no doubt make a valuable brood bitch. Her name is Aileen, bred by Mr. E. Despad. She is by Jock out of Kelpy Chapel Belle, Belle is by Tory brother to champion Sport, out of Gyp, who is own sister to the celebrated champion Banshee, and we shall confidently look for some winners among her progeny.

COMET.—The Dominion Kennel Club of Canada have just imported the celebrated Laverack dog Comet (K. C. S. B., 10,-130) from the kennel of Mr. T. B. Bowers of Liverpool, England. This is the dog which Mr. Llewellin protested as not being a pure Laverack, but was not sustained by the committee of the Kennel Club. Comet is a grandson of Pride of the Border and we congratulate the Canadian breeders upon the acquisition of so valuable an animal. He is a blue belton with evenly marked head and blue ticked all over; his head is nearly perfect, he has good sloping shoulders and a fair chest; he is well ribbed back, and has a fair loin and quarters, with good legs and feet. He had a rough passage and is in wretched condition, but his coat and feather are abundant and we hope to see him in good condition at the coming shows where he will prove a great attraction, as he has been very successful on the bench in England.

FLEETFOOT KENNEL.—Mr. Chas. E. Hitt of Delhi, N. Y., informs us that he has established at that place a kennel for the breeding of cocker spaniels, which will be known as the Fleetfoot Kennel.

NO DOGS ALLOWED ON THE CARS.—It happened the other day on the D. & H. C. Railway. The train had just left Albany, and the conductor was making his first round, when he observed a small white dog, with a bushy tail and bright black eyes, sitting cosily on the seat beside a young lady so handsome that it made his heart roll over like a lopsided pumpkin. But duty is duty, and he remarked, in his most deprecatory manner: "I am very sorry, madam, but it's against the rules to have dogs in the passenger cars." "Oh! my, is that so!" and she turned up two lovely brown eyes at him beseechingly. "What in the world will I do? I can't leave him away; he's a birthday present from my aunt." "By no means, miss. We'll put him in the baggage-car, and he'll be just as happy as a robin in spring." "What, put my nice dog in a baggage car?" "I'm awful sorry, I do assure you, but the rules of this company are as inflexible as the laws of tae Medes and them other fellows, you know. He shall have my overcoat to lie on and the brakeman shall give him grub and water every time he opens his mouth." "I just think it's awful mean, so I do; and I know somebody will steal it, so they will," and she slowed a half notion to cry that nearly broke the conductor's heart, but he was firm, and sang out to the brakeman, who was playing a solo on the stove: "Here, Andy, take this dog over into the baggage car, and tell Dudley to take just the best kind of care of him." The young lady pouted, but the brakeman reached over and picked the dog up as tenderly as though it was a two weeks' old baby, but as he did so a strange expression came over his face, and he said hastily to the conductor: "Here, you just hold him a minute Bill I put this poker away," and he trotted out at the car door and held on to the brake wheel, shaking like a man with the ague. The conductor no sooner had his hands on the dog than he looked around for a hole to fall through. "Wh-wh-why, this is a worsted dog." "Yes, sir," said the little miss, demurely. "Didn't you know that?" "No, I'm most awful sorry to say that I didn't know that;" and he laid the Christmas dog down on the owner's lap and went out on the platform, where he stood half an hour in the cold trying to think of a hymn tune to suit the worst sold man we ever saw on the D. & H. C. Co.'s road.—*Cincinnati Commercial.*

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Biddy O'More. By Dr. J. S. Reed, Buskirk's Bridge, N. Y., for red Irish setter bitch, whelped August, 1881, by champion Rory O'More out of Pearl.

Sheff. By Mr. John A. Hoffar, Washington, D. C., for black and white ticked English setter dog, whelped June, 1881, by Frank (Frank —Sis II.) out of Victoria (Warwick—Belle).

Frick. By Mr. C. B. Macken, Wellsville, N. Y., for lemon and white pointer dog, whelped July 15, 1882, by Jerry (Sensation—Belle) out of Snowflake (Glenmark—Girl).

Neptune By Mr. Frank Holman, Brooklyn, N. Y., for red Irish setter dog, whelped Sept. 11, 1882, by Scout (Plunket—Carrie) out of Pearsall's Donna.

Psyche. By Dr. E. C. Franklin, Ann Arbor, Mich., for black cocker spaniel bitch, whelped July 6, 1882, by imported Montague (Baron—Queen) out of his imported Leda.

Dyer No. 1. By Mr. W. C. Callender, Brooklyn, N. Y., for black and white English setter dog, whelped November, 1881, by Adams's Drake out of Beauty (Carlowitz—Rose).

Nella Bluegrass. By Mr. Sanford R. Crook, Somerville, Mass., for black and white English-setter bitch, 3mos. old, by champion Dash III., out of Blanche.

Bucher. By Mr. Wm. Loeffler, Preston, Minn., for fallow red dachshund dog puppy by Bergman out of Gretchen.

Caroline, Waldine III., Rosa and Gretchen II. By Mr. Wm. Loeffler, Preston, Minn., for fallow red dachshund bitch puppies by Bergman out of Gretchen.

Waldmaa, Bruno, Caro, Pinch and Tackel. By Mr. Wm. Loeffler, Preston, Minn., for one black and tan and four fallow red dachshund dog puppies by Fanst out of Gretchen.

Temptation. By Mr. Geo. L. V. Tyler, West Newton, Mass., for black and white ticked pointer bitch, whelped June 25, 1882, by Fogg's Don (Strong's Pete—Slocum's Kate) out of Maud S. (champion Pete, Jr.—Slocum's Kate).

Blackberry. By Mr. Geo. L. V. Tyler, West Newton, Mass., for black pointer bitch, whelped June 25, 1882, by Fogg's Don (Strong's Pete—Slocum's Kate) out of Maud S. (champion Pete, Jr.—Slocum's Kate).

PRIORITY OF NAME.—*Editor Forest and Stream:* I see in FOREST AND STREAM of Nov. 2 that Dr. H. G. Piffard, of New York, claims the name of Feather for cocker spaniel pup. I wish to notify the Doctor that I have a cocker of that name that has won quite a number of prizes at our bench shows, and, to save confusion in the future, would ask the Doctor to claim some other name, and oblige the proprietor of the Riverside Cocker Spaniel Kennel, Claremont, N. H.

BRED.

☞ *See instructions at head of this column.*

Friskey—Fritz. Capt. John Rowell's (steamship Strathmere) pug bitch Friskey to Mr. A. W. Lucy's (New York) Fritz, Oct. 25.

Belle—Snapshot, Jr. Mr. Edmund Orgill's (Brooklyn, N. Y.) lemon and white pointer bitch Belle (Flake—Lilly) to his Snapshot, Jr. (Snapshot—Ruby) Nov. 4.

Flora—Elcho. Mr. John S. McIntosh's (Pittsburgh, Pa., imported red Irish setter bitch Flora (Pop—Lill II.) to Dr. Wm. Jarvis's Elcho, Oct. 30.

Daisy—Hornet. Mr. T. Donoghue's (La Salle, Ill.) orange and white English setter bitch Daisy (Storm—Bell) to Mr. Frank Kelley's Hornet (Count Noble—Spark), Oct. 31.

Dinna—Dash III. Mr. H. Sumner's (Milton, Mass.) English setter bitch Diana (Leicester—Doll) to Mr. A. M. Tucker's champion Dash III.

Belle—Dash III. Mr. L. D. Rumney's (Buffalo, N. Y.) English setter bitch Belle (Carlowitz—True) to Mr. A. M. Tucker's champion Dash III.

WHELPS.

☞ *See instructions at head of this column.*

Judy. Mr. T. Donoghue's (La Salle, Ill.) imported Irish water-spaniel bitch Judy (Drake—Duck), Oct. 21, nine (four dogs), by his Count Bendigo (Bob—Bridget).

Gretchen. Mr. E. H. Smart's (Bainbridge, Ga.) blue belton setter bitch Gretchen (Mac Leod of Dare—Brenda), Oct. 13, eight (five dogs), by Rolla (Lofty—Maud Muller).

SALES.

☞ *See instructions at head of this column.*

Jerry—Sunnyflake whelp. Lemon and white pointer bitch, whelped July 13, 1882, by Mr. C. B. Macken, Wellsville, N. Y., to Mr. G. E. Farnum of same place.

Neptune. Red Irish setter dog, whelped Sept. 11, 1882, by Scout—(Plunket—Carrie) out of Donna (Hill—Donna), of Mr. A. W. Pearsall, Huntington, L. I., to Mr. Frank Holman, Brooklyn, N. Y.

Roll—Clairine whelps. English setter dogs, whelped July 5, 1882, by Roll (Dash III.—Countess Ada) out of Clairine (Dash III.—Diana), by Mr. Fred. H. Hoe, Tarrytown, N. Y., two to Mr. Fred. E. Lewis of same place, one to Mr. Wm. B. Brown, New York, and one to Mr. R. M. Hoe, Jr., New York.

Conquest—Nell whelps. Cocker spaniels, whelped July 5, 1882, by Mr. Fred. H. Hoe, Tarrytown, N. Y., one liver and white dog and one liver and white bitch to Mr. Robert Hoe, New York, and one liver and white ticked bitch to Mr. A. S. Burlingham, Mount Vernon, N. Y.

Belle. Lemon and white pointer bitch, 6yrs. (Flake—Lilly), by Mr. Edmund Orgill, Brooklyn, N. Y., to Mr. L. C. Clark, New York.

Rock. Lemon and white pointer dog, 15mos. (Rush—Swaynes's Nan), by Mr. Edmund Orgill, Brooklyn, N. Y., to Mr. L. C. Clark, New York.

Rush—Nan whelp. Lemon and white pointer dog, whelped Sept. 22, 1882, by Mr. Edmund Orgill, Brooklyn, N. Y., to Mr. Brewster, Boston, Mass.

Maud S. Black pointer bitch, whelped March 31, 1880 (Alden's champion Pete, Jr.—Slocum's Kate), by Mr. Geo. L. V. Tyler, West Newton, Mass., to Mr. E. C. Alden, Dedham, Mass.

Temptation. Black and white ticked pointer bitch, whelped June 25, 1882 (Don—Maud S.), by Mr. Geo. L. V. Tyler, West Newton, Mass., to Mr. Wm. B. Collagar of the same place.

Butcher. Fallow red dachshund dog puppy (Bergman—Gretchen), by Mr. Wm. Loeffler, Preston, Minn., to Mr. George Popperl, Milwaukee, Wis.

Fanst. Black and tan dachshund dog puppy (Unser-Fritz—Waldine), by Mr. Wm. Loeffler, Preston, Minn., to Mr. George Popperl, Milwaukee, Wis.

DOGSKIN LEATHER JACKETS are imported by G. W. Simmons & Son, Oak Hall, who has created a large trade in this class of goods. Read their advertisement in another column and note what they say about prices. Oak Hall can never be approached by competition. When you are ready for your shooting trip call and examine the stock at Oak Hall.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

SPRINGFIELD, Mass., Oct. 31.—The Rod and Gun Rifle Club's fourth annual tournament at the West Springfield range opened October 30 and closed to-day. The weather was nearly perfect and the attendance very good. The shooting was remarkably fine. L. H. Mayott, Geo. F. Ellsworth, and H. G. Bixby each scored 89 out of a possible 84, beating a1 previous records on the range. The shooting in the Continuous match was at a Massachusetts target, 200 yards offhand, 7 shots to score, 3 highest scores to count for prize. In the bullseye match the first prize, $5, was won by W. Charles, with a score of 37, and the second prize, $2, was taken by H. K. Cooley who scored 36. W. Charles made 10 consecutive bullseyes. The leading scores in the Continuous match stood:

Ellsworth	10 11 12 11 12 12 12	H Bixby	11 12 12 12 11 11 11—89

The Sportsman's Club have their annual bird shoot next week, to be followed by their annual supper. The captains of the rival sides are William S. Perry and Allen B. Houghton. Mr. A. B. F. Kinney, a member of the club, who has recently returned from an extended hunt in the far West, has placed at the disposal of the club a portion of the game he brought with him.

The Worcester Rifle Association have elected the following officers: H. T. Farrar, President; John N. Morse, Jr., Vice-President; Stedman Clark, Secretary and Treasurer. The officers, with Dr. W. A. Knight, are the Executive Committee.

GARDNER, Mass., Nov. 1.—At the last meeting of the Gardner Rifle Club, at Huckmatuck Range, seven of the members made the following record, the distance being 200 yards, off hand, using the inch flag and Creedmoor target combined:

	R.	C.	Totals.
G. F. Ellsworth	97	92	46	184	93
Chester Hinds	85	45	93	46	178	91
A. Mathews	90	45	93	44	175	90

ROXBURY CITY GUARD, Boston.—The annual fall rifle matches of the Roxbury City Guard, Company D, 1st Infantry, took place at the range of the Massachusetts Rifle Association, Walnut Hill, Nov. 3. As is usual with all the rifle meets of this company, there was a very large attendance of company members, both active and honorary, as well as friends. For shooting purposes the day could hardly have been bettered, the wind blowing very gently, while the light was satisfactory. Seven matches were shot. The conditions of each and the leading scores made are appended:

Match No. 1.

Two hundred yards; rounds five; open to all members; first prize, silver medal, and other prizes.

Private Bennett	33444—19	Capt. Hersey	44150—17
Capt. Rockwell	42354—19	Private Coes	34243—16
Private Brownell	45453—19	Private Andrews	33342—15
Private Lithgow	33443—18	Private Loker	43222—15
Corp. Penrose	44424—18	Surg. Emery	34450—15
Corp. Libbey	43224—17		

Match No. 2.

Two hundred yards; rounds five; open to all members who score less than 16 in match No. 1; first prize, silver medal, and other prizes.

Private Loker	33444—18	Sergt. Orme	33333—16
Private Jenkins	31442—17	Private Andrews	53312—16
Private Walker	44432—17		

Match No. 3.

Two hundred yards; rounds five; open to all members who score less than 18 in match No. 2; four prize.

Private Caswell	45443—20	Private Scott	43234—17
Corp. Shepard	44334—18	Private Paine	43223—17

Match No. 4.

Distances, 200 and 500yds. Rounds, 5, at each distance. Open to all members who score 16 or more in match No. 1. First prize, medal, and other prizes.

	200yds.				500yds.				
Captain Rockwell	3	5	4	5	4—21	2	2	3	2	3—11—32
Private Bennett	4	4	3	4	3—17	0	2	3	3	4—12—29
Private Libby	4	5	3	2	3—17	3	3	0	0	3—11—28
Private Brownell	4	4	3	4	5—19	4	3	0	0	0—7—26
Private Coes	4	2	0	3	5—14	0	0	0	3	4—7—21
Private Penrose	4	5	3	4	3—19	2	0	0	0	0—2—21

Match No. 5.

Two hundred yards; rounds, 5. Open to all fine and honorary members and invited guests.

Lieut Kellet	51454—20	Privat Lithgow	34354—19
Capt Foye	44444—20	Capt Max	44334—18
Col Willington	41435—20	Private Barrett	43345—17
Capt Gueth	34451—20		

Match No. 6.

Five hundred yards. Shirmisher's match. Open to all members. Rounds, 7—4 in advance and 3 in retreat. Thirty seconds allowed for each shot. Rifle, Springfield. Any position. Competitors will provide their own ammunition for re-entries. First prize, medal and other prizes.

	Advance.					Retreat.				
Private Bennett	2	5	5	5		5	5	3	—28	
Capt Rockwell	4	2	3	4		3	4	0	—27

Private Libby	0	0	0	2		1	0	2	—8	

Match No. 7.

Two hundred yards. Ro unds, 7. Open to all members. Competitors will provide their own ammunition for re-entries. Several prizes.

Capt Rockwell	5454534—30	Capt Max	4245474—28
Lieut Gardner	4444454—29	Private Loker	4414434—27
Private Bennett	4444444—28	Private Penrose	3444435—25
Private Brownell	4344445—28		

ALBANY, Oct. 3.—The match at Rensselaerwyck, yesterday afternoon, was at the extreme short-range distance. Such a match only has charms for the experts, and those who usually shoot at the short distances stand aloof and look on with feelings very much akin to looking at drawing numbers in a lottery. Still the men who do shoot at 30yds. always try to make good scores. Yesterday afternoon, though the weather was cold and the wind strong from the five-o'clock quarter, the competitors entered into the match with spirit, and it was evident that the adverse conditions were being successfully combatted. The match was a fine shot one with the best three scores made to count. It was quite exciting to watch the varying fortunes of the riflemen, for at the end of each string one and then another would be at the head. However, the first place went to James I. Miles, with 70 out of the possible 75. The scores were as follows:

Short-Range Match—200 yds.

James I Miles, May S.	4 5 4 5 5—23 4 4 5 5 5—23 | 70 5 4 5 5 5—24	
Wm E Filch, Bal S.	4 4 5 5 5—23 4 4 5 5 5—23 | 69 5 4 5 5 5—24	
R R Spellman Jr, Bal S.	4 4 5 4 5—22 5 5 4 4 5—23 | 67 5 4 4 5 5—23	
Chas. H Guss, May S.	4 4 5 4 4—21 4 5 4 4 5—22 | 65 4 5 4 4 5—22	
L Geiger, R S.	4 5 4 4 3—20 4 4 5 4 3—20 | 60	

HUNTINGTON, L. I., Oct. 27.—Rifle match on Bay View range, between two amateur shots. Conditions: Fifty-five shots, off-hand, 200yds. Wind blowing very heavy across the range. Riflemen using two and one-half to three points wind:

Wm MacBrien	4 3 4 4 4 5 4 5 5 4—41 5 5 5 4 5 4 5 5 5 5—48 4 5 5 4 5 4 5 4 4 4—44 4 4 5 4 4 5 5 4 5 4—42 4 5 5 4 4 3 4 4 4 4—41	—20—236

—WILLIAM THURSTON.

NEWARK, N. J.—The associated rifle clubs will hold a meeting at the headquarters of the Plymouth Rifle Club, 191 Market street this evening. Arrangements will be perfected for the first tournament on the 26th inst.

THE TRAP.

LYNN, Mass., Oct. 31.—There were not many members present at the practice shoot of the Lynn Central Club. A large part of the regular shooters are away in the woods and down on the Cape, and the attendance at present is small. Next Tuesday being election day the regular shoot will not take place. There will be a shoot Tuesday, November 14, and it is hoped there will be enough members present to make it interesting. There will be a good programme out for Thanksgiving, which will give plenty of amusement. The following scores were the result of the last shoot at clay pigeons: Webster, 16; Morrill, 16; Colcord, 15; Fuller, 15; Carleton, 12.

FOREST CITY GUN CLUB, Rockford, Ill., Nov. 2, 1882.—Rotary trap, 18yds. rise.

Hollenbeck	11110 11111 10001 01111—18	
Ellison	11100 11101 01011 11011—18	
Thurston	10010 11011 01110 11111—18	
Felch	10101 01100 11111 11110—18	
Taylor	01111 01110 01100 11111—16	
Medlar	11001 11010 01111 11110—14	

A gale of wind carried most of the balls 40 or 50yds. T.

NASHVILLE, Tenn.—Andy Meaders won his match with F. Maskey, in which he was to break 185 glass balls out of 200, 100 single the other double balls, the following are the scores: One hundred single balls, thrown at five angles from a Mole trap, 21yds. rise, were broken without a miss. The double balls were thrown from two Mole traps, 18yds. rise. He scored 91: total 191.—J. D. H.

WELLINGTON, Mass., Nov. 3.—Few shooters practiced at the Raymond grounds, Wellington, to-day, the twenty-bird sweep being the only one competed. Mr. J. L. Sawyer and E. C. Bernard took the honors in the order mentioned. A great tournament, when valuable prizes will be shot for, will occur Thanksgiving Day.

BRIDGEPORT, Conn., Oct. 30, 1882.—A match between the Winsted and Bridgeport Gun Clubs was shot at the Trotting Park, Oct. 25, each man to shoot at twenty-five clay pigeons, 15 yards rise. The day was fine, with a high northwest wind. The scores in the match were as follows:

Winsted Club.

J K Camp	11011 01111 01111 11101 10011—19	
A W Adams	01100 11011 00111 11101 11110—18

Total		208

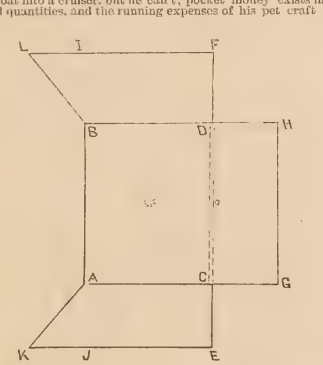
After the regular match was shot a sweepstakes for three prizes was contested. First prize, set of reloading and cleaning tools; second prize, silver cup; third prize, re-and-de-capper and crimp r.

Each man shot at 7 clay pigeons, at 20 yards. The following are the scores:

A. D. Laws 7, A. W. Adams 5, Geo. Simmons 7, J. H. Camp 7, E. A. Longden 5, V. A. Blakeslee 7, Chas. Beers w, J. Ferguson 5, Geo. Kerr 4, J. A. Smith 4, Chas. Graether 3, John White 5, G. W. Benedict 7, R. Hubbard 4, D. C. Peck 4, D. E. Smith 4, J. F. Peck 4, Geo. Link 0, H. L. Roberts 3, Ed. Rowe 7, A. E. Moore 5, A. Roberts 6, Wm. Jennings 7, H. Nichols 7, D. Scott 6.

In shooting off the ties each man went back five yards and shot at five pigeons; if they tied again to go back three yards and shoot at three pigeons, then if tied to shoot miss and out. Wm. Jennings won first, A. Roberts second, John White third. SPORT.

Cartridge Groover, 75cts., E. Redmond, Rochester, N. Y.—*Adv.*



Yachting and Canoeing.

AN IMPROVISED CABIN.

Editor Forest and Stream:

I have noticed with great pleasure your endeavors in the direction of small cruisers, and while I may not agree with you in details, still I am so thoroughly with you on the main issue, that I am desirous of contributing my mite toward the furtherance of so laudable an object. My friend Mr. Stephens has, I see, designed a "single-hander," which I do not doubt will prove a fund of enjoyment to some fortunate chap, but we are not all of us able to discard old boats, though they may be obsolete in style, and build new and improved ones, and to such unfortunates I propose to address a few remarks.

There may be somewhere a couple of boys, or a single solitary boy possessed of a sixteen or seventeen foot boat, who, filled with the desire of emulating Magregor or Robinson Crusoe, would dare the dangers of the vasty deep, could he but afford to metamorphose his open boat into a cruiser, but he can't; pocket money exists in only limited quantities, and the running expenses of his pet craft eat up

the greater part of that. Nobody seems to have much regard for that boy. I will take him under my protection; I was that kind of a boy myself once, and I've a fellow-feeling for him, besides I think that kind of a boy generally manages to get as near a hundred cents on the dollar in the way of fun, as is given to us mortals to get, and he deserves encouragement.

I will suppose my young friend to be possessed of an open boat about sixteen feet long, and six wide (more or less) with a cockpit about nine feet long and five wide. The shape is immaterial, but the combing is, I hope, high. This craft in smooth water is perhaps all that can be desired, but for going straight ahead through anything and everything, and for sleeping in at night she is susceptible of improvement.

In the first place, I will take it for granted that the rig, whatever it may be has been tried and found satisfactory, and so spare the tyro a lecture on my beloved yawl rig.

The nine-foot cockpit is considerably larger than is demanded by the exigencies of "small boat cruising," and we will curtail its dimensions, and at the same time improve the weatherly qualities of our craft by constructing two hatches, which together shall be five feet long. These must be as light as possible, yet strong enough to permit one to set or stand on them; one-quarter inch cedar with one inch by seven-eighths inch oak cariines will about fill the bill. Around the inside of the washboard close to the top edge an oak batten half an inch thick must be fastened, notched to receive the ends of the carlines so that the weight will come on them and not on the outside planks of the hatches. The forward hatch should be lashed in place so that a sea will not be able to wash it away, the after one will probably not need it. The joint between the two hatches should be closed by a batten tacked to the after edge of the forward hatch. The after edge of the after hatch should have a combing an inch or so high to prevent the water from washing aft and dripping into the sleeping apartments, and should also have three or four round-head brass screws projecting a little from it, and two of the same in the edges on the side.

So much for the carpenter; now for the sailmaker. The nondescript figure accompanying this dissertation is the plan from which he must work, and he must construct of pretty stout canvas a "cabin," whose dimensions shall be as follows: for a 9x5 cockpit. From A to B, 5ft. (the width of the cockpit); C to D the same; A to C and B to D 4ft.; C to E, C to G, D to H, D to F, B to I, and A to J, all 2ft.; E to K and F to L, 5ft. 9in.; on the edge A B work eyelets to correspond with screws in afterhatch, and do the same on edges B I and A K. At C D tack in a piece of hickory 5ft. long, 2in. wide and half an inch thick, put it in "flat ways," that is, as it would float if in the water, in the middle put a stout brass screw-eye. To the button on the edge L B & K to afterhatch, fasten a line to the screw-eye in C D, and haul it out to boom it a sloop, to driver mast if a yawl; the points A and G, F and H will fall together, and should come just to the deck. Now, with a stick, prop up the afterhatch until the sides of the "house" set smooth, slacking or tautening the afterline as may be necessary, until it is all square and even, then cut two oak or hickory supports, to be secured at one end to the inside of the washboard, just long enough to reach to the hatch, when it is tipped up; these when not in use will lie down alongside the washboard and be out of sight and out of the way.

At the point where I have placed a * put a loop or ring; when it rains pass a line from this ring to the boom above and haul taut, your roof will have "pitch" enough to shed rain perfectly.

To set the "house," prop up the hatch first, button on the canvas, and then go on deck, and haul out your afterline and the thing is done. Except in stormy weather the corners D G and F H will not require fastening, and one corner will probably be tried up most of the time for ventilation

In a house just such as I have described, I have lived for days with a friend and my dog, eating, sleeping, cooking, smoking, reading, etc., smiling at the rain, water and cold proof in our snug, blustering nights, and "striking" the whole thing, folding it up, rolling it around its stick and putting it under blankets for five minutes, and thus converting my little seventeen-foot Petrel into a regular cruiser. In fair weather the afterhatch may lie on the other, giving more room, and airing things below, but both hatches should be covered with light canvas or drilling, and thoroughly painted, the canvas coming well down all around to prevent water from dashing in at crevices, and an extra wide flap should cover the bottom and joint between the two hatches. We used a small kerosene store, but it was not perfectly satisfactory, and though they have been greatly improved since that time, I feel sure there must be some better substitute. If one is used it should be enclosed in a neat box with a hinged cover and top, which will preserve the stove from damage and capsize. WILL BROOKS.

SAN FRANCISCO, Cal.

SHARPIES AT SEA.

Editor Forest and Stream:

We, your readers, take it for granted that you wish to do justice to all, no matter in what direction your personal sympathies may lead.

In your issue of Oct. 5 you name "details of a 36ft. sharpie" as follows: Over all, 36ft. 1in.; beam, 6ft. 3in. on bottom, 7ft. on top, etc.

I would ask if it be any wonder that yachtsmen and others sometimes question the stability of these boats when a man of science commits himself to the publication of such dimensions?

You give the 36ft. sharpie a side flare of but 9in. for both sides when there should be, say, 15in. for each side, and you name a beam of 7ft. when it should be 9ft.

In FOREST AND STREAM, of Oct. 26, you speak sarcastically of a certain Frenchman who has been bold enough to cross the Channel in a 36ft. sharpie (her length was about 40ft.), and add that "as no rough weather was encountered, so the experience, though nominally at sea, is without any special lesson." You are quite correct in this statement. I have seen many a day on the English Channel when a canoe could easily cross.

About the middle of last August my two little boys and myself took a New Jersey "lift" down to Cape Cod in a 40ft. sharpie. Her draft of water is 18in. She has a centerboard 15ft. in length. Her rig is the "Roslyn yawl," and although we found plenty of rough water "at sea," away outside Montauk, Block Island and the Vineyard, I can say absolutely that in the course of a pretty long yachting experience I never yet have seen any boat perform better in heavy weather outside than did this 40ft. sharpie. On that rough day when the papers told of disaster and wreck off Long Island and New Jersey we made our run from Block Island to Plymouth, Mass., with half a gale blowing from a shroud. We made a direct course, and, what is very remarkable, something the desperately deep gentleman will scoff at, is that during this run—some fifty or sixty miles—we let our tiller swing perfectly free, never once touching it, but putting the boat entirely by the trim of her sail. Is there no lesson as to handiness in this? Is there a cutter yacht afloat that could do the same thing? If you know of any man who so thinks I hereby offer to sail him, and his cutter, a match, twenty miles at sea, with no rudder or steering gear of any kind on her boat.

In a short time two Nonpareil sharpies are to start for Florida. One of them, at least, sails the outside course. THOMAS CLAPHAM.

ROSLYN, L. I.

[The dimensions we gave were those of a sharpie in actual use for several years.]

BEDOUIN'S BEAUTY.

NOT a critic or reporter, nor even an ultra nationalist or devotee of antiquity, whose views have been recorded, but freely acknowledges the superior style, beauty and shipshape appearance of the cutter compared to the sloop. This concession has been forced through the gradual wearing away of prejudice in favor of the fruit. A few years ago the cutter was held up as ugly and unguinly in hull and rig. Time works wonders, and as these sturdy ships grow upon us, still further familiarity will remove the last vestiges of unfounded prejudice yet remaining against their grand accommodations and perfect adaptability to our waters. Bedouin's light weather victories in store for us next season will give the good cause of honest boats a big lift, though practically the case has already been settled in her favor by events still so fresh in yachting history.

BEDOUIN TO WINDWARD.

IN the main the *Herald*'s report of the three memorable matches was fair in spirit, though naturally colored by prejudices even honest persons may be excused from displaying under circumstances so trying to national pride and long-treasured faith. Concerning Bedouin's breeze-splitting propensities, we quote from the *Herald* as follows: "The cutter was by this time a quarter of a mile to windward, and all hands knew that the Gracie could do nothing with her. . . . . The Bedouin stood well to the westward on the starboard tack, beating Gracie like breaking sticks. . . . . She had gone out to windward in a manner that was astounding to the friends of the sloop, and the race was practically over. . . . . By two o'clock Bedouin had the Gracie a mile and a half away on her lee quarter. . . . . The Bedouin's performance places her among those at the top of the list."

BEDOUIN'S ACCOMMODATIONS.

ANYBODY can make bilid assertions. One can assert the cutter has most room and her cabins are cool. The other can denounce her as confined and sweltering. We make no assertions here, but are content to rely upon every person's own judgment. Let him inspect the sloop Gracie on deck and below, then let him go and do likewise aboard the cutter Bedouin. Next summer let them hang up thermometers in both vessels. We court such an investigation, for knowing both styles and certain that truth will prevail, we fear not the conclusions sure to be reached.

WHO SAILED BEDOUIN.

IN the first of the recent Seawanhaka matches the Bedouin was steered by her owner throughout. In the second and third races Skipper Petrick was at the stick. The second race was lost after Bedouin had the prize well in hand by following the counsel of her pilot, who advised going off shore for a two-knot current and wind, neither of which were found. The third race was lost after Bedouin had roundly beaten Gracie through the lubberly contingent of native hands. With Petrick at the helm there was no one to look after the raw material.

BEDOUIN IN LIGHT BREEZES.

FROM the trials of this cutter in scrub brushes with sloops down the bay, in light winds, notably with the Fanny, we judge the cutter to be a marvel. Under such conditions, with her short rig, she ran through Fanny's lee and weathered on her in such a way which was truly a caution. But she will be heard from at this game next summer.

BEDOUIN ONLY A CRUISER.

WE have it upon the best authority that Bedouin was contracted for and designed for a cruising yacht and that her spars were cut down ten feet from proper racing dimensions. In spite of the light weather this cruising cutter outsailed one of the fastest racing contrivances in America.

NEW SLOOP.—New ideas have not got as far as South Brooklyn yet. Gorman & Wallin are building a sloop for Mr. Chester of Staten Island. Water line 32ft., over all 35ft., beam 13ft. 3 in., depth 4 ft. 3in. These are very antique proportions.

CAROLINE.—Schooner Caroline, recently ashore on the Eastern coast, is not to confounded with the well-known Caroline of the Eastern Yacht Club.

LAID OVER.—Continuation of article on single hand yachts will appear next week.

VAYU.

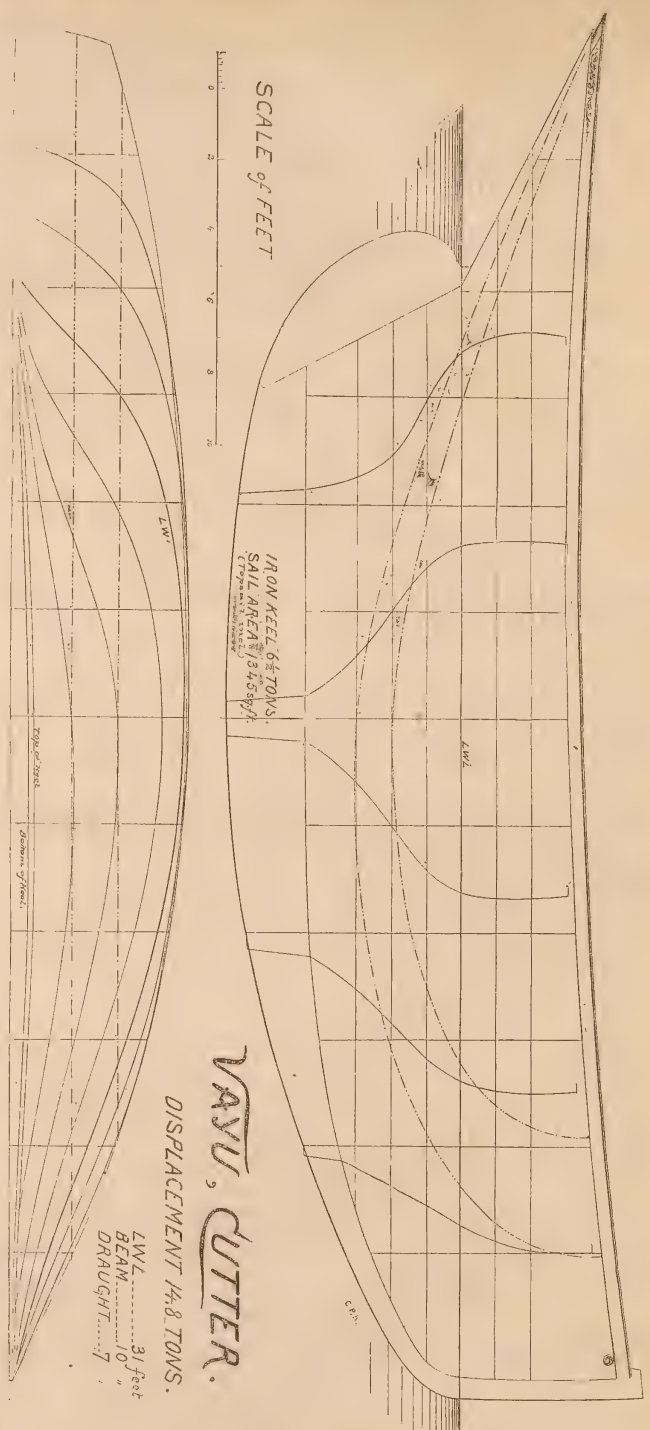
NOW that it is gradually percolating the whole sailing and yacht building community that depth and displacement are not in themselves a hindrance to speed, but that speed depends upon form and area of skin, the principal and really the only ground upon which the construction of wide, flat and dangerous boats might be excused has been removed altogether. With the evidence of recent races in support of a clearer understanding of the problem of successful design, we look for a rapid increase in the fleet of safe, able boats having draft and displacement enough to make them something more than toys. With their introduction will follow, of course, more extended cruising, leading to greater experience, assisting in the conversion of the raw material into sailors and adding materially to the benefits, physical and mental, to be derived from following up the sport. In short, the habilitation of the cutter in the American yacht fleet is a great stride ahead in raising a sport from purposeless juvenile play to the dignity of a manly pastime, in the pursuit of which student and athlete may find honor, food for thought and reflection, as well as the opportunity to develop character and the stamina of manhood of the highest order.

In the East where the working yachtsman has thrived to a far greater extent than about New York, it is not surprising to find a preference for boats of the cutter style manifesting itself in a general move for more depth and displacement and the substitution of the keel for the centerboard. In part this may be accounted for by the proximity of the denizens of higher latitudes to the sea, but much of their love for deep water yachting springs from a hardier mind which seeks satisfaction in adventures accompanied with daring and dash, from which more sensual and luxurious people naturally shrink. But the inclinations of yachtsmen in the East are founded upon something more tangible as well, for they have witnessed many competitive trials between deep vessels and skimming dishes, and of late the former have been perfected to such a degree that often they snatched the laurels from their less worthy but fleet adversaries.

Probably the most marked exhibition of the speed deep boats and the cutter rig are capable of last season, was the triple victory won by the cutters Kelpie, Mavis, and Beetle, in the Beverley open matches, sailed August 26, in which these three headed their class—in fact, a fair, square race, beating handsomely keel and centerboard sloops of great local reputation. These boats range about 30ft. loadline, with one-third of that for beam, and represent a very handy size for a couple of quarter-deck amateurs and one hand before the mast. As cruisers their sturdy qualities, large accommodations, and the ample room afforded by a flush deck, were certain to recommend them to yachtsmen in the East. But it was long supposed that such boats could never lay pretensions to speed, and as all Americans love a race now and then, the prospects of the cutter did not seem overbright. A few trials, however, drove away all doubts, and to-day cutters bid fair to come in for a large share of public patronage.

The boats we have mentioned belong to the category known as "Itchen boats," from the place of their origin. They are beamy cutters, and it was quite natural that cutters with some beam should appeal most readily to the tastes of a community accustomed to great beam from boyhood up. The construction of Itchen boats is a long way in advance of the regulation sloop, since they prove in their moderation that beam does not include all the virtues, but that depth, draft and displacement play their share in making roomy, fast and able boats. We are glad to learn from yacht builders in the East that a large demand for more such boats has sprung up and next season promises to see flush-decked cutters so common in Eastern waters as to excite no further comment. Whether British experience will be followed and beam decreased gradually, as actual trial demonstrates the gain in snug rigs and the greater reliability for all round work the narrow cutters possess, is a matter which remains to be seen, and depends very much upon the pressure exercised by measurement rules enforced.

If yachtsmen were perfectly free to extend in all three directions as they liked, paying only for the size they made use of, length might be received with more favor, but if a tax is put in that direction and size allowed to go free in some other, the process of development will of course be slow, and we may have to look to the cruisers, not influenced in their choice by any rule, for the cue to the best model in the future. But that great beam is much of a delusion for any purpose the Boston cutters have already proven. It would be hard to find a thirty-foot sloop in Boston with the room on deck or below Kelpie and her kind can boast of, and it would certainly be quite impossible to discover any New York centerboard sloop with much more than half the stowage room, though necessitating larger sails to drive them. For all that is contained in the hackneyed expression "comfortable boat," no man would hesitate between an Itchen cutter with her depth, high side and as much beam as there is use for, and a shoal, dangerous New York trap, with her stilling and cramped cabin confined to the short length of her house, and the extravagant rig, which is a necessary evil to make a beamy boat go.



As an example of the tendencies in the East we produce this week the lines of the latest addition to the seagoing fleet in the shape of the new cutter Vayu, recently launched and found to give great satisfaction upon trial. This yacht was constructed for Rear Commodore Charles A. Welsh, Boston Y. C., formerly of the Valhalla sloop, by the well known City Point builders, Geo. Lawley & Son, who likewise furnished the model, we believe. While resembling the Itchen boats in general, the new craft has features of her own rather an improvement upon her prototype across the pond. The sheer plan shows her to be bold in conception and in the round up forward and raking post a commendable departure from old school lore. Her topsides show none of the homely flare or lip of the sloop which so retards headway in rough water, while the sharp lines forward with the tolerably fine run are certain to assist ease and dryness and close windedness in a sea.

The overhang adds much to jaunty appearance and deck room abaft the mainsheet. It is one of those luxuries seldom to be found in our fleet, owing to the imperative necessity of docking under the silly length rules of the day. It is within bounds to say that no benefit to speed is derived from the last four feet of this overhang, yet the mean length and one-third overhang crudities still in vogue in many clubs would tax those last four feet as equal to a lump in the body a couple of feet in length. Had Mr. Welsh intended racing under such absurd rules he could not have indulged in the beauty or utility the long overhang offers, but would have felt obliged to saw his boat off short and ugly after the Elsworth fashion. Luckily no measurement tyros blighted the good looks of Vayu in this respect, and the Lawleys were able to display themselves without hindrance in a cutter's nobby fantail. The iron keel, though no longer anything new in the East, is a pattern for many in New York, for Vayu is thereby made uncapsizable, able in a sea and minus the nuisance of a centerboard casing just where it is not wanted, and under most circumstances will draw less water by several feet than if built with a fin.

The Vayu is 31ft. on loadline, 39ft. over all, 10ft. extreme beam, 6ft. 9in. depth of hold, and 7ft. draught of water. Her keel is so much rockered that should she ground a change in trim will float her free. Least height of freeboard is 2ft. 11in. to covering board. Displacement 14.8 tons, of which 8½ tons is represented by ballast, 6½ tons thereof being in the shape of an iron shoe on the bottom of a broad keel, the remaining 2 tons stowing inside for the purpose of trimming. She is very strongly built in Lawley's best style. The keel is of well seasoned white oak, 16in. wide on top and 14in. on the bottom, the iron shoe below having also a slight taper downward and fore and aft. Frames spaced 14in. between centers, every third station being shown in the accompanying plans. They are double, with exception of seven in the ends, 2in. sided and 4in. moulded at keel, tapering to 2½in. at head, of white oak. Plank, 1½in. Michigan yellow pine, 4in. wide, the topsides being worked in one length fore and aft. Oak beam shelf, 4x4in., the clamps being in a single length and through-riveted to the frames. Decks of white pine 1½x1¾in wide.

The accommodations are extremely liberal. The deck is of course flush, no house or cockpit interfering with free passage. There is a skylight over the saloon amidships and a mahogany companion over the main hatch, also a small hatch to forecastle and large bullseye to after cabin. The forecastle is 12ft. long, with standing height; main saloon, 8ft. 6in. long, with 6ft. head room, bulkheaded off at both ends with sliding doors of neat panel frame. The stateroom aft is very cosy, having a double berth on starboard side and handsome bureau and lockers with mirrors on port hand, also improved provisions for washing and a w. c. a. 12-ft. forecastle and a stateroom with double berths and conveniences on port hand line reared much like a fairy tale to the average sloop owner about New York, accustomed as he is to a little kennel forward, into which he would hardly ask his crew to double up, and a main cabin with 4½ or 5ft. headroom split up into four sections by the centerboard. Though he has 12ft. beam or more, he gets only half the accommodations it has found in a cutter 2ft. less beam. Vayu carries 1,345 sq.ft. in lower sails and topsail. Mast, 30ft. above deck, 8½in. diameter at partners; housing topmast 18ft., long gaff, 21ft.; boom, 31ft. 6in.; gaff, 23ft. 6in.; hoist of mainsail, 29ft.

It is to yachts like Vayu we look for popularizing the arts of sailing and navigating. Economical in build and possessed of safety, they likewise comprise all that yachts of large tonnage can boast of, and are capable of taking care of themselves at all times, affording a thorough participation in all the attractions of the sport at a fraction of the cost spent upon large vessels, which add only to expense, care, and cumbrous inutility, without offering more good to their owners except for distant voyages.

QUITE THE CONTRARY.

AFTER the excellent beginning the *Herald* made at understanding the cutter's good points, Gracie's bull luck in taking the prizes in second and third race rather discomfited our estimable contemporary, and it quickly sought to straddle the fence again in the following mildly put summary: "It is conceded on all hands that the advocates of the cutter type of boats are not as fully satisfied as they would like to be of their superiority over the beamy and lighter draught American sloop." We will endeavor to infuse more confidence in a journal seeking the truth to the best of its abilities. Given the crack sloop of the country in her own weather, with years of time and tens of thousands spent upon her in bringing her up to perfection, put her in charge of a skipper and crew accustomed to these waters; given also a random, untried cutter, possibly quite a slow vessel of her style, let her be rough and raw, ballast hove in any fashion, her trim unknown, her hold full of cruising rubbish; put aboard a crew perfectly green and strange to one another, a foreign skipper not familiar with our waters, an amateur at the stick one day, and cap the climax by cutting down her racing spars ten feet. Let these two sail three matches, the sloop being beaten, as the *Herald* has aptly described it, "like breaking sticks," let the cruising cutter repeat this three times in succession, and pray what influence can it have upon reasonable persons that the sloop by sheer force of luck and fluke most patent landed the purse upon two occasions? And, pray, if a cutter picked hap-hazard, without regard to her rating among other cutters, and sailing under short rig and the disadvantages enumerated above, can beat one of the crack sloops of the country, why should the *Herald* suppose the "advocates of the cutter type" in the least disconcerted?

We regard the recent races as a perfect revelation to the old school, represented in our sloops, and are quite content, even highly pleased, with the result, and willing to stake our reputation upon the future, which we predict will place the cruiser Bedouin at the head of the fleet, the fastest single sticker in American waters. That is what we concede, and not an iota short of that. Let the *Herald* watch coming events.

WHAT WE CONDEMN.

Editor Forest and Stream:

There may be a great deal in science, but I think you are not right in condemning practical experience as you do.

A READER.

[We do not condemn practical experience nor practical men, and never have done so. What we do condemn is the fraudulent assumption of men styling themselves "practical," with their claims resting upon nothing else than sublime impudence and a whole lot of dogmatic quackery built upon abysmal ignorance. We denounce as fraudulent the claim to "practical experience" when the test of facts shows it to be palpable charlatanry. We denounce the very prevalent impression among certain classes that ignorance of underlying principles and "practical" knowledge are one and the same thing. The complacency with which the unsophisticated are roped in with the current stuff about light displacement, light draft and beam for speed and other good qualities in yachts, we will continue to denounce as the arrant humbug it is. Recent events have shown up

the hollowness of the pretensions of a class to a "practical" understanding of the very simplest rudiments of the subject they swaggeringly profess to be masters of. Our correspondent had better read with attention the article "What Bedouin Teaches," and answer himself whether we are not justified in holding up to scorn as an imposition the bare-faced clap-trap palmed off upon the public so long as "practical experience" in the modeling of our shoal-bodied fleet. We have great regard for science or theory. We have still more for genuine "practical experience," but all do we put down as humbug when combination of the two. For the empty claim to practical experience where none really exists we have the contempt properly bestowed upon any swindle.]

STRAIGHTENED OUT.

WE lay no great store upon the criticism of technical subjects by men not fit for the task by special training, as unprofessional people reason only *a posteriori*, after the accomplishment of certain facts, and not *a priori*, by induction. But the *Herald* has generally exhibited a spirit in honest and fair-minded reviewing of yachting matters, that we will undertake to set it right concerning the recent Seawanhaka races. In a summary of those events which appeared in the *Herald* last Monday, certain very important information does not appear to have been in its possession, or its conclusions would have been more decidedly in favor of the cutter. In the main we find no fault with the review, but there are certain half-digested passages, likely to create wrong impressions, in the article, and these we will now take up for correction.

The *Herald* says: "The Gracie did very well with the big cutter Bedouin, and it is likely that in breaking tacks the former won the race. What Captain Rogers meant by letting the Gracie get away from him is one of those things that cannot be satisfactorily answered."

This is the secret of the second race. Bedouin had given the best evidences of being the winning boat, but an error of judgment lost her the race. That certainly is no proof against the speed of the cutter. The first match she won out and out, on the merits of the boats, as the effect of the tacking to Gracie's steering gear had been greatly overrated and used to explain away her defeat without good grounds. We quote again from the *Herald:*

"The last race was over a course from buoy No. 5, thence to the Whistling buoy, Gedney's Channel, thence to Sandy Hook lightship and back, going over the course twice. It was a cutter course, the wind being ahead to Whistling buoy, and on the first round, after leaving the buoy, the lightship could just be fetched. The sea was so short and the tide ebb, giving the yachts that kind of water which would show to most disadvantage the weak points of the wide boats. It did make them bob a good deal, but not enough to cause them to dig the sea up with their bowsprits, as the cutters did. Truth compels the remark that, though the cutters held on well, they were very wet, and the water line on the jib and forestaysail must have been four feet up from the bowsprit. On the first beat off the cutters gained a little. In the windward work on the second round the Gracie had the Bedouin out, and the Fanita gained a trifle on the Oriva. Before this time the Valkyr had given up, as being evident that she was not in her usual form. It was subsequently ascertained that Valkyr's centerboard was so badly bent it could not be hauled up. Some time before the races the Valkyr touched on the rocks and bent the board. Repairs were made but the strain was such that kind of work

J. PALMER O'NEIL & CO.,

68 Fifth Avenue, Pittsburgh, Pa.

AGENTS IN THE UNITED STATES FOR THE

Westley Richards Hammerless Gun.

Manufactured by WESTLEY RICHARDS & CO., London, England. (Established 1820.)

INVENTORS AND SOLE OWNERS OF THE ANSON & DEELEY HAMMERLESS LOCK WITH AUTOMATIC SAFETY BOLT.

Making the Safest, Simplest and Most Durable Breech-Loading Gun to-day in Use.

SAFEST, because the triggers are effectually bolted whenever the lever is moved to open or close the gun. SIMPLEST, because the lock contains fewer pieces (only four) than any other gun. MOST DURABLE, because the four parts are very strong, and the swivel and bridle—the weakest parts in the ordinary lock—is entirely dispensed with.

The Anson & Deeley hammerless lock has been subjected to the severest test, having been fired EIGHTY THOUSAND times in a wear and tear trial without cleaning, and without showing any evidence of wear. The Anson & Deeley action is made in its perfection by Westley Richards & Co.

From every quarter unsolicited come testimonials of the excellence of these guns. We quote a few extracts:

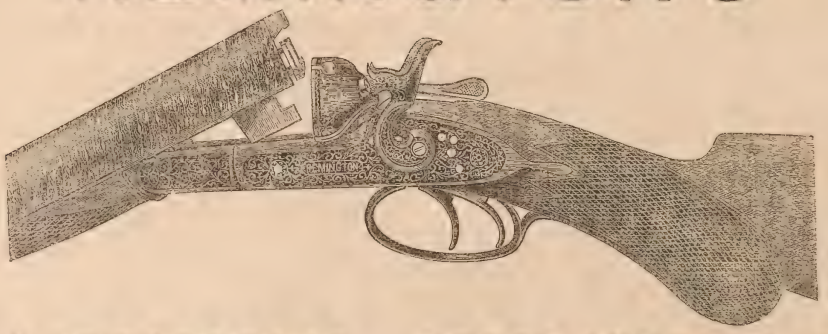
"The Westley Richards Hammerless Gun excels any gun that I have ever used."—GEORGE W. BROWN, Conneautville, Pa.

"The action is simply perfect; there is no possibility of accidental discharge."—E. J. CARPENTER, Cincinnati, O.

"The Hammerless Westley Richards works to a charm, and brings the ducks right out of the sky."—CHARLES J. CLARKE, Winnows Point Shooting Club.

"The little seven-pound Westley Richards Hammerless Gun, purchased from you last summer, has given entire satisfaction. For hard shooting, easy manipulation, and perfect safety, it cannot be excelled. I used but three drams of powder and one ounce of shot throughout the entire season, killing my birds as clean in September as first of October."—ALEX. REYNOLDS, JR., Kittaning, Pa.

"The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun to buy a Westley Richards Hammerless."—PATRICK HENRY, Clarksville, Tenn.



"I find perfect ease in manipulating the gun, and absolute safety secured from accidental discharge by the automatic safety bolt, which never fails to go to safety when the lever is moved to open or close the gun. You know how prejudiced I have been against hammerless guns. Well, I am thoroughly subdued, and I unhesitatingly say it is 'the gun of the future.'"—I. R. STAYTON, Secretary Allegheny County Sportsmen's Association.

"I feel as if I ought to let you know how the 10-bore, 9½lbs., 30in. Westley Richards Hammerless works. At the target with four and a quarter drams of Orange Lightning powder No. 6, and one and a quarter ounces No. 8 shot, I can get over 400 pellets in a 30-inch circle, 40 measured yards, every time, with beautiful distribution and wonderful penetration. With the same charge of powder and one and a quarter ounces No. 5, it is sure death to ducks at fifty yards every time. I made two successive shots at single mallards sitting on the water at 76 and 83 yards, and killed both times, and this with the above light load in paper shells. A mallard flying at 50 yards drops as if struck by lightning. Let me thank you for having furnished me what I have so long been looking for, i. e., a gun that suited me in every way. I've got it now and money cannot buy it."—F. W. COTTLE, Lincoln, Ill.

We have just received a large invoice of these matchless weapons in all grades and gauges, including the smaller bores, 14, 16 and 2 -gauge, and can fill all orders promptly, or will import to special order without extra charge. Our stock of Fine Goods is *without exception* the largest in this country. Constantly on hand, bargains in fine second-hand guns with hammers. New catalogue now ready containing illustrations and prices of all new and useful implements.

1882. **REMINGTON'S** 1882.

12-Gauge. 8lbs.

10-Gauge. 9lbs.

NEW MODEL DOUBLE GUN.

The latest and best gun yet produced. They are made of the best material, with the best workmanship, on the interchangeable plan. They are made with the popular top action and double bolt. All have Rebounding Locks, Large Head Strikers, Patent Fore End and Extension Rib. Each gun is thoroughly tested at the factory. All these guns are made with Pistol Grip, and are Choke Bored. In beauty of finish, quality of material, and accuracy of workmanship, even distribution and penetration, they are unexcelled.

PRICE LIST.

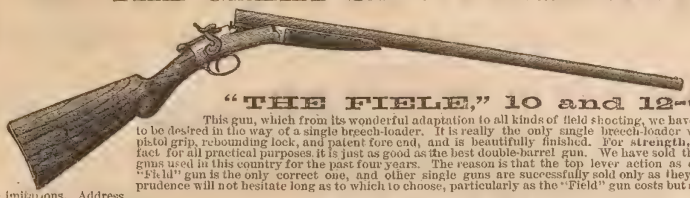
DISCOUNT TO THE TRADE.

Swaynes Ointment

A RELIABLE REMEDY FOR ALL DISEASES OF THE SKIN, SUCH AS TETTERS, PIMPLES, SORES, BLOTCHES, RASH, ERYSIPELAS, RINGWORM, BARBERS' ITCH, REDNESS OF NOSE AND FACE, BURNS, CUTS AND SCALDS.

NO HUMOR OF THE SKIN CAN RESIST THE SOOTHING AND HEALING POWER OF SWAYNES' OINTMENT.



ON ACCOUNT OF ALLAYING THE INTENSE ITCHING AND INSURING SWEET REPOSE, IT IS KNOWN BY MANY AS "THE GREAT CURE FOR ITCHING PILES."

DR. SWAYNE & SON, PHILA.

SOLD BY ALL DRUGGISTS.

THE GREAT SINGLE BREECH-LOADER.

"THE FIELD," 10 and 12-Gauge.

This gun, which from its wonderful adaptation to all kinds of field shooting, we have named "The Field," leaves nothing to be desired in the way of a single breech-loader. It is really the only single breech-loader worth having. It has Scott top lever, pistol grip, rebounding lock, and patent fore end, and is beautifully finished. For strength, convenience, penetration, and in fact for all practical purposes it is just as good as the best double-barrel gun. We have sold the bulk of all the single breech-loading guns used in this country for the past four years. The reason is that the top lever action as combined with other features in the "Field" gun is the only correct one, and other single guns are successfully sold only as they resemble ours. Persons with ordinary prudence will not hesitate long as to which to choose, particularly as the "Field" gun costs but a trifle any way, and no more than the imitations. Address

BLOCK SAFETY HAMMERLESS, With Crystal Apertures.

The *only* Hammerless showing position of hammers at a glance. The only Hammerless having fixed firing pins, thus preventing smoke and dirt entering the lock. In others the aperture through breech to lock is open, the hammer and striker being one piece.

1876—PHILADELPHIA, MEDAL AND DIPLOMA. 1878—PARIS, SILVER MEDAL.

1879—SYDNEY, FIRST, AND HIGHLY COMMENDED FOR MANUFACTURE. 1881—MELBOURNE, SPECIAL GOLD MEDAL AND FIRST ORDER OF MERIT.

COGSWELL AND HARRISON, 142 New Bond Street and Strand, London.—"After careful consideration of the merits or otherwise of the various systems of Hammerless Guns now before the sporting public, our opinion, formed sixteen months since, remains unchanged, that the principle of your top lever gun with the safety tumbler-block has many advantages over any other gun we know of at present; we consider with the extreme safety secured, together with the sound principle on which the gun is formed, will make it a general favorite in the future. As far as we are personally concerned we like the principle so much that we have adopted the system."

CAPTAIN BOGARDUS.—"As evidence of the durability of your guns, I have shot one gun over 50,000 times. I used your triplex action in my two recent matches with Mr. Fennel, winning both times; also in my match with Captain Shelley, at which time I scored 84, the highest score on record; and in the international match with Aubrey Coventry, Esq., for £1,000, which I won, killing 70 out of 100—all 50 yards rise."

THE *Field* says:—"The match will be handed down as one of the most exciting contests ever witnessed."

"GREAT PIGEON MATCH.—Captain Bogardus, in his recent match with Mr. Rimmel, of England, used his new W. & C. Scott & Son's **"Block Safety" Hammerless,** and killed 99 out of 100—30 yards rise."—*Forest and Stream, New York.*

C. M. STARK.—"The Scott Hammerless is the very best shooting gun I ever owned or have seen shot both for closeness and penetration."

LATEST VICTORY FOR THE SCOTT HAMMERLESS.—Match between Mr. Chas. Mucalaster, of Philadelphia, and Mr. E. C. Murphy, N. Y., for $1,000 a side.

Constantly receiving fresh invoices of these guns of all sizes.

SEND STAMP FOR OUR CIRCULARS OF DIFFERENT MAKES.

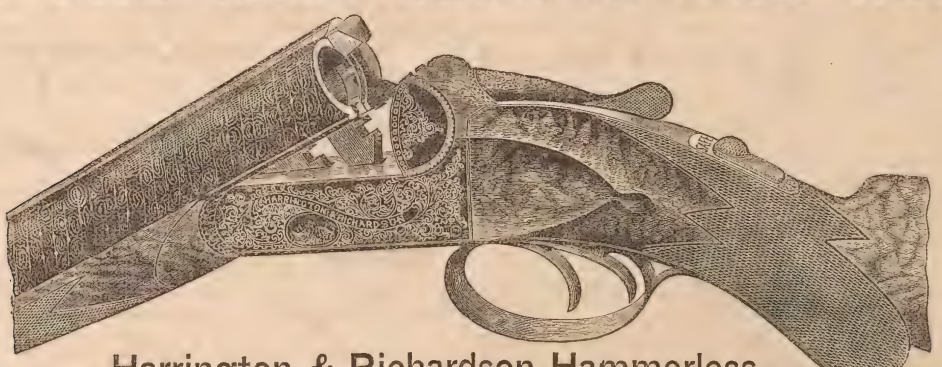
Absolute Safety!

Patent Block Safety Lock.

This gun is always safe from any accidental discharge. In opening the gun for loading, the block safety A, interposes between hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer as accidentally discharged, other than by the trigger and caught by the block safety.

LONDON Field, Nov. 1st, 1879.—"The principle accords with our ideas of what is wanted to make the hammerless gun safe."

Land and Water, Nov. 10th, 1879.—"The great improvement lies in the New Tumbler Safety Block; this being worked by the triggers only, supposing the hammer from any cause should fall, **without the trigger being pulled,** the projection on the hammer falls into the **Safety Block,** and so prevents an explosion. The gun is on the favorite top lever action, and the cocking arrangement is exceedingly simple and smooth-working."

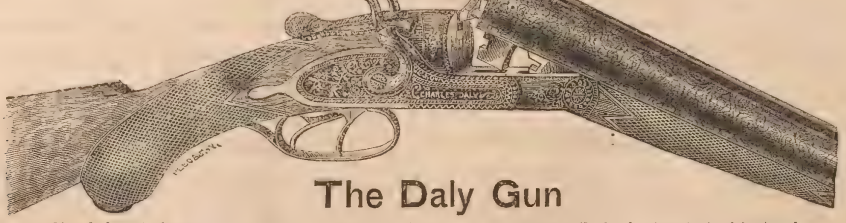


REV. W. J. RAINSFORD, Toronto, Canada, Oct. 2d, 1879.—"I have used many guns, by many makers, and certainly your New Premier Hammerless is the hardest hitter I have put to my shoulder."

CAPT. BOGARDUS says:—"No gun can excel mine in shooting. The Block Safety is perfect."

GREAT INTERNATIONAL PIGEON SHOOTING, MONACO, Feb. 18, 1882.—Grand Prix du Casino, 80 competitors, comprising the best shots in the world. Sig. Guidicini (the most noted shot in Italy), won the 8,000 frs. prize with a pigeon gun by W. & C. Scott & Son.

We call attention to a few of their leading hammer guns, viz: their New Trap Gun; their Star quality gun with Prize Compensating Lump; their New Triplex Lever Grip Pigeon Club Gun. Superior quality in hammers and hammerless. Their highest quality is marked "The Premier Quality" between name and address. No guns are genuine unless marked in full W. & C. Scott & Son.



THE TWO BEST GUNS IN THE WORLD.

Harrington & Richardson Hammerless

Is the highest achievement of American gun enterprise. The workmanship is equal to the finest London Premier guns, and the fitting is closer, every part being made by machinery to a gauge. For close hard shooting nothing in the world can excel them. In every respect equal to imported hammerless guns costing twice the money. They are made on the Anson & Deeley patent, and the work is inspected Mr. Deeley. The rubber butt plate is of the most exquisite design, and all the lines are in the finest taste. Size—12-gauge, 7½ to 8¼lbs.

No. 1, Laminated steel barrels, outline engraving.....$100 00
No. 2, Damascus barrels, good scroll engraving, selected stocks.....150 00
No. 3, Same as No. 2, but finer in all points.....$200 00
No. 4, Premier quality, every part made with the most scrupulous care, and most exquisite finish, 300 00

The Daly Gun

Has been in the market for ten years, and has the largest sale of any strictly first-class gun in the country. Hundreds have been in the hands of professional hunters for years, and are as sound to-day as when they were bought. C. R. Shelton, manufacturer of auxiliary rifle barrels, New Haven, Ct., has shot one over 20,000 times in showing his invention, and it is sound as a dollar and hasn't had one cent of repairs. Here is a sample testimonial:—Jefferson, Texas, Aug. 19, 1882: "The Charles Daly Gun I bought in 1880 is the most perfect gun I ever saw. A microscope cannot detect the slightest flaw in the fitting. I have shot it 2,000 times and the action is as strong and tight as when received. The gun is a beauty and the admiration of all my friends.—WM. T. WARE.

No. 42, **Scott Action,** Damascus barrels, bar rebounding locks, pistol grip, patent fore and extension rib.....10 and 12 g. $80 00
53, Same as No. 42, with Purdy double bolt and horn butt plate.....10 and 12 g. 90 00
55, Same as No. 53, with 3 pin locks and engraved mountings and ornamental rubber butt.....10, 12, 16 and 20 g. 100 00
60, Same style as No. 55, fine laminated steel or Damascus barrels, fine engraving and chequering, first-class workmanship.....10 and 12 g. 150 00
100 **"Diamond Quality."**—The most superbly finished gun in the market, every part of the finest quality and most elegant workmanship, and equal in every respect to the finest London Guns, 10 and 12 g. 200 00

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, { 30 per cent. less than others. / Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.

In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

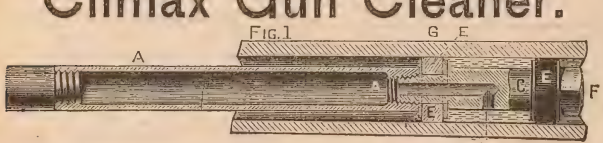
Climax Gun Cleaner.



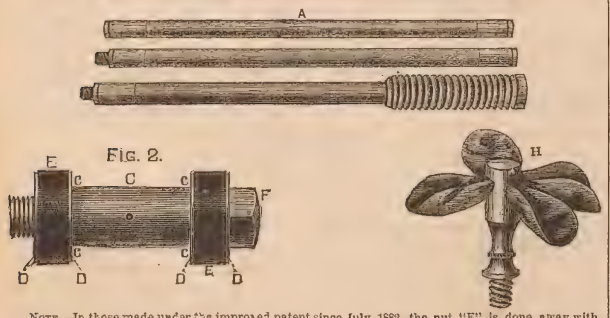


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

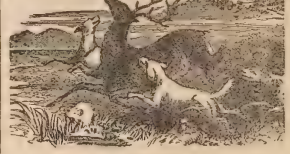
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.



During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For 'Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

ANSWERS TO CORRESPONDENTS.

THE CHANGE OF CONDITIONS.

UNOFFICIAL advices from Great Britain bring the news that the Council of the National Rifle Associon have acted upon the requests sent from the Directors of our own Rifle Association, and that two out of the three points asked for have been granted. These concessions permit the American team to be made up of members of the National Guard who may become such before the first of January next. It is also agreed to permit the use in the match of wind gauges on the rifles similar to those in use on many of the weapons now in the hands of the guardsmen here, but on the other hand the cablegram informs us that the request for a modified form of the front sight, tapering it up in finer proportions than the comparatively clumsy fore sight now in use, has been denied.

We are not informed upon what grounds these conclusions were reached by the British Association, and it is of comparatively small moment. Another week will bring the official notification of what modifications are to be made in the conditions of the match of 1883, and American marksmen may know precisely how to practice and what restrictions they will be placed under when they go abroad to meet the Wimbledon champions on their own common. The match of the last season did not reflect as fully as it should, in its conditions, the present state of military rifle shooting. It was admirable as an exhibition of what may be done at extreme ranges with a nominal military rifle, but while this rifle showed marked departures from a weapon which could fairly be called fit for general use in the hands of troops, yet in other particulars it contained very antiquated points. Two of these were indicated in the application made by the American directors for a modification of the conditions. For some time past a readily controlled wind gauge has been a fixture on the best models of American military rifles. It has been shown to be a practical device. It answers its purpose in the hands of properly trained troops, and with it the National Guardsmen, of this State at least, have been able to get better work out of a confessedly inferior arm. It was no new-fangled contrivance, then, which was asked for by the American competitors, but one which only an oversight left out of the original conditions, it properly should have found its place in a match which was supposed to represent the best and latest endeavors in military rifle practice. Equally with this was the modification of the fore sight to make it better adapted to its object as a point of sight. It is nonsense to suppose that the present form of fore sight is by any means as well adapted for catching a quick and ready sight as the new form permitted by the military authorities here, and which, by its merits, must come generally into use.

So far, then, the change in the conditions is in the right direction. The rifles do not cease to be really military rifles, but they are made much more effectual, as the records of the matches will show. It is to be regretted that the British Association did not see its way clear to an entire change of the conditions of the match as proposed by the American Board, still as far as they go the changes ought to make the American team much stronger for the match of 1883. It was the general complaint that the home team was much weaker in the last match, because of the lack of their accustomed wind gauge. There may have been some truth in this. It certainly had the effect of making the men lose confidence in their own work, and with wind gauges it would have been possible to have shown how wretchedly bad were the rifles under the ammunition used. With wind gauges it will at once become possible to keep records and establish a team system, and Col. Bodine may now make his coaching a real help to the men and not have it, as he has confessed it was in their late defeat, merely a set of motions intended to mislead the public and keep down the very proper protests which would have come from the press. While it may be to a certain extent true that military shooting is a matter of personal endeavor, yet with tried weapons, shooting known charges, it will be entirely possible for a team to establish a system of mutual help, which in a match will be worth many points in the aggregate. They can surely keep the story of what each rifle will do under certain conditions of wind, light, moisture, etc., and very soon it will become possible to arrive at some general conclusions. We confess that we despair of seeing a renewal of the series of American victories before the butts until the American team system is re-established in reality and not as a farce. With the number of men in Great Britain who give so much time to local, county and general rifle meetings as to become in a measure semi-professionals, there will always be a body of marksmen strong in an individual contest, and such their team matches really are. Accustomed to shoot against each other, and always striving for their personal advancement, there has been no cultivation of purely team shooting. Here it is yet possible to get squads of men who, under proper leadership, pull together, and other conditions of rifles, position, etc., being equal, they must win.

Touching the concession of later additions to the National Guard taking places on the team, it was a pure confession of inferiority on the part of the American managers. It was an insult to the National Guard as a whole, and if the Guard is to be crammed to make up a team, there is a scandal brewing which even a victory will not wipe out.

EASTERN FIELD TRIALS.

THE Eastern Field Trials, which commence to-morrow at High Point, N. C., bid fair to prove the most important and interesting trials that have yet been held in this country. The meeting commences with the Members' Stake for which there are fifteen entries, and we shall look for a very interesting contest. All of the dogs entered are good ones, and the winner may be well proud of his victory. We are greatly pleased to see the members of the association take the interest they do in the object for which the club was formed. As we have repeatedly stated, the Members' Stake should be made the most important event of the meeting, and we have no doubt that the interest manifested this year, and the prominence which this stake holds may give an impetus to the matter which will soon accomplish the desired result. The Derby closed with the goodly number of sixty entries, and, judging from what we hear of the performances of the dogs, and the well-known earnestness and enthusiasm of their owners, there will be a larger proportion of starters than has ever been seen in any similar event, and we feel well assured that it will prove to be the most interesting and well contested trial of youngsters that has yet taken place. Forty-seven of the number are setters, and among them are representatives of a large proportion of the best blood in the world. Many of them are doing grand work, and the hearts of their owners are filled with high hope of anticipated victory. The pointers number only thirteen. Although this is an ominous number their owners are confident that the merit of their favorites will secure for them immunity from the decrees of fate. The All Aged Stakes has the unprecedented number of thirty-six entries. A glance at the list gives assurance that the struggle for supremacy will be hotly contested, and worth going a long distance to see. Those who are so fortunate as to be there, will undoubtedly witness better work than has yet been seen at any trial in this country. Birds are reported unusually plenty, and they have been strictly protected on the grounds set apart for the trials. Our only fear is that, owing to the mild weather, the weeds are too rank, and will prove a serious obstacle to the successful running of the trials. With so many starters it will be all important that the conditions for rapid work should be favorable, in order that the trials may not be prolonged beyond proper limits. We trust that our fears may prove unfounded, and that we may have one or two heavy frosts in that vicinity before the trials commence.

HOW TO LIBERATE QUAIL.—From the number of inquiries received by us for live quail we judge that the efforts to restore depleted game grounds will be prosecuted with vigor. We give a hint about putting out the birds. It is the plan pursued by the Westfield, New Jersey, Game Society, and has worked well. The birds are put into cardboard boxes, a pair in each box, and taken at night to the designated place. Here the boxes are put down on the ground in the dark, being open at one end. Some food is spread about them and they are left. The birds remain quietly in the boxes all night. In the morning they come out, there is nothing to frighten them, and they begin to feed. At night they come back to the boxes for shelter. In this way they become accustomed to the locality and remain there. The plan is worth trying.

DOGS AND INSANITY.—In the course of the examination of an alleged lunatic in this city last week, one fact advanced as evidence of unsound mind was that he had paid fifty dollars for a dog. Now, provided the dog was a tolerably good one, there was nothing irrational about this; it should rather be accepted as an evidence of the buyer's sanity. If he can show that in addition to the dog he bought a fine gun and a set of fishing tackle, and used them, he may have no fear of incarceration in a lunatic asylum. If some of the hard-working business men of the day would invest a little money in such outfits, and devote some of their time to field sports, they would cheat the insane asylums out of much revenue. *Mens sana in corpore sano*—a sound mind in a sound body.

SOUTHERN SHOOTING GROUNDS.—The season is approaching when scores of Northern sportsmen will be seeking shooting grounds at the South; and we are in constant receipt of inquiries as to the most desirable localities. The frequent changes which a given district may undergo with respect to its game supply renders the latest and fullest information on these points of the utmost importance. We shall be much pleased to have such particulars sent to us for publication. It should be remembered that the more specific the details of localities, routes, accommodations, etc., the more useful such advice will be.

A GOSPEL OF RELAXATION.—At a complimentary dinner in this city last week Herbert Spencer took occasion to speak of the push and drive which had impressed him as characteristic of life in this country. He urged the necessity of accepting a new ideal of the proper conduct of life, in which relaxation and leisure should have their merited importance. While we Americans are not wont to pay much attention to the idle criticisms of ourselves and our ways, which are offered by the average visitor from abroad, we cannot afford to be indifferent to the observations of so profound a thinker as Herbert Spencer. His gospel of relaxation is well worthy of our heed.

MISERY LOVES COMPANY. It was doubtless on that principle that a crippled Arkansas gunner, the other day, fired into a mass of ducks, bringing down fifty, of which fifteen were recovered and thirty-five cripples allowed to escape. If there is any consolation to be found in such maiming we sincerely trust that our Arkansas friend may have had the full benefit of it. When satiated with the sport of duck-crippling he might emigrate to India, where he would win distinction as a Thug.

A DEER COUNTRY.—Maj. H. W. Merrill, who has just returned home from an extended Western tour, reports the deer very plenty in Schoolcraft and Mackinac counties in the upper Peninsula of Michigan, on the line of the new Detroit, Mackinac & Marquette Railroad. This country is a natural game preserve, and will probably furnish excellent still-hunting for many years to come.

ADIRONDACK SURVEY NOTES.

XII.—MEACHAM LAKE.

BEFORE the echoes of the Angling Tournament had begun to vibrate with sufficient vigor to bring in letters upon the subject, the rattle of elevated railroads and the thunder of the trucks and wagons was left behind, and with a ticket in my pocket for Malone, Franklin county, N. Y., the best point from which to strike into the northern part of the Adirondacks, I started for the woods again. Pictures of Arctic cold, deep snows, snow shoes, and an almost Siberian winter were drawn by parting friends, but there was, on the other side, a chance to find the "frostfish" spawning; and so with heavy clothing the high temperature of the railway car was endured, knowing that the time of suffering would be short. Near Albany the foliage was bright, and visions of Adirondack lakes framed in red, scarlet and old-gold came up as the car wheels clicked in unison with the rhythm of that charming little waltz song, "When the Leaves Begin to Turn," which ran on for miles until it became too dark too see whether the leaves were turning or not. Supper at Plattsburg and a change of cars at Rouse's Point for a Western bound train, were the only breaks until Malone was reached, near midnight. In the morning a look from the window showed that the leaves had not only turned, but fallen, in this northern portion of the State, and that the lakes would be trimmed with brown and dark green, instead of the gorgeous colors mentioned, proving that the last of October found the trees prepared to send under bare poles through the gales of winter.

A team from Malone over a good road reached Meacham Lake, a distance of twenty-five miles, in a little less than four hours and stopped at the cosy hotel of Mr. A. R. Fuller. The lake is one of the most beautiful sheets of water in the wilderness and Fuller's buildings are the only ones upon it. They are mostly new and are finished inside with linden or basswood, and are the perfection of neatness. All the room he has is engaged by the same persons for certain dates for seasons to come, and it is seldom that he can accommodate others. This makes it a most select place, and as there is no bar and no liquor sold it is naturally a quiet one. The lake is some two and a half miles long by half as wide, and the fishing and shooting is second to none, the laws being strictly observed here. Brook and lake trout are artifically propagated by Mr. Fuller at his own expense, and turned out in great numbers not only for the benefit of his guests but also for the good of those who may fish in the waters, only part of which are under his control. The last report of the New York Fish Commission contains the following note from Mr. James Geddes, of Syracuse, to the board: "During my rambles this summer in he woods, I for the first time visited Meacham Lake, where I found, much to my surprise, a fish-hatchery managed at the sole expense of Mr. A. R. Fuller, who keeps a small hotel at this lake. For several years Mr. Fuller has hatched and placed in Meacham, which are public waters, several hundred thousands of young fish—brook trout, lake trout, and a cross of the two, many of which I took with the fly. Now what I wish to say is this: Why should not the fish commissioners foster and assist in such undertakings to encourage others in the woods to go and do likewise? A few hundred dollars of the vast sum annually appropriated would, in my opinion, do a vast amount of good."

Mr. Fuller's hatching boxes are simple ones, placed in a ravine and merely covered with boards, without a house, although he contemplates building one for his own comfort. They are now full of eggs, and I saw some of the finest brook trout I ever beheld, which were being confined until ripe, when their eggs will be taken and the fish then released in the lake. I accompanied the proprietor to Clear Pond, a half mile from Meacham, and saw him take a dozen trout from the spawning beds, none of which would weigh less than three pounds. Brook trout of five pounds weight have many times been taken from these waters, and there is no doubt of the fact that they produce larger trout than any in the Adirondacks or elsewhere in the State. I saw a female hybrid taken from the beds which would weigh nearly five pounds. Its colors were those of its father, the lake trout, but its shape and habits were those of the brook trout. The fish was taken off to the hatching boxes, and I did not have the chance to examine the vomer to see which parent it resembled in the character of this bone which separates the genus *Cristivomer* from that of *Salvelinus*.

Clear Pond has no visible inlet nor outlet, and the trout spawn near the shores among the sediment, which they sweep away until they come to gravel, a foot below; but it is doubtful if any hatch here, as a few weeks later the sediment covers the beds again. It did not contain many trout until Mr. Fuller stocked it a few years ago, but there must be plenty of food here or they would never grow to such a great size. The "frostfish" abounds here, and is called "whitefish"; and this reminds me that "shad" was on the bill of fare for supper at Plattsburg, and proved to be the whitefish, *Coregonus*, of Lake Champlain. The species of catfish called "bullhead," "bullpout," etc., *A. catus*, is found here in great numbers also, as are sunfish and several small cyprinoids. In Meacham eels are quite plentiful and suckers abound. The latter play upon the surface at this time of the year, and can be shot very easily.

Many deer are killed about here, and a hunt is arranged every day now by some New York gentlemen, whose success is varying, like all hunts; but about this I will write again. The survey party is still below at Raquette, and will not be here before December, if then, and so we are widely separated. Mr. Colvin has been here in former years and left his monuments to mark his primary, and perhaps other, triangulations which afford us such a perfect knowledge of this mountainous region.

A friend has sent a note saying that as the "Adirondacks of Murray" have been done in these sketches, it might be well to give a view of them through other spectacles. I thought that I had been doing this, but will sit down and think it over, and if the snow keeps off and the spectacles don't get broken, perhaps it may be done. It is just glorious here now; better than in summer, with its insect torments. But city people are all on the homestretch as soon as September comes, and so miss the best time of the year to be in the woods for everything except trout. F. M.

ITALIAN FISH FIENDS.—The Italian laborers employed in the construction of the new railroad on the west shore of the Hudson River, are making fearful havoc among the fish in the vicinity of their camps. They have been carrying on their destructive practices for many months, and it is now about time for them to stop, or to be stopped by the officials of the railroad. Owing to the gross carelessness of those in charge of the work of blasting, these Italians are allowed to help themselves to dynamite cartridges, with which, every Sunday, they repair to the trout streams and bass lakes and murder the fish by scores and hundreds. These Italians know no better; but the railroad people ought to; and they are the responsible parties.

"AL FRESCO."—We had a pleasant call last Saturday from "Al Fresco," our well-known Florida correspondent, who was on a flying trip to these latitudes. He reported the usual rosy aspect of Florida things in general and fishing in particular. Indian River Inlet is the place to go. The fish are very plenty, so plenty in fact, that it was hinted a three-tined pitchfork might not be an altogether useless implement.

The Sportsman Tourist.

MENDON MERE.

THE mountain slopes to the level plain
In dark green mantle of cypress leaves
The grain is garnered in bounteous sheaves;
The latter summer has come again.

Ripe fruit is hanging from orchard trees
In globes of crimson, or gold and red.
The tiger-lily, with drooping head,
Resigns her soul to the robber bees.

Sad autumn flowers, in blue and gold,
Are flecking the fading river banks,
And strange wild vines in their tangled ranks,
Wave in the breeze as they did of old.

I watch by the river, as long ago
I watched by the waters of Mendon Mere.
What sights and sounds do I see and hear,
As the river goes by with endless flow?

A long succession of mountain spurs,
Roundly abutting upon the stream,
An eagle drifting, with savage scream,
Above the ridges of pines and firs.

A fish hawk guarding the glassy pools.
A pert kingfisher with grating cry,
A heron lazily flapping by,
And trout and minnows in swarming schools.

And now, as of old, the woods are rife
With mystic murmur of sylvan sounds,
For over the hill are eager hounds,
And a red deer running to win his life.

* * * * * * * * * * *

Ah, little I reck of hounds or deer,
Or care for a shot at buck or doe.
My hair is gray and my pulse is slow—
Alas for the days of Mendon Mere.

NESSMUK.

ANGLING IN GERMAN WATERS.

THE ordinary incidents of a trouting trip, especially those connected directly with the catching of the fish, are so very similar all the world over, that in attempting to keep my promise and give you an account of my experiences on the streams in this vicinity, I meet at the outset an obstacle which to me seems formidable, and this obstacle is the difficulty I shall have in trying to avoid more or less repetition of the old, old story, with which all readers of sporting literature must be very familiar, and many of them, as I am, most heartily tired, so tired that the most skillfully worked and thrilling descriptions of the vagaries of the "speckled beauty," his "rushes" and "sulks" and demands upon the power, strength and skill of rod and angler, fail utterly to draw. Is it satiety, advancing age, or the knowledge gained by having myself been one of the actors in such little dramas, with free access to "behind the scenes" that has thus killed my sensations?

Perhaps the second reason is the strongest, for I find that many other golden illusions have faded; for example, I no longer strive to let "The rays of the morning sun, as they give the first kiss," etc., "find me," etc., "by the banks of purling brooks." With Fred Mather, I believe that there is a good deal more fun in a morning nap, and the general average of the day's pleasure is best maintained by the increase of luck with which the approach of sunset is generally accompanied, while with morning fishing, as noon approaches, the slacking up of sport causes increasing fatigue to make itself more manifest.

After "mature deliberation" as to the ways and means I should employ in the endeavor to keep my promise, I have resolved to steer as widely as possible from the breakers among which I have already drifted, and confine myself as closely as I could to a channel, which, whether a good one or not, should have, at least, the merit of novelty, and to base my letter upon the points in which a trout fishing trip in Germany differs from one in our own country—that blessed country to which the thoughts of the wandering tourist so longingly revert, when seated at the table d'hôte and filling up on its mysterious combinations, the memory of oysters, raw and steamed, real roast turkey, and uncooked celery, present themselves so strongly and so vividly that the slight remaining desire for the never ending *filet* and *potage* or *consumé* is reduced to very slight dimensions. Please excuse this apostrophy, which, even if patriotic, is, I confess, somewhat irrelevant. I'll return to my subject, trusting that in so doing I may succeed in interesting two classes at least of your readers, those who have and those who have not gone through the same experience; the first by reviving in their minds some pleasant reminiscences, and giving confirmation to some of the yarns they have spun; to those of class second with whom they have, to use an expression common to sailors, "swapped lies" and to the second by imparting some new facts. All of the rest of your readers are very welcome to skip the columns devoted to this letter.

During this month I have passed several very pleasant afternoons trout fishing, and while I have neither caught any extraordinary numbers nor any very large fish, I have had lots of fun, and learned a great deal about how other people do it.

The brooks that I have fished have had to me one great novelty, for although here and there a bit of cultivated pine woods, through which they passed, has, to a slight extent, recalled similar bits in our own wilderness, yet the general course has been through cultivated fields and vineyards, with the agricultural peasants busily engaged in their ordinary pursuits, through thickly settled hamlets and villages, from which groups gathered and followed me along the stream, manifesting great interest in my success and wonder at my mode of fishing, for to them the little rod, fine line and cast of flies were novelties, and that trout could really be thus taken a revelation. Grave men in blue blouses, each with a porcelain pipe in full blast, deserted the allurements of the *gasthirthschaften* (inns), where they were wont to doze comfortably over immense mugs of beer. Stolid, solid and bareheaded women, whose short skirts revealed immense connecting links with the heavy wooden sabots which encased their feet, ceased their toil with hoes, and plows, and wheelbarrows and solemnly joined the procession, which was further increased by crowds of small boys in clogs, little girls in ditto, each bearing in her arms a child sometimes nearly as large as herself; a soldier or two and a priest, for no group in Europe is complete without representatives of both professions, came also, and with my "guard" and his assistant as my personal staff I was by no means a "lone fisherman."

It would have been a very pleasant afternoon's stroll, if for no other purpose than to enjoy the scenery and delightful mountain air, which, after months of confinement to the conventionalities of cities, was most refreshing. No painting, among the many I have tired myself staring at in the various galleries of Europe, conveyed to me more real pleasure than the ever changing panorama of the brooks, now winding through pine forests dense in shadow, then out in the sunlight through meadows and fields carpeted with acres of brilliant poppies and larkspur, with daisies and clover to remind one of home, then through quaint German hamlets and under stone bridges, the high arches and extent of which indicated that the "purling brook" could and did sometimes become a river whose force was to be respected.

The path down the stream was smooth as a country footpath, and not a snag or alder, mosquito or black fly to detract from the pleasure.

But there was another purpose, and on each occasion I caught all I wished of good-sized trout. No number so great on any day as to cause the sport to pall, nor so few that disappointment took the place of pleasure, just the happy medium which served to keep up a gentle excitement. Not a "hole" yielded more than a couple of fish, but it was very seldom that any place which "ought to hold a trout" failed to come up to my expectations. The fish were of a very satisfactory average size, ranging from four ounces to fourteen, and I could not perceive that they were at all inferior in game to the trout of our own mountains.

The first step toward a fishing trip here as elsewhere is to find out where to go, and the second how to get there. Then comes here the third, which is the most difficult of all, for it is to get the necessary invitation or permission to make use of the knowledge; for in Germany every bucketful of fresh water, every inch of stream, and every living creature of any value in it, is private property. Each stream has, according to its length, a greater or less number of owners. When in its course it runs through landed estates, it is the property of the landlord, the portions running through villages are generally owned by them, and become a source of revenue either by being leased annually to the highest bidder, or by tax upon such anglers as obtain from the Burgomaster a license to fish there. The fishings, or sections, are generally of six kilos each (a kilo is three-fifths of a mile) and the rental varies from twenty to a hundred marks per annum (equal to from four to twenty dollars).

The owner or lessee of a section generally employs (and I believe he is compelled by law so to do) a "guard" or keeper, whose duty is to prevent poaching, keep the stream in order, and to accompany fishermen to see that all fish which are less than twenty centimetres (eight inches) in length are returned to the brook. It is customary for these guards, who like most every one else in Germany wear a regulation uniform, to act also as assistants to a fisherman, carry and clean the fish, disentangle caught hooks, and make himself useful generally. The laws require that each kilo shall be re-stocked every spring with one hundred young trout, which can be procured at either of several breeding establishments, of which I have visited two, and "some day" will tell you of them, one at Heidelberg and one at Baden-Baden. The keeper's work is not a sinecure, for the high price of the *bach forellen* in the market makes a great temptation to poachers. His home is generally close to his field of duty, and as his revenue depends greatly upon the fees he receives from fishing tourists, it becomes his interest to do all in his power to put such patrons in good humor by keeping up the stock.

Hombourg-les-Bains is a most charming summer resort; it is situated upon a spur of the Taunus Mountains, and from this circumstance derives one of its many names. Homburg-von-der-Höhe, or "on the hill," perhaps the most useful

name of all of them; for a letter so directed from elsewhere, runs less risk of going to some other of the several Ham- and Hom- burgs and bourgs than by any of the others. Nature has done a great deal for the place, in the way of healthy and picturesque location, with pine forests bounding the horizon in several directions; a cool, bracing climate, and an assortment of health-restoring springs ample enough to meet all demands. Art and business enterprise has completed Nature's unfinished work, and the medicinal waters made palatable by the surroundings. Broad and well-shaded promenades, beautiful gardens, artistic rock work, grottoes and fountains, palm gardens and swan ponds, with in all directions pleasant wood paths leading off to cosy retreats amid the pines, form some of the attractions, which every morning from seven to nine amuse the immense throng of people who are ill, and people who think they are, and people whom the doctors assure that they are, and who gather at the springs or *brunnen* to indulge in the regulation draughts; and the springs are so varied in their medicinal qualities, that they meet all emergencies. At the Elisenbrunnen the fat man drinks himself lean; and three hundred yards away at the Stahlbrunnen or steel spring, "rich" in iron, the debilitated and lean man seeks strength and fat. That word "rich" I quote is one in such common use by the doctors, that it has grown into the vernacular, and one day, when after heavy rains I was doubtful as to the condition of an angling stream I wished to visit, the German guard whom I consulted told me, "Don't go to morrow, the brook will be too 'rich' in mud;" and this man's stock of English was very limited.

Up and down the long promenade the crowd marches, all busily engaged in digesting; for the rules are: On an empty stomach sip very slowly the amount prescribed, from three to six ounces, then fifteen minutes promenade, then another five minutes of sipping, and so on for an hour or more, and all of the time a fine band is giving us choice selections of the most fashionable music.

By 9 A. M. the springs are deserted, the crowd has melted away and its integers, in wrappers and slippers, are attacking the matutinal coffee and eggs to meet again at 3 P. M., in the beautiful grounds of the Kurgarten, to listen again to sweet music, to stroll again up and down, and circle as listlessly as did the white whale at the Aquarium, to drink *eau-sucre* and enjoy each other's costumes. And in the evening the same thing over again, diversified by perhaps a re-union or dance in the splendidly fitted up halls, whose origin is due to the gambling business, of which this was once a center, and to which theoretically only the payers of the Kur-tax are admitted, thus assuring a tolerably select party, but practically open to every one, for no one is called upon to show his or her *kurticket* or *abonnement*, and this is well known to the couriers, and valets, and "*femmes*" of Frankfort, but forty minutes away, and practically the re-union is very much mixed. But I am again off the track. [For further particulars see Baedeker.]

Ten miles north of the city the Weilbach (Weil Brook), which is by far the best stocked stream to which I had access, winds its way through the valley of the name, and, like every thing and body in Germany, does a great deal of work, its particular duty being to irrigate the vineyards and farms, and to turn the funny old-fashioned wheels of many mills in the villages through which it flows. Among these fortunately there are no saw mills, the natural enemy of trout streams. Its source is near the Heldtberg, and after thirty miles it discharges into the Cahn, a tributary of the Rhine.

Two sections of this stream are leased by the proprietor of the Royal Victoria Hotel, who in them finds a source both of pleasure and profit, as well as a means of affording pleasure to his guests. Two other sections are owned by the villages of Dorfweil and Schmitten, and these four I fished.

On my arrival at Hombourg I naturally drifted into acquaintance with the piscatorially inclined sojourners, and one day, comparing tackle with some of them, it was unanimously carried that my little split bamboo, or as the English termed it "glued rod," would come into good play in settling a question—the question being, would or would not the Taunus trout appreciate the allurements of the fly. A correspondent of the London *Field* had in its columns asserted most dogmatically that they would not, and had endeavored to prove by most illogical reasoning that German trout cared only for a diet of worms. Against this we had the positive evidence of a young English gentleman, that in the Weilbach he had caught quite a number with the fly, but there were doubting Thomases, of whom, however, I was not one, for in five minutes' conversation I knew that he knew how, and had done it, and moreover, he gave me a well-used cast of three tiny gnats with which he had done it, and I owe to their use and the advice he gave me much of my subsequent success. The doubters had tried flies and failed utterly. This, or rather the failing part, I could readily believe, for the rods and gear shown me were most eminently adapted for cunner fishing. One murderous contrivance in particular attracted my attention, it was nothing more nor less than a small gang of five hooks on gut, the lower hook being triple; I think it was called "Clark's fackle." A two inch trout could hardly rush by this contrivance, and when baited with several worms, woven in and out, in a fashion I'm glad to say I didn't learn, it was sure death to anything that came near it.

Another arrangement was a phantom minnow, which was attached to a short, strong line, it to a long, strong pole, and it firmly grasped by a lusty young English parson, who otherwise proved to be a very jolly companion. [Note.—The "otherwise" is intended to connect with the method of fishing and not with the profession.] His kit did most excellent service. One day when the brook was high and "rich in mud," and with a current like a mill race, my flies skipped harmlessly over the muddy surface, until at last I fitted out a regular Adirondack cast of a red hackle, scarlet ibis, and split ibis, the latter, I believe, invented by Perry, who has a camp on Third Lake, Fulton Chain, at least so he told me when he sold it to me, all large hooks, and with these I made up somewhat, securing in two hours about a dozen fair sized fish—four to twelve ounces—during which period the worms of our companion drowned themselves in disgust at their non-success, while the Parson was kept fairly busy, and yanked out twice as many fish as the other two of the party collectively. Fishing for breakfast, with no reserve stock, at the spring high water and rain, I should vote the spinning minnow a success, but for sport there was more in ten minutes with my light rod than in as many hours with his heavy one.

My first trip was on a bright sunny day, and I enjoyed the companionship of a very jolly Irish gentleman, brother of Col. Nolan, member of Parliament, who, being a great pedestrian, had, on foot, roamed over much of the route, and was so well up in the legendary lore of the country that he beguiled the time with bits of the same, as we passed by old ruined castles and villas of Roman and Rhenish origin, and the two hours' drive seemed very short; but that a trout stream lay at the further end of the route, I could have willingly prolonged it to twice the time.

The road ran straight north, cutting a line through the dense pine forests, until it crossed the summit, then wound down into the beautiful Weil Valley, through fields and farms, on all of which a force of women and children were laboring, and many of those we met or overtook on the road were laden like so many beasts of burthen. Like the Africans, in Germany the woman of the middle and lower classes is the laborer of the family, and like the African woman she "totes" her bundles; and I should fancy that to a person seeing it for the first time, the loads they carry would produce astonishment, but they don't seem to mind it.

Europeans generally, and I think the Teutons particularly, are very economical people, and among the things which we waste and they save is *power*. To call a man an "idle dog" here could hardly be considered as using insulting language, for except among the upper classes of canines there seems to be no such animal here. Big dogs and little dogs all work, and they, with the women and cows, perform a large portion of the hauling, which in other countries is done by horses. On the road we encountered some very curious combination teams, such as two cows, a woman and a cow, two dogs, one dog and a woman, all dragging farm produce; very seldom was there a man in the party, and when there was one, his load consisted of a big pipe and perhaps a dinner basket. Not once did I see a man give a particle of assistance to the team.

Our turnout presented a striking contrast, a handsome drag, two gaily caparisoned horses, a driver in gorgeous livery—that of the hotel—and in the rear, with folded arms, sat, arrayed in a costume somewhat Tyrolean, viz., short green coat with staghorn buttons, a hunting horn, bell-crowned hat, gun—old fashioned pin fire—resting across breast, and held by a strap, thigh boots, and holding a dachshund in leash, a functionary whom in my verdancy I felt sure was a *chasseur*, and I wondered whether it was the custom to go shooting and fishing at the same time, and what we were to shoot. Subsequent developments destroyed all illusions.

Taking it altogether, our entire outfit was decidedly the most stunning one that I ever had an opportunity to participate in en route to a trout stream. Remembrances of legs, lumber wagons and buckboards flitted through my mind, and I wondered what would Dan Rudes or Hiram think, to see me coming in to Pisceo Lake in such a stunning style. As Nolan pithily remarked, as we took possession of the affair, "I say, old boy, this is very swell;" and when the next day I paid my share of the accrued bill, I was by its magnitude, if aught else were lacking, fully satisfied as to the grandeur of the preceding day.

At 3 P. M. we reached the stream at the head of the section we were to fish; and as Nolan had been there before, he very courteously gave me the selection, and I elected to start there and fish down, he driving to the foot of the fishing to fish up, the brook's course being nearly parallel with, and in proximity to, a well-traveled high road. The *chasseur* stayed with me, and, after divesting himself of the hunting symbols of gun, dog and hat, substituted therefor a fish basket, measuring-stick and felt hat, also a box of worms and small bottle of a foul-smelling liquid, with which I was to anoint the worms, which he felt very confident I would be compelled to resort to eventually.

My first cast, three little gnats, brought me a very pretty trout, and I don't remember reading in your columns a description by any "true sportsman" of incidents attendant upon the capture of a trout at all resembling those which were then experienced by me. I didn't play that fish, nor did he me; the whole affair might have occupied four seconds. I don't believe it did though; but on that assumption I'll divide it up: second 1, cast; 2, strike by trout; 3, ditto by me; 4, trout in hand. If ever a trout was hurried up by a tyro more than this one by me, I haven't read of it. Highly unsportsmanlike I confess, but remember it was my first for two years, and I had been so discouraged, or rather had heard so many discouraging stories in regard to my prospects with flies, that I was probably about as surprised when the trout struck as he was when I did. When in my hand there did occur an incident. My metamorphosed *chasseur* politely advanced and saved me the trouble of unhooking him. I wasted the "thank you" though, for I had misunderstood his motions. Gravely placing the fish and his measuring rod side by side, he solemnly pointed to a space of about a quarter inch, between the end of the tail and a broad red mark on his stick, sternly ejaculated "*Klein*" (little), and gently deposited him in the brook. Then I began to realize what he was there for. Accustomed to our legal standard of six inches, I was at first rather chagrined at the loss of a seven and three-quarter inch fish, for the brook didn't look as though it would be very apt to improve on him; but after a half hour's brisk work, during which several fish over nine inches in length, and one a three-quarter pounder (I weighed him with a spring balance, and he actually went eleven and one-half ounces) had been taken, I became quite contented to have the little ones put back, and can't help wishing that our own home standard was the same.

About midway of the stream I met Nolan working up and found that up to that time (about 5 P. M.), my flies had badly beaten his worms. We passed each other, and when the fishing was over (7 P. M.), I found that he had gained on me considerably, for very singularly—at least so it seemed to me—as the day waned, the trout became much less eager for the fly, and more so for the worm, and, by the way, this happening on another occasion, I record it as a possible peculiarity of German trout. Our score for the four hours' fishing was, total, 73, of which 47 were above 8 inches in length, and kept. Of these 47 the flies took 29, the worms 18; the largest caught by worms 13oz.; by flies 11¼oz.; total weight of the 47 about 10 pounds.

My other trips were more or less repetitions of this my first, except that this was the most successful, the Weilbach being the best brook, and the day the most suitable. On all the fly beat the worm.

I made other trips to other brooks owned by the villages of Dorfweil and Schmitten, obtaining permit from the burgomaster, who collected from me on my finish a tax of one mark (24 cents) each for every fish I retained.

The trout in every way resemble our own cultivated brook trout, and were quite as gamy. I do not think that they were as well flavored, although the salmon of the Rhine are, to my taste, far superior to those of our Western coast.

PISECO.

HOMBOURG-LES-BAINS, Prussia, Aug. 28, 1882.

RAMBLES THROUGH NEWFOUNDLAND.

PART SIX.

As far as the eye could see the floe seemed acrawl; and upon a number of cakes or "pans" was seen a cluster of half a dozen sunning themselves and sucking the ice. These separated and tried to waddle off on the hunter coming near, but before they got far fell from a blow of the heavy "gaff." The hunter strides up to the seal, deals it a blow upon the head, then draws his knife, opens the blubber of the animal down the abdomen and at the back, and in an incredibly short space of time strips it of its deep coating of fat. To the fat or blubber are left attached the skin and flippers, the carcase being left upon the ice. After the hunter kills and "skulps" a number in this manner he draws the "pelts" together upon a pan, and rears above the pile a little flag bearing his name. After he has killed enough for a day's hauling, he strings four or five pelts to a rope, which rope he puts over his shoulder, and trudges off to land, or to his boat, as the case may be. I was glad to lend a hand killing, and learnt fairly, too, how to take off the pelts; but when it came to the hauling rope, I preferred being "excused." After I had killed and taken the blubber off five or six, I extended my rambles out the ice, for I saw with my glass that there were some larger than others.

The greater body of seals upon the ice I ascertained were harps—*Phoca grænlandica*—though I came upon a patch of what is known as the square flipper—*Ph. barbata*. The larger ones which I had noticed, and of which I saw four or five, were "doghoods" or the hooded seal—*Stemmatopus cristatus*. Now, the doghood is the terror of all greenhorns upon the ice, and many a veteran hunter will give the monster a wide berth. I had not heard about its vicious temper, so I readily started off, when one of my companions remarked that if I "could kill you" it would be something worth doing.

So I strode boldly off, too full of my enterprise to hear the quiet titter which followed me. As I approached the animal he saw me, and rousing himself began to waddle off. I approached within about twenty paces, when I paused to survey him before I fired. He was as large nearly as an ox, and carried about his head a large hood, which he seemed to have the power of raising and throwing back or of drawing completely over his head. The nearer I approached, I had observed, the more did the hood close down, and now cocking my gun to begin the action, I found it impossible to get an exposed part of his head. I fired, however, bang into the hood, a heavy charge of seal shot, but I found it had as much effect as if I had fired a charge of peas. I gave him another charge at fifteen paces distant, and this time in the loins, but neither did this affect the monster; so I continued to fire till I had put six shots into him. Not even this seemed to have any effect; on the contrary, it only seemed to kindle the ire of the unwieldly brute, for turning suddenly he faced me, drawing himself up in the order of battle. I then gave him another dose of shot in the teeth, but it was lost in the hood, when I concluded that I had to capture him in some other fashion.

So I laid my gun upon the ice, and seized my gaff, striding out for the assault; but that was pr[illegible]dy's state of feeling too; for he advanced at a f[illegible] toward me. I stood, scared at the monster's a[illegible] could not summon courage to assault him; but [illegible]y was he it occured to me that I might assault him[illegible] behind, which I did; but I might have pounded till the day of judgment and yet not have harmed him. In trying to strike him upon the head I ventured somewhat too far, and before I recognized my folly I was disarmed, Hoody holding my gaff in his mouth.

Then I reloaded my gun and fired four more rounds into him, but still the brute held fast to my gaff, and I was obliged to retrace my steps, utterly at a loss how to account for having left it behind. I found no young seals anywhere upon the floe, though many of the females were large with young, and would evidently whelp in a few days. On my return I came to a small lake, and found that it was swarming with seals, which frightened by the hunters had gone in there. Not less than fifty round blackheads might be seen at once popping above the water, and again sinking below it.

I found four or five of the fishermen at a rendezvous, where there were several piles of pelts ready to start with another "tow" for the edge of the ice. They had killed all the seals within a pretty wide area, and remarked that they would "not last many days." Then one of them saw me without my gaff, and asked where it was. I told him I lost it in a hole coming in, and that I had a narrow escape from being drowned. "From being eaten, perhaps, you mean," he said with a wicked leer; and I found they all knew I was telling a lie. And then they began quizzing me in their own uncouth way, asking me how I liked "killin' doghoods," and how long he stood me "tantalizin of him." Then they told me that "a doghood baint no fool;" and that "he knowed a greenhorn." I bore the chaffing as sweetly as I was able, and then tied two pelts to a rope and started away with the rest for the boat, which we had left on the edge of the ice. When we reached it with our tows the full number of pelts aboard was thirty-two. Each pelt was worth on the average £1 or $4, so that it will be seen a valuable day's work had already been done. Some young lads who had come out in some of the other boats had prepared dinner by boiling the kettles on the ice, and frying a number of seals' flippers on large pans brought out for the purpose, and though, from the carelessness in preparation, there was a strong flavor of seal oil on the meat, I never remember having made a more delightful meal.

With the towing of another load each of pelts from the slaughter ground the day's programme was ended, as all the seals within near range had been killed. I apprised the party of our boat of the lake I had seen, which gave them great delight, and after dinner was ended we repaired thither with our three guns. Then taking up our shelter behind some ice pinnacles we opened fire on every head as it appeared. My companions had flint muskets, and these sometimes "burnt prime" or "hung fire," and where they did go promptly off in three cases out of four the seal went down at the flash in the pan and escaped. Even with my gun I missed a number of shots, the head dipping at the flash. This was especially the case when either myself or the gun was seen before firing.

The mongrel dogs worked admirably, pouncing upon every seal we killed and dragging him to the edge of the ice, when one of the men stood ready with a boat-hook and pulled the carcase up, lifting out the dog as well. I could not say how many seals we killed in the lake, but we landed between twenty and thirty, took off the pelts, piled and flagged them. These it was the intention to let stand during the night, and taking the remaining loads from the first

rendezvous we stopped for our boat, and thence for the shore.

That night the full moon made it almost as light as day upon the ice, and as the wind had shifted and began to pipe faintly out from the land, it would soon drive the ice off toward the other side of the bay, so my hosts put their boat out after the moon had risen and sailed to the edge of the ice, and hauled their pelts by the side of the lake, nearly three miles distant, on board. They returned about the dawn, rowing shoreward in the teeth of the strong off-wind now blowing, surprising their neighbors with about $120 worth of seals further than the handsome catch landed the day before. The breeze after this grew into a gale and pushed the ice out the bay, so that the one day mentioned was the extent of the "spurt," and for many a family living along the shores this day brought a richer recompense than a summer's toiling for cod and herring. Fancy, as is the case in a majority of instances, one skiff upon which a large family, and sometimes two, depends for support, taking in the season but forty quintals of codfish!—the quintal with the oil fetching on the average about £1. It may be thought that this, with the seal catch, is considerable, but five and six seasons may pass and a seal not visit the bay. The visitation is indeed the rare exception instead of the rule.

The next day my host said to me: "Now, then, I shall give you a week fishing or shooting, whichever you will, around the arms and nooks, and after that I will take you to the deer shooting grounds." So the next morning the three of us set out in a small boat before a shoving breeze down to an arm which ran in from the bottom of the bay several miles. By the time we reached our stopping place it was snowing fast, and the wind brought gusts of snow-drifts from the hills down hissing in the seething waters, and in the offing a couple of little boats were at anchor also. All along this reach we saw small boats out hauling their nets;

I was told that in this way did the seven or eight families who lived along the shores of the arm spend their winter; that they could not catch cod enough in summer to support them, and had to brave the storms and the cold of winter wretchedly clad. I now saw a boat looking in the distance like a piece of ice from the spray beating continually over and freezing upon her. We ran up to her and found an old man and his son, a lad of about thirteen, on board. "Fish is scarce, I suppose," said I. "They baint plenty, sir," the old man said, looking in the bottom of the boat, where half a dozen cod lay as the result of the day's fishing. The boy was, like his father, poorly clad, and stood doubled up and shivering as he "sawed" his limbs. They beat their arms around their bodies continually to keep themselves warm, and again turned to their lines, now hauling them in and fresh baiting, then casting out again, and every half hour or so, I was told, "hauling up," shifting their ground, and anchoring in a new spot. A trader lived among the rocks and bought the cod as it was caught, allowing about six shillings per hundred weight for it green. About twenty-five such fish as we had seen in the boat would make a hundred weight.

Close by the shore, as we ran along, our little sails reefed to keep us from being upset by the squalls which pitched down upon us from the cliffs and hills, we came upon two or three punts hauling herring nets. We luffed up beside one of these and found two men on board, also miserably clad, and bearing the look of suffering and privation. This had been their second time out to the net during the day, and from this haul they had got about a fourth of a barrel. The herring were getting poor then, as the spring advanced, I was informed, and the trader had refused to take any more. So that they were catching these now while it lasted to eat; and the skipper of our boat told me that these wretched fish, with the government meal, was all the poor sufferers along here had to eat; and that some of them, before the government relief came, had been living on the herring alone.

We landed at the trader's rooms, and found a couple of skiffs there, their owners having just taken their few fish to the scales and got them weighed. They received, I observed, neither cash nor foods for their fish, as they had during the stormy days that they could not get out, run accounts. They brought the heads and sounds of the fish home to eat. Then we met the trader, a short, little hide-bound man, with red whiskers and comfortable in a heavy pilot cloth reefer, a seal skincap and knee boots. He told us that times were very bad down in these parts, but promised to make us as comfortable as he could. He kept the tavern, the boarding house and the store of the region. There was none other within a dozen miles.

On our way up I saw a man going by driving a pair of dogs, which were drawing a load of wood cut among the hills, to his little cottage down by the rocks. I learned that there was no horse in these parts, save that owned by the trader. The dogs hauled patiently along, the man assisting them with a hauling rope over his shoulder. "I have seen the blood come through the canvas jumpers of some of these poor devils," said the trader to me, "after a long and heavy haul. But they are so used to this hardship that they do not mind it now." It reminded me of the Irishman getting used to his hanging.

The trader was one of the few shots and sportsmen of the neighborhood; and he informed me that few of the people about here had guns to shoot the game so abundant in the sea before their doors, or a short distance inland; and that most of those who had muskets had no powder and shot. He expected a party of two or three others in a few days, when he was going out to have "the last whack at the deer for the winter." "This is my place," he said, pointing to the cosy little house standing in the middle of a grove of evergreens. Standing out from the house was a little store, in which were a number of carcases of deer, and skins purchased from the owners of guns and traps. The provisions, clothing, etc., he informed me, he kept down by the stages where the fishermen landed, so he need not have any "trucking up here." His wife, a little woman with healthful looking cheeks, bright, good-natured eyes and a cherry voice bade us welcome to what the house had, "such as it is," apologizing for a score of little things which we did not notice. Her house was at once cosy and tidy, and the fine large stove with flushed cheeks offered a grateful change from the biting March wind, and the blinding drifts. We had venison and sugar-cured ham, and some delicious cod-fish, a meal that might delight a king. In the winter the grain of the cod seems to get short and brittle; and the fish is fatter and richer, very much, than in the summer.

"My daughter," said our hostess after dinner, with a look of modest pride, and I did not think it strange. For myself—

> "I wondered how so fair a flower
> Could grow and flourish there."

The girl was not alone handsome as an opening rose bud, but accomplished and modest as well; and while the storm whistled that evening, she played to me very prettily some touching and beautiful pieces on the harmonium and chatted on books and places; showed me her drawing books with rude, yet here and there sweet, sketches of the wild hills and the woods, and the turbulent sea sentinelled by the grim rocks. She read and spoke French fluently, and I learned she had spent two years at school in St. Pierre. She hoped, and so did her mother, that her father would some day remove to Placentia or to St. John's, but it seemed to me that the love of gain was stronger with the trader than sympathy for the aspirations of his daughter. He educated her, but in this he only did her an unkindness. Better he had left her as she was; for she would not then be yearning for a life, pictured in her education, which she could never have among these lonely rocks.

The trader then proposed that we should take the morning for duck up the arm beyond where any cottages were, and that in the afternoon we might take a run out among the hills for willow grouse. So accordingly an hour before dawn we put out in our boat, four in number, and into the arm about five miles, hauling up our boat and taking shelter behind it. The dawning broke out clearly by the time we were prepared, and the trader predicted a successful morning's shooting. Peering with my glass through the growing light I saw several flocks of ducks swimming shoreward, and we could hear them singing as they came. It was bitter cold, and I was incessantly engaged beating my feet and hands; and every movement I made the others informed me would be likely to alarm the ducks. Scores of birds were now in among the little nooks, and the tide being low they had excellent fishing in the shallow water. When they went down I could see them gouging their bills against the rocks to disengage the shellfish clinging thereto. I was anxious to fire at once, but the trader kept on saying, "Bide a bit, wait till more come." After several flocks had swam in they began diving irregularly, and we now waited and waited till we could get forty or fifty in a bunch. Slaughter, not sport, is the aim of the coast dwellers. When they go out it is for meat, not for sport. Just as we had made up our minds that we might as well fire now as to wait longer, the birds suddenly took an alarm, put their necks erect and swam off from the land, some rising and beating the water into foam. We were at a loss to account for this, and I reproached the trader for not allowing us to fire before.

We turned to the bank overlooking the nooks, and what was our surprise to see a herd of five deer passing along, and one, a fine stag, looking down upon the rocks. Quick as lightning I had my shot charge out and bullets in; then, raising my gun, I fired first one barrel and then the other into the buck. It was pretty work, I must confess, and had come so suddenly that I was cruptured out of my senses. The animal gave a bound and fell prone down the bank stone dead. He had been only about forty yards distant, and had received my two bullets. Indeed, he had even got a dose of seal shot in the face from the trader's gun simultaneously with my last barrel. The rest of the herd flew at a mad pace through the firs and spruces, and our mongrel water-dogs set off in pursuit, barking in most ill-bred fashion.

We disembarked and quartered our buck, which was a fine fellow, and fat, and placed the quarters and the head, which had a majestic pair of antlers, into our boat, and pushed off. At my request, they moved down the shore to get some wing shooting at the divers and sea pigeons. The trader informed me that it was not uncommon to find herds of deer along the banks here; that he had seen them scores of times before; that this was a temporary rendezvous for them in passing, there being good shelter and feeding among the hills. Besides this, no human being lived here and seldom resorted here, save now and again to shoot at the flocks as they passed up and down.

We had not sailed very far—and I pulled an oar to keep up animal heat—when we saw several flocks of birds on the wing. They flew shyly of us, however, and in the space of an hour's paddling I got but two or three shots. As we moved into the bottom of the reach I noticed that the sea-pigeon became more numerous, as also several varieties of gull. The place was aswarm with herring, and these latter birds were having a perfect carnival, dipping incessantly and dragging up the wriggling fishes out of the water. We let the boat remain stationary here, and I began a fusilade against the gulls. Before we began to pick them up there was a white patch round about us of their corpses. About sixteen lay there, and the trader picked them all up, for he said, "the poor devils"—the fishermen—"would be glad to get them."

I had also shot a couple of pairs of the pigeons—pretty little birds with yellow legs. This is the black guillemot—*Uria grylle*—and it weighs about two pounds. It is the easiest of the birds upon the coast to "work upon," though it is very quick, and often dives at the flash. The fishermen with their flint muskets swear dismally sometimes, as shot after shot reveals nothing but the heels of the pigeon disappearing down into the green sea. Frequently this series of calamity is attributed to some one having "stepped over" the musket of the unlucky sportsman. The very day of which I am writing, in my haste in the racks, I stepped over the gun of one of the party as it lay down, when I was requested to step back again, which I did. They told me solemnly: "You never kill anything out of a gun that anyone has stepped over." There is another miraculous feature in connection with these muskets which is also worthy of notice. I remember a few days before I reached the trader, having been out shooting grouse, when one of my companions, after knocking down two birds standing on a hummock, ran up to me saying: "Look at that; do you see the blood in the pan?" I really did see blood there, and he assured me that was "a sign of rali good look altogether." He said the blood comes mysteriously on the pan; that it does not get there from the birds. Several others likewise showed me the same occurrence, but being a skeptic I came away unbelieving in a mysterious agency.

Along the shore in the bottom of the reach were scores of pigeons, and while two of our party rowed quietly along, myself and the other took up our place in the bow. There were generally two or three birds in a cluster, I taking that on the right with my first barrel, and the one nearest with my second. My companion blazed blankly always at the left bird out of his bell-muzzle musket. I think he killed only one; and after each melancholy bang out of the huge piece, and the bank of suffocating smoke—the result of his coarse and vile powder—had blown a little away, I could hear him curse in his sad way. The powder was most vile that the man fired. It bestunk the air and bestenched his gun, and half of the loathsome stuff seemed to cling down in the muzzle and about the pan. The musketeer himself was as black as a powder monkey; and the funniest sight that a man could look upon was to see him and to hear him after his gun had "burnt prime." This "shc" would do every other shot or so—fiz-z-z you could hear, and then a dismal oath; and sometimes you would see him pull upon a pair of pigeons, see the pan go off, fizz-z-z, and about four seconds after see the main charge go off. It seemed to take that powder as long sometimes to ignite as if it were powdered anthracite coal. It was amusing after each flash in the pan, too, to see him how he kept the gun to his eye; and he justified this practice by telling me, "You can nuvver tell when she will go off."

I lent the poor fellow my gun as we neared a pair of birds pushing lazily ahead of our boat, and he presented, fired and missed. The shot fell half way between the boat and the birds. "She's too soft on the trigger," he said; for he had been used to pulling about fifteen pounds pressure on the dreadful musket. He tried again and was successful; and then with a satisfied twinkle in his eye took up his own direful piece again. I did all my firing at the birds after he had desisted, as they rose, and I need not tell the sportsman what a "dead thing" a bird flying straight away from you is when within easy range. I believe I missed but two or three shots out of about twenty-five. We returned early in the afternoon to the cozy cottage of the trader as few sportsmen on this continent might return after a few hour's shooting, with a fine buck, a few divers, between twenty and thirty pigeons and two huge bundles of gulls.

This being sufficient sport and luck for one day, we deferred our proposed afternoon ramble on "rackets" for ptarmigan and willow grouse, and instead proposed that we should set out in the morning on our deer expedition, as the trader and the others concluded that the "passing season" was at its highest now, else the few straylings would not have been seen down at the water's edge. So the trader decided not to wait for the others who were to join him, and I thought it better to go with the trader than to put myself under the guidance of my late host out the bay. An elaborate preparation was made by the good housewife and her pretty daughter. They packed bacon and sweet cakes, and biscuits and cheese, and butter in the general kit, and warm home-knit socks, and a pair of heavy blankets, while the trader himself did not forget some of his best St. Peter's schnapps, indispensable in these parts in the outdoor biting cold. With the morrow's dawn, each one comfortably loaded, we were prepared to set out for a tilt in the silentest part of the neighborhood, about a mile from the deer's thoroughfare. This had been built some years before by the trader, and had been repaired about a fortnight before my arrival by two fishermen for the trader, preparatory to the shooting season.

And though a gloomy wind blew out of the east, and bore a hissing snow upon its wings, we set out. The east wind is an object of peculiar awe to some of the fishermen, and it is no wonder. Of all the winds that come out of Heaven it is the most dismal. When it begins to sing its weird song upon the hills, and blow chillingly down upon the waters, the fishes flee from the shores and take refuge in the deep sea till the blast is over. No fisherman will put out his boat for cod when the wind is "easterly." There goes a tradition, too, that on the day Christ was crucified the wind blew from the east, that ever since when it comes from that quarter it presages stormy things. Experts in insanity tell us that seventy-five per cent. of suicides happen when the wind comes from the east, and we know that Lord Beaconsfield battled nobly with death till the east wind began to whistle, and then his soul took wings upon the weird blast. And as we went through the woods in the gloomy morning I noticed that the tops of the larch trees, called juniper by my companions, all inclined to the East. I remarked the fact, and was informed that it was so all over the island, and of some thousands of these trees, *Larix americana*, which I saw, there were not a dozen which did not distinctly incline their heads to the East. And then the fishermen told me that when the hunter gets astray in the woods, if it be foggy and he cannot see the sun, he invariably follows the indications of these trees. The reason of this bending I do not know, though it seems probable that it is in some way caused by the sun's influence on the tree in the early morning. I learned, too, that some of the Micmac Indians, found upon the island after Cabot's discovery, worshipped the sun, and regarded the larch as an intelligent tree, saying it paid homage to their God, the rising sun. This is the same tree called tamarack and hackmatack respectively, through Canada. Larch is too short and convenient a name to give it.

Though our way lay through the wood, which grew closely—nor was there any path—the storm howled through the trees, and suffocating gusts of snow drift came down. In the midst of the wood the trader laid his hand upon my shoulder and said, as he pointed to a large birch, "Do the trees where you come from bear fruit like that?" and looking, I saw squat upon its limbs seventeen willow grouse, looking perfectly stupid with their squatty attitudes and ruffled feathers. Then the trader "prepared," and the other two unslung their muskets. Then began the most murderous onslaught the sportsman can conceive of. I urged that we put the flock up, but they told me, "Nonsense, man, if you keep quiet we'll get 'em all." Then I agreed, and knocked one down with each barrel, the trader knocking two down with his long muzzle. One of the muskets got off, and did a single murder, but the other had got wet about the pan, and "she hung fire and be d—d to her" in the phrase of her owner. I had never seen anything like this before. The birds sat upon the tree as if nothing were going on, dropping off one by one. When the tree was about cleaned off, only three birds remaining, the poor fellow with the unodorous powder and the villainous musket had got ready, after having chipped his flint with the back of his jacknife, presented, and with a most laborious effort got his piece off. He fired seven fingers every time, the explosion making a melancholy sound of wondrous magnitude. The bird rose from the limb with its under works knocked completely away. Splinters from the birch limb, too, flew in the woods. As this bird dragged itself away to die, the remaining two seemed suddenly to awaken, and took flight, but I altered the arrangements of one of them before it had disappeared in the trees.

We buried all the birds save four in the snow, sticking two or three saplings in the snowbank beside them. As we considered it probable that we might kill a good many more before reaching our rendezvous, one of the party blazed the trees as we went along, that the game might be found on our return.

We came up with several other flocks on the way, some on the ground and some on the trees; but as the wind grew colder, as always happens, they became wilder, and we got

in only about a dozen birds additional. On the fork of a large dead tree, called a "rampike" by my companions, we saw a huge snowy owl. The bird is called in Newfoundland the "white owl." It is the *Nyctea nivea*. It had upon the limb, in its claws, a grouse, which it had begun to rend, when I gave it one of my barrels. Strange to say, the great stupid thing did not fall, though I knew I must have riddled it; but, rising, it flew with its prey in its claws, lighting upon a bank of snow. I ran up to within twenty paces, and gave it another charge, which did not kill the bird, however, but only prevented its flight.

"You might fire at one of these fellows for a week," said my companions, "and not kill him." When we went up we found the snow stained with blood and the owl clinging still to its prey, and when one of us approached it with our hand it would open and snap its beak that you might hear the noise made a gunshot away. It was only with great difficulty I took the grouse out of the bird's claws, and then I beat the head of the huge thing against a tree, as I wanted to get its skin. But I could not kill it this way and was obliged to tie a piece of small cord with all my strength around its neck. It then suffocated in about five minutes.

We had to cross several morasses and tracts covered with heath in summer, and over these the wind whistled, biting fiercely, and the drifts blew blindingly. The trader led the way through the fearful storm and the rest blindly followed. It was with a feeling next to rapture that I entered a dense patch of forest where the pines and the firs grew tall and afforded shelter, and in its very midst we stopped by the side of a cozy looking tilt. J. E. COLLINS.

TORONTO, Canada.

AMERICAN HIGH-PRESSURE.

[From an after-dinner speech, by Herbert Spencer.]

It seems to me that in one respect Americans have diverged too widely from savages. I do not mean to say that they are in general unduly civilized. Throughout large parts of the population, even in long-settled regions, there is no excess of those virtues needed for the maintenance of social harmony. Especially out in the West, men's dealings do not yet betray too much of the "sweetness and light," which we are told distinguish the cultured man from the barbarian. Nevertheless, there is a sense in which my assertion is true. You know that the primitive man lacks power of application. Spurred by hunger, by danger, by revenge, he can exert himself energetically for a time; but his energy is spasmodic. Monotonous daily toil is impossible to him. It is otherwise with the more developed man. The stern discipline of social life has gradually increased the aptitude for persistent industry, until among us, and still more among you, work has become with many a passion. This contrast of nature has another aspect. The savage thinks only of present satisfactions, and leaves future satisfactions uncared for. Contrariwise, the American, eagerly pursuing a future good, almost ignores what good the passing day offers him; and when the future good is gained, he neglects that while striving for some still remoter good.

What I have seen and heard during my stay among you has forced on me the belief that this slow change from habitual inertness to persistent activity has reached an extreme from which there must begin a counter change—a reaction. Everywhere I have been struck with the number of faces which told in strong lines of the burdens that had to be borne. I have been struck, too, with the large proportion of gray-haired men, and inquiries have brought out the fact that with you the hair commonly begins to turn some ten years earlier than with us. Moreover, in every circle I have met men who had themselves suffered from nervous collapse due to stress of business, or named friends who had either killed themselves by overwork, or had been permanently incapacitated, or had wasted long periods in endeavors to recover health.

I do but echo the opinion of all the observant persons I have spoken to, that immense injury is being done by this high-pressure life—the physique is being undermined. That subtle thinker and poet whom you have lately had to mourn, Emerson, says, in his essay on the gentleman, that the first requisite is that he shall be a good animal. The requisite is a general one—it extends to the man, to the father, to the citizen. We hear a great deal about "the vile body," and many are encouraged by the phrase to transgress the law of health. But nature quietly surpasses those who treat thus disrespectfully one of her highest products, and leaves the world to be peopled by the descendants of those who are not so foolish.

Beyond these immediate mischiefs there are remoter mischiefs. Exclusive devotion to work has the result that amusements cease to please; and, when relaxation becomes imperative, life becomes dreary from lack of its sole interest—the interest in business. The remark current in England that, when the American travels, his aim is to do the greatest amount of sight-seeing in the shortest time, I find current here also. It is recognized that the satisfaction of getting on devours nearly all other satisfactions. When recently at Niagara, which gave us a whole week's pleasure, I learned from the landlord of the hotel that most Americans come one day and go away the next. Old Froissart, who said of the English of his day that "they take their pleasures sadly after their fashion," would doubtless, if he lived now, say of the Americans that they take their pleasures hurriedly after their fashion. In large measure with us, and still more with you, there is not that abandonment to the moment which is requisite for full enjoyment; and this abandonment is prevented by the ever-present sense of multitudinous responsibilities. So that, beyond the serious physical mischief caused by overwork, there is the further mischief that it destroys what value there would otherwise be in the leisure part of life.

Nor do the evils end here. There is the injury to posterity. Damaged constitutions reappear in children, and entail on them far more of ill than great fortunes yield them of good. When life has been duly rationalized by science, it will be seen that among a man's duties care of the body is imperative, not only out of regard for personal welfare, but also out of regard for decendants. His constitution will be considered as an entailed estate, which he ought to pass on uninjured, if not improved, to those who follow; and it will be held that millions bequeathed by him will not compensate for feeble health and decreased ability to enjoy life. Once more, there is the injury to fellow citizens, taking the shape of undue disregard of competitors. I hear that a great trader among you deliberately endeavored to crush out every one whose business competed with his own; and manifestly the man who, making himself a slave to accumulation, absorbs an inordinate share of the trade or profession he is engaged in, makes life harder for all others engaged in it, and excludes from it many who might otherwise gain competencies. Thus, besides the egoistic motive, there are two altruistic motives which should deter from this excess in work.

The truth is, there needs a revised ideal of life. Look back through the past, or look abroad through the present, and we find that the ideal of life is variable, and depends on social conditions. Every one knows that to be a successful warrior was the highest aim among all ancient peoples of note, as it is still among many barbarous peoples. When we remember that in the Norseman's heaven the time was to be passed in daily battles, with magical healing of wounds, we see how deeply rooted may become the conception that fighting is man's proper business, and that industry is fit only for slaves and people of low degree. That is to say, when the chronic struggles of races necessitate perpetual wars, there is evolved an ideal of life adapted to the requirements. We have changed all that in modern civilized societies, especially in England and still more in America. With the decline of militant activity, and the growth of industrial activity, the occupations once disgraceful have become honorable. The duty to work has taken the place of the duty to fight; and in the one case, as in the other, the ideal of life has become so well established that scarcely any dream of questioning it. Practical business has been substituted for war as the purpose of existence.

Is this modern idea to survive throughout the future? I think not. While all other things undergo continuous change, it is impossible that ideals should remain fixed. The ancient ideal was appropriate to the ages of conquest by man over man, and spread of the strongest races. The modern ideal is appropriate to ages in which conquest of the earth and subjection of the powers of nature to human use is the predominant need. But hereafter, when both these ends have in the main been achieved, the ideal formed will probably differ considerably from the present one. May we not foresee the nature of the difference? I think we may. Some twenty years ago a good friend of mine and a good friend of yours, too, though you never saw him, John Stuart Mill, delivered at St. Andrew's an inaugural address on the occasion of his appointment to the Lord Rectorship. It contained much to be admired, as did all he wrote. There ran through it, however, the tacit assumption that life is for learning and working. I felt at the time that I should have liked to take up the opposite thesis. I should have liked to contend that life is not for learning, nor is life for working, but learning and working are for life. The primary use of knowledge is for such guidance of conduct, under all circumstances, as shall make living complete. All other uses of knowledge are secondary. It scarcely needs saying that the primary use of work is that of supplying the materials and aids to living completely, and that any other uses of work are secondary. But in men's conceptions the secondary has in great measure usurped the place of the primary. The apostle of culture as it is commonly conceived, Mr. Matthew Arnold, makes little or no reference to the fact that the first use of knowledge is the right ordering of all actions; and Mr. Carlyle, who is a good exponent of current ideas about work, insists on its virtues for quite other reasons than that it achieves sustentation.

We may trace everywhere in human affairs a tendency to transform the means into the end. All see that the miser does this when, making the accumulation of money his sole satisfaction, he forgets that money is of value only to purchase satisfactions. But it is less commonly seen that the like is true of the work by which the money is accumulated; that industry, too, bodily or mental, is but a means, and that it is as irrational to pursue it to the exclusion of that complete living it subserves, as it is for the miser to accumulate money and make no use of it. Hereafter, when this age of active material progress has yielded mankind its benefits, there will, I think, come a better adjustment of labor and enjoyment. Among reasons for thinking this, there is the reason for the process of evolution throughout the organic world at large brings an increasing surplus of energies that are not absorbed in fulfilling material needs, and points to a still larger surplus for humanity of the future. And there are other reasons, which I must pass over. In brief, I may say that we have had somewhat too much of the "gospel of work." It is time to preach the gospel of relaxation.

This is a very unconventional after-dinner speech. Especially it will be thought strange that in returning thanks I should deliver something very much like a homily. But I have thought I could not better convey my thanks than by the expression of a sympathy which issues in a fear. If, as I gather, this intemperance in work affects more especially the Anglo-American part of the population—if there results an undermining of the physique, not only in adults, but also in the young, who, as I learn from the daily journals, are also being injured by overwork—if the ultimate consequence should be a dwindling away of those among you who are the inheritors of free institutions and best adapted to them; then there will come a further difficulty in the working out of that great future which lies before the American nation. To my anxiety on this account you must please ascribe the unusual character of my remarks.

AUTOBIOGRAPHICAL FRAGMENTS.—V.

BEING EXTRACTS FROM AN EDITOR'S CORRESPONDENCE.

* * * I have hunted over twenty years of my life as a profession, in the wilds of Northern Maine. I hunted alone and camped alone many years; have followed hunting lines sixty-five miles long with traps all the way, which took all the week days—I did not hunt Sundays—through the season. I have killed seventy-three black bears, between fifty and sixty moose and several hundred Canada lynx, beside caribou, red deer, otter, fishes, fox, mink, martin and other game. I trapped forty-nine lynx in one season.

I have caught tons of brook trout, both summer and winter, from nine pounds down. I am familiar with all the northern counties of Maine bordering on the Canada line. The mountains, brooks, rivers and ponds are well-known to me. I have sold much value of living and dead animals and specimens of natural history to Professor Agassiz for the Cambridge Museum.

AN ANNIVERSARY.—November 11,—By the way, this is a sort of anniversary day with me. Just twenty-five years ago to-day I shot a glossy, short-legged black bear, the meat of which weighed five hundred pounds. And always on the tenth of November I take an extra nip, and go back ("in my mind's eye, Horatio") to that bark camp on the rattling, rushing Second Fork. Ah, *culpa mea!* Do we grow old, as it were? When shall I see such another?—NESSMUK.

Natural History.

A RUFFED GROUSE SKETCH.

WHAT A NATURALIST SAW.

SAM and I had been hunting ruffed grouse every day for a week, and Sunday had finally brought us to a halt to rest for the week ahead. It was a glorious Sabbath in a little quaint village in Wagner county, Pa. We sat on the stone slab at the kitchen door of the old farm house, and smoked our pipes in contentment, watching the yellow leaves as they lazily zig-zagged down to the ground from the limbs of the half bare maples, and the antiopa butterflies slowly flitting from one decayed apple to another under the trees in the orchard close by. The old blue dove on the eaves of the barn cooed occasionally in a quaint, Sunday way as he basked in the November sunshine, and the hens were half asleep in the holes where they had been dusting themselves an hour before, in front of the barn door. Belle and Carrie were curled up in the grass near us, dreaming of grouse that never flushed wild; and everything was still. The sound of the church bell down in the village seemed far away, and mellowed as though in harmony with the color of the beech and maple woods through which its vibrations reached us.

"Sam!" said I, "Those grouse down by the rock cut will be in the frost grapes this morning, and I'm going down across the lot to see if I can get near them. Don't let the dogs follow me."

The dry leaves, a foot deep, along the fence by the grapevines seemed to rustle louder than they ever did before, as I cautiously climbed over the rails, but no grouse was near to be frightened, and although expecting the sudden dash and whir every moment, I got near to the further side of the little patch of vines without starting a bird, and sitting down in the leaves with my back against a mossy boulder, refilled my pipe and waited. In a few minutes there was a pattering of very light footsteps in the leaves back of me. Nearer and nearer they came, stopping for a second and then proceeding again, coming my way all of the while. Suddenly a surprised "peet" on the right caused me to slowly turn my eyes in that direction, and there, within six feet, was a splendid male grouse, with crest erect and tail half spread, looking curiously at me. I kept stiller than half a mouse, and the old fellow satisfied himself that I was harmless. He came a few steps nearer, clucking all of the while, and mounting a stone, spread his tail to its fullest extent, and with crest and tail erect, with ruff displayed, and with wings drooping to his feet, he turned two or three times around, like a turkey gobbler. Then composing himself again he took another good look and walked around in front.

At that moment another grouse, a younger one, had come around the rock by which I was sitting, and he too went through the same performance, but not in such fine style. Both birds then walked on a way, watching me all of the while, and soon four more grouse came in sight. They walked within three rods, but paid me no attention, and busied themselves picking up fallen frost grapes. Suddenly there was a rush overhead and a grouse alighted in the vines just above me and commenced picking at a bunch of grapes, his smooth plumage with the dark markings on the sides seeming more beautiful than anything I had ever seen. Once in a while he looked down at me over his shoulder, erected his crest and gave an interested "peet, peet," and then went on picking grapes again.

In a short time eleven grouse were in sight, moving about as gracefully as could be, putting their little feet lightly down on the dead leaves, and all engaged in hunting for food. One of them flew up to the one already in the vines, and then nearly all followed, and commenced picking the grapes that hung in scattered clusters.

All of this while I had remained perfectly quiet, but my position was fast becoming uncomfortable. An edge of rock was boring into the middle of my back; another sharp piece had done its level best to penetrate the back of my head, and a jagged stump had worked just as far into my leg as it could possibly get without amputating the leg, and I had to move. The grouse all seemed alarmed at me. They sat straight and motionless among the vines, but none flew. For several minutes they remained in this position, and knowing that I was discovered I arose, expecting to see all dart off at once. This they did not do, however, but started slowly one at a time, and sailed off only a few rods into the woods.

How different the scene the next day, when with fast ranging setters we found them down in the ravine and sent bounding into the ferns, with feathers flying, three or four of the proudest of the flock. MARK WEST.

BREEDING QUAIL IN CONFINEMENT.

Editor Forest and Stream:

A number of communications have appeared in your recent issues on the breeding of quail in confinement which, while containing many valuable suggestions as to their care, have in no case given exact information as to the age to which they were reared. In my experience, out of a considerable number of attempts, only three broods reached the age of from five to six weeks, and of these three, two of our common quail, *Ortyx virginianus*, and one of the valley quail, *Lophortyx californianus*, none survived the period stated, though up to that time all had apparently been in the best condition and had received all attention. In a number of cases, which I have personally investigated, where these birds were said to have been "raised," I have found that they were put out intentionally when a few weeks old, or the boxes were so arranged that the young birds could escape into the fields when they were strong enough to scramble over a low board.

My experience with the ruffed grouse has been much the same as with quail. The difficulty of raising birds belonging to this family is very great, and it would be interesting to know if any of your correspondents have succeeded in carrying them safely to maturity under conditions of domestication. ARTHUR ERWIN BROWN.

ZOOLOGICAL GARDEN, Philadelphia, Nov. 12, 1882.

Editor Forest and Stream:

Several of us were seated about the stove at the hotel at Hayt's Corners, New York, a short time since, talking over the day's quail shooting and the subject of quail in general. Adam Sheridan, the proprietor of the hotel, said that he tried to breed quail in confinement for some time without

success, but finally found the secret of the difficulty. Most of his young quail died within the first ten or twelve days after being hatched, and after losing a great many, he decided to hunt for the cause. No lesions were found that would indicate the reason for their dying, but he found in the crops of the young birds the remains of a few insects, and no other food at all. He then began feeding the little fellows on flies, and found that they ate them with avidity.

The catching of the number of flies necessary became a very serious matter, and as Sheridan noticed that the quail could catch them themselves when they had the opportunity, he placed a beef's head in the coop. The little quail would stand around the head and pick off the flies as fast as they alighted on it, and were so expert at the business that they seldom missed one. In nine or ten days after hatching, the birds would eat other food, but previous to that age no other food was used, and the conclusion was naturally arrived at that the cause of death in early life was starvation, and the supposition was confirmed by the fact that the quail fed with insects at first all did well and grew to be as strong and sturdy as wild birds.

It is a well-known fact that the young of several of the gallinaceous birds depend almost entirely upon insect food, and the secret of the successful raising of quail will no doubt be found to rest on this to a great extent.

MARK WEST.

NEW YORK, November 13.

BIRD MIGRATION IN THE MISSISSIPPI VALLEY.

FROM OBSERVATIONS COLLATED BY W. W. COOKE.

[Continued from page 284.]

Hesperiphona vespertina—Evening Grosbeak.—(10) W. R. formerly common; (11) W. R., all winter on island, 5, 16 L.; (12) W. R. not common.

Pinicola enucleator—Pine Grosbeak.—(10) W. R. common; (11) W. R.; (12) W. R., usually; '79-'80, abundant, '81-'82 not one.

Carpodacus purpureus—Purple Finch.—(3) 4, 6, seen 4, 7; (11) in mild winters, 4, 3; (12) 4, 19.

Loxia curvirostra americana—American Crossbill.—(11) Sometimes seen in winter in small numbers; (12) W. R., not common.

Loxia leucoptera—White-Winged Crossbill.—(12) W. R., not common.

Ægiothus linaria—Common Redpoll.—(2) W. R., collected into flocks and moved North February 21-24; (4) W. R.; (9) W. R.; (11) W. R.; (12) 4, 12, probably came sooner.

Astragalinus tristis—American Goldfinch.—(3) R.; (4) W. R.; (6) 4, 10; (11) in mild winters; (12) 5, 23.

Chrysomitris pinus—Pine Goldfinch.—(9) 5, 10; (10) W. R.,common; (11) in mild winters; (12) W. R., irregular.

Plectrophanes nivalis—Snow Bunting.—W. S. in severest winters; (10) W. R., abundant; (11) W. R., abundant, began to sing 3, 14; 3, 25, keep up a constant warble; 3, 27 and 28, rapidly leaving; 4, 8, last.

Centrophanes lapponicus—Lapland Longspur.—(3) W. S., rare this winter; (9) W. S. in severest winters; (10) W. R., regularly; (11) W. R.; (12) W. R., not common; seen 3, 18.

Passerculus sandwichensis savanna—Savannah Sparrow.—(3) 3, 31; (7) 3, 18, abundant.

Poœcetes gramineus—Grass Finch.—(3) 4, 19; (4) 3, 24; (11) 4, 20, nest without eggs 4, 29; (12) 5, 4.

Coturniculus passerinus—Yellow-Winged Sparrow.—(2) 3, 10.

Melospiza lincolni—Lincoln's Finch—(3) 4, 24, abundant 5, 1.

Melospiza fasciata—Song Sparrow.—(3) 4, 12; (4) 3, 30; (11) 4, 3; (12) 4, 16; N. N. 4, 17, eggs 6, 4.

Melospiza palustris—Swamp Sparrow.—(12) 4, 13.

Chondestes grammica—Lark Finch.—(3) 4, 1, full set of eggs 5, 25; (4) 4, 30, very abundant; (6) 4, 15; (9) 5, 10; (11) 5, 9; (12) 5, 15.

Zonotrichia querula—Harris's Sparrow.—(3) W. S., abundant 3, 18, still present in great numbers 5, 8, but left soon after; (12) 5, 18.

Zonotrichia leucophrys—White-Crowned Sparrow,—(4) 4, 7; N. N. 4, 30, still present and unusually numerous 5, 3; (9) 5, 9; (12) 5, 14, 1881.

Zonotrichia albicollis—White-Throated Sparrow.—(3) 4, 25; (6) 4, 18; they seem to me to sing: "I have got plenty to eat, but no che-eze;" (9) 4, 29; (11) 4, 26; (12) 4 7.

Spizella montana—Tree Sparrow.—(3) W. S.; (4) W. S., (9) W. S., nearly gone 4, 20; (10) W. S. common; (11) W. S. usually, 4, 1; (12) never stay over winter 3, 25, N. N. 4, 11, 4, 22, nearly all gone.

Spizella domestica—Chipping Sparrow.—(2) 3, 10; (3) nesting 5, 7; (4) 3, 24; (6) 4, 6; (9) 4, 4; (11) 5, 3; (12) 5, 3.

Spizella pusilla—Field Sparrow.—(3) 3, 2; (4) 4, 21; (6) 4, 16; (12) 4, 17.

Junco hyemalis—Black Snowbird.—(2) W. R.; (3) W. S., a flock seen 2, 27; (4) W. R.; (5) W. R.; (6) W. R. common; (8) W. R.; (9) W. R., nearly gone 4, 20; (10) W. R. common; (11) W. R. in mild winters; (12) 2, 2, a single specimen seen, probably it had stayed over winter, 4, 4 flocks, 4 11 N. N., 4, 18 preparing to leave, 4, 22 nearly all gone.

Passerella iliaca—Fox Sparrow.—(3) 3, 17; (4) 2, 1-6; (5) 3, 5; (11) 4, 3; (12) 4, 14.

Pipilo erythrophthalmus—Chewink.—(1) about 2, 5; (2) 3, 16; (3) seen Dec. 15, 1881, and Jan. 5, 1882, by D. E. Lantz, nesting 5, 15; (4) 3, 18; (5) 2, 30; (6) 4, 7; (8) 4, 29; (9) 6, 3; (12) 5, 20

Pipilo maculatus—Arctic Towhee.—(3) 4, 19, abundant 5, 1.

Cardinalis virginianus—Cardinal Grosbeak.—(1) R., common; (2) R.; (3) R., hatching 5, 1; (4, 5, 6) R.

Zamelodia ludoviciana—Rose-Breasted Grosbeak.—(4) 3, 12; (6) 4, 26 to 5, 3; (9) 5, 4; (11) 5, 9; (12) 5, 18.

Zamelodia melanocephala—Black-Headed Grosbeak.—(3) 5, 22.

Guiraca cærulea—Blue Grosbeak.—(3) 5, 26.

Passerina cyanea—Indigo Bunting.—(2) 4, 15; (3) 5, 6; (4) 4, 25; (6) 4, 26 to 5, 3; (9) 5, 10; (12) does not occur.

Dolichonyx oryzivorus—Bobolink.—(3) 5, 6; (4) 5, 4; (12) 5, 17.

Molothrus ater.—Cowbird.—(1) about 2, 5; (2) 3, 17; (4) 3, 10, N. N., 3 29; (6) 4, 4; (9) 5, 4; (12) 5, 6, eggs, 6, 8.

Xanthocephalus icterocephalus—Yellow-Headed Blackbird.—(3) 4, 1, seen by T. V. Lyon; (11) 5, 2; (12) 4, 27.

Agelæus phœniceus—Red-Winged Blackbird. (1) about 2, 5; (2) 3, 17; (3) 3, 1, seen 5, 26 nesting; (5) 2, 26; (6) 3, 26, N. N., 4, 1, young 5, 5; (8) all winter; '81, '82 not usual; (9) W. R., 3, 22; (10) 3, 1; (11) 4, 1; (12) 4, 3, eggs, 6, 1.

Sturnella magna—Meadow Lark.—(1) W. R. in open winters; (2) 3, 17; (3) R., abundant, 3, 31, young 5, 22; (4) 3, 1, 6; (6) W. R.; N. N., 4, 1, song is interpreted; "Laziness will kill you;" (7) are here 3, 7, still arriving 3, 11; (9) 2, 3, 9; (10) 2, 14; (11) 4, 1; (12) 4, 3.

Sturnella neglecta—Western Meadow Lark.—(3) R.

Icterus spurius—Orchard Oriole.—(2) 4, 17; (3) 5, 2; (4) 4, 25; (9) 5, 9; (10) 5, 1; (12) 5, 29, the most northerly record in Minnesota, 5, 30, two more seen.

Icterus galbula.—Baltimore Oriole.—(2) 4, 20; (3) 5, 1; (4) 4, 25; (6) 4, 26 to 5, 3; (9) 5, 9; (10); 5, 3; (11) 5, 9; (12) 5, 4.

Scolecophagus ferrugineus—Rusty Blackbird.—(3) 3, 21; (6) 3, 22; (12) large flocks in fall, none in spring.

Scolecophagus cyanocephalus—Brewer's Blackbird—(12) 4, 8.

Quiscalus purpureus—Purple Grackle.—(2) 3, 24; (3) 3, 21; nesting 5, 15; (6) 3, 22; (9) a few 3, 4; (10) 4, 5; (11) 3, 31 to 4, 1 seen building nest on side of house in elbow of a stove pipe; (12) 4, 15, 4, 27 altogether too N. N., 5, 10 building.

Corvus corax carnivorus—Raven—(12) R. in the pine timber a few miles north.

Corvus frugivorus—Crow.—(1) W. R.,(2) W. R., (3) R., nest 4, 10, young 4, 15; (4) W. R., 4, 13 nest with 6 eggs; (5) W. R., (6) W. R., common, (8) W. R.; (9) W. R.; (11) 3, 18, numerous 4, 1; (12) Dec. 10, '81, Jan, 5, '82, flocks 3, 3, '82, N. N. 4, 5.

Cyanocitta cristata—Blue Jay.—(2) W. R. from the south, 3, 25; (3) R.; (4) W. R., nearly full feathered 5, 7; (6) W. R.; (8) W. R., (9); W. R., (10) R.; (11) R., nest 4, 26; (12) R.

Perisoreus canadensis—Canada Jay.—(10) W. R., not common; (12) R., breeds.

Eremophila alpestris—Shore Lark.—(1) W. R.; (3) W. S., rare this winter, flocks arrived the first week in Feb.; (9) W. R.; (10) W. R., common; (11) in mild winters; 2, 11, F., nest 1 eggs 4, 12; (12) 2, 14 numerous and song somewhat louder 3, 22, 3, 31 first that came have paired, 4, 3 nearly all have passed on.

Tyrannus carolinensis—Kingbird.—(2) 5, 1; (3) 4, 25; (8) 4, 30; (9) 4, 29; (12) 5, 17.

Myiarchus crinitus—Great Crested Flycatcher.—(3) 4, 29; (4) 4, 29; (6) 5, 14; (9) 5, 10.

Sayornis fuscus—Pewee.—(1) 3, 15; (2) 3, 18; (3) 3, 22 and again 3, 24, 3 eggs 4, 21; (4) 3, 19; (5) 3, 22; (8) 3, 1; (9) 3, 29; (10) 3, 28; (11) 4, 9; (12) 4, 19.

Contopus virens—Wood Pewee.—(3) 6, 5, seen; (9) 6, 3.

Empidonax flaviventris—Yellow-bellied Flycatcher.—(2) 4, 26.

Empidonax pusillus traillii—Traill's Flycatcher.—(3) 5, 24; (12) 5, 16.

Empidonax minimus—Least Flycatcher.—(2) 4, 31; (4) 4, 17.

Trochilus colubris—Humming Bird.—(3) 5, 22; (4) 5, 7; (12) 5, 18, eggs 6, 20

Chætura pelasgica—Chimney Swift.—(2) 3, 8; (3) 4, 25; (4) 4, 26; (9) 4, 27; (11) 5, 8; (12) 5, 19.

Caprimulgus vociferus—Whippoorwill.—(3) 4, 27; (4) 4, 26; (8) 4, 30; (10) 4, 27; (12) 5, 25.

Phalænoptilus nuttalli—Poorwill.—(3) 4, 22.

Chordeiles popetue—Nighthawk.—(4) 5, 1; (6) 4, 26 to 5, 2; (9) 5, 27; (11) 5, 4; (12) 5, 12.

Picus villosus—Hairy Woodpecker.—Resident at all stations.

Picus pubescens—Downy Woodpecker.—Resident at all stations; (3) nesting 5, 15.

Picoides arcticus—Black-backed Three-toed Woodpecker.—(10) W. R; (11) W. R., only a straggler; (12) 5, 21, 1881. Breeds.

Sphyrapicus varius—Yellow-Bellied Woodpecker.—(4) 4, 3; (6) 5, 14; (10) 4, 5; (12) 5, 24.

Hylotomus pileatus—Pilcated Woodpecker.—(3) R.; (4) W. R.; (9) W. R.; (11) R.; (12) R.

Centurus carolinus—Red-Bellied Woodpecker.—(3) R.; (4) W. R.; (9) W. R., nearly gone 4, 20.

Melanerpes erythrocephalus—Red-Headed Woodpecker.—(3) 5, 15; (4) W. R. in cold winters; (5) W. R.; (6) W. R.; (9) 5, 9; (11) seen 3, 10, probably wintered in low grounds, again 4, 16; (12) 5, 26.

Colaptes auratus—Yellow-Shafted Flicker.—(1) W. R. in open winters; (2) W. R.; (4) W. R. in cold winters; (5) W. R.; (6) W. R., N. N. 4, 1; (9) W. R.; (10) 3, 27; (11) 4, 2; (12) 4, 7, N. N. 4, 11.

Colaptes auratus mexicanus—Red-Shafted Flicker.—(3) R., seen 3, 24; (9) W. R.

Ceryle alcyon—Kingfisher.—(3) 3, 16; (4) 4, 1; (6) 4, 23; (9) 4, 7; (10) 4, 5; (11) 4, 16; (12) 4, 17.

Coccyzus americanus—Yellow-Billed Cuckoo.—(2) 4, 27; (3) 5, 8; (6) 4, 26–5, 2.

Coccyzus erythrophthalmus—Black-Billed Cuckoo.—(2) 4, 30; (12) 5, 30.

Aluco americanus—Barn Owl.—(4) 4, 21, a beautiful specimen shot about ten miles from here. It is the third specimen taken in these parts in twelve years.

Asio americanus—Long-Eared Owl.—4 and 9) W. R.

Asio accipitrinus—Short-Eared Owl.—(4 and 9) W. R.

Strix nebulosa—Barred Owl.—(2, 3, 5, 8) R.; (4) R., young 5, 3; (10) a few remain in winter.

Nyctale tengmalmi richardsoni—Richardson's Owl.—(10) W. R., rare.

Nyctale acadica—Saw-Whet Owl.—(10) W. R., not common; (11) R., not common.

Scops asio—Screech Owl.—R., at all stations; (3) fledged 5, 22; (10) a few remain in winter; (11) not common; (12) rather common.

Bubo virginianus—Great Horned Owl.—R., at all stations; (4) young 4, 27.

Ulula cinerea—Great Gray Owl.—(10) W. R., not common; (11) W. R., occasionally.

Nyctea scandiaca—Snowy Owl.—(3) W. S. taken Jan. 30, '82; (9) a few remain nearly every winter; (10) W. R., common on prairies; (11) W. R., not common.

Surnia funerea—Hawk Owl.—(10 and 11) W. R., not common.

Ectopistes columbarius—Pigeon Hawk.—(12) 4, 12.

Tinnunculus sparverius—Sparrow-Hawk.—(3) 4, 7; (4) 2, 1-6; (7) 3, 8; (11) 4, 1; (12) 4, 2.

Elanoides forficatus—Swallow-Tailed Kite.—(3) 5, 11; (12) usually a few seen, in '80 all summer, in '82 none seen, in '80 seen at Red Lake, Minn., which becomes, I believe, the most northern record of its observance.

Circus hudsonius—Marsh Hawk.—(3) R.; (12) 4, 2.

Accipiter fuscus—Sharp-Shinned Hawk.—(12) 4, 5.

Buteo borealis—Red-Tailed Hawk.—(3, 4, 5, 8, 9) R.; (4) shot one in nest 3, 18; (10) occasionally stays with us in winter; (11) in mild winters a few sometimes stay; (12) seen for the first time 4, 1, and the next day, during a twenty-mile ride, over two hundred seen.

Buteo lineatus—Harlan's Hawk.—(4) there were several black hawks in this vicinity last winter besides the rough-legged, which is quite common here, and I was fortunate enough to get one. It answers the description of Harlan's as given by Coues, and no other.

Archibuteo lagopus sancti-johannis—Rough-Legged Hawk.—(4) W. R.; (12) W. R.

Aquila chrysaetus canadensis—Golden Eagle.—(11) probably resident; (12) seen in '81.

Haliæetus leucocephalus—Bald Eagle.—(3) R., seen 2, 27; (7) 3, 4; (10) W. R., not numerous; (11) R.; (12) could anything be more appropriate than the emblem of our country building its nest on the shore of Lake Itasca. Visiting the lake May 19, 1881, I found it nesting high up in the dead top of an enormous pine near the lake; 4, 2, '82, three were seen.

Cathartes aura—Turkey Buzzard.—(1) W. R.; (3) R.; (4) 3, 16; (8) W. R.; (9) 4, 27; (12) 4, 2.

Ectopistes migratoria—Wild Pigeon.—(6) 3, 12; (11) 4, 3; (12) seen 5, 18, but probably not first.

Zenaidura carolinensis—Mourning Dove.—(1) 3, 15; (3) R. nesting 4, 17; (5) 2, 27; (6) 4, 17; (8) 3, 29; (9) 4, 3; (11) 4, 29; (12) 5, 4.

Meleagris gallopavo americana—Wild Turkey.—(3) R.; (6) R.

Canace canadensis—Spruce Partridge.—(10) W. R.; (11) R.; (12) R., not common.

Bonasa umbellus—Ruffed Grouse.—Resident at all stations.

Pediœcetes phasianellus columbianus—Sharp-Tailed Grouse.—(9, 10, 11, 12) R.

Cupidonia cupido—Prairie Hen.—Resident at all stations.

Ortyx virginiana—Quail.—(1 to 10) R.; (11) R. not common; (12) does not occur. The Minnesota Indians have no name for the bird. It came to the southern part of the State after the white man did, and the Indians had left that part of the State and gone north before it arrived.

Ardea herodias—Great Blue Heron.—(3) nesting 5, 31; (4) 3, 28; (12) 4, 14.

Butorides virescens—Green Heron.—(3) 4, 21.

Nycticorax grisea nævia—Squawk.—(3) 6, 1, seen.

Botaurus lentiginosus—American Bittern.—(6) 4, 1; (4) 3, 20; (11) 5, 6; (12) 5, 8.

Ardetta exilis—Least Bittern.—(4) 3, 28; (12) 5, 12, full-fledged young 6, 21.

Charadrius dominicus—Golden Plover.—(4) 3, 29; (10) 5, 10; (12) 5, 3.

Oxyechus vociferus—Killdeer.—(3) 2, 28; (4) 2, 1-6; (6) 4, 13; (7) 3, 7; (8) 3, 18; (9) 3, 17; (10) 3, 3; (12) 4, 3.

Philohela minor—Woodcock.—(1) W. R. in open winters; (10) 4, 16; (12) seen 6, 1, not first; is quite uncommon; not more than three or four seen in a season.

Gallinago media wilsoni—Wilson's Snipe.—(1) W. R. in open winters; (8) 3, 18; (9) 4, 19; (10) 4, 5; (11) 4, 3; (12) 4, 3.

Macrorhampus griseus—Red-Breasted Snipe.—(4) 5, 4; (9) 4, 27.

Actodromas maculata—Jack Snipe.—(4) 3, 26, numerous 4, 20; (9) 5, 3; (12) 5, 22, 1881.

Actodromas minutilla—Least Sandpiper.—(12) 5, 21.

Totanus melanoleucus—Greater Yellow-Legs.—(4) 4, 20; (9) 5, 2; (11) 4, 29; (12) 4, 3.

Totanus flavipes—Lesser Yellow-Legs.—(4) 5, 5; (9) 5, 1.

Rhyacophilus solitarius—Solitary Sandpiper.—(4) 4, 5.

Symphemia semipalmata—Willet.—(6) 3, 23.

Bartramia longicauda—Upland Plover.—(3) 4, 4; (4) 4, 1.

Tryngites rufescens—Buff-Breasted Sandpiper.—(3) 5, 11.

Porzana carolina—Carolina Rail.—(3) 5, 26; (6) 4, 7; (11) 5, 2; (12) 5, 4.

Porzana jamaicensis—Black Rail.—(3) 5, 26.

Fulica americana—Coot.—(4) 3, 25; (12) 5, 3. N. B.—When this species feeds in the fall on the ripe wild rice, it becomes very good eating.

Grus americana—Whooping Crane.—(3) 4, 12; (8) 2, 1 to 6; going south 3, 9.

Grus canadensis—Brown Crane.—(9) 3, 25; (12) 3, 31.

Olor buccinator—Swan.—(3) 3, 18.

Chen hyperborea—Snow Goose.—(3) visits us during the winter; captured one 3, 4, saw flock 3, 24; (7) 3, 8.

Anser albifrons gambeli—White-Fronted Goose.—(3) W. S.

Bernicla canadensis—Wild Goose.—(3) both this and var. *Hutchinsi* stay here during the winter; (9) 2, 5; large flocks came 3, 2; (12) 4, 2.

Bernicla brenta—Brant.—(1) 3, 7; (3) W. S.; (9) 2, 5, large flocks 3, 2.

Anas boscas—Mallard.—(1) W. R. in open winters; (2) W. R.; (12) 4, 2.

Dafila acuta—Pintail.—(2) W. R.

Nettion carolinensis—Green-Winged Teal —(7) very plentiful, 3, 5.

Querquedula discors—Blue-Winged Teal.—(2) a large flock of 500 stayed at a lake near here for three days, June 1-3. (3) 5, 26; (6) 4, 7.

Aix sponsa—Wood Duck.—(9) 3, 20.

Æthyia americana.—Redhead.—(3) 3, 16.

Clangula glaucium americana—Golden Eye.—(10) W. R.; (11) formerly W. R.

Clangula albeola—Buffle Head.—(10) W. R.

Harelda glacialis—Old Wife.—(10) W. R.

Melanetta velvetina—Velvet Scoter.—(10) W. R.; (11) twice seen in winter.

Mergus merganser americanus—Buff-Breasted Merganser.—(10) W. R.

Mergus serrator—Red-Breasted Merganser.—(10) W. R.

Pelecanus erythrorhynchus—Pelican.—(3) 5, 6; a large flock 5, 31; (4) 5, 4; (22) 4, 28.

Phalacrocorax dilophus—Cormorant.—(4) 3, 28.

Larus glaucus—Glaucous Gull.—(10) W. R.

Larus argentatus smithsonianus—Herring Gull.—(10) W. R.

Larus delawarensis—Ring-Billed Gull.—(9) probably seen 3, 28; (12) 4, 3.

Larus franklini—Franklin's Gull.—(4) 4, 21, very rare in these parts; (10) W. R.

Larus philadelphia—Bonaparte's Gull.—(11) 4, 1.

Sterna forsteri—Foster's Gull.—(3) 4, 29; (9) 5, 1.

Hydrochelidon lariformis surinamensis—Black Tern.—(3) 5, 20; (12) 5, 9, N. N. 5, 17, eggs 6, 16.

Podiceps holbolli—Red-Throated Diver.—(10) W. R.

Podilymbus podiceps—Common Diver (4) 3, 26; (10) W. R.; (11) 4, 21; (12) 5, 3.

Colymbus torquatus—Loon.—(6) 4, 23; (11), 4, 21; (12) 4, 27.

EARLY ARRIVAL OF THE PINE GROSBEAK IN NORTHERN NEW YORK.—On Monday morning, Nov. 6, 1882, I saw three pine grosbeaks (*Pinicola enucleator*) on a tree in front of my office, at Locust Grove, Lewis county, New York. I have never observed them here so early before, although I was told last year that one had been seen Oct. 29. But as none were seen afterward I concluded that the observer was mistaken in the identity of his bird.—G. HART MERRIAM, M. D.

THE DIVINING ROD.—The London *Times* publishes several letters on the working of the divining rod. Mr. T. Sherwood Smith, F. S. S., writing from Bristol, says that some years ago he was carrying on mining operations in Somersetshire and had a workman who professed the power of using the "twig." He tested him and found that the twig certainly turned up sharply between his hands, while in his own it made no sign. On another occasion one of Mr. Smith's men was pointed out as possessed of the power. A number of hats were placed in a row, and under one of them—known only to Mr. Smith and two scientific friends with him—a number of copper coins. The man was called in, and by means of the twig, identified the right hat. The experiment was several times repeated, and in most cases with success. Lieutenant Colonel Charles Cocks, in a letter written from Montreux, says that at Cannes and other places on the Riviera certain Italians constantly travel about the country for the purpose of finding concealed springs to supply houses in course of building. In place of the usual hazel twig in use in Cornwall the Italians use a twig of olive. When water is indicated the loop gives slight jerks upward and eventually slowly becomes upright and turns toward the breast of the person operating. Colonel Cocks gives an instance of the successful employment of the twig, and says that he himself has often tried to trace a drain as a mere matter of curiosity, with invariable success. He has no doubt whatever of its truth. On the other hand Mr. T. K. Taplin, of Milverton, Somersetshire, writing with reference to some successful experiments said to have been made with the twig in a field near Westbury-sub-Mendip, says that the field in question, though generally surface dry, had abundance of water below, and he has little doubt that the spring said to be tapped could have been tapped at any part of the field or even in the adjoining field. The men, no doubt, knew very well that they were practising a joke. The laboring men born and bred in any district, he adds, know well the nature of the land and where water is to be obtained. Capt. D. Bingham, writing from Paris, says that Abbé Paramelle, who died four years ago, possessed the power of finding water, and through it conferred great benefits in various parts of the country. He wrote a book on "The Art of Discovering Springs," in which he describes the merits of the divining rod. The Abbé says the rod turns spontaneously in the hands of certain individuals endowed with a temperament of a nature to produce the effect. The movement is determined by fluids which escape our perception, such as electricity, magnetism, etc. The rod turns indifferently over places where there is not the least thread of water as over those where water is found, and, consequently, it cannot be depended upon.

BITE OF THE "COTTON-MOUTH."—Sardis, Miss., Oct. 31.—In the last issue of FOREST AND STREAM under the head of "Cotton-mouths and Water-mocassins," N. A. T. certainly gives a good description of a Tennessee cotton-mouth, both as to habits and abiding place. I can call to mind two instances where dogs were bitten by cotton-mouth snakes. One of the dogs was bitten on the under jaw, and died within two hours or less; the other dog was bitten on the hind leg, and lived about a day and died in spasms. I have seen water-mocassins bite dogs and not affect the dog more than to cause a slight swelling, which always went away in a few hours. My nephew one day took his dog Gyp fishing with him, and in his rambles through the woods from pond to pond, Gyp came upon a very large cotton-mouth, and being quite an expert at shaking the insides out of snakes, he did not hesitate to at once give this cotton-mouth a general shaking up. But I suppose from the size and weight of this old rusty fellow, the dog could not handle him very well. Soon after the fight the dog showed signs of being sick, and as my nephew valued him very highly, because he was a distant relative of the famous guard-dog at Andersonville, S. C., during the war, he hastened home to doctor him, thinking the snake had bitten him. The dog's body was terribly swollen for several days, and he finally got so sick that he could not walk. All the time he was well cared for and nursed. By and by the hair began to come off in a narrow strip, say an inch wide, and reaching from the left side of the throat, across the back of the neck, down across the right shoulder blade nearly to the belly. After the hair came off the flesh then rotted out nearly to the bone, and did not cure up for several months; and when it did get well the new hair was of a reddish color, where, before, it was white. It was always my belief that the snake was so large and heavy that the dog could not raise it clear when shaking, and the result was that one of its fangs must have scratched him from side to side, or *vice versa*. I notice you make me say: "Fishing with net is anything but good," * * * I intended to say: "Fishing with *me* is anything," etc. Don't accuse me of fishing with *net*.—DAVY.

MUD-HENS EAT FISH.—Lincoln, Neb., Nov. 4.—I have read "Byrne's" letter in FOREST AND STREAM, Oct. 26 Tastes in the matter of diet are so varied in the human race that when one man asserts the mud-hen is a palatable bird there is no reason to call in question the assertion, especially so far as he is concerned. He may enjoy eating them, others do not. But when he claims that the mud-hen is strictly a vegetable feeder, he shows that he is a shade "off" on this subject. The mud-hen does feed largely on fish, and I think prefers them to any diet it can get. My brother and I have watched them for hours swimming about and among our duck decoys in the lake adjacent to Vicksburg, as we sat concealed in our "blinded" skiff, and have often seen them emerge from a dive with wriggling minnows in their bills, which they gulped down in short order and with apparent gusto. I do not allude to the little "hell-diver." The difference between the two is quite marked, and any intelligent hunter can easily distinguish one from the other at quite a distance away. So far, however, as my own observation extends, the mud-hen is as regular a feeder upon fish, bugs and worms as is the "hell-diver," and I doubt if there is much difference between the two as an article of diet. Having thoroughly tried the mud-hen, I would call for "hell-diver" if compelled to eat one or the other.—BURR H. POLK.

A CORMORANT IN THE ADIRONDACKS.—Meacham Lake, N. Y., Nov. 9—A cormorant (*Graculus dilophus* Linn., Gray) was killed to-day by Mr. Fred N. Collins, of New York. Neither the guides nor myself ever saw the bird before and no one knew what it was until we looked over DeKay's "Birds of New York," and Jordan's "Manual of Vertebrates." Other waterfowl are plenty here at times and Mr. Mather caught a little grebe alive in a small net and will send it to Central Park.—A. R. FULLER.

A COLLECTION OF HORNS DESTROYED.—The studio of Albert Bierstadt, the artist, was destroyed by fire last week. Of his natural history collection Mr. Bierstadt said: "The studio had in it not only some valuable paintings, but, what were to me almost priceless, the collection that I made during ten years in the Rocky Mountains of costumes, carvings, implements and paraphernalia of various tribes of Indians, and many objects of a branch of natural history in which I had deeply interested myself. I had made a study of the wild-horned animals of this country, and had many specimen heads of the deer, wapiti, mountain sheep, and goats, from the time their horns start to grow until they are the most perfect specimens obtainable. For instance, I had fourteen pairs of wapiti heads. In the studio also were a great number of valuable studies and sketches, together with pictures completed and incomplete. Among the curiosities was a book written by Indians, in their language, and illustrated by them. It told of their wars and the personal exploits of many noted braves, and Sitting Bull had written in it a sketch of himself. It was given me by General Sherman, who got it in one of his Indian raids."

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

DUCKS BELOW ZERO.

THE classic Skunk—Chicagua is its more melodious Indian name, but it means just the same thing—the sometimes erratic and uproarious, sometimes calm and gentle, but always crooked Skunk, sweeps in a ragged curve about the town of Newton, in the pleasant State of Iowa. West six miles on the C. R. I. & P. road lies the station of Metz, situated on the river bottoms. South twelve miles on the N. & M. branch is Reasnor, also upon the bottom. Between these two points is a distance of perhaps twelve miles, by the way of the river it is probably thirty. By reason of which dispensation of providence and the railroad companies, the morning of the day before Thanksgiving, in 1881, found a friend and myself at our boat, waiting for it to grow light enough to start. It was very cold, our boat was calked by the fingers of the frost, and could not leak a drop. We shivered under our heavy coats. Far and wide the bottoms were a sheet of ice, for winter had caught old Skunk "out on a high," though the water was now within the banks. Ice being on either shore, and the meager current in the middle looked blue-black and forbidding in the morning light. A cold wind whistled through the trees, and the whole scene was so dismal that it was with feelings almost of foreboding that we stepped aboard and shoved off, heading eastward, where a faint gray streak told of the coming day. Fifteen minutes passed in silence as we sped down the racing current. Then a sharp whiz-z greeted our ears, as a solitary sp ketail crossed from the right. We dropped two empty shells in the bottom of the boat. And the duck went right on; a double miss to begin on. Now an old mallard starts from under the willows, but he comes down dead all over. Two more follow, and meet a like fate. Then they start up by the hundreds, from under the ice, among the willows, from the dry ground. "Shoot! shoot!" my companion cries, and as fast as I can work the top snap I comply. Half our ducks fell on shore, and before we could break through the ledge of ice many of the cripples were lost beyond recovery, sometimes creeping off a hundred feet beneath a sheet of ice, where a man could not follow them.

We now exchanged places, and Virgil took the bow with both guns, it being our agreement that but one should shoot at a time, we not caring to add another to the list of accidents from careless shooting in boats.

As we rounded a bend, I noticed my friend trying to catch a sight on a big mallard which was swimming ahead of him. "Trying to shoot on the water, are you, hey?" said I. "See here—" "No, I am not. He's dived twice. Hold on! Whoa! Back water! Confound him, there he goes again!" and that duck was never seen again. After several such experiences, we concluded to shoot on sight. With few exceptions the single ducks would dive instead of flying. It was most provoking, to get within thirty yards of a fine duck, and then, just as you expect to see him start up to meet an honorable death, see him settle down in the most approved belt-diver style, till his eye just showed above water line, and then dive to shot. These "slinkers," as we called them, were all mallards, though I have seen redheads do the same thing. They were nearly all uninjured, so far as we could see. Sometimes we would see two or three skulling along the edge of the river with their heads down, trying to escape notice till they could hide or dive. The day was very cold, ice formed on our oars so thick that we often had to stop and pound it off, and it struck us that the birds were possibly too numb to fly, or had their wing tips frozen fast. A friend afterward suggested that these were all crippled birds, driven in by the freeze, but some of their actions and their numbers precluded that idea with us, though the shooting had been very heavy that fall. We set it down to natural cussedness. What say our readers?

Meantime, imagine us gliding down the swirling current, between long rows of ice-laden, creaking willows, now running full before the wind, now rounding a bend to meet a row of whitecaps which dashed an icy spray in our faces; now pulling straight away, now veering quickly to escape a sunken log or projecting ice ledge. We scarcely knew our familiar stream in its changed appearance; sometimes we ran through the woods for miles without knowing where we were.

The black and angry clouds, the ice fields, the strange sounds in the woods, and the swiftly moving vistas of the ever changing, restless river, made up an effect which will not soon pass away. It was novel, it was glorious, this boating with the mercury below zero, and the river narrowing slowly. Would I have changed my uneasy seat in this winter panorama to hunt any other game on foot or on horseback, or play any fish beside a summer pool? By no means. Such fascination I have never known.

It was the last day of the season and all the ducks in the country were crowded along that narrow channel; and no one else was there to molest or make afraid.

Whang! went Virgil's gun. "I got that old slinker that time," said he. Sure enough, we could see his red feet paddling against the transparent ice as he vainly tried to dive. We had learned to believe it as honorable to shoot a duck diving as one flying.

At noon we landed, stretched our limbs, and ate our frozen lunch.

We had now nearly as many ducks as we thought it honorable to take. I realized that if we would catch the evening train we must hasten. So cautioning Virgil not to shoot any more, I took the oars, and we flew down stream at a lively rate. Running thus for some time in silence, except an occasional "Port a little! Straight away!" from my companion, I was startled by the double report of his gun, followed by the whistle of a flock of mallards as they passed up stream. Two ducks lay stone dead upon the water. "Thought you weren't going to shoot any more," said I. "Well," said he, a little ashamed, "I couldn't help it; the old gun would come up, and I had to hold her, you know." We changed again before long, and I made a righteous resolve not to shoot another duck, and allowed several to pass unsaluted. Finally an old drake came shooting along up the river. "It would be a sin," thought I, "to kill that duck, for we have a plenty. Shoot him? No. That's not so easy, though. I don't know—I guess—just watch me drop him as he crosses!" Now, is not that an intense moment, when the gun comes just against the shoulder and the duck seems glued to the end of the barrel? Every intervening object is blotted out; you can see nothing but the duck; and he falls to the crack of the gun, as if you had struck him dead with a concentrated eye-glance. But alas! alas! for my principles. I had killed another duck!

We now left both guns unloaded, and one taking his seat in the stern with the paddle, and the other at the oars, we went ahead in grand style, and in due time reached our journey's end. Here we pulled out our boat and locked her to a tree, but happening just then to meet a native with a train, we concluded a hasty bargain by which he was to haul our boat over to the station for the sum of one dollar, the roads being, as he said, powerful bad.

Virgil started ahead with all the ducks he could carry, and I followed with the rest, together with the guns and coats. At the station we were the wonder of all observers, there appearing to be a general desire to see "the two fools who had come all the way from Metz right in the dead of winter." We reached home in good season, having made the round trip in one day. That night we divided up with several families, and the next day some of our game appeared upon tables where possibly ducks were rarely seen.

This hunt, we thought, paid us well, not so much in the game as in that we felt we had surprised nature in a new mood—one which she had gotten up for herself and intended no one else should see. It was audacious in us to tempt her in such a mood; but in the memories of the day our audacity was rewarded. E. HOUGH.

NEWTON, Iowa, October 5, 1882.

NOVA SCOTIA MOOSE HUNTING.

THERE is great rejoicing in the camp of the Rod and Gun Club, for behold, the grand worthy chief of the free and independent order of moose snarers hath fallen, yea, verily old Alex, surnamed "Piper," who twice before had evaded the toils of the game protectors, has at last fallen into a "snare," and as a consequence thereof has been fined by the "Deacon" $25 and costs for setting a snare with intent to entrap the king of all our game animals, the moose. And richly the old boy deserves it, for according to his own count he has caught during his lifetime over eighty moose, and although he has repeatedly been had up before the wardens he has always managed to evade the law and get off scot free until this time, so the boys take great credit to themselves. It was considered one of the impossible things to convict old Alex, and his conviction will strike terror into the hearts of all the other "snarers" of smaller caliber.

Last winter was a hard one on the moose, the heavy snows and crust in February and March rendered them an easy prey to the "dog hunters," and as a consequence over one hundred moose were killed in this and the adjoining county. The price of hides ran high and many moose were killed and left in the woods, nothing being taken out but the hide. The writer, while hunting this fall, came upon three skeletons which had been left in the woods, and it was quite evident that nothing but the hides had been taken. But so well did the poachers lay their plans, and so stealthy were they in their movements that not one conviction followed for "dog hunting" this season. We are determined to stamp this class of hunting out, if within the bounds of possibility, and to that end the game protection society have offered a reward of $20, besides half the fine, for information that will lead to convicting parties hunting with dogs, and passed an amendment making it lawful to destroy dogs found hunting moose.

I have lately returned from my usual fall trip moose hunting, I was out nine days and had a first rate time. I was accompanied by the veteran hunter McQ. On the day appointed McQ. and I drove to Sunny Brae, eighteen miles, then packed our stuff seven miles across the barrens to the forks of Bryden's Brook, on the west branch of the St. Mary's River; there we camped, as we expected to get good fishing as well as hunting. The evening of the next day after we got to camp was favorable for "calling," so we tried that. We did not hunt much during the day, as we did not wish to disturb any game which might be near. About sunset we repaired to our calling place. On the second call we got an answer, and could hear the moose quite plainly, but he was busy in coming up, and although we waited till past ten o'clock he did not put in an appearance; and as the night was cold and we were getting hungry we decided to return to camp. The next day we investigated and found that our moose had come up during the night to within ten feet of where we had called but had got the scent, and was off like the wind. It proved to be a young bull, and they invariably act thus; they are very shy and timid about coming to a call. If they come up boldly and they find an elder brother in possession of the field they are apt to get a sound thrashing from the old one. Next day being Saturday we determined to go to the river and fish, so taking a light fly rod we started for the "Cameron pool," about a mile from camp. Arriving there, I got my tackle in working order and on the first cast hooked two fine sea trout. I found the fish very lively; I continued fishing till lunch time and had landed about three dozen beauties and lost many fine ones for want of a net. After lunch, began fishing again and got several more.

When I began to think about reeling up and making for camp, I turned round to tell Mac, who was smoking quietly on the bank, that I thought it was time to go, when something broke the water, which, as I did not see it, I took by the noise to be a whale, and away went the line through the rings, and the reel keeping time at the rate of forty miles an hour. By this time it dawned upon me that I had hold

of something more than I bargained for, which was no less than a salmon. No landing net nor gaff, a light hair line, and not very much of it, a single-gut leader, and a "salmon." The pool was large and deep, so I determined to do my little best. The fish had broken water two or three times, and I made him out to be of ten or twelve pounds, and a lively one at that. Various were the means that my good friend McQ. suggested as to the best way to land that salmon, shooting him with the rifle, a spear made out of a pointed stick, a landing net improvised out of a hat, in fact, everything that he could think of, none of which appeared to me to meet the requirements of the case, so I determined to fight it out. To make a long story short, after an hour and a quarter of hard work, I reeled him up to the bank, when a tap on the head from McQ. settled the business. It proved to be a fish of about eleven pounds weight. I took him with a red hackle. This was on the 30th of October, and 35 miles from the salt water. The best fishing on this river is in May and June; and I have never known a salmon taken with a rod there later than July 31.

Next day it was raining and blowing a gale, and as we were camped on the open barren we had the full benefit of it, but our tent held up bravely, and beyond a little water that the high wind drove through the light canvas we did not suffer much inconvenience. The day following, as the storm had not blown over, we shifted our camp into the heavy woods, and then we were all right. We now turned our attention to hunting, and by Wednesday at noon had killed a wild cat (lynx) and a splendid big cow moose. In case some of your readers may say, why kill a cow? I "rise to explain." On Wednesday morning early, Mac and I came upon a good 'yard." We knew by the signs that there was a large bull or cow, and a yearling in the "yard." We were doing our level best and were coming in well to where we thought they would most likely be feeding, when all at once we heard a loud snort and a rattle of the bull's horns. This we knew at once was the signal of alarm to his family. How we had started them we were at a loss to conceive, but started they were, sure enough. Our only chance was to run and try and get a shot, as they would have to cross a little bog about one hundred yards to our left. Run we did, and got there just in time to see the bull going out of sight in the alders, and a fine one he was, with splendid antlers. The cow was some distance behind, and as we came up I got a clear sight, and in a second a bullet was through her heart. She proved to be a very large, fat moose, and although I was much put out at losing the bull, I consoled myself with the thought that her meat would be much better eating than the other.

We had scarcely come to where she fell when out walked two men who had been out looking for lumber, and they had come up directly to windward of our "yard," not knowing that the moose were there, and their approach had been the cause of alarm. Words failed to express our feelings, I can assure you, but it could not be helped, and we came to the conclusion that that bull was not intended for us anyway.

We saw one bear, but did not get a shot. They are very plentiful in these parts. Last season I killed three and wounded another, but still-hunting bears is difficult work. If we only had a couple of good dogs trained for bears what glorious sport we would have! GLOBE SIGHT.

NEW GLASGOW, Nov. 6, 1882.

ON THE "AR-KAN-SAW" PRAIRIES.

IN my last I wrote of fine sport after mallard, teal, etc., on the prairie near here. The next morning John and I hitched the team to the ambulance and started for another shoot. The prairies have on the highest parts of them or "ridges" a few small round ponds, from two to five rods across, which seldom go dry. Recent rains had filled these full, the water extending somewhat into the dense grass, five to eight feet high, surrounding them. Into these the hungry ducks on their southern migration dropped by hundreds, I might say by thousands, where they found unlimited food, both vegetable and animal. Our plan for killing them was very simple and effective. John being crippled in his right arm, could not shoot much. We would drive within about twenty rods of a pond, then I would leave the wagon, and while John drove on one side far enough away not to scare the ducks, but to attract their attention, I would approach on the other.

The first pond we drove to was quite a large one and we had seen many bunches of ducks drop into it. I approached it carefully through the grass, when just as I was about near enough for a big "pot shot" I almost stepped on some ducks that were out in the grass feeding; they sprang into the air with a great clatter and squawking. This started the whole lot; with a tremendous noise the whole air above the pond was a quivering mass of ducks; they flew in every direction, some of them nearly in my face; and there I stood first pointing my gun here, and then there, trying to pick out the thickest place; I suppose I pointed the gun in a half dozen different directions. At last I let her go at random and killed only three with the first barrel and two with the other, my gun shooting too close for very effective work of this kind. At the next pond I killed six at the first shot on the water and four as they arose. At the next pond I made the great slaughter of my life at a shot, namely, twelve mallards and a teal on the water and six mallards as they flew up, all killed outright. All that were able to reach the dense grass getting away, and so on until I thought we had all the ducks that we could use or give away, for the weather is still too warm to market any surplus game from here, John insisted that the slaughter should go on. He seemed to think that so long as there was a duck in sight it was our bounden duty to kill it. On counting up we found we had fifty-one fine fat mallards, five teal, a couple of jack snipe, the same of chickens, several quail and a bittern, and were back to town soon after twelve noon.

This kind of "sport" would suit a great many exactly, but I am forced to say that I did not enjoy it with that exquisite pleasure I would twenty-five years ago. As we drove home I felt that I would have had more comfort and sport in neatly stopping a half dozen single teal, or bluebills, as they came whizzing over my decoys, yet I had some very nice wing shots that forenoon. Here, on White River prairie that day, would have been the chance seldom met with for a party of say four, with a few decoys, to have made a bag on mallard ducks such as is seldom heard of, by putting out their decoys in the four principal ponds, and then having a fifth person on a pony to gallop over the prairie, routing the ducks when settling in other places. It would be hard to guess how many could have been killed in that way. Such great masses of ducks are found here feeding on the prairie in autumn after every cold spell north until winter sets in severely; there and then we have both ducks and geese as thick as the most ardent pot-hunter or market-hunter could desire until spring.

John was not satisfied with any of my "pot" shots at ducks. He thought I should have killed more at a shot. That night he dreamed the whole night through about pulling off great scattering guns, heavily loaded with coarse shot, into solid masses of ducks. I shot 6's, which John and others here think too small for partridges, quail and squirrels. By morning he was so "worked up" that he concluded he must "do or die," so he borrowed an old rusty "pot metal" gun, loaded her to his satisfaction, mounted his pony and started for the prairie. He rode around carefully for a long time hunting for a big chance, when riding through the tall grass he heard directly ahead a great chattering and splashing of ducks. He knew of no pond in that direction, but the noise was unmistakable, and showed that there was a great mass of ducks feeding directly ahead, either in the grass or in a pond. He slipped from his pony and cautiously approached. As he neared the pond he became convinced that the great shot of his life was near at hand.

Cautiously and silently he slipped through the grass until he was as near as he wished; he could see the grass shaking and hear the ducks bragging over the fine food not ten feet ahead of him, while the little pond three rods in diameter was a solid mass of mallard ducks. John had both barrels at full cock, and as he straightened up, the ducks all took wing. Holding the gun in his left hand he shut both eyes and pulled both triggers at once. When the smoke cleared away John saw on the water a ⊂-shaped mass of dead ducks reaching nearly from the muzzle of his gun clear across the pond, kicking and splashing, he thought about fifty. Not being very well and not wishing to wet his feet, he mounted his pony and rode to a farm a mile away for a boy to wade in and retrieve them. When he came back they gathered in sixteen mallard ducks, dead, all that were able to reach the grass of course getting away. He is convinced now that if he had shot one barrel and then changed the direction of his gun a little and shot the other he would have killed many more ducks; and also that heavy shot is the right thing for ducks. I am confident that I can more certainly kill a single duck in the fall of the year at a long shot with 6's than I can with heavier shot.

During the last five days the ducks have been growing scarcer and wilder, so that it takes some skill to bring them to bag. This will be the case until old Boreas sends us down another "grist" from the north. We have had no shadow of frost here as yet, this sixth day of November.

Yesterday I missed one of the great opportunities of my life. I and John were on the prairie driving around looking for ducks, chickens, etc.; ducks were very scarce. As we approached a pond I saw standing in it a large white bird, which I supposed was a great white egret, *Ardea egretta*. I cared nothing for killing that bird, for I had shot hundreds of them, but as I had not had a shot for some time, I jumped from the wagon and "sneaked" for him. When about near enough to shoot, a little bunch of mallards jumped up to my left; this was too tempting, so I dropped a couple of them right and left. What was my surprise on looking around to see the great white or whooping crane, *Grus americana*, a bird I had never bagged, go flopping away. Well, I was just a little bit put out, for I would rather have bagged that crane than a hundred mallard ducks.

Right here I wish to add a few words in the way of postscript concerning this region. This is a fine game country for all game that was ever found in the Central South, except buffalo. It gives me great pleasure to answer all inquiries of sportsmen who enclose stamps. The only two direct routes by which to reach here are by boat or rail to Memphis, Tennessee, thence here by White River packet, or from St. Louis by St. L., I. M. & S. R. R. to Newport on White River, thence by White River packets here.

Last winter I thoughtlessly wrote a letter to FOREST AND STREAM giving the great advantages of this prairie region as a very profitable stock country, and a future fruit country, saying that there were thousands and tens of thousands of acres of the finest of growing lands that could be had at the U. S. Government price of one dollar and a quarter an acre, and for very much less, and that the same was open to homesteading and timber claiming, bringing it down to a nominal cost. This brought me hundreds of letters of inquiry. A whole year of observation and experience right here has fully confirmed the opinions formed last winter, and have proven that all I said was true. For not only have we here one of the finest game, stock and fruit regions with as cheap or cheaper lands than can be found elsewhere, but also thousands and tens of thousands of acres of fine, I might say choice, upland cotton lands that may be had equally cheap, and what is better, this past season has proven that the prairies are very healthy for Northern stock men, and the timber—the cotton lands—for the acclimated people of the Southern States. Well, what I was going to say is this, I, "Byrne," am not a land agent, therefore all inquiries about land should be addressed to C. H. Belknap & Co., of this place, who I believe to be honorable men trying to settle up this country. All letters relating to shooting matters, simply directed "Byrne," will reach and be answered by me. BYRNE.

CROCKETT'S BLUFF, Arkansas County, Ark., Nov. 6.

WITH THE DUCKS.

OUR fall along the southern shore of Ontario has thus far been an exceptionally pleasant one, no heavy storm having visited us. As a natural result the flight this year has been at present writing light. Within the past ten days, however, several fine bags have been made.

The grounds, or more strictly speaking the waters, controlled by the Ontario Hunting and Fishing Association, a party of gentlemen sportsmen resident at Oswego, are located near the eastern end of our lake, and within two hours ride by rail from this city, and a telegram from the keeper will always be answered in person by one or more of the club instanter. Already two parties of two and three guns respectively have visited the ponds, returning with from forty to seventy-five birds for a day's shooting. Our game is highly assorted, with butter-balls, blue and broadbill, redhead, gray and black and occasionally a canvas-back duck, while not infrequently teal are found in fair numbers. Twenty-five miles south from here and accessible by the line of the N. Y. & W. R. R., lies Oneida Lake, at this season affording good sport. The same ducks are to be had there, and a day's time behind a good gun in a well made blind will yield from ten to twenty birds if the weather is favorable. Partridges are scarce, requiring much perseverance to find them; the shooting being far behind that of last year. To offset this general report however, and in proof of the fact that the birds are by no means extinct, I have before me the authenticated record of two hundred birds brought to bag by one gun since September 1st in this county.

Black and gray squirrels have been thick, but hunters have killed many score and their ranks are depleted. The little gray and his cousin (?) the white rabbit may be found near here, the former in large quantities in certain known localities. F. E. H.

OSWEGO, N. Y., Nov. 8, 1882.

DUCKING AT SPESUTIA NARROWS.

Editor Forest and Stream:

"Homo's" article in your issue of Nov. 2 leads one to believe that box boating is carried on in Bush and Gunpowder rivers. Should a box boat be put out below the mouth of Swan Creek, on the west end of the line, some one would come out of Spesutia Narrows and say, "What yer at here?" I was down in the narrows from Oct. 30, and I send you a few items for that week, ending Nov. 4. There were many redheads on the flats and some blackheads, and very few canvas-backs; fifteen, I think, were all that were killed. Wednesday, the first day, several of the club scows were fined for getting their berths or positions before the hour. This they are perfectly able to do in order to get a good position, but I think it a very poor principle indeed, as it deprives the many who gun to support large families.

The shooting for the first week on the flats and in the Narrows was below the average; boxes did not average 100 per day; whackers about two. Shooting over decoys from shore was poor on account of the calm weather, and flying points did nothing, comparatively speaking. I managed to get about forty head. Those killed on Tuesday and Wednesday had to be eaten on the spot, as the weather was too warm to ship to friends at home. Many theories have been advanced in the columns of the FOREST AND STREAM regarding the holding ahead, etc., etc. Now, I have not quite advanced to the age of three score and ten, but I have had enough lessons taken and learned from that great great book, experience, to enable me to say that any one who attempts to hold on to a duck coming down wind at the rate of thirty miles an hour, is going to get left, and the duck will be left to be shot at once more. Friday was a very calm day, and no better day to fully convince one of the different theories.

Shells loaded four drams powder, one ounce 6's. Held on to five coots, killed one. Shot line on water four feet in the rear of the part of the duck that went through the air last. Same load, one coot; he must have had an errand to Washington, D. C., and wanted to get there in 2:40; gun stationary; shot at him as he presented himself in front; that coot is still going.

Now let's see. Single coot comes rocking along, is about to say something, when his wind is cut short. Aimed two feet behind, kept moving the barrels along, and when his broadside was in front of blind, down he went. Shot line on water in line of coot. Any better evidence wanted? I killed some seven or eight in succession in the last way. I don't want to enter into any controversy on this subject. I would not have said this much, but the weather is warm and it would not keep. G. H. W.

RED BANK, N. J., Nov. 11

NOTES FROM WORCESTER, MASS.

THE social event of the year with the Worcester Sportsmen's Club is the annual hunt and game dinner which follows on the evening of the following day. This year the club has held two field days and dinners. It happened in this way. At the regular meeting of the club on the first Wednesday in October, the matter of the annual hunt and game dinner came up as usual, and it was voted by a small majority to hold a glass ball shoot instead, and have a grand dinner at Swan's, which is near the club house. Also to invite the Marlboro and Westboro clubs to join us in the festivities. The day was simply perfect and the dinner most excellent, and those who attended had a very pleasant time, but this departure of the club from the old custom was by no means satisfactory to a large number of the members, and therefore the glass ball shoot was not largely attended.

Those members who favored the new departure, on learning of the disappointment that was felt by many of the club, were the first to move for a special meeting to make arrangements for an old-time hunt and dinner. The meeting was held, and it was unanimously voted to have the hunt, and the arrangements were made at once, Wednesday, November 8, being appointed as the day. A more beautiful day could not have been desired. The members were ordered to report with their game before nine o'clock P. M., at the Bay State House, at which house the count would close. The whole affair was conducted practically the same as last year, the same scale of points being used. The captains were Alba Houghton and Wm. S. Perry, and it would have been impossible to have selected two members better qualified to judge of the merits of the different shooters, therefore the sides were very evenly matched, and throwing out the element of luck, it was anybody's race.

The members of the side were divided as follows:

CAPT. HOUGHTON.—Messrs. H. B. Verry, J. A. Noreross, J. T. Boyce, A. H. Hammond, H. W. Eager, A. B. F. Kinney, E. S. Knowles, C. R. B. Claflin, A. P. Cutting, George McAleer, C. F. Darling, L. W. Holman, W. F. Rice, G. A. Cutting, L. R. Hudson, W. L. Shepard, W. H. Cole, C. B. Holden, Stedman Clark, F. A. Hatch, N. S. Johnson, C. S. Peacock, F. Wesson, C. C. Houghton, Henry Colvin, Chas. Hartwell, Dr. H. M. Quimby, Isaac Fisk, J. B. Garland, G. B. Buckingham.

CAPT. PERRY.—Messrs. B. Zaeder, C. B. Pratt, J. T. Taft, E. T. Smith, J. G. Rugg, O. A. Benoit, John Mascroft, A. S. Newcomb, A. F. Hatch, O. L. Taft, D. C. Sumner, I. E. Divoll, J. B. Goodell, Levi Moore, C. A. Allen, Charles Barton, J. E. Browning, Charles Mann, Moses D. Gilman, A. L. Gilman, L. G. White, Charles H. Bowker, W. S. Jourdan, E. E. Fisk, J. M. Drennan, A. W. Joslyn, A. G. Mann, R. R. Shepard, R. R. Haynes.

Game was counted as follows: Partridge 25, woodcock 20, quail 20, English snipe 20, wild duck 50, wild goose 50, hawk 50, owl 50, fox 300, 'coon 100, rabbit 15, gray squirrel 15, mink 100, weasel 50, wild pigeon 20.

The members turned out well, and early in the evening the crowd began to assemble to see the game and witness the count, a goodly number of prominent citizens being present. Promptly at nine o'clock the count was declared closed, and Secretary Clark began to foot up the columns. The long table presented a beautiful sight, the game consisting of partridges, woodcock, quail, rabbits, gray squirrels and one

fox, and the quantity was large, especially so, considering the lateness of the season.

Capt. Houghton was declared the winner of the hunt, his side scoring 1,360 points to 980 for Capt. Perry. The largest individual bag was made by O. A. Benoit, and consisted of six partridges and four woodcock; the next largest, by Capt Alba Houghton, of three partridges and seven woodcock, while the largest number of points was scored by A. P. Cutting, who killed a fox about 10 o'clock in the morning, and three partridges later in the day, scoring 375 points.

The dinner was served at the Bay State House, on Thursday, Nov. 9, and was the finest that the club ever enjoyed. The game dishes of the *menu* were: Roast partridge, larded; roast venison with jelly; roast wild goose, stuffed; roast antelope; potted quail, country style; broiled woodcock on toast; boiled buffalo tongue; ragout of rabbit, French style; stewed squirrel; wild Montana swan, with fine herbs. The antelope, venison, swan, goose and buffalo tongue were contributions from A. B. F. Kinney, who had just returned from his Western hunting trip on the excursion car "Jerome Marble."

The company, about forty in number, assembled in the parlors, and after spending about an hour very pleasantly, discussing the interesting experiences of the previous day, marched to the small dining-hall about 8:30 o'clock. It was a jolly party, and one that could do justice to the tempting repast before them. About 10 o'clock the cloth was removed, the cigars lighted, and chairs turned towards the head of the table, where ex-Mayor Pratt presided as master of ceremonies. Mr. Pratt was in a happy mood, and having just been elected to the State Senate, that fact was made the subject of many pleasant remarks by the speakers. His Honor, Mayor Stoddard, was the first speaker, and his remarks were most excellent. Then followed short speeches or stories by Sheriff Sprague, C. A. Allen, Ed. Titus, President Rugg, H. W. Eager, of Marlboro, ex-Alderman Richardson, A. B. Lovell and others. The evening passed quickly and pleasantly and 12 o'clock arrived all too soon, at which hour the company broke up after singing "Auld Lang Syne."

Partridge shooting has been better than for several years and I am satisfied there are two to one as compared to last year. The woodcock flight has been almost a failure, very few birds passing on this line. Quail are more plenty than for many years and some very fine bags have been made. Gray squirrels also are very abundant. The Rifle Association is in a flourishing condition and is just out with a new set of officers as follows: H. T. Furrar, President; Job Moore, Jr., Vice-president; Stedman Clarke, Secretary and Treasurer. Three matches are in progress which will close Jan. 1. They have been making improvements at the range and contemplate an addition of twenty-five feet to the club house. They received, on their last field day, a visit from Mr. Hinman of the M. R. A. and also of the late International team.

K.

OUR CHICAGO LETTER.

[From a Regular Correspondent.]

BELIEVING that never was the FOREST AND STREAM more thoroughly appreciated as the representative American sportsman's journal, or its columns of meritorious reading more eagerly perused in and about Chicago than at present, your correspondent hastens to fulfill his mission by sending on at once the doings and events of interest in the city and hunting vicinity, and trusts that at no time will news be so stale as to be generally complained of, as in many instances where the reverse is to be expected. If a Chicago sportsman desires finding any live news of this vicinity from journals with a claim upon their attention from being classed as a sportsman's organ, he is disappointed, only how grievously your correspondent can testify. That it has never been thus with the FOREST AND STREAM and never will be, countless readers will cheerfully testify to. No one desires to read the summary of a shoot, of big local importance, in a sporting paper just exactly three weeks after its occurrence.

It is needless to try and tell about game, or whether there is any, to those who have ever shot in this vicinity. The big swamps in Indiana, where the English Lake, Crown Point, Mak-Saw-Ba clubs all hold forth, with their spacious club houses, are known to all Western hunters to be the great waterfowl resorts; while the Kankakee River, in our own State, on which are located the club quarters of the Diana, Cumberland, Sportsmen's, Forester's and other clubs, fairly teem with ducks. The shooting has never been better, and every one that owns a gun is out after mallards, redheads or canvasbacks, while "rails" and mud-hens are shot for diversion. The shooting at the Cumberland Lodge is peculiarly fine, and does not seem to vary day after day. The feeding along the Kankakee is exceptionally good, which accounts for the prolonged presence of the ducks.

Jere. Liston killed seventy-eight mallards one day, and then shot for an hour the next morning and brought in thirty-seven ducks. This was done at the Cumberland. Our two great shots, the Kleinmans, are ensconced in some marsh near Lowell, on the Kankakee, and are having great sport.

A jovial party, consisting of Rol. Organ—who, by the way, has received the deserved appointment of stock agent for the new "Nickel Plate" railway that no one knows what "railway king" has purchased—John Wiggins, L. Petrie, M. Haskel and several others are all at Mak-Saw-Ba, and if the old club house does not ring with merriment nights it will be because the cider is not tart enough to stir Rol. up to his jokes and tricks.

In opposition to this party, John Gillespie, our champion shell loader, and a party comprising Charley Williams, Al. Bell, and a lot more hunters, have been at English Lake all week. They sent word back of great sport with plenty of ducks, and "tackled" Fred Taylor for more loaded shell.

The sportsmen, however, are all anxiously awaiting letters from the noble triumvirate of hunters now shooting wild turkeys, deer, buffaloes, etc., in the land of the Cherokees. They are Messrs. Tydston, Chapin and Gore, and they are now supposed to be in Central Indian Territory, barring bad luck in the way of scalping. They remain away one month, and the FOREST AND STREAM will reach them and report success.

The fishing season is over unless a heavy frost creates appetite enough in the bass to make them bite. Fred Leland, our great oysterer and the best posted Waltonian about here, took a little trip to Turkey Lake, on the B. & O. road in Indiana last week, returning Friday, and was thoroughly out of patience with the luck he had. Only a few black bass, some pickerel and a few rock bass.

CHICAGO, November 6.

HOUNDING vs. STILL-HUNTING.

AS to which are the most proper and destructive modes of hunting deer has of late been freely discussed in the columns of your journal, and as the open season for hounding has just closed, allow me to draw a comparison between the two modes of hunting within a radius of my own observation. One hundred and fifty will not cover the number of deer killed in Beaver River and the lakes and ponds within two miles on either side of the river by driving them into the water with hounds during the open season just closed. Four parties have just returned from a hunt of about a week, which together brought out forty-nine deer. This is only a sample of the way they have been slaughtered.

To my knowledge only one deer has been killed by still hunters, on the same ground, during the past two months. There will doubtless be more deer killed during the remainder of this month, should there be snow on the ground; but unless still hunters are more successful than they have been in previous years, it will not amount to one-tenth the number killed by hounding. Your correspondent from Massachusetts, "Buck-Shot," says "Deer take to the water ahead of the hound, and half to three-quarters of the time that is the end of the hunt, and the deer lives." This is the very reason why so many deer are killed here in the Adirondacks. During the open months, especially October, there is hardly a lake or pond in the Adirondacks that does not have its hunters watching for deer, so that a deer taking to water before the hound is almost sure to be killed; and as there is not a square mile in the whole Adirondack wilderness, except it be in St. Lawrence county, but what deer are driven from it by hounds, the slaughter cannot be otherwise than immense. "Buck-Shot" says, in regard to their being killed when driven to water, "Quantities of deer have formerly been slaughtered in this way," thus admitting that killing deer by driving them to water with dogs to be very destructive.

I do not wish to deprive any one of hunting deer in the way he can best enjoy it. But it has become a serious matter of fact. If we would preserve the deer in the Adirondacks, to make it more attractive to the sportsman and tourist, a law must be enacted and enforced to prevent the killing of deer driven into water by hounds.

The present long open season for hounding deer, while it benefits the sportsman but little, will insure the speedy extermination of the deer by the pot-hunters and market-men.

MURRIT.

ADIRONDACKS, Nov. 6, 1882.

PINNATED GROUSE ON MARTHA'S VINEYARD.

DURING a conversation with a Massachusetts sportsman, who is quite an expert shot as well as an angler, I was asked if I had ever killed a "hethen." I have spelled the word as he pronounced it. Not knowing what he meant, but at the same time having a suspicion that he was referring to the heath hen, as the pinnated grouse was called on Martha's Vineyard, I questioned him further. He described it, and stated he had seen two or three broods last summer. I told him they were "prairie chickens." This astonished him, as he was not aware that the bird ever existed in the locality he referred to. Certainly not one known as the "prairie chicken" or pinnated grouse. I verified his statements by other inquiries, and even heard of four having been killed by one man who knew it was against the law; and he confessed it to me.

Now, are these birds descendants from the old stock known to have inhabited Martha's Vineyard years ago, or have they been bred from birds liberated in this locality of late years? Frank Forester speaks of the pinnated grouse having been plentiful on Martha's Vineyard, and writes of their abounding on Long Island, in Burlington county, N. J., and on the Pocons plains or barrens in Pennsylvania. I know from natives of Manahawken, N. J., that so late as fifteen years ago "grouse," not ruffed ones or pheasants, were killed not far from that place, and a friend living now in the Lehigh Valley, Pa., with whom I frequently shoot—and he holds his gun very straight—told me he had killed "two strange grouse with very short tails, much lighter in color than the pheasant of his hills, and feathered all the way down to the ankles, from a brood of ten or twelve grown birds" a few years since. The locality where they were shot was but a few miles from the "barrens" spoken of by Forester. My friend not being an ornithologist, and never having seen a prairie chicken up to that time, could not identify them, but thought them entirely different from anything he had ever shot. He now thinks they were the pinnated grouse since I have shown so much interest in the matter, and have shown him a specimen of the western bird to examine.

It would certainly be very interesting to the readers of the FOREST AND STREAM to hear from some one who can give a better account of these birds on Martha's Vineyard, and state if they are from the old stock, or come from western planting. I had almost forgotten to mention that the "hethens" my friend told me he saw were in Tisbury, a county of Martha's Vineyard.

HOMO.

THE MICHIGAN ASSOCIATION'S WORK.

THE Michigan State Sportsmen's Association has evidently been doing a good work in its efforts to put a stop to the wanton destruction of game. A year ago its officers sent out a circular letter to all the prominent sportsmen of the State, asking for pecuniary assistance in the enforcement of the dead-letter laws for the protection of game and fish. There was a pretty general response to the request, and officers were employed to arrest and prosecute offenders. Michigan, however, is quite a large tract of land for a few men to patrol, but while it is certain that a vast amount of out-of-season slaughtering has been done, yet the protective officers succeeded in enforcing that section of the law that prohibits the transportation or sale of game out of season, and, with his market closed, the pot-hunter found neither pleasure nor profit in killing, and laid away his old muzzle-loader until he could legally use it.

One thing is certain: Whereas quail, woodcock and grouse used to be common in our restaurants late in the spring, and long before the open season, nothing of the kind has been observable the past season. Pot-hunting for profit, at least, has been stopped. The result is an increase of feathered game throughout this region. I have been out a few times, and find at least two quail where there was but one two years ago. Grouse and woodcock are more numerous, but have not increased so rapidly.

The result of the better enforcement of our game laws, is a well-stocked market, which, by the way, is already sending forward its luxuries to those of the East, especially quail and ducks. It is, perhaps, unnecessary to add that Michigan never runs short of ducks. They are plenty this fall, and in excellent condition. The market is overstocked.

The annual influx of hunters and hounds has not yet commenced, and the bucks and does are yet browsing contentedly in the deep forests of both peninsulas. The frosts of autumn have but barely reached us, and the deer-stalkers and watchers by the run-ways can believe that November has come and that the antlered game is listening for the baying of the hounds.

I should make one exception. Ed Gillman, of this city, and a party of four Ohio friends were on the happy hunting grounds at sunrise on the 1st inst., and have since been sending down from ten to sixteen fine deer per day.

DETROIT, November 11.

TEXAS GAME NOTES.

QUAIL are found here in great quantities, three varieties being found—viz., massena, blue or scaled and Bob White. The massena afford excellent sport, lying well to the dog, having short flight. The blue species offer but poor sport, as they will not lay to a dog, long flights, and are running, one might say, the instant they alight. Bob White gives one the same sport as in the other States.

Turkey have commenced to come into the river bottoms in large flocks.

Deer are to be found on the table lands adjacent to the Pecos and Rio Grande.

Bear are numerous in the canyons, as well as panther and other varmints.

Just across the Rio Grande, the "land of God and liberty," is abundantly supplied with all kinds of game found in this region. It is not altogether safe, however, to venture on that sacred soil with a full hunting equipment without a passport, as there is a possibility of your outfit being captured by the Mexican river guards and confiscated. This happened to a friend not many days ago.

Northeast of this point about twenty miles one can reach Devil's River and have excellent black bass fishing, especially between Pecan Springs and the old military post of Camp Hudson

This is an exceedingly healthy country, at an elevation of sixteen hundred to two thousand feet above tide water, the atmosphere is light and healthful. It is now accessible by rail from El Paso and San Antonio. I have been invited up the Pecos to participate in a panther hunt.

G. W. P.

MOUTH OF PECOS, TEXAS, November, 1882.

A BOY'S PISTOL OF FIFTY YEARS AGO.—The West Chester (Pa.) *Record* tells this pretty story: Week before last, Titus Darlington, carpenter, in tearing down a portion of the farm house of Taylor Hoopes, of West Goshen township, Chester county, in order to enlarge the building, came across a large-sized horse pistol that had been lost for fifty years. In 1832 Taylor Hoopes and his brother Lewis, the latter now deceased, purchased this pistol from a gunsmith in West Chester, named Emanuel Gosher, for $2.50—cheap enough, considering the size and quality of the weapon. Benjamin Hoopes, the father of the boys, who were then about sixteen years of age, did not approve of the lads having so dangerous a plaything—Mr. Hoopes was a wise man—so the boys concluded to keep "Old Diamer," as they named their miniature cannon, as much out of parental eyesight as possible, and they hid it away in the loft of the house over the collar beams between partition and wall. To have it convenient for use, they made a little wagon, in which they placed "Old Diamer," a powder-horn, and a small bag of shot. To the wagon they attached a string, and thus they lowered and pulled up the artillery wagon, gun and ammunition when they wished to use them, or hurry them out of sight of the "old man." But one day the rope broke—whether the old gentleman was "hunting the boys too close" we cannot say—and down to the bottom of the partition went wagon, pistol and all, with a crash that sent sadness to the very bottom of the hearts of Taylor and Lewis. After fishing for hours day in and day out with a pole and a hook, with the hope of catching the wagon and drawing it up, they abandoned the task and gave up their treasures as lost. When the carpenters tore down the building, Taylor Hoopes, who is now on the shady side of life, stood by, thinking of "Old Diamer." Board after board was taken down, and the little ammunition wagon at last came in sight, and in it lay "Old Diamer," the powder and shot, all in the same good condition, with the exception of a little rust on the pistol, as they were the day they so suddenly went from the sight of the boys half a century ago. Mr. Hoopes rubbed the pistol with a little oil, loaded it with the old powder, and, in honor of the occasion, shot it off with a report that made the Goshen hills echo.

GAME ABOUT NEWARK.—The Newark, N. J., *Call*, of Nov. 13 reports: The suburbs of Newark and Elizabeth present a large area of good cover for rabbits, and an occasional bevy of quails finds undisturbed existence in the thick undergrowth during the summer, because their presence is scarcely suspected so near civilization. Such a bunch of birds was found by some rabbit hunters at North Elizabeth on Tuesday, and nine quails fell to their guns. They also got nine rabbits between Frelinghuysen avenue and the edge of the meadows, near Brinton Range, and heard from the natives in the neighborhood that all the rabbits had been cleaned out on the first. Another little bunch of quails were exterminated in East Newark, near the Harrison Nursery, eight in all being killed by two Newarkers, who also got three rabbits. The rabbits were more thoroughly hunted on Tuesday than on the opening day, owing to the damp leaves and ground holding the scent better and enabling the dogs to follow the trail unerringly. A party of four Newark gentlemen visited the Warwick Woodlands early last week, and in two days' tramp through that historic country gathered eighteen grouse, twenty-one quails, twelve woodcock, and a number of rabbits, which they scarcely considered worth counting or carrying. Three other Newarkers went to Roselle on Thursday, and in the limits of that pretty little town killed eight rabbits and several woodcock. The shooting in the beautiful valley below Greenwood Lake has been excellent this fall, and large numbers of quails have fallen, many of them to the guns of sportsmen from this city. They reach this region by rail to Hewitt, and walk over the hills to West Milford. The tramp across country is through splendid grouse cover, and the birds have been found quite numerous this fall. The best of woodcock haunts are encountered in the swales, and frequent patches of buckwheat stubble are met with, each of which is apt to harbor a bevy of quails.

SUCCESSFUL DECOYING.—A correspondent of the Detroit *Free Press*, writing from western Minnesota, says: "Wild geese do not, as a rule, hatch their young here, most of them going further north. They come in large numbers about the 1st of October and remain until the approach of winter. They are very wary, usually keeping on the wing during the day and only descending into the ponds to feed at night. Occasionally they will alight on the stubble of a wheat field in large numbers, but the hunter can rest assured that his approach will be signaled by an old gander long before he is within gunshot of them. I saw one farmer-sportsman who has a sure thing on geese. A year ago last spring he found a wild goose nest on top of a muskrat house, and secured six eggs. These he placed under a hen for incubation. Biddy did her work so well that six goslings were netted from the enterprise, but one of them subsequently came to an untimely end by being stepped on by the farmer, for they are considerably tamer than a house cat, and have to be kicked before they will get out of the way. The remaining five, besides being regularly plucked of a portion of their feathers for feather-bed use, and doing other farm-yard duty, are used for decoys. Their owner has a birch-bark canoe that he procured from Sault Ste. Marie, and, proceeding at nightfall to a large pond near his house, he anchors his geese with a string and an old plow-point, pulls his canoe into the rushes, and is ready for business. His decoys, unused to such treatment, 'honk' lustily, and call down the passing flocks. Soon they are thick upon the water, and a single discharge of his breech-loader secures as many as he desires, for to his credit as a sportsman be it said, he never kills more than he can use upon his table. Cranes, too, are very plentiful, and the young ones are highly prized for table use. The old ones are very tough, and the natives tell of a woman who boiled one for three days, and then threw it into the kennel to a hound. The hound died of starvation. Snipe are quite common, but no one shoots them. In a country where every wheat field is the feeding ground of scores of grouse, and where every slough and pond is the retreat of ducks and geese, snipe are small game.—W."

FLORIDA QUAIL AND DEER.—Lawley, Bradford County, Fla., Nov. 6.—Yesterday three of us started for Highland Station some four miles north. Object—business, quail hunting thrown in. For some reason quail and jack snipe were scarcer than usual, as we have before this, in going over the same ground, bagged between fifty and sixty quail and jack snipe, in February, besides a few woodcock. But we didn't seem to find the birds, although the dogs, Jacko and Bis, grandsons of old Bismark, worked well. The whole bag counted up for two guns was only fourteen quail, half a dozen jack snipe, some half a dozen larks, about as many doves, a hawk and a rabbit, also something else. As we were coming home about sundown Bis ran off from the wagon some twenty rods along a strip of palmettos and bushes; suddenly he dropped as if shot. Of course guns and men tumbled out and legs carried them up to where Bis was waiting to put up the quail, like any other good dog. Three quail we got. The balance of the birds were marked down farther on down the same run. Bis went through the shrub only a few rods wide; coming through from the other side he smelled something that did not wait to be put up. There was a rattle and crash of palmetto leaves and sticks and out jumped a deer, in too much of a hurry to stop and get acquainted, as it was getting late. But the Colonel sent a charge of shot after him. The deer ran some twenty rods, when, with a leap high in air, it stopped and the dog Jacko had it by the throat. How is that for No. 9 shot at thirty yards distance?—KNICK.

MARYLAND.—Hagerstown, Nov. 7.—The quail, usually so plentiful here during the season, have for some unaccountable reason become remarkably scarce this fall, and the few birds shot in our immediate vicinity have been noted for their small size, some of them, even so late as Oct. 19, being but scarcely half grown, thus evidently showing a second or, perhaps, a third brood. Indeed, one gentleman informed me on the 16th that on that date he discovered a nest containing thirteen eggs and flushed the old bird off the nest. Rabbits are very plentiful and a great many are shot. Some of the roughs of the town go out on Sundays, a mile or two, with worthless curs, and armed with clubs and stones, secure a great many, virtually, as the Irishman says, "shooting them with clubs." In the mountains north and west of us wild turkeys and pheasants are abundant. Wild pigeons are also plentiful in the mountains, one party alone bringing thirty-six to town in one day. Opossums and 'coons are also being caught all around us. Last week a party of three of our sportsmen went on a ducking expedition to Big Pool, a point on the Potomac about fifteen miles from here, and report ducks as being very plentiful. Had a fine half day's sport and succeeded in getting twenty-six ducks, including black mallard, wood duck and redheads. Others report good bags in the way of ducking. Occasionally we hear of a fox or two being shot, and only this morning had one brought to me that was shot about four miles from town.—NATAX.

COMMENT UNNECESSARY.—Columbus, O., Nov. 11.—Messrs. George Marshall, Frank Tarbox, Elton Archer and W. W. Olliff, of Cedarville, passed through this city yesterday, returning from a four weeks' hunt at Ogamaw, Michigan. They succeeded in getting fifteen deer, two bears and some small game. They told how Marion Groves, a young man from Pennsylvania, who visited their camp and intended to remain a few days to hunt, was shot through the heart one night and instantly killed. They were all out hunting bears, when they came upon a large dark object near a swamp, which they supposed to be a bear. They fired at the supposed brute, but they were startled and shocked to find they had killed their fellow hunter. His body was carried to camp, and afterward sent to his sorrowing friends. This sad event threw a damper upon their sport, and they returned home as narrated above.

LINCOLN, Neb., Nov. 4, 1882.—Ducks and geese have been slow about coming down this fall. Indeed, so few have, so far, come this way that many have thought it probable they have given this section the "go by" in their flight southward. Very few big bags have been made. Hathaway and Baum were out one day and got fifty-two, all teal. The next day Webster and I were out, staying all night in the country, and after hard tramping got eleven mallards and forty-five teal. Both geese and ducks are fat and sweet as a nut this fall. I have heard of no one who has eaten one with a fishy taste. Last year hardly any of them which came this way were palatable.—B. H. P.

TENNESSEE GAME NOTES.—Notwithstanding the continued warm dry weather the sportsmen around Nashville are out almost every day and night, trying to find game. Birds are abundant, but the weeds are so rank, and the fields being, as yet, cumbered with cornstalks, very few have been bagged. Squirrels are plentiful, though to tramp after them all day with the mercury at seventy degrees is more like work than sport. The consequence is that fox and 'possums are the most hunted. The hounds can be heard running every night, and those who have done up the 'possum business report the fun as immense. Clarke Pritchett and a few friends were out this week, and caught one 'coon and two 'possums. The latter were as fat as butter, though by many not considered healthy food, as we have had no killing frost. Bill Hobbs, who is the boss hunter of the *Didelphys virginiana* in this section, captured five on last Saturday night. To-morrow night a grand hunt will take place in which at least twenty couples of dogs will participate. As 'possum-hunting is a funny sport, there will be plenty of incidents to laugh at. I am invited to be a slow mover in the chase, and have partially accepted, which means that I will let the FOREST AND STREAM know what transpired during the eventful hunt.—J. D. H.

"DIDYMUS" COULD NOT FIND THEM.—Nov. 10.—Shooting on Long Island is like hanging in New York—it is nearly "played out." A few days ago I went to the lower end of the Island where quail, a few years ago, were quite "numerous," but after ransacking the region round about for half a day we flushed the meagre remains of a covey only, and I left in disgust and went to a place near Smithtown, where I was told that quail were as thick as when they swooped down on the Israelites in Egypt, but after hunting the country over for nearly two days we flushed only about half a dozen scattered birds, and gave it up. Our ground was formerly one of the best for partridges that I ever hunted over, but I only got three shots, after a very long ramble, two of which I dropped as dead as a salt-herring; but the third was an unadulterated miss. They are so thinned out that even if not another one was killed there would scarcely be enough to raise another family. If sportsmen could only be induced to keep their guns in the cases this season, there might be some show of birds next fall, but of course they will not, and the only way to recruit their ranks will be to pass another restricting law for two or three years.—DIDYMUS.

CONNECTICUT.—New Haven, Nov. 9.—Game prospects in this State, at least in the western part, are very flattering. There are, back from the shore, a good many quail and ruffed grouse which, when the weather becomes colder, will afford fine sport. At present, however, the leaves are still hanging to the trees, and the weather is so warm that tramping over the hills is very hard work. Along the line of the New York & New Haven Railroad the shooting is poor, for the grouse and quail have been all killed off, whether by the myriads of shooters or from some other cause I cannot say, but in the eastern part of the State there are said to be more birds. We had a flight of woodcock last week, but they were not abundant, and small bags were the order of the day. Probably the next severe frost will move the birds on, and then we may have a day or two of good shooting. A very curious fact in regard to quail and ruffed grouse in the Eastern part of this State is the way in which they have decreased along the shore and increased in the interior. I have heard no satisfactory explanation of this fact, but it is ackowledged by most old gunners.—B.

NORTH CAROLINA.—Belvidere, Perquimans Co., Nov. 6.—Quail are seemingly plentiful and full grown; have not seen any "late coveys" this fall. Have been out once only (last Friday afternoon); had a young dog in training, but managed to get ten out of eleven single shots—"Seen in my eye," the eleventh. Expect rare sport this winter, after the birds resort more to stubble; they are now in cover, after scattering peas. Squirrels scarce; some deer and bear.—A. F. R.

DOG-SKIN LEATHER JACKETS are imported by G. W. Simmons & Son, Oak Hall, Boston, who have created a large trade in this class of goods. Read the advertisement in another column and note what they say about prices. Oak Hall can never be approached by competition. When you are ready for your shooting trip send to Oak Hall, Boston.—*Adv.*

Camp Fire Flickerings.

"That reminds me."

WE had sat around the fire for some time and the boys were speaking of fish—of very large fish—when George finally said: "Well now, boys, I don't want you to think I'm lying, and I never did believe in telling big yarns, but your speaking of the big pike reminds me of a catfish they caught up near Des Moines last year. You see the river had got very low and this big yellow head climbed out at a low place in the bank and was chasing a two-year-old around the field when they saw him, and as the farmers were afraid of losing their stock they clubbed together and killed him." After an awe-struck silence of some time L. ventured to remark in a low tone: "How big was he, George?" "Well, by the great whale, I'd like to know if you suppose any small fish could tackle a two-year-old steer?"

The subject was changed to snakes, and along about eleven o'clock the stories grew pretty large. Sam had been sitting in silence, his feet propped up, his hat pulled down over his eyes, meditatively pulling away at his pipe. At length he said, without raising his eyes or taking his pipe from his mouth: "Gentlemen, I seem to be the only man here who has had no experience with large snakes. I never killed a large snake in my life. But," said he, mournfully, "I did see something strange one day out in Iowa. We were riding along through the timber on the Boone bottoms, in a big lumber wagon; we had broken our wagon-tongue and put in a green stick in replacing it. Just as we got pretty near through the woods a yellow rattler came gliding through the grass and struck at one of the horses, but missed him and struck the wagon-tongue. We killed the snake and drove on, thinking nothing more of it; but if you will believe me, gentlemen, in less than twenty minutes that wagon-tongue began to swell and in a short time was covered with dark spots. But that was not the worst of it. The swelling spread from the tongue to the running gear, and in a little while the axles were so badly swollen that we had to take off the wheels and apply elm-bark poultices to reduce the swelling."

Not a word was said. Each man took his hat and in silence left the fireside. When we returned Sam was sitting in the same position calmly smoking away. E. HOUGH.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 29.*

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Grayling, *Thymallus tricolor and T. montanus.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius.*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca fluviatilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, 2 species.
Warmouth, *Chænobrytus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Striped bass, *Roccus lineatus.*
Black perch, *Morone americana.*
Tautog or blackfish, *Tautoga onitis*
Bluefish or taylor, *Pomatomus saltatrix.*
Smelt, *Osmerus mordax.*
"Sea trout," *Cynoscyon carolinensis.*
Drum, *Fogonias chromis.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 29.

WINTER TALKS ON SUMMER PASTIMES.

I.

Dear solitary groves, where peace does dwell!
How willingly could I forever stay
Beneath the shade of your embracing greens,
Listening to the harmony of warbling birds,
Tuned with the gentle murmur of the streams.
—*Rochester.*

I HAVE often had to assure my critical and incredulous friends that it is by no means all of fishing to fish. The appreciative angler, who has inherited or acquired the true spirit of the art is not alone happy while plying his vocation, but happy also in the recollection of what has been, and in the anticipation of what is to be. To him memory and hope are equally satisfying—the one luminous with the mellow sunshine of the recent past, and the other all aglow with the assured good cheer of the near future.

Nor is the pleasure derived from a review of the incidents of the last outing wholly or chiefly associated with its material results. "Casting" and "striking" and "killing" belong to the mere mechanism of the art. Its real fascination lies in what one sees and feels: in mountain and valley; in river and lake; in sunshine and shadow; in the exhilarating atmosphere and delectable odors of the virgin forest; in the music of singing birds and in the soothing monotone of running waters; in the hush of the night watches, and in the quiet and repose best found in the "solitary places" where anglers "most do congregate."

It strikes me like the sound of a trumpet to remember my fights with three-pound trout, five-pound bass or thirty-pound salmon, but I find intenser ecstacy when I recall the circumstances and surroundings of these material experiences, the transparent brook, whose ripples were rendered dazzling as molten silver by the sunshine glints which fell upon them through the ever-waving branches of the pine, or birch, or hemlock which over-arched it like a benediction; the pellucid waters of river or lake, whose unruffled surface trembled as fly and leader touched its placid bosom; the deep pool, cast into deeper shadow by the giant boulders near which the lordly salmon rests on his upward journey, and the thousand other "things of beauty" which fill the eye and ravish the senses while watching and waiting, and casting for a "rise."

These are the pictures most distinctly photographed upon the memory of the appreciative angler, and which come up most vividly before him when he looks back upon what has been.

Many pleasures leave a sting behind them. Not so this fascinating pastime. It is as harmless as it is invigorating, and as healthful as it is harmless. There are many things for which I am grateful, but for few things more than for my passion for angling and the reasonable leisure always vouchsafed me to gratify it.

I say "reasonable leisure," because the most of what time I have given to angling has been abstracted from the grinding pressure of a busy life. And the fact has, I am sure, intensified my love for the pastime. As the dawn is most gladly welcomed by the weary watcher who is waiting for the morning, so a holiday brings most pleasure to those who have earned it by hard work or patient service. The "cumberer of the ground," whose only employment is to "kill time" and battle with *ennui*, has no holiday. He can no more appreciate the luxury of "a rest" than can the surfeited gourmand the luxury of an appetite. But with the busy man, held to the tread-mill of active life through eleven of the twelve months of the calendar year, it is not so. His holiday is to him what the open door is to the caged bird, the opportunity coveted by the Psalmist, to "fly away and be at rest," to "wander far off, and remain in the wilderness," (Psalm 55, 6-7). Because most of my holidays have been thus wrenched from the ever whirling wheel of time, they have brought to me more joy than "when oil and wine increaseth." And as my love of angling has grown with my years, so every recurring holiday has been more impatiently longed for and enjoyed. If all my days had been days of idleness, bringing with them neither conscious responsibility nor the pressure of duty, I might have lived as unprofitably and passed through life as wearily as the *ennuied* pet of fortune, whose indolence and incapacity are the only products of his inherited wealth, and, worst of all, I might never have known the delights of that man who finds pleasure in the silent woods and loves to go a-fishing.

In my immediate vicinage there are not a few beside myself who are fond of the angle—quiet men of gentle habit—simple, wise men, as unostentatious as they are merry-hearted, and who carry about with them a clear conscience, a contented mind and the elements of perpetual youth. It is their custom to often "forgather" while waiting for the return of "the time of the singing of the birds," when it will be right to go a-fishing. Among them are men of divers profession—philosophers and educators, merchants and politicians, but not one among them all who would engage in any service, however remunerative or honorable, that would debar him from his annual outing, with rod and reel, for trout or salmon. These meetings are only less delightful than the fascinating pastime which constitutes the exhaustless theme of conversation. Every phase of the art is discussed, but the experiences of each individual during the just closed season is always first in order. Some of these experiences will enter into these familiar "Winter Talks on Summer Pastimes."

G. D.

STRIPED BASS CLUBS.

ON the Atlantic coast the fish known as "striped bass" about New York and eastward, or "rockfish" along the coast of New Jersey and southward, is considered the king of game fishes by its votaries, who do not even except the salmon when claiming royalty for their favorite. The females of this species, *Roccus lineatus*, are said to grow to the weight of one hundred pounds, and specimens of seventy pounds are often seen in the market. We have been unable to learn the extreme weight attained by a male fish, but incline to believe that they never exceed twenty-five pounds. The striped-bass are taken all along the coast, but the vicinity of Martha's Vineyard is the favorite ground. A famous bass-fisher went down on the coast of North Carolina to shoot ducks, and asked about the fishing. "Nothing here but rock and taylor, and only the niggers fish for them," he was told; and not until he left there did he learn that those names were applied to his favorite striped bass and bluefish, which he would rather have fished for than to have shot all the ducks in the country.

Many of the most prominent citizens of New York and other cities are members of the large bass clubs which own property and fish from it in the waters named. The New York *Herald* recently gave an account of them, from which we condense the following:

WEST ISLAND CLUB.

The island from which this famous bassing club takes its name is part of Seconic Point, Newport, R. I., and for twenty years past has enjoyed the reputation of being the headquarters of one of the most conservative sporting organizations in the country. In size the island covers about five acres, but the club also owns East Island, one of the West Island clump, whose fertility adapts it for garden purposes. The club, which is restricted to a membership of thirty gentlemen, is composed of many of our most prominent citizens, among whom are Mr. Robert L. Cutting, Jr., Mr. John O'Brien, Mr. Philo T. Ruggles, the prince of bass fishermen; Mr. William Sellers, of Philadelphia, and of Brooklyn Bridge fame; Mr. Frank Thompson, of the Pennsylvania Railroad Company; Mr. Charles L. Tiffany, Mr. George Peabody Wetmore, Drs. S. Weir Mitchell and William Pepper, of Philadelphia; Mr. Charles J. Osborn, Mr. H. W. Gray, Mr. F. C. Latrobe, of Baltimore, and others of the same standing. The officers are: President, Mr. Charles E. Strong; Treasurer and Secretary, Mr. William R. Foster, Jr.; the executive committee being composed of Messrs. John Whipple, Fred. D. Tappen, Samuel W. Milbank and the president, treasurer and secretary *ex officio*. The par stock value is $1,000 per share, but for years they have commanded a large premium.

This year the fishing has been unprecedentedly poor, for although the season opens on the 15th of June and usually runs at even course until the middle of October, it was not until July 5 that a fish was taken, and no large fish were hooked until August 8, when a seventeen-pound bass was gaffed. The sport then alternated from good to bad. On September 16 a thirty-two pound fish, which turned out to be a "high hook" of the season was captured, and on the 19th the next largest bass, a twenty-nine pounder, in company with several fish of half its weight, was duly recorded. Summing up the season's work the score shows that 293 fish were landed, whose aggregate weight amounted to about 981 pounds. Compared with the showing of the last three years a marked falling off is found.

At West Island there are in all some ten or twelve railed stands, to which the enthusiastic fishermen resort as early in the morning as possible, first having despatched their baiters to "chum" the fish up. The most noted stands are High Rock, the Gully and Horseshoe; they are protected by iron railings, to which the fishermen cling for their lives when a heavy sea is breaking. It is a remarkably interesting sight to see the fishermen, clad in their oiled canvas jackets, making their casts, and after striking the fish concentrating all their skill and strength to bring it to the gaff, while all the time the waves that dash themselves on the rocks at their feet completely envelope them in spray. It is no child's play to handle a large sized bass successfully. It requires both tact and endurance added to an unusually large slice of patience. The fish must be watched as a cat does a mouse; every rush has to be met with quickness, and each attempt to check and turn with a steady wrist. Sometimes the battle between the angler and the fish lasts many minutes, and it is not until the gaffer lifts the dripping beauty on to its bed of seaweed that the victory for the sportsman is won. Angling, like every other true sport, is made up of vague uncertainties, and oftentimes after a long and persistent struggle the fish goes bolting off to join its brethren in freedom, with a farewell flourish of its tail to the tired and crestfallen fisherman on the shore.

In addition to the striped bass in the waters about West Island there are quantities of bluefish, ranging from four to fifteen pounds in weight, which when hooked by good anglers are allowed to cut the hook off sooner than disturb the bass with any attempt to land them. There are also blackfish and occasionally a sea bass.

Owing to the non-appearance of menhaden in Narragansett Bay this year all the bait had to be procured of Eugene G. Blackford, of Fulton Market, who twice a week shipped several barrels of menhaden to the club.

CUTTYHUNK ISLAND.

Cuttyhunk Island is the most westerly of the Elizabeth Islands, with Buzzard's Bay on the north and Martha's Vineyard Sound on the southeast, being fourteen miles from New Bedford, Mass. The island is very fertile, producing corn, oats, rye, hay and all vegetables, besides having fine pasture for cattle and sheep. The club opens annually about the 10th of June and closes about the 10th to the 15th of October. The bass fishing for the last year or two has not been good, the scarcity of the fish being accounted for by disappearance of the menhaden, which is their natural food. On this important subject a member of the club gives the following information. He says: "Some years ago the waters around here were alive with menhaden, but for the last two years we have been unable to obtain them for bait. The 'menhaden steamers,' as they are called, have not left a trace of these fish, and if they are permitted to continue their piratical forays will destroy all the food for food fishes. Pounds, seines, traps, gill and drag nets—in fact, all the devices and inventions of man—are resorted to to capture fish of all kinds, which is very vexatious and annoying to the true sportsman."

Along the seashore at regular intervals, almost in front of the club house, the stands for the bass fishermen project out into the water some 100 to 150 feet. All these places have become famous for sport since the club was inaugurated, in 1870. Bass Rock, a huge round bowlder, is also regarded as one of the best stands on the island. Unlike Pasque Island, Cuttyhunk Club is a stag organization, and fifty is the limit ation of its membership. Its capital of $30,000 is divided up into shares of $100, and the general direction and supervision of the affairs of the club are in the hands of the president, subject to such regulations as the board of directors may from time to time make. Among the members are Messrs. Andrew Dougherty, George N Osgood, George C. Chapin, William McGrorty, William A. Woodhull, William R. Renwick, James Renwick, Thomas Patten, T. J. Havemeyer and William Spence. The officers are: President, Mr. W. R. Renwick; Treasurer, Mr. W. A. Woodhull; and Secretary, Mr. Thomas Patten. This year the island of Cuttyhunk was bought by the club. From the following table, which gives the list of bass taken yearly from 1870 to October 6 of this year, inclusive, it will be seen that there has been a great reduction in the catch of this season and last compared with former years:

RECORD OF BASS TAKEN AT CUTTYHUNK CLUB SINCE ORGANIZATION.

Year.	Number of Bass.	Weight in Pounds.	Largest Bass.
1870	615	4,407¾	47
1871	801	6,312	42
1872	581	4,620½	39
1873	592	3,968	37
1874	500	4,144¾	55
1875	724	6,029⅛	50¼
1876	835	5,862½	51
1877	321	3,311¾	51½
1878	648	5,144¾	51
1879	90	1,134¾	49
1880	403	3,619½	50¼
1881	181	1,781½	44
1882	180	1,795	64

PASQUE ISLAND.

Pasque Island is the third in succession of the Elizabeth group, which he between Buzzard's Bay and Martha's Vineyard Sound, off the coast of Massachusetts. It is nearly square, being about a mile and a half long by a mile and a quarter broad. It indicates clearly and in a most interesting degree its glacial origin, being, in fact, a mass of "moraline" deposits, and its shores filled with huge traveled bowlders of granite, gneiss and conglomerate, varying from one of at least one hundred tons in weight downward. As these proceed down from the shores past ages have covered them with huge rock weed and other submarine grasses, which form a refuge for all the crustacea, eels, etc., which form the tidbits for the bass.

During the summer the waters about the island are usually alive with minute fry of the menhaden, spearing, herring and bluefish, and the natural result is an abundance of all kinds of bottom fish, bluefish and should be of bass. But for some reason not positively known this latter—king of game fish of the sea—has become certainly much scarcer than ever before. It is supposed by the gentlemen of the club that the steamer warfare on the menhaden has been a very positive and active agent in producing this result. Certainly they have succeeded in driving the menhaden from our waters, and simultaneously with their diminution and emigration the bass have also ceased to be plentiful.

The usual season for bass angling on Pasque Island is from June 15-25 to October 1-15, and the catch in good seasons has reached from four to five thousand pounds of bass, which is the only fish a record is kept of. At all times any quantity of bluefish, scaup or porgies, blackfish, seabass, sole or flounders and other sea fishes can be taken.

The club house is a comfortable collection of buildings, and the organization is unique in one respect, all of the members having the privilege of taking their families, and the result is a degree of refinement and delightful association peculiar to it. The "highest hook" since the present organization went into effect still rests with Mr. A. B. Dunlap, who took a sixty-two pound bass in September, 1869. Since then the nearest approach was a sixty and a half pound fish caught by Mr. F. O. Herring in July, 1878. This year, so far, a fish weighing fifty-four pounds is the highest, and unless still exceeded will give the annual prize for the largest fish taken during each season to Mr. C. P. Casielly, of this city.

The club at this time numbers forty-two members, two having died within the year. It embraces in its list many of our first citizens, such as Mr. Solon Humphreys, Mr. Cyrus W. Field, Mr. J. Crosby Brown, Mr. J. L. Vallotton, Mr. A. Foster Higgins, Mr. Frederick Sturges, Mr. Frederick Chauncey, Mr. M. D. Carrington (of Toledo), Mr. H. E. Pellew, Mr. George A. Robbins, Mr. J. F. Scott, Mr. W. H. Phillips and others of similar class and standing. The officers are: Mr. J. L. Vallotton, President; Mr. A. F. Higgins, Treasurer, and Mr. J. D. Barrett, Secretary.

SQUIBNOCKET CLUB.

The house of this well-known bassing club is situated on the southwest point of Martha's Vineyard, and is excelled by none for comfort and good living. The membership is limited to ten gentlemen, each of whom has his own room fitted up according to his taste. For this year the following is the list of officers and members: President, Mr. Chas. H. Murray; Vice-President, Mr. James L. Flint; Secretary and Treasurer, Mr. John M. Armory; with Messrs. Charles H. Smith, H. C. Ward, R. G. Dun, T. M. Davis, Elihu Root, S. M. Blatchford and W. Murray. The fishing here this season was a great improvement over last year's. As on the other islands the casting is done exclusively from stands, which consist of small railed platforms connected with the beach with a broad walk, all the planking being supported by iron rods of three inches in diameter, which are firmly embedded in holes drilled in the rocks. The platforms are located from shore at distances varying from one hundred and fifty to two hundred feet, and this season eleven different ones were strung along the two miles of beach leased by the club in localities adapted to all kinds of winds and weather. In connection with the small catch made during the past few years, Mr. S. M. Blatchford said to a *Herald* reporter:

"I feel confident that the menhaden steamers are ruining the fishing. Before they began to cruise up and down our coast enormous schools of menhaden were in the habit of passing between Squibnocket Point and No Man's Land, an island to the southward about five miles away. Now we may watch from morning to night and never see a school. However, the average weight of the fish we have taken during the past few years compares very favorably with that of other clubs, the average of each fish being about ten pounds in weight. This season we used small lobsters, it being impossible to secure menhaden bait. When I went down in June I took five barrels from this city, but the weather being warm most of the fish spoiled. The lobsters, however, answer admirably, and as we have never chummed at Squibnocket we do not miss the menhaden bait as much as the other clubs do." At Squibnocket President Arthur often casts his line, and among the residents there he has the reputation of being an accomplished and skilful angler. The bassing season on these grounds runs from May to the end of October, and the big fish are generally taken early and late.

The official record of the bass taken from June 13 up to October 4 shows that the catch amounted to 1,125 pounds, Mr. W. Murray and Mr. William Mayhew each taking one fish weighing 33 pounds, these being the largest hooks of the season, while Mr. E. Root, on September 22, made the following catch of seven fish: One 14 pounds, one 11 pounds, one 5, one 12, one 33, one 20 and one 8. Total, 92 pounds.

FISHING IN A FOG.—The author of "Life in Normandy" (a rare book now unfortunately) shows how a fog may be a great boon to anglers. He was fishing one day in the river Colum with the May-fly when a thick fog came on after a bright morning, with the fish rising well. With the fog fled the fish and flies. He was about to give up in despair, when he saw an old fellow, whom he knew to be a desperate poacher, watching him. He gave him a drink, when the old fellow said, "I could give you a wrinkle that would make you stay by the river." A half-crown was promised. "The fish are feeding just as fast as ever below, and they don't require to rise to the surface. The May-fly be a coming out of their cases just now as before. When the sun is bright them creturs is up and away in a jiffey; but when the day is dark, one as does come out of his case either crawls up the reeds at the side, or if they does rise up the stream they gets on but slowly, and the fish nabs them afore they reach the surface, as I will soon show you." He thereupon proceeded to collect several flies, which were clustered round the stalks close to the edge of the water. He then arranged the line in this manner: First he took off the flies, and put on their place two small bait hooks, the one about a foot above the other. Then he took two large spit shot out of his own pocket and fastened them on the casting line, three feet above the upper hook. The hooks were baited by running them through the tails of a couple of the May-flies, and all was ready. He proceeded to the head of a weir where the stream was very deep, but there was a rush of water through two or three places where the sluice-boards were drawn. He cast the line across one of these small rapids, let it sink for a minute, and then drew it gently toward him through the rush. No sooner had the line reached the rush than there was a fish hooked. The author adds that he caught more fish by that method on that day than he ever caught before or since in the same river.

THE JURISDICTION OF LONG ISLAND SOUND.—By acts of the Legislatures of New York and Connecticut the waters of Long Island Sound are divided between the two States for the purpose of determining fishing rights and possible questions of jurisdiction. In the United States Court, in a suit brought against the Providence Steamboat Company by a survivor of the Narragansett steamer, a decision has been rendered, which, if sustained, will invalidate that part of the boundry agreement entered into between the two States relating to the division of the Sound. The judge decides that Long Island Sound is a part of the Atlantic Ocean, not a State water, and that its navigation is not governed by the provisions of the Federal act regulating inland waters. Should this decision be maintained neither New York nor Connecticut could exercise proprietary rights in the Sound fisheries.

"SPECKLED BEAUTY."—Elegantly gotten-up angler, coming to a trout pool where freckled boy is fishing with hoop-pole and cotton cord: "Ah! Here is the haunt of the speckled beauty!"

Freckled Boy: "Houp! Guess I'm 's hahnsome 's you be! Nose looks julluk ripe tomarter!"

TENNESSEE FISH NOTES.—The Cumberland River is being thoroughly fished at present, from source to mouth, but not by pot-fishers or seiners. The genuine "Waltonians" have come to the front and driven those pests from the charming stream, and now angle the "gallant" jack and gamy bass with tackle as should be used.—J. D. H.

LUMP FISH are eaten by the Ogunquit, York county, Me., fishermen, who fry the fish.

Fisheulture.

GEORGIA FISHCULTURE.

THE following extracts from the report of J. T. Henderson, Commissioner of Agriculture of the State of Georgia, show the fisheultural work done in that State for the years 1881–'82:

The following is the full text of the Act which contains all the general legislation on the subject of Fish and Fisheries in this State, though local Acts affecting particular streams and counties abound:

AN ACT *to encourage the propagation of Fish in the waters of the State of Georgia, and for the protection of the same.*

SECTION I. Be it enacted, That from and after the passage of this Act, the Commissioner of Agriculture, in addition to his present duties, shall have specially in charge the propagation of migratory fish in the waters of this State, and is hereby authorized to employ a Superintendent of Fisheries, who, under the directions of the Commissioner, shall have charge of the propagation of fish, under the provisions of this Act.

SEC. II. Be it further enacted, That the Commissioner of Agriculture shall proceed at once to secure the artificial propagation in the various rivers of this State of the principal migratory food fish adapted to our waters and climate.

SEC. III. Be it further enacted, That the sum of five hundred dollars is hereby appropriated for the payment of all necessary employes, and for other necessary expenses for carrying out the provisions of this Act, which sum shall be paid out of the annual appropriation heretofore made, under an Act, approved February 28, 1874, for the Department of Agriculture, as a part of the expense of said Department; Provided, nothing contained in this section shall be so construed as to constitute this appropriation as an additional appropriation to said Department; but the same is hereby declared to be a part of said appropriation, and this section is to be so construed as to direct the application of said five hundred dollars of said appropriation to the purpose of the bill.

SEC. IV. Be it further enacted, That from and after the passage of this Act there shall be a "closed time" in all the rivers of Georgia in which shad are caught, of forty-eight hours, commencing at sunrise on Saturday morning of each week, and ending at sunrise on Morning of the next week,

during which "closed time" no shad or other migratory fish shall be caught by nets, wires [weirs], pounds, or any other means whatever, neither shall such nets, wires [weirs], pounds or other apparatus be left set in said rivers during said "closed time." The meshes of nets or other apparatus for catching said fish shall not be less than five inches.

SEC. V. Be it further enacted, That no shad shall be taken by any means whatever, except between the first day of January and the twentieth day of April of each year, except for spawning purposes, to carry out the provisions of this act.

SEC. VI. Be it further enacted, That any person or persons violating the provisions of this Act shall be guilty of misdemeanor, and on conviction of the same shall be punished as is now provided in section 4,310 of the Code of Georgia, as last revised.

SEC. VII. Repealing clause.

Approved February 29, 1876.

The Act above given contemplated a character and scope of work altogether beyond the possibilities of the sum of only five hundred dollars, which was directed to be devoted to the purposes of the Act. My predecessor, Hon. Thomas P. Janes, in his first annual report, made after the passage of the Act, says:

"The Legislature, at its last session, passed an Act directing that $500 of the annual appropriation to this Department be used to the purpose of propagating fish in our streams. Immediately after the passage of the Act correspondence was opened with Prof. Spencer F. Baird, U. S. Commissioner of Fisheries, and Mr. Seth Green, Superintendent of Fisheries for the State of New York, in regard to supplying some of our rivers; but it was found that the season was too far advanced to make even a beginning, so that the effort was abandoned until this fall. Correspondence was reopened last month, with a view to the artificial propagation of shad in several of our streams, but as yet no satisfactory arrangements have been made.

"My wish was to establish a hatching station in Georgia; and this Mr. Milner, the U. S. Deputy Commissioner, thinks would be the proper plan, but says '$500 is too small an amount to begin with.' He says: 'With the amount you have to use, I see nothing better than to move California salmon now, or shad next summer, from our stations to the rivers you wish to supply;' but says that $500 would only move 60,000 salmon to our streams. I have, therefore, decided to wait until spring, when the United States Commissioner proposes (if Congress makes the necessary appropriation) to hatch shad on the Potomac, and to charge only the cost of removing them, since I am convinced that the small sum at my command can be most profitably devoted to the introduction of the largest possible number of this fish into our streams. While I think the introduction of 60,000 salmon into our mountain streams, at a cost of $500, would eventually prove a good investment for our people, I have not deemed it proper to devote the whole appropriation to that purpose, especially since there is a prospect of accomplishing more good by the introduction of shad at the same cost. Mr. James W. Milner, Deputy U. S. Commissioner of Fisheries, who has had large experience in artificial hatching, expresses the opinion that $2,500 is the least amount with which hatching stations could be established with a reasonable hope of success."

In the annual report which I had the honor to submit to you for the year 1880, in referring to the included report of Superintendent Cary, I took occasion to say:

"Your attention is respectfully invited to the foregoing report of Dr. H. H. Cary, Superintendent of Fisheries, and especially to that portion in which he shows the necessity for a reasonable appropriation to carry on this most important work. At no period in the history of this State has the people manifested so much interest in fisheulture. It is a question of vast economic importance to the people of the State, and one well worthy the consideration of the General Assembly. The present annual appropriation is utterly inadequate to accomplish results commensurate with the importance of the interests involved."

These extracts are given in order to show that attention has been repeatedly called to the insufficiency of the sum, not appropriated from the Treasury, but directed, by the Act quoted, to be expended of the annual appropriation for the support of this department. Notwithstanding the inadequacy of the means provided, the Superintendent, under my direction, has been as active and successful as could be reasonably expected of an official working without a salary and with such a small fund for expenses; and quite a number of shad and salmon fry have been released in our streams.

CARP.

Though the Act quoted does not make express allusion to, or provision for, the introduction and encouragement of the culture of other than migratory food-fish, a fairly liberal construction of its language will also include other fish that give promise of being of economical value to our citizens. In accordance with the spirit of the Act, therefore, I have directed the Superintendent to give attention to the introduction of the German carp as a pond fish promising of important results to domestic fisheulture. I beg to refer to his report, herewith submitted, for details of the work and other matter in this connection.

In concluding my remarks under this head it is proper to call your attention to the fact that, so far as I am informed or can ascertain, the provisions of the Act (which have been fully set forth) in regard to "closed time" as contained in sections IV. and V., have been utterly disregarded, not a single instance having come to my knowledge of conformity on the part of persons engaged in shad fishing. Nor have I learned of a single case in which the penal provisions of section VI. have been enforced or attempted. The law is a dead letter so far as these prohibitions and regulations are concerned, and the anomaly is presented of an Act of the Legislature requiring the inauguration of a system of artificial hatching of shad and other migratory fish for restocking our rivers—without an adequate appropriation for the purpose, and at the same time without adequate legislation for the protection of the fish from untimely and excessive use of the various means used to capture them. Our people living along the courses of our large streams, away from the coast, are deprived of their natural right to the benefit of the fish, that would run up the very headwaters of the streams, if they were not decimated before getting fifty miles from the ocean by the artful and complete and unlawful contrivances for capturing shad that are in use near the coast. Not only this, but citizens of distant States send their fishing vessels and tackle to our streams, and ship the "catch" to distant markets, so that our State and people derive no benefit whatever from them. It is like "taking the food out of our mouths." I beg to refer you to the following:

REPORT OF SUPERINTENDENT OF FISHERIES.

DEPARTMENT OF AGRICULTURE,
OFFICE STATE BOARD OF FISHERIES,
LA GRANGE, GA., Oct. 10, 1882.

Hon. J. T. Henderson, Commissioner of Agriculture:

I herewith submit my biennial report, embracing the time since my last report, dated Oct. 16, 1880.

While it is to be exceedingly regretted that the limited means at the disposal of the department has prevented the extension of the work to the extent desired, still it is a matter of congratulation that steady progress has been made in the work, and that fisheulture stands higher in public opinion than ever before in this State, and as a means of cheap and abundant food supply is rapidly gaining favor.

GERMAN CARP.—This new fish has more than sustained the reputation acquired up to my last report. Up to that time only about 700 had been introduced into the waters of Georgia, and most of these having been placed in ponds with inadequate drainage, but few opportunities had been afforded to test their growth. The few examinations made, however, showed a growth of about four pounds per year. The fish above named were the hatchings of 1879, the first hatchings east of the Rocky Mountains. The hatchings of the carp ponds at Washington for 1880, had enormously increased. Georgia, through the Department of Agriculture, received and distributed over 3,700, and the members of Congress received and distributed about as many more, making the entire distribution in the State for that year, over 7,400. Many of these fish were very small, not more than one or two inches long, and weighing a fraction of an ounce. A shipment was received from Washington in February, 1881; six of these were sent to a gentleman in Talbot county, and were released in his mill-pond; the last of September one was caught and weighed, and it was found that in seven months it had taken on a growth of five pounds. That this may not be an exceptional case, I will state that other cases of nearly equally rapid growth have been reported to me. Of the hatchings of the carp ponds at Washington of 1881, we failed to get the supply we expected, hence, a large number of applicants were disappointed. The Department of Agriculture received about 1,700, and probably the members of Congress even a larger number than this, which were distributed, as in the previous years, over the State, and so far as reports have been received they have, in every particular, sustained the high estimate placed upon them. It is hoped that a very large distribution will be made the present fall, as a letter from Col. McDonald, in charge of the distributions at Washington, states under date of the 5th instant: "I am directed by Prof. Baird to say to you that he can probably supply all applicants for carp from Georgia."

I have been very desirous of ascertaining the precise time of hatching of the carp eggs in our latitude, as numerous inquiries have been propounded to me on that subject. Dr. Rudolph Hessel, a German fisheulturist, and the Superintendent of the carp ponds at Washington, states in the report of the Commissioner of Fish and Fisheries, Part 4, 1875—1876, that they hatch in from twelve to sixteen days. I was impressed that they would hatch much sooner here. Mr. Emanuel Heyser, of Madison, Ga., an enthusiastic fisheulturist, a careful observer and reliable gentleman, has given me the benefit of a careful experiment made during the present year, and as I regard this experiment as very important, I beg leave to detail it somewhat fully. On Friday, May 12, 1882, he had three scale carp taken from his pond with hook and line, two females and one male, weighing about three and a half pounds each. On Saturday, May 13, he placed them in the bed of a spring branch, running through the bottom of an old pond that had been dry for about four years, and was overgrown with grasses, rushes and weeds—except the little spring branch in the center. On the following Monday, the 15th, he had the breach in the dam of the old pond closed and the water gradually spread over the surface of the pond. On Wednesday following, May 17, Mr. Heyser noticed the carp were spawning in water and not over six inches deep, and the water was so clear he could readily observe every movement of the fish. On Thursday the 18th, and Friday the 19th, he gathered eggs from where he had seen the carp spawning, deposited on grass, weeds, etc.; some of these eggs were placed in a glass vase and some in a tin bucket, both filled with clear water. The vase he kept in his dwelling house, the bucket he placed on the branch of a tree in open air, six feet from the ground. These remained undisturbed until Tuesday morning, May 23, when he found that in both, in the bucket and vase, the eggs were hatching. On making this discovery he went immediately to the pond from which the eggs were taken and with a basin could dip up large numbers of tiny fish. That they were scale carp he was certain, as he kept watch of them for about a month, when they had attained a length of one and a half inches. As the young fish were hatched in from five to six days there can be no mistake, as there was no water where he gathered the eggs until less than a week before he saw the young fish, and it had just risen sufficiently deep to allow the fish to swim around in spawning. Mr. Heyser having no thermometer, had no means of ascertaining the temperature of the water at the time, but by reference to my register, I find the average temperature of the atmosphere in the shade was on the days named in the experiment 69, 1 degree, but as Madison is about one-half degree north of La Grange, the temperature might be a little lower, and this would approximately indicate the temperature of the water, so that we may assume with the temperature of the water at about 69 degrees, these eggs hatched in from five to six days.

The carp in this latitude usually commence spawning in April. I observed mine this year spawning on the 27th of March.

CALIFORNIA SALMON.—During the fall of last year an offer was received from Prof. Baird of a large quantity of eggs of the California salmon taken from the McCloud River. At first I declined to take them, as we had no means to establish a hatchery, but the South Carolina Commission kindly offered to hatch them gratuitously at the hatchery at Walhalla, in that State. This proposition was gladly accepted, and the result was we were enabled to plant 136,000 salmon fry in the head-waters of the Savannah River. This river was selected and the whole plant made there for several reasons, among which was the belief of its best adaptability of all our streams for fish, and another that all experience has proven that in restocking barren streams large plants are the most profitable, as the depredations are about the same on a small plant as on a large one. Like the shad, the salmon is an anadromous (migratory) fish, and passes up the river to the spawning grounds in the fall months. They have a fine flavor and take on a rapid growth, weighing often from 12 to 20lbs. Should the temperature of the water of our rivers prove suitable, they will be a valuable acquisition. They seem to be of easy propagation and, very recent letter from Mr. Livingstone Stone, in charge of the hatcheries on the Pacific slope, shows that notwithstanding the enormous numbers that are caught for canning and other purposes, they are increasing very rapidly. It, doubtless, will be prudent to wait the result of this planting in the Savannah before making other efforts in this direction.

SHAD.—As stated in my last report, through the aid of the U. S. Commission I was enabled to plant over 1,000,000 of shad fry in the waters of this State, dividing them between the Oconee, Ocmulgee and Chattahoochee rivers. These fish were planted in June, 1880, and should return to their spawning grounds next spring (1883). In the season of 1881 and 1882 more or less shad fry were released in the waters of this State by the U. S. Fish Commission. The fish of these plantings should return in three years, respectively, from each planting.

In all these streams there are obstacles to their return, in the obstructions presented by mill-dams. Fish-ways can be constructed over these dams without injury to the property of the mill proprietors. This subject should receive the careful attention of the Legislature. Our main effort should be for some time directed towards the artificial propagation of the shad, as in early time it was found the natural inhabitant of the waters of the State. And I wish to emphasize the fact that it is only by artificial propagation that barren waters can be restored.

But to secure these desirable results, we must do precisely what New York and other States have done—establish by law a proper "closed time" and have enacted the necessary protective laws.

BROOK TROUT.

The clear, cold streams in many of the upper counties of the State are well adapted to the propagation of the brook trout, and it is very desirable, as soon as our means will permit, to stock these streams. A few experiments have been made by private individuals in introducing the brook trout into these streams, from the opposite side of the Blue Ridge, with quite encouraging results.

It is important to impress upon the Legislature the necessity of a sufficient appropriation to establish hatcheries for the migratory and other food fishes, and to establish carp ponds of sufficient capacity, not only to stock every pond in the State, but to plant them in all the principal streams, as the carp will do remarkably well in our sluggish rivers.

An appropriation of one-third of a cent. *per capita* of the people of Georgia will enable us to make fish the cheapest food in the State, and will take them from the list of luxuries and place them in the reach of all.

All of which is respectfully submitted.

H. H. CARY, Superintendent.

THE MICHIGAN COMMISSION.—The Fish Commissioners of Michigan have appointed Mr. Oren M. Chase to be their superintendent in place of Mr. J. G. Portman. Mr. Chase is a fisheulturist of a dozen years' experience, and is a very competent man. He has been in the employ of the Michigan Commission for the past eight years, and was previously with the New York Commission. His address is Detroit.

ANENT THE ELECTION.—*Editor Forest and Stream:* It may be of interest to recall the fact mentioned on page 324 of your seventeenth volume, *in re* the dog as personal property, that the only Judge of the Court of Appeals who dissented from the conviction of a dog thief was Chas. J. Folger, late candidate for the Governorship of New York State.—CANIS MAJOR-(ITY.)

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. Washington A. Coster, Flatbush, N. Y.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

N. A. K. C. DERBY ENTRIES.

THE following is a complete list of the entries for the National American Kennel Club Derby, to be run at Grand Junction, Tenn., upon the completion of the All-Aged Stakes, which commence Dec. 4. All were whelped in 1881.

1. KATE B. Dr. A. F. McKinney, Forest Hill, Tenn.—Black, white and tan English setter bitch, April 18 (Count Noble-Peep O'Day).

2. CARRIE J. Wm. B. Gates, Memphis, Tenn.—Black, white and tan English setter bitch, April 18 (Count Noble-Peep O'Day).

3. CHICKASAW. D. Bryson, Memphis, Tenn.—Black, white and tan English setter dog, April 18 (Count Noble-Peep O'Day).

4. BLAZE. D. C. Sanborn, Dowling, Mich.—Liver and white English setter bitch, July 13 (Count Noble-Spark).

5. NELLIE BEY. D. C. Sanborn, Dowling, Mich.—Black and white English setter bitch, July 18 (Count Noble-Nellie).

6. COUNT DAD. D. C. Sanborn, Dowling, Mich.—Black and white English setter dog, July 18 (Count Noble-Nellie).

7. GATH. Crawford & Wallace, Memphis, Tenn.—Black, white and tan English setter dog, April 18 (Count Noble-Peep O'Day).

8. COUNTESS MAGNET. D. C. Sanborn, Dowling, Mich.—Liver and white English setter bitch, July 13 (Count Noble-Spark).

9. QUEEN LAVERACK. J. J. Snellenburg, New Brighton, Pa.—Black, white and tan English setter bitch, May 16 (Tory-Meg Merriles).

10. MINNIE LEE. M. F. Rodgers, New Albany, Miss.—Black and white English setter bitch, Sept. 22 (Bismark-Nellie).

11. DASHING ECHO. C. Spahr, Ridgeville, Pa.—Red Irish setter dog, 9 months (Elcho-Noreen).

12. ROYAL VICTOR. J. M. Taylor, Lexington, Ky.—Lemon belton English setter dog, April 15 (Racket-Kelp).

13. FAN CARLISLE. D. C. Plumb, Niagara, Canada.—Liver and white ticked English setter bitch, May 24 (Bill Carlisle-Nell Carlisle).

14. NELLIE E. W. A. Ellison, Ortoka, Tenn.—Blue belton English setter bitch, June 18 (Bruce-Lit).

15. PINK B. W. B. Mallory, Memphis, Tenn.—Black and white English setter dog, May 13 (Gladstone-Countess Key).

16. PRINCE AL. A. H. Moore, Philadelphia, Pa.—White, with lemon ears, English setter dog, April 26 (Leicester-Dodge's Rose).

17. PRAIRIE WONDER R. B. Morgan, Canton, O.—Lemon and white English setter dog, April 2 (Prairie Joe-Prairie Queen).

18. PEGGY BELTON. Geo. P. Jones, Florence, Ala.—Black, white and tan English setter bitch, May 6 (Belton-Bramble).

19. COUNTESS A. J. M. Arant, Hickory Valley, Tenn.—Lemon and white English setter bitch, Aug. 10 (Dashing Lion-Amada).

20. BESS A. J. M. Arant, Hickory Valley, Tenn.—Lemon and white English setter bitch, Aug. 10 (Dashing Lion-Amada).

21. CADDY. A. Branshaw, Dallas, Texas.—Black, white and tan English setter bitch, Aug. 30 (Rake-Phyllis).

22. GLEAM. E. E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 9 (Dash III.-Countess II.).

23. SIOUX. M. Tucker, Charlestown, Mass.—Black, white and tan English setter dog, July 12 (Dash III.-Rhoebe).

24. COUNTESS MAY II. Luther Adams, Boston, Mass.—Black, white and tan English setter bitch, April 12 (Drake-Countess May).

25. SYBIL. Luther Adams, Boston, Mass.—Black, white and tan English setter bitch, Sept. 7 (Rake-Roxie).

26. GREENWICH. L. H. Smith, Strathroy, Canada.—Black, white and tan English setter dog, July 5 (Paris-Dawn).

27. DANBURY NEWS. Herbert Inman, New York.—Red Irish setter dog (Rally-Abbey).

28. BIZORA. J. S. McIntosh, Pittsburgh, Pa.—Red Irish setter bitch, July 8 (Biz-Flora).

29. CLIPPER. Chas. Tucker, Stanton, Tenn.—Black, white and tan English setter dog, Nov. 22 (Gladstone-Frost).

30. STANTON. Chas. Tucker, Stanton, Tenn.—Black, white and tan English setter, Nov. 22 (Gladstone-Frost).

31. OLIVER'S DAN. J. H. Kraft, New Albany, Ind.—Black white and tan English setter dog, Aug. 6 (Rake-Bessie Lee).

32. KRAFT'S RAKE. J. H. Kraft, New Albany, Ind.—Black white and tan English setter dog, Aug. 6 (Rake-Bessie Lee).

33. COUNTESS MOLLIE. John D. Ladd, Martin, Tenn.—White and lemon English setter bitch, July 13 (Count Noble-Spark).

34. ELSA. E. E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 12 (Drake-Countess May.)

35. AMERICAN DAN. Jos. H. Dew, Columbia, Tenn.—Black, white and tan English setter dog, April 12 (Lincoln-Daisy Dean.)

36. COUNT TITCOMB. Jos. H. Dew, Columbia, Tenn.—Liver and white English setter dog, April 12 (Lincoln-Daisy Dean).

37. PRIDE OF FAIRLEW. Jos. H. Dew, Columbia, Tenn.—Liver and white English setter dog, April 13 (Lincoln-Daisy Dean).

38. DAISY LION. T. E. Gordon, Columbia, Tenn.—Liver and white English setter bitch, April 12 (Lincoln-Daisy-Dean).

39. OLD WALT. J. A. Titcomb, Columbia, Tenn.—Lemon and white English setter dog, April 12 (Lincoln-Daisy Dean).

40. CYNTHIA WALKER. Charles H. Raymond, New York.—Black, white and tan English setter bitch, June (Guy Mannering-Whirlwind).

41. RIP VAN WINKLE. J. W. Orth, Pittsburgh, Pa.—Liver and white English setter dog, July 13 (Count Noble-Spark).

42. POPE. J. W. Orth, Pittsburgh, Pa.—Lemon and white English setter dog, July 13 (Count Noble-Spark).

43. STARTLE. Major George R. Watkins, Brooklyn, N. Y.—Blue belton English setter dog, July 12 (Leicester-Crook).

44. CHESTER. Major George R. Watkins, Brooklyn, N. Y.—Orange and white English setter dog, July 12 (Leicester-Crook).

45. FLINT. A. S. Bishop, Pittsburgh, Pa.—Blue belton English setter bitch, August 9 (Thunder-Minerva).

46. REDDY. Samuel Scranton, Providence, R. I.—Liver and white English setter dog, June 27 (Old-Meg).

47. GARNET. Thomas Stodd, Catasauqua, Pa.—Red Irish setter dog, April 5 (Elcho II.-Dell).

48. NANNIE. Thomas Stodd, Catasauqua, Pa.—Red Irish setter bitch, April 5 (Elcho II.-Dell).

49. MAY STAR. J. J. Snellenburg, New Brighton, Pa.—Black and white English setter bitch, Feb. 19 (Count Noble—May Laverack).

50. MILWAUKEE. Dr. A. G. Stark, Milwaukee, Wis.—Black, white and tan English setter dog, Aug. 31 (Dashing Herwyn—Dolly Varden).

51. GEM. Alex Jackson, Florence, Ala.—Black, white and tan English setter bitch, June 6 (Dave B—Rose).

52. MINNETONKA. W. H. Key, Florence, Ala.—Black, white and tan English setter bitch, May 13 (Gladstone—Countess Key).

53. FRANK D. Ferguson, Milwaukee, Wis.—Black and white ticked English setter dog, June 15 (Carl—Queen).

54. COUNT MAYGO. Wm. Tallman, Worcester, Mass.—White and lemon English setter dog, Sept. (Count Noser—Maple).

55. TRAMP DALE. Wm. Tallman, Worcester, Mass.—White and lemon English setter dog, August (Grouse Dale-Lady Thorne).

56. FENELLA. H. F. Grant, Newport, Isle of Wight, Eng.—Black, white and tan English setter bitch, May 16 (Tory-Meg Merilies).

57. TAM GLEN. H. F. Grant, Newport, Isle of Wight, Eng.—Black, white and tan English setter dog, Sept. 7 (Souter Johnny-La Reine).

58. MISS TWILIGHT. L. H. Smith, Strathroy, Ont.—Black and blue belton English setter bitch, May 30 (Thunder-Twilight).

59. SUSSEX. L. H. Smith, Strathroy, Ont.—Lemon belton English setter dog, June 30 (Paris-Coomassie).

60. MASE. J. Otto Donner, New York.—White and orange English setter bitch, October (Paris-Fairy Belle).

61. MIGNON. J. Otto Donner, New York.—Blue belton English setter bitch, October (Paris-Fairy Belle).

62. PARIS BELLE. J. Otto Donner, New York.—Blue belton and tan English setter bitch, October (Paris-Fairy Belle).

63. VICTOR. J. Otto Donner, New York.—Blue belton English setter dog, June (Ranger II.-Star).

64. PRINCESS LOUISE. Conestoga Kennel, Lancaster, Pa.—Lemon and white English setter bitch, June 30 (Paris-Coomassie).

65. CANADIAN BEAUTY. Conestoga Kennel, Lancaster, Pa.—Liver, white and tan English setter bitch, July 1 (Paris-Dawn).

66. TIPTON. Conestoga Kennel, Lancaster, Pa.—Red Irish setter dog, April (Don-Clytie).

67. ROYAL WIND'EM. Conestoga Kennel, Lancaster, Pa.—Black and white ticked English setter dog, May 29 (Count Wind'em-Nora).

68. REBEL WIND'EM. Conestoga Kennel, Lancaster, Pa.—Black, white and tan English setter dog, May 29 (Count Wind'em-Nora).

69. MONARCH WIND'EM. Conestoga Kennel, Lancaster, Pa.—Black and white English setter dog, July 3 (Count Wind'em-Countess Moll).

70. TRUMP. W. H. Key, Florence, Ala.—Lemon and white English setter dog, May 13 (Gladstone-Countess Key).

71. GAZELLE. J. W. Murnan, Keeling, Tenn.—Black, white and tan English setter bitch, Aug. 15 (Druid-Jolly May).

72. UNNAMED. J. W. Murnan, Keeling, Tenn.—Black and white English setter dog, June 16 (Druid-Magnolia).

73. DUS BOYNE. D. C. Sanborn, Dowling, Mich.—Black and white English setter dog, May 11 (Dashing Bondhu-Novel).

74. PRIDE OF MEMPHIS. William Bowles, Jr., Memphis, Tenn.—Black, white and tan English setter dog, Oct. 26 (Victor-Nellie C.).

75. CARLISLE WAG. D. C. Plumb, Niagara, Can.—Liver and white English setter dog, May 24 (Carlisle Bill-Carlisle Nell).

76. RICHARD III.—F. A. Tremaine, Pittsburgh, Pa.—Black, white and tan English setter dog, April 7 (King Dash-Skip).

77. JOICE. H. W. Fawcett, New Albany, Ind.—Red Irish setter bitch, May 1 (Joe, Jr.-Susie Merriwether).

78. SNIPE. George P. Law, Glencoe, Ill.—Red Irish setter bitch, May 1 (Joe, Jr.-Susie Merriwether).

79. MONTE CHRISTO. W. C. Beringer, Pittsburgh, Pa.—White and black English setter dog, April 17 (Thunder-Bess).

80. ACME. J. Palmer O'Neil, Pittsburgh, Pa.—Black and white English setter dog, April 17 (Thunder-Bess).

81. ST. ELMO IV. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black, white and tan English setter dog, April 20 (St. Elmo-Clio).

POINTERS.

82. MIDNIGHT. E. S. Wanmaker, Elmwood, N. C.—Black pointer dog, June 13 (Chipps-Nettie).

83. DARKNESS. E. S. Wanmaker, Elmwood, N. C.—Black pointer bitch, June 13 (Chipps-Nettie).

84. MODOC. A. J. Early, New Albany, Ind.—Lemon and white pointer dog, April 22 (Sport-Dio).

ROBBIN'S ISLAND CLUB FIELD TRIALS.

THESE trials will be run on Robbin's Island Nov. 27, 1882, under the rules of the Robbin's Island Club, A. T. Plummer, Esq., secretary. The judges are Hon. Calvin E. Pratt and H. D. Polhemus, Esq.

ENTRIES FOR THE ALL-AGED STAKE.

W. B. Kendall's black and tan Gordon setter Montague, 3 years (Gypsum-Fan).

A. T. Plummer's black and tan Gordon setter Fred, 3 years (——).

W. B. Dickerman's liver and white English setter Gambol, 4 years (Rob Roy-Nellie).

A. S. Swan's black and tan Gordon setter Brighton, 3 years (Gypsum-Meg).

L. Waterbury's liver and white setter dog St. Ives, 3 years (St. Elmo-Maida).

W. H. Force's black setter Doctor, 3 years (Sid-Fan).

L. H. Bullard's red Irish setter bitch Meg, 4 years (——).

John McClure's liver colored pointer Tasso, 3 years (——).

H. D. Polhemus's black and tan setter Bob, 2 years (——).

D. A. Lindley's red Irish setter Pat, 2½ years (——).

F. E. Taylor's black, white and tan setter Douglas, 18 months (Chancellor-Fan).

N. D. Putnam's red Irish setter dog Berkley II., 2 months (Chief-Gussie).

S. Fleet Speir's black and tan Gordon Romeo, 5 years (Gypsum-Daisy).

S. Fleet Speir's black, white and tan setter Chancellor, 3 years (St. Elmo-Maida).

LOUISIANA FIELD TRIALS.

IN a recent article upon the coming Field Trials of the New Orleans Gun Club the *Times-Democrat* says:

It is a matter of regret that so little interest is taken by sportsmen throughout the State in an enterprise which, if even moderately successful, is bound to be largely beneficial in its results to all interested in field sports. Field trials are of comparative recent occurrence in America, but for years our English cousins have devoted much time and expense toward them. The result of such attention is attested by the fact that nowhere in the world can a setter or pointer dog be found possessing any merit that does not trace his origin to one of the contestants at these trials. Vast sums of money have been spent by the English, Irish and Scotch and Welsh breeders in a generous competition to produce a strain of dogs possessing in the highest degree the two greatest requisites of a hunting dog—scent and endurance. Experience has proven the utility of such experiments, as illustrated in such distinctive breeds as the Laverack, Llwellin, Gordon and Irish setters of to-day.

A love of hunting and field sports seems inherent with us of the South. Every neighborhood boasts its local Nimrod, and in ante bellum days, the Southern planter rivalled the landed gentry of the Old World in his devotion to dogs and the chase. The kennels of Europe and America were taxed to supply his own, and one instance can be recalled where a prominent sportsman, now living, spent five thousand dollars in organizing and carrying on one fox chase that was attended by some visiting sportsmen from Scotland. Such instances of extravagance are well calculated to confirm the impression of a great many non-sportsmen that a love of field sports engenders a spirit of idleness and reckless extravagance. Hunters, like artists, are proverbially easy-going souls, and our friend alluded to above is a veritable "prince of good fellows." An enthusiast of the chase—no game was too large for him, and when the toesin of war sounded amid the woods of beautiful "Lochinvar," he exchanged his hunting suit for an uniform of gray, his hounds for horses, and out of his private purse he armed and equipped a gallant company of cavalry and merrily led them in many a mad charge over field and ditch to the cannon's mouth. Recognizing the fact that the class of dogs now in the hands of our sportsmen are, as a class, of very inferior quality and becoming more worthless with each succeeding generation, the New Orleans Gun Club, at their annual meeting last spring, resolved to give a series of field trials and offer prizes of such value as would tempt owners of fine dogs to bring them from almost any point to contend for them.

The benefit of such a movement to our sportsmen is almost incalculable. At these trials will be gathered the most famous dogs in the land, both of "blue bloods" and "natives." The rules governing such meets are framed in a manner best calculated to allow a dog to win on his own merits. The judges selected on the occasion will be gentlemen of undoubted integrity and ability, and who will be unprejudiced in favor of any breed or class of dogs. Consequently, those sportsmen who attend will have full opportunity of comparing the different breeds, systems of training and management of dogs. Without wishing to offend the *amour propre* of any hunter, the assertion is ventured that after witnessing the performance of such dogs as Peep o' Day, Croxteth, Sensation and others of that class for the first time, he will find that all preconceived ideas of what constitute a perfect dog as illustrated by such exemplars as he had been accustomed to hunt with were sadly at fault. His experience would have been the same had he entered his farm hack against Ten Broeck in a four-mile race.

Louisiana is prolific in resorts for snipe, and such resorts are particularly easy of access to the sportsmen of New Orleans. Consequently nine out of ten sportsmen confine themselves to snipe and duck shooting. Considerable apathy exists among these hunters as to part taken by the New Orleans Gun Club in inaugurating their field trials, from the fact that these trials are held on quails, a class of game they never hunt, and, therefore, they cannot see that any benefit is derived. Such ideas are preposterous from the fact that a dog broken on quails is superior to one broken on snipe, and therefore a superior dog on quails quickly develops his qualities on snipe. Trials are made on quails because, unlike the snipe, they lie to cover and finding them is not attended with the discomforts of hunting snipe. The same requisites necessary to the perfect quail dog, namely speed, endurance and scent are applicable to the snipe dog in a marked degree, as it requires a keener scent to ferret out these little denizens of the marsh land. It is a slander on the pointer and setter to attempt to describe the class of dogs in the hands of our local sportsmen, except in some instances, as representatives of their kind, as well compare the cab horse to "Maud S."

In the interest of true sport an appeal is made to hunters in this and adjoining States to come forward and aid the gentlemen of the New Orleans Gun Club in their endeavors to make their field trials a success. A large attendance of some of the most noted dogs now living, has been promised. Quite a large sum of money is required to carry these trials on, and this expense ought not to fall on the shoulder of some five or six individuals, but be shared by every true sportsman in the South.

MEMORY IN DOGS.

Editor Forest and Stream:

In looking over your ever welcome paper to-day, I was struck with an article entitled "Memory in Dogs." This, I think, does not properly describe the wonderful faculty they possess of tracing their way home from long distances. I will give an instance in which I do not see how memory could have assisted the dog in finding his way home:

My father owned a very handsome black setter a good many years ago, that answered to the name of Major. My father and a friend started from our residence, at that time on the Delaware just above Philadelphia, for a shooting trip to New Jersey. They first rowed in a boat up the river some four miles, then up Rancocos Creek about a mile, where they took the cars for Mount Holly, distant from that point about twenty miles. This, at that time, involved a change of cars at Burlington, N. J. From Mount Holly they rode in a stage (the dog riding with them) to Pemberton, about fifteen miles. At Pemberton they were met by their friend, who drove them to his residence at, or near, Hanover Furnace, about twenty miles from Pemberton, "down in the pines," the dog riding all this distance; in fact, he never touched the ground, except in making the different changes of conveyance. After shooting for a few days with his friend at Hanover Furnace, a trip to the shore for ducks was proposed, and as my father thought he would have no use for Major, he left him tied up in his friend's barn. After remaining two or three days at the shore the party returned to Hanover Furnace, where the first news that greeted my father was that his dog had slipped his collar and escaped from the barn and disappeared. As the dog was a very valuable one, and one that my father was very much attached to, he advertised his loss in the Philadelphia papers as soon as he returned home. The advertisement was answered by a farmer living just across the river from our residence. In crossing the river to see this person my father soon found, much to his delight, the lost Major, who, the man that had him stated, was just in the act of entering the water, evidently with the intention of completing his journey by swimming the Delaware, at this point about three-quarters of a mile wide. Now the question is, how, or by what faculty, did this dog find his way home. Remember, he never touched the ground the whole distance except in making the changes of conveyance above referred to. Just imagine yourselves, Messrs. Editors, put in a like fix and debarred from asking a single question, depending solely on your memory or "nose." Do you think you could do it? I very much doubt it. This same dog used to do another thing that amused the family very much. He was accustomed to occupy a large dog house at the corner of the house in common with another setter who answered to the name of Pero. This dog was not quite as amiable, on all occasions, as Maje, and consequently when he first entered their common dwelling would sometimes growl at Maje, and refuse him an entrance. On these occasions Maje, after standing a few moments in front of the house, thinking up the matter I suppose, would trot off behind the house and commence a furious barking, when out would dash Pero to see what all the trouble was about. In the meantime Maje would gallop round the house the other way and rush into the dog house, but when Pero came back after his prospecting tour, Maje, who then had possession, would always return good for evil, making no objection to his occupying his share of their mansion. Doesn't this approach very nearly to reason, or if not, what is the faculty that enables them to do these things? SINKBOAT.

EASTON, Md.

RETRIEVING.

Editor Forest and Stream:

I have read and heard so much about the force system in retrieving that I feel constrained to give you my views. I have taught a great many dogs to retrieve and have adopted a great many different plans to accomplish my object, and I have always found in my experience that my best retrievers were those that I used the least force with, and that they did their work with more apparent pleasure than those that I had been harsh with. I have tried all of the different ways that I ever heard of to learn dogs to retrieve and have generally found where I used the spike collar or twisted their nose, or used other harsh methods, that, although they would retrieve, it took me longer to go and show them where the bird was than it would to get it myself, and that they would never make, what I always like to see, cheerful retrievers, but when nothing but kindness was used I have found that they soon learned to love their work and would search for the dead or wounded bird in a very short time. In shooting snipe I have often found that the dog taught to retrieve by force would drop his bird as soon as he came to water, giving me no end of trouble to break him of it, while the dogs that I have taught without severity have never given me any trouble on this score, but invariably have brought their birds in a manner that afforded me much pleasure. This idea of using force at all times while educating your dog is all wrong and I hope the day is not far distant when twisting the poor animal's nose or spiking him will be entirely done away with. When I commenced handling the blue bloods I was told that it would be impossible to break them without using the spike collar, but as my natives had served me so well when kindly treated, I pursued the same course with the blue bloods and have always found that I had no occasion to use the force system in learning them to retrieve or come to me when called. Of course, in some parts of their education it is necessary to use force, especially when learning them to drop to shot or wing. I think that the rules of the field trials require too much of a dog, as some of them are never used in common field work, and in a close heat the best dog may get beat by failing to drop to shot or wing or failing to back, which he would readily do if his handler was allowed to speak to him. Many men can break a dog so that he will show off well, but only a few know how to prepare one for good practical field work, which after all is the only true test of a dog, and for that matter of a BREAKER.

BIRMINGHAM BOYCOTTED.

SIR—When the Darlington show was attacked last summer through an anonymous threatening letter to its spirited secretary, Mr. Murchison (who certainly has the courage of his convictions, and is one of the ablest of its defenders), honestly ashamed of such an audacious act, pleaded, on behalf of the Kennel Club, that this threat was a hoax. The more thoughtful of your readers, who, with painful anxiety, have watched the working of its committee of late, were not so easily deceived, but felt a strong conviction, although almost ashamed at the audacity of the writer, that it was no hoax, but a deliberately mean and underhand subterfuge to coerce the Darlington committee into compliance with the complete code of the Kennel Club rules. Mr. Sewell, the secretary of the Darlington show, treated the insult with the scorn and contempt it so richly merited. It was then stated, as "Beta" opportunely reminds your readers, "that the Kennel Club had no intention of Boycotting Birmingham." We now find that what the K. C. dared not then openly avow it has since secretly achieved, and the Birmingham Dog Show, the oldest, most respectable, and most prosperous dog show in existence, is Boycotted by gentlemen in private. These gentlemen formed the committee at which it was decided, in the absence of their clear-headed chairman, to launch a thunderbolt at Birmingham just on the eve of closing its entries, as if it hoped to crush it with a blow that would annihilate this great national dog show for ever. Poor Birmingham! it's time for Burnaby and Bright to shake hands, now that she has fallen upon such an evil time that, alas! she should have been Boycotted by the canine potent "committee of four." Mr. Beech and the band of Birmingham men at his back, who have made their dog show truly "national," as well as a financial success, will not, I assume, meekly submit to this dictation from "the committee of four." The old threat is repeated, that, if exhibitors dare send their dogs to Birmingham, these dogs will not be registered in the K. C. S. B.

On behalf of the dog-loving public outside of the K. C., I make one more appeal to you, Sir, who have done so much for dogs, to come to our rescue. In the name of fair play and justice, and as a public right, I ask you again to give the British public a national stud book—call it the "British Stud Book," if you will. You may rely upon the help of our different dog clubs, and the many secretaries of local dog shows in the country, as well as the larger non-exhibiting public, to help you with all their might. The St. Bernard Club has already made an excellent start with its stud book. The first number of the *Kennel Review* (its official organ) was published on the first of this month. The next number, to be published on Nov. 3, will give the first instalment of the new St. Bernard stud book. You can compile all together, and publish a comprehensive and complete stud book, which, with the singularly successful imprimatur of "Stonehenge," ought to carry great weight and command a large circulation.

The catalogue of the St. Bernard show, to be held in the Duke of Wellington's Riding School in Kensington on Wednesday next, is now being arranged by Mr. Arthur Carter, and will be a marvel and a masterpiece in the way of stud books. It is carefully compiled, the pedigree of every dog being seen at a glance, and Mr. Wyndham Carter, the indefatigable and intellectual editor of the *Kennel Review*, has, I believe, offered to publish a complete list of the dogs that have been exhibited at Birmingham since its first show. The *Kennel Chronicle* has published two volumes of pedigrees. All these stud lists, with the addition of those of other clubs, would form an invaluable nucleus for a really useful stud book.

Birmingham need not fear any diminution of entries from the silly attempt of the K. C. to Boycott her show, for it is a well-attested fact that those shows which have been threatened by the K. C. have invariably proved to be successful.

Darlington last summer had more entries and a better show than ever. The St. Bernard Club Show next week has already over two hundred and fifty entries, after many were returned. The last K. C. show at the Crystal Palace had only ninety-two St. Bernards to our total of two hundred and fifty, the grandest show of St. Bernards ever held, not only unprecedented in numbers, but also never equalled for quality, if I am correctly informed. In face of forcible facts like these, I can with difficulty bring myself to think that such good old supporters of Birmingham Dog Show as Messrs. Shirley, Whitehouse, Lort, Col. Startare, and Major Platt, and other members of the K. C., can uphold their "committee of four" in the suicidal course they have entered upon. In common self-respect, they must now elect whether they will stand by Birmingham, or sink with the Kennel Club.

J. CUMMING MACDONA, *in London Field.*

St. Bernard Club, 23, Dover-street, W.

A FOUR-LEGGED WITNESS.—Otto V. Brandesky and a trained Newfoundland dog named Leo appeared on the stage in Concordia Hall last spring. Brandesky sang hunting songs and, with the dog's assistance, went through a hunting pantomime. Last summer he lost the dog. Yesterday a Newfoundland ran up to him on First avenue and kissed his hand. Then they hugged each other. Charles Rees of First street came up and claimed the dog, but Brandesky insisted that it was Leo, and all three went to Essex Market to have the matter settled. Brandesky offered to make his ownership of the dog apparent, and Justice Smith told him to go ahead. Brandesky drew an engraved collar from his pocket and whispered to the dog. The dog sat up and allowed him to put the collar on. "Kiss me," said Brandesky, and the dog sprang up and kissed him. Brandesky, handling his umbrella as a gun, brought it to a shoulder and then took aim with it. The dog crouched as if watching for game. Then he held out the umbrella and the dog jumped over it. He ordered the dog to imitate death, and Leo lay down and became rigid. Brandesky pretended to weep and Leo sprang up and embraced him. Brandesky began to dance and Leo rose on his hind legs and danced also. Brandesky approached the bar as he would the footlights and bowed. Leo also stood up and bowed to the Court. "There is no necessity of further evidence of ownership," said Justice Smith, laughing. "The Court awards the dog to Brandesky."

—*New York Sun.*

ALDERSHOT RETURNS TO ENGLAND.—Mr. J. R. Robinson of Sunderland, England, has repurchased of Mr. E. A. Herzberg, Brooklyn, N. Y., the Laverack setter dog Aldershot. He was sent to him last Thursday on the steamship State of Georgia. Mr. Robinson, who bred Aldershot and sold him to Mr. Herzberg, repurchases him to take the place of his promising young dog Glen Tilt, who died Sept. 23.

DOG SHOW AT NEW BEDFORD.—The Southern Massachusetts Poultry Association will hold a dog show in connection with their forthcoming poultry show at New Bedford, Mass. We hope to be able to give full particulars next week.

POINTERS AT THE EASTERN FIELD TRIALS.—An enthusiastic admirer of the pointer wishes to go on record regarding the Eastern Field Trial Derby with the guess that two or more of his favorites will obtain a place.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notices, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Chester. By Mr. B. J. Smith, New York, for liver and white pointer dog, whelped Aug. 21, 1882, by Vanderbilt's Don out of Fanny (Buster—Biddy).

Lordman. By Mr. G. H. Nixon, Leesburg, Va., for lemon and white pointer bitch, whelped April 2, 1882, by Beaufort (Bow—Beulah) out of Fannie Turner (Sensation—Queen 11.)

Nellie Black. By Mr. Jas. Farias, Jr., Paterson, N. J., for black, white and tan English setter bitch, whelped May 1, 1882, by William (Strong's Rock—Davis's Fan) out of Ruby II. (Blue Blood—Bingham's Bess).

Gretchen. By Mr. Eugene Powers, Cortland, N. Y., for black, with white spot on chest, cocker spaniel bitch, whelped April 13, 1882, by Bob III. (Buccleuch—Nell) out of Mignon (Dart—Daisy II.)

Rose Bonheur. By Fleetfoot Kennel, Delhi, N. Y., for black cocker spaniel bitch, whelped July 5, 1882, by Dr. C. H. Franklin's imported Mountjoy (Baron—Queen) out of his imported Lena.

Elcho V. By Mr. F. Windholz, New York, for red Irish setter pup, whelped June 29, 1882, by Elcho out of champion Noreen, both owned by Dr. Wm. Jarvis, Claremont, N. H.

Chester. By Mr. Daniel Smith, New York city, for liver and white puppy, whelped Aug. 27, 1882, by Don (Roger—Biddy) out of Fanny.

Snipe. By Mr. Geo. E. Bassett, Pawtucket, R. I., for white liver-ticked English setter puppy, whelped April 6, 1882, by T. Mickel's Tip (Dash—Fanny) out of owner's Gyp (Carlo—Nellie).

BRED.

☞ *See instructions at head of this column.*

Nellie—Bob. Mr. A. Weeks's (Locust Valley, L. I.) Gordon setter bitch Nellie to Mr. A. H. Moore's Bob, Oct. 20.

Queen—Love. Mr. Edward Odell's (New Orleans, La.) pointer bitch Munson's Queen (Pet—Nellie) to his champion Bow, Nov. 5.

Nettie—Tyke. Mr. Wm. R. Hill's (Albany, N. Y.) imported wire-haired fox-terrier bitch Nettie to Mr. J. E. L. Grainger's imported Tyke, Nov. 2.

Fley—Sam Tilden. Mr. J. H. Dalliba's (Cleveland, O.) setter bitch Fley (Rob Roy—Blanche) to Mr. C. M. Munhall's Sam Tilden (Dash—Belle), Oct. 13.

Dilley—Bron. Mr. C. C. Pettit's (Galveston, Texas) white pointer bitch Dilley (Dilley's Ranger—Bird Royal) to Mr. E. Odell's (New Orleans, La.) Bow, Nov. 7.

Flora—Pedro. Mr. G. A. Colman's (Charlestown, Mass.) Gordon setter bitch Flora (Chloe) to Mr. H. H. Sawyer's (Charlestown, Mass.) Pedro (Tom—Nellie Horton).

Daisy B.—Don. Mr. G. N. Bockwith's (Pittsburgh, Pa.) liver and white pointer bitch Daisy B. (Biss—Croxteth) to Mr. R. T. Vanderpoort's Don, Nov. 8.

WHELPS.

☞ *See instructions at head of this column.*

Gem. Mr. George S. Tucker's (Peterborough, N. H.) liver and white ticked cocker spaniel bitch Gem (Snip—Feather), Nov. 4, seven (five dogs), by the Riverside Kennel's imported Beau.

Vic. Mr. J. C. Waller's (Tangipahoa, La.) orange and white pointer bitch Vic, Oct. 12, four (three dogs), by champion Bow.

Dot. Mr. N. Hathaway's (Fall River, Mass.) English setter bitch Opal (Rake—Fanny), Nov. 4, six (two dogs), by Dash III.; all black and white ticked.

Gypsey—Turk. Mr. W. Wade's (Pittsburgh, Pa.) imported mastiff bitch Gypsey, Nov. 5, seven (two dogs), by Mr. W. H. Lee's (Boston Mass.) Turk.

Feather—Beau. The Riverside Cocker Spaniel Kennel's Claremont, N. H.) liver and white ticked cocker spaniel bitch Feather, Oct. 1, four (two dogs), by imported Beau (Bob—Nell).

Gracie—Beau. The Riverside Cocker Spaniel Kennel's liver and white ticked cocker spaniel bitch Gracie (imported Snip—imported Zuleika), Oct. 29, six (five dogs), by imported Beau (Bob—Nell).

Blackie—Beau. The Riverside Cocker Spaniel Kennel's imported black spaniel Blackie (Rolf—Belle), Nov. 11, seven (five dogs), by imported Beau (Bob—Nell).

Frost II.—Dime. Mr. C. A. Boxer's (Winnipeg, Man.) lemon and white setter bitch Frost II. (Gladstone—Frost I.), seven, by owner's Dime; all black, white and tan.

Bess—Boy. Mr. P. B. Lyndo's (New Texas, La.) orange and white pointer bitch Bess, Nov. 6, six (one dog), by Edward Odell's Bow.

Fire Fly. Dr. E. Wilson's (Alabama, Clubs) red Irish setter bitch Fire Fly (Rufus—Freund), Nov. 6, seven (five dogs), by Dr. Arnold's Larry; all red.

SALES.

☞ *See instructions at head of this column.*

Bob III.—Mignon whelps. Cocker spaniels, whelped April 13, 1882, by Mr. Eugene Powers, Cortland, N. Y., a black and white dog to Mr. Earl Thompson, Syracuse, N. Y.; a black dog with white star on breast and a black and white bitch to Mr. G. G. Kelp, Toledo, Ohio, and a black and white dog to Mr. I. M. Dewey, New Haven, Conn.

Gipsie Queen. Liver and white pointer bitch (Faust—Munson's Queen), by Mr. Edward Knell, Moline, Ill., to Mr. Edward Odell, New Orleans, La.

Mr. W. Wade (Pittsburgh, Pa.) has exchanged with Mr. W. H. Lee his mastiff bitch puppy, imported *in utero*, by Taurus II., 9,333 ex. Dinalo II. for puppy by Turk, 1st Boston, 1882.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Sipio—Kleo whelps. Cocker spaniels, whelped Sept. 28, 1882, by Mr. Hugh H. Willoughby, Saratoga, N. Y., a black and white dog to Capt. H. McNair, one to Mr. Gage, and a liver bitch to Dr. Hodgman, all of the same place.

DEATHS.

☞ *See instructions athead of this column.*

Elcho V. Mr. F. Windholz's (New York) red Irish setter Elcho V. (Elcho—Rose), owned by Dr. Wm. Jarvis, Claremont, N. H., May 16, from distemper.

Chester. Orange and white English setter dog, whelped July 12, 1881 (Leicester—Crook), owned by Major G. B. Watkins, Brooklyn, N. Y., from distemper.

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Nov. 11.—The attendance at Walnut Hill to-day was first class considering the disagreeable weather in town. Early in the day the fog was quite dense, but at noon it lifted, the sun shone out brightly and the conditions excellent. Not a breath of wind lifted the flags and the sport was fine. Mr. Lee made a clean score in the Victory match, and Mr. Fellows made a fine score of 99 in the Rest match. These were not the only good scores made, as may be seen by the following:

Creedmoor Match.

J S Bennett	5455545455—47	E Burleigh	4554545444—44

ALBANY, N. Y., Nov. 5, 1882.—The fine weather, yesterday afternoon, brought out quite a company of marksmen to shoot in the Capt. John Daly match, and the sharp shooters' match. Fifteen competitors entered the Daly match. The wind and light were fine, and good scores were made. The leading scores were as follows:

Capt. John Daly Match—500yds.

Wm E Fitch, Bal. S	5	5	5	4	5	5	5	5	5	5—49
Wm T Miles, S. C	5	5	5	5	5	5	4	5	5	5—49
James Miles, S. C	5	5	5	5	5	5	5	5	4	4—48
Chas H Gans, Bal. S	5	5	5	4	5	5	5	5	5	4—48

Ten competitors entered the sharp shooters' match, and very fair scores were made, the leading ones being as follows:

Sharp Shooters' Match—200yds.

Wm E Fitch, Bal. S	11	10	11	10	8	10	10	11	12	12—105
B B Spelman, Jr., Bal. S	12	9	9	12	10	11	8	12	10	11—104
Chas H Gans, Bal. S	10	11	11	12	10	9	10	9	10	11—103
W T Miles, Hep. S	8	10	12	10	8	10	11	10	11	10—100

THE BROOKLYN AMATEUR RIFLE CLUB held their last match of the season at Myrtle Avenue Park, Brooklyn, on Election day, November 7th. Conditions of match were: Entries unlimited; 200 yards; offhand; Creedmoor targets; seven shots each score; highest aggregate of three scores only to count; ties to divide. The following were the winning scores:

A. H. Anderson	5555554—34	4555555—34	5555555—35—103
G. Joiner	5555455—34	5555555—35	5555545—34—103
C. E. Taynton	5544555—33	5555555—34	5555455—34—101
F. H. Holton	5555545—33	4555545—33	5544555—33— 99
J. S. Case	4555444—32	5555444—33	5444455—33— 98
F. Burns	4455544—31	4545455—32	5545554—33— 96

WORCESTER, Mass., Nov. 11.—The rifle club went out to Pine Grove Range to-day. The following score tells the story:

Creedmoor.

John Norman	4	5	5	4	4	4	5	4	5	5—45
A L Rice	4	4	4	4	4	5	4	4	5	4—42
Stedman Clark	4	4	4	4	5	4	4	4	4	4—42
J W Murphy	5	4	5	4	3	4	4	3	4	4—40

Massachusetts Match.

J N Morse, Jr	11	11	12	11	9	12	7	11	11	10—105
C Dusenberry	12	8	11	11	12	11	11	9	10	8—103
J W Murphy	11	9	10	10	12	6	12	10	11	9—100
A L Rice	12	10	10	8	11	8	9	11	11	— 97
C A Allen	12	11	10	9	11	9	9	9	11	8— 96

Ring Target Rest Match.

Stedman Clark	11	11	12	10	12	12	12	11	11	12—114

WAKEFIELD, Mass.—The second annual meeting of the Wakefield Amateur Rifle Association will be held at the Wakefield range Thursday, Friday and Saturday, Nov. 16, 17 and 18. The conditions are 20yds, 7 rounds, open to all, re-entries allowed, 3 scores to count, Creedmoor target, with nearly $30 in prizes.

SYRACUSE SCHUETZEN CLUB.—A number of prominent sportsmen of Syracuse, N. Y., have formed a rifle club which they call the Syracuse Schuetzen Club. They have a fine 200yds. off-hand range down at Onondaga Lake Beach and indulge in a shoot once a week. We shall hope to publish some crack scores from them before long.

NEWARK, N. J.—Gallery shooting is very brisk here, and a dozen new clubs have been organized for the winter series of matches. The Newark Rifle Club, which is a federation of all the clubs, will hold a special meeting on Thursday evening, Nov. 16, at the Plymouth Club rooms, 199 Market street. As this will be the last meeting before the tournament, all clubs must be represented. Clubs not represented will be debarred from shooting in the tournament this fall. There will be seven matches in the tournament. The first, probably, will take place on the Essex range, corner Lush and Bank streets

THE TRAP.

WELLINGTON, Mass., Nov. 10.—The fine weather Friday brought out a few members of the Raymond Club to try conclusions at clay birds, some good practice was had for the forthcoming tournament on the 24th. Some of the finest shooters in the State have promised their attendance for the Champion match. The following are the scores:

S Rice	15	J N Waterman	10
W B Witherell	13	L Stewart	9
J R Smith	10	G Longman	8

The programme for the tournament, which begins at 9 o'clock, is as follows:

Three single seven birds' sweeps, entry $1, and three single seven birds' sweeps, entry fifty cents, from trap No. 1.

Three single seven ball sweeps, entry fifty cents, and continuous fifty cents' sweep shooting from trap No. 2.

One five pair double-bird match, from trap No. 3, entry $1, and one double-ball match from trap No. 2. Prizes in all matches, 40, 25, 20 and 15 per cent. of entries.

One two-men-team match, ten birds per man, entry $2 per team. Trap No. 2.

Champion match, fifty birds per man, entry $10. Prizes, 50, 30 and 20 per cent. In addition to this a handsome silver badge will be presented to the winner of the first prize, by the Raymond Club, indicative of the State championship at clay pigeons. To be shot five birds alternately. This match must contain six entries.

YOUNG BOGARDUS has recovered sufficient to be taken to his home in Illinois.

Cartridge Grocer, 75cts., E. Redmond, Rochester, N. Y.—*Adv.*

Yachting and Canoeing.

COMPARED BY BULK.

Editor Forest and Stream:

In the review made by you of the last Seawanhaka races you have omitted one point upon which you laid great stress at the time of the Vixen and Maggie races. At that time you claimed that the relative merits of the two boats should be gauged by their size as determined by cubical contents. Now the Bedouin, we are told, has a displacement of 102 tons, equal to 3570 cubic feet. Again her length as officially measured is 70.79ft. and her beam 15.43ft. Multiplying these together we obtain 1092.28sq. ft. According to Dixon Kemp the area of the water line in cutters is about 0.7 of the circumscribing parallelogram. This would give us 765.03 as the area load water line in the Bedouin. Multiplying by .03 of the length of load water line, *i.e.* 2.12 ft., we get 1621.86 c. ft. This leaves out of account any flare in the stem and the counter and is therefore necessarily less than the truth. 1621.86 added to 3570 gives 5191.86 c. ft. as the cubical contents of the Bedouin. The cubical contents of the Gracie are given in the club lists as 4431.20 and the Bedouin would therefore allow the Gracie four minutes time over the club course. Deduct this from the amount in Bedouin's favor on the first day and add it to the amount by which the Gracie beat the Bedouin on the other days when her steering gear was not broken, and you have a very different statement of the case from that made in your last issue. The Valkyr you claim as a full fledged cutter, yet she is but one foot narrower than the Vixen. She is 18 inches longer on the water line and 13 inches deeper to the rabbet of the keel amidships, and she is a centerboard boat besides. The Valkyr's contents are 1875.86. The Orivan's are 3220.37. The Fanita, although shorter than the Valkyr, is broader and has about the same cubical contents. Under this rule the Valkyr beat the Oriva on the first day and the Fanita beat her on the other two occasions. Here then we have five races for the sloops and one only for the cutters, and that gained by an accident, the breaking of the Gracie's steering gear. What the Bedouin really proves is, that a cutter like the Bedouin, although bigger, cannot compete with the Gracie, although it is claimed that the Gracie is not in her best form.

FAIR PLAY.

[Our correspondent's comparison is a fair one, and we take no exception to his reasoning, but see no cause to alter our opinion that Bedouin in racing rig and form is as fast as any sloop in America even on bulk measurement. Valkyr may be claimed a sloop or cutter, being as near half way between the two types as it is possible to make the cross. Oriva would not rank as a fast cutter among racing cutters, and being beaten by the oversparred Fanita proves nothing one way or the other about the speed of cutters.]

CHICAGO YACHTING.

Editor Forest and Stream:

The yachting season has ended here, and the Chicago Y. C. has reason to be proud of the success it has achieved this year, and cause to look forward to a very brilliant future. The club is one of the youngest in America, but has made advancing strides in the past season that would satisfy any lover of yacht racing and yacht clubs. A complete organization, with officers thoroughly awake and pushing, caused the good results. The club has secured a fine club house for their quarters, located on the "lake front," with a commanding view of the basin and the lake. A flagstaff enables the club to work one of the most perfect systems of signals yet seen, and add usefulness to its beauty as yachting headquarters. Three of the best schooner yachts on the lakes, one being the famed Countess of Dufferin, and a number of first, second and third-class sloops, with several small schooner yachts, make up a fleet that any of our lake prots envy.

Among the yachts of the fleet, the Countess has stripped and is lying in the river near the entrance in her regular slip. The Idler and Viking are also laid away, both being safe in South Chicago. By the way, the former vessel made a memorable cruise late this fall, and a glimpse at the log is promised your readers very shortly. The cruise lasted for six weeks, and Mr. Fisher with his friends had one of the most enjoyable trips experienced. The yacht touched at Milwaukee, Sheboygan, and other ports on the lake, then crossed about Petoskey, Mackinaw, and into the fish-abounding bays in that vicinity a few days, and allowed some notable efforts in the piscatorial art to be recorded before the white wings were again unfolded for a further cruise down the Huron, Superior, and even Erie lakes was undertaken. These incidents and joys, pleasures and sorrows, and above all, notable experiences in storms and disasters, will be of interest to your many readers about this city. The other yachts are in a semi-comatose state. The club house has been leased to the Chicago Bicycle Club until the opening of next season, though a friendly corner near the fireplace has been tendered the club by the bicyclers.

It is understood here among yachtsmen that some of the Cannucks will bring their speedy vessels to this port next summer and try to wrest our honors from the club. Toronto yachts are the most talked of, and will attract attention here next season. GREAT WEST.

HAS IT COME TO THIS?

THE New York *Times* recently summed up the results of the Seawanhaka races as follows: "it was evident that the best of our sloops are probably as fast as the cutters."

Very good. Perhaps they are at least as fast as an untried cruising cutter of medium speed, sailing under a short rig. But then that is not the question, and never was. The way the *Times* puts it shows well the change come upon us in America. From a positive conviction expressed by experts and old hands that our sloops could sail to windward as well through as at anchor, it now appears that the boot is quite on the other leg, and instead of proving how very slow cutters really are, the *Times* mildly concludes that probably our best sloops are as fast as some haphazard cruising cutter. We had supposed the question of speed was on trial. That seems no longer to be the question, for the issue has turned about completely, until the critics of the day want to know how nearly the sloop can hope to cope with a cutter! Time, and FOREST AND STREAM may be thanked for the witnessing of the issue in the public estimation. We note likewise that our contemporaries have fallen back one ditch, and while no longer venturing an issue in respect to speed, seek to defend their sinking cause by citing the bugbear of "great draft," and the purely imaginary lack of accommodations and "shifting cabins" the cutter is supposed to possess, in direct opposition to the truth. Time and greater knowledge will likewise knock these last supporting pins from under the antiquated school of provincial ideas. The accommodations of the cutter Bedouin are nearly double those of the sloop Gracie, and cooler by five degrees or more in summer, as anyone can convince himself by trusting his own senses, and nine times out of ten the Bedouin draws less water.

CRUISE IN A THREE-TONNER.

Editor Forest and Stream:

Having read with great interest your recent articles on single hand yachts which appealed very forcibly to the sympathies of myself and friends, fond of sailing in small yachts, I am induced to send you the log of a recent cruise down the Sound in a three ton cutter. The articles in your journal, evidently written by one perfectly conversant with the delights of sailing in small boats, have come into definite so thoroughly that I will confine myself to a description of the cruise. The cutter Teal is 21ft. on deck, 20ft. load line, 7ft. beam, and draws 3ft. 6in. aft. The topmast houses and the bowsprit reefs, but we carried single jib which was run out to the bowsprit end with a traveller in cutter fashion. The cabin is very commodious for so small a boat, and the numerous visitors who came alongside to the "most complete little yacht they had ever seen," all expressed surprise at the room in the cockpit and below. Two could find very comfortable accommodations for a long cruise in the cabin, and a third might be taken along without much inconvenience. Our outfit was a very complete one, including all of the articles mentioned by you in speaking of single hand yachts, excepting the frame for charts which would have come in very handy at times and saved the charts. The rig worked satisfactorily and in light weather was all that could be desired. But if I were to sail the yacht alone for any length of time, would much prefer the yawl rig which my experience in San Francisco has taught me to regard as the most convenient and safest of any devised. The Teal proved herself a most excellent sea boat and went along dry and easy in a sea I know would have bothered my former 45ft. sloop to such an extent that beating would have been a fruitless and very wet task.

The good behavior of the Teal was due to her moderate beam, good depth and high freeboard, which gives her nearly a plumb side without flare, and so permits the boat to ease into the sea and rise again through her ample buoyancy instead of hitting the sea with a flat bottom. The difference between the action of a wide, flat boat and a deep boat, like our cutter, I can best describe by saying that while the former falls on the sea, the latter settles into it, going along with greater ease and less check to her speed, and also throwing less spray. We cooked all our meals on board, and never went ashore for a night during the whole three weeks' cruise, much preferring our cabin to any country hotel. All night a blanket was needed, and small as the yacht was in dimensions her depth made full amends for the modest tonnage, and the crew of two hands found no reason to complain of want of room at any time. Her draft of 3½ft. we found no hindrance and never gave the matter any attention, though once we got on the mud. We should not have acted differently or gone anywhere else had we drawn only half that amount. As the Teal is a very good type of small boat, neither as narrow and deep as a racing cutter nor as wide and useless as an ordinary catboat, but fast, cheap and very roomy, well suited for cruising and racing, and also a safe boat and able in rough water, I hope to furnish you with her lines and spar plan soon. With a few minor improvements I think the Teal a very useful style of boat for one or two hands, as there is no shifting ballast to handle and no danger of capsizing. A boat like her can be built for the same sum as a 5th and mainsail boat, and offers far greater usefulness in the pursuit of general yachting purposes. The yawl boat question referred to in your recent numbers is something which must be solved for the benefit of owners of small yachts. My yawl was a regular round bottom tender, only 6ft. long, and, of course, rather chunky. She could not conveniently be taken on deck, and towing her in rough water was a bad job, as the log will tell. I think with you that something collapsable like the Berthons will have to be introduced instead.

SATURDAY, August 12, '82.—The Teal, with the relator for captain and cook, G. H. crew, and sometimes passenger, sailed from West Brighton, S. I., at 2:20 P. M., with moderate S. W. wind. The day had been dark and cloudy, and at this time threatened rain. Barometer 30.40. Passed under East River Bridge, 4:15; Hell Gate, at 6 P. M., and came to anchor on eastward side of City Island at 7:30 P. M. A storm could be seen passing around to the N. E., but did not touch us, and the sun set in a beautiful red sky. An hour after the sky was clear, betokening a pleasant day to-morrow. I said we came to anchor. We did not. We ran a line to a buoy of the marine railway, and before we turned in, a second one, and lay to it all night. A steam yacht, large schooner yacht and several smaller ones were in our company, beside a number of smacks. Corn beef hash, potato salad, coffee and pie, constituted our dinner at 8 P. M. Distance made, 35 miles.

SUNDAY, Aug. 13.—Got under way at 5:30 A. M., with light breeze from S. W. Passed Sand's Point 6:30 A. M., and at 7:35 came to anchor off Peacock Point. G. went ashore to see his friends, the Dudgeon's, while I prepared breakfast—scrambled eggs, coffee, etc. We had had coffee and coffee cake from the "Dutchman's" at West Brighton at 5 A. M. In a half hour G. H. returned from shore with a pail full of apples, potatoes and onions. After breakfast, at 9 A. M. we got under way, where H. took, where H. went ashore to reach Lake Rinconkoma. Set topsail. The wind veered to N. W., and strengthened until we took it in on arriving off the harbor, which we did at 1:30. From the Point we laid a course by compass E. S. E., Stony Brook not then in sight, but soon was brought us directly to the harbor. There was considerable sea here and the wind blowing fresh on shore. The channel narrow and no deep water at low tide inside. After cruising around outside a while we gave it up, and determined to run on for Ther to the eastward and make Port Jefferson. Arrived at that harbor at 3:30. Found that also difficult of entrance and strong ebb tide running out between the jetties which mark the channel and heavy rips on eastern wall. Anchored in smooth and deep water outside near the beach, while the skipper went around and probed the bottom with the boathook (in the yawl boat). Sounded all the way up between the jetties and found nearly the whole distance only one to three feet of water for one-third the distance in from each wall, at this stage of the tide, which was nearly low. On arriving at the yacht, the skipper first rove new peak halyards, which had carried away off Stony Brook, and then took the yacht in tow and led her into the harbor with the first of the flood. By this time the wind had died out altogether, but once inside there was a little air and we got up sail and finally, at 7:30, got up to the town and anchored in four fathoms, among a number of yachts and vessels. Distance made, forty-five miles.

MONDAY, Aug. 14.—Did not turn out early. Had breakfast about 8, and left for the yawl and went ashore. Daylight revealed to us a lovely little harbor, completely land-locked, with plenty of deep water close to shore, without the intimation of a swell. Numerous rowboats and sailing boats were out with young people of both sexes, their shouts indicating that they probably city boarders, here for the summer vacation, either on some one of the large schooner yachts or at the hotel on shore. Sunday evening it was as still as a country churchyard, but this morning was noisy with the caulker's hammer on shore, where the wharf and ways of the yard seemed to be busy, and boat building. Two three-masted schooners and one steamer were awaiting their turns at the marine railway, and one yacht about ninety feet long was still clothed entirely in the canvas covering she had worn through last winter. Her owner had probably been short on ruffled sticks, and is taking his vacation on foot like the rest.

We spent two hours on shore laying in fresh supplies and mailing our letters.

Returned aboard at 12 and after lunch, or breakfast dumb chops, fried potatoes, coffee and peach cake from the before-mentioned Dutchman's), at 1:15 got under way with a fair light wind from S. E. taking us out of the harbor. High water, first of the ebb.

There being no more harbors to the eastward on the Long Island shore and knowing from many accounts that Black Rock Harbor was a favorite resort for the yachts from New York, we determined to make it next. The Connecticut shore could not be seen, so we took our course N. N. W. by compass. The wind was light, running around to the eastward after we got into the sea and we did not make Perfield light till 5:30. When within about three miles of it we saw the sloop Æolus, Mr. McMurray, Seawanhaka Corinthian Y. C., pass on to the eastward two miles ahead but could not attract her attention. As we were about entering the harbor, we were pleased to see her entering. She is a fine sea boat (about 45ft. I believe in her size) and we anchored about fifty yards in her wake, off the hotel, in three fathoms of water and with fathoms of chain. After supper H. and I went ashore to the hotel for awhile, which was lively with summer boarders. There was a dance going on in the hall. Then we went on board the Æolus, where we met Mrs. McMurray, her daughter Katie (a promising young debutante at yachting) Miss. Hewitt and four gentlemen guests. They are off on a cruise for four or five weeks. After promising to meet them at New Haven in a week or row, we pulled to our yacht and turned in. Distance twenty-five miles.

On coming aboard at Port Jefferson, I dropped the key to the cabin overboard, which vexed me not a little. Fortunately the hatch had not been fastened. I had brought it and took the nuts off the bolts holding the clamp, enabling us to take it off and open the doors.

TUESDAY, Aug. 15.—Shortly after turning in a disturbing swell rolled in from the Sound, indicating the approach of wind. Soon the wind came from S. W., and it blew very fresh, and the swell tossed us up and down all night, disturbing me with frequent calls on deck to pay out more chain, or some similar duty, while H. slept like a young cub the night through. We were to have started at 5 A. M., but at midnight I thought it would be more likely 6 A. M. Wednesday. Slept most of the time till 7. On arising found the wind had gone down considerably, so we got under way for New Haven immediately, and saying good-bye to the Æolus party who, all except the ladies, were on deck, we glided out of the harbor in smooth water. Once out, ran up the topsail and at last got it to set properly, the first time of the season.

The wind grew lighter and lighter, and at times was almost calm, and the sun boiling hot. Off Bridgeport, and again off Stratford Point, passed through fleets of oyster sloops. Some of them were fast sailers and trim looking craft, and one had evidently been a yacht in her earlier days, low black hull, without sheer and straight stem. We were evidently getting near to the home of the sharpie, as almost every other boat except the oystermen (and even some of them) were of that peculiar rig and build. As we could not be in any more of a hurry than we were for lack of wind, we ran up and hailed the solitary individual who was "cook and crew and captain too," of the first one. He told us she was 35ft. long, did not carry a pound of ballast, drew six inches of water, could stand more weather than the oyster sloops, in fact he was often out with full sail when they had to reduce theirs. His sails and all others are leg of muttons with a horizontal sprit to the clew. Except the pounding, they were good seaboats, so this veteran said. The wind freshened and we hastened on towards New Haven, entering the harbor and dropping our hook between the large schooner yacht Prospero, N. Y. Y. C., and sloop Henrietta, A. Y. C., near the first steamboat dock, at 3:30 P. M., in two fathoms of water with nine feet chain. The wind continued growing stronger, blowing S. W. up the harbor, and by the time we swung to it a heavy swell was rolling in. We could not keep the dingy clear of the yacht until we rigged a boat-boom with the boathook, topsail halyards, and guys fore and aft. We looked as stylish then as any of the big ones. Everything made snug, we packed out our store clothes and prinked up for a stroll ashore. All ready, the skipper jumped into the dingy; a swell took her at the same time under one of the guys, which prevented him from doing the same, threw his whole weight on her side, which capsized her and dumped all the Sunday-go-to-meeting things into the salt water. It was funny to see the skipper scramble aboard and survey his condition. The run ashore was not to be thwarted in that way. The boat was righted, bailed out, and, the skipper having no change of clothes, went on dripping as he was. We took a walk around the town, had supper on State street near Chapel, laid in some stores, and returned to the boat about 7:30. Turned in at 9:30.

WEDNESDAY, Aug. 16.—It was raining when we turned out at 7 this A. M., and no chance for the skipper to dry his clothes; so, after breakfast they were hung on two lines in the cabin. By 10 it had cleared off though, and by 12 we were ready for another visit ashore. Prospected the town pretty thoroughly, walked through the classic campus of Yale, had lunch ashore, loaded ourselves up with stores, all we could carry, forty pounds ice, water melon, fruit, fresh bread, pies and groceries. Returned at 3; found a strong breeze from S. W. blowing, and had to handle the dingy very gingerly to keep her from shipping more water than she could comfortably carry with our load. Slipped our good clothes expeditiously and got under way; sailed up the harbor prospecting for fresh water; ran in alongside one of the docks and filled our tank and then worked out. In the latter process ran aground, not knowing the waters; then sent G. out quickly with a line, hauled desperately on it myself from the yacht, and in one of those efforts pulled myself headforemost overboard. I plugged a hole in the black mud on the bottom and came up with my bald head plastered over with it. Scrambled aboard and got the half dozen louts ashore to fry the hauling this time, and she came easily out of the mud. We had intending making a start for New London, but it was then 5:30 and too late, so we found a comfortable berth, had a good supper of beefsteak with onions, Lyonnaise potatoes, sliced tomatoes, huckleberries and coffee, and turned in, with the intention of starting at 4 A. M. next morning. Barometer 30.10. In the evening had a call from two local yachtsmen curious to see the cutter, her presence being remarked by many.

THURSDAY, Aug. 17.—Last night the skipper broke his crystal optic, and that broke up the arrangements for departure temporarily. He had in consequence to go to New York city. Left at 6:30 and returned at 3 same day. Wind blowing fresh from S. W. Following suit of some to be outside, took in a single reef in mainsail and got under way. At that moment a catboat capsized a hundred yards off and her crew of two were floundering in the water. We were hailed to go to the rescue, which we did, but a boat from the Prospero took the job off our hands. No one hurt, but catboats fell below par in our estimation. This was 4:30 P. M. Before we got out of the harbor had to shake out our reef and a half hour after set topsail.

Made Thimble Islands just after sunset, and ran in among them after several fishing steamers and the sloop yacht Phantom, and three or four others. This is a lovely anchorage, high rocky islands topped with trees and surrounded by deep water, a dozen of them, and the channels between them nowhere more than 100 yards wide. Summer hotels crown several of them and the bright dresses of the resorters on the docks, beach and in row boats enlivened the scene. We were sorry we had not fetched in six hours earlier.

After our supper (mullagatawny soup, poached eggs, tomatoes, pie, and coffee) the captain sat on deck to have a smoke while the crew went ashore to inspect the country and principally the inhabitants. The evening was calm and still as death. The voices of the loiterers on shore could be heard from one island to the other. One group sang songs and tempted the skipper to draw forth his flute, with which he made the rocks echo. Turned in at 10.

FRIDAY, Aug. 18.—Got under way at 6:30 and went out the channel to the southward, the passage by which we entered. There is a shorter passage to the eastward, but it was high water and being uncertain of the location of some rocks, we would not risk it. The wind was fresh from north as we ran out, but a few miles eastward it fell light and we set topsail. We have now to set properly and it is a strong pull for us in these winds. Off Niantic Bay the wind drew around to N. W.

Before starting we had only coffee and bread, so at 9 we flowed the sheets, put helm down and let her go easily along on her way, while both of us went below and had breakfast. Passed the mouth of the Connecticut at 12:30. On one bank is a large hotel with numerous beautiful cottages of latest architecture surrounding it. The shore all along is dotted with pretty residences among the trees which run down to the water's edge in many cases. Passed the light vessel off New London harbor at 4 P. M., and at 4:50 anchored off Pequot, among the sloop Julia, three or four large steam yachts and schooners, in five fathoms, close to shore. As we were a mile below the town, and forbade to go ashore, we hauled down our flag and put out our riding light at 5:30 and went ashore. Hauled the dingy on the beach and made fast by the chain to an iron bar in the sea wall. The finest sand I ever saw, I think, was found here, and we afterwards took some aboard for scrubbing purposes. The floats at the pier were crowded with gigs and cutters from the various yachts, and we did not want to intrude on their privileges. From shore our little cutter looked smaller than she ever looked; she was a gnat among bumblebees. We took the stage up to town, called at the post office, and received the cabin door key (after some trouble in explanation) and a telegram from friend K., but no letters from my office. Returned on foot after dark with more fresh provisions in our hands, and found it a much longer walk than we expected. The harbor of the Pequot House looked like a festive occasion, so many riding lights were there out on the water. Walked around the hotel and looked in on children's dancing party and envied the rich old duffers who owned the magnificent yachts off there, smoking on the veranda, and their rich young sons making love to the daughters, all dressed in the highest style of art. Barometer, 30.40.

SATURDAY, Aug. 19.—It was so cold last night we had to double up our blankets. Got under way at 7 A. M., anxious to get out of such unfavorable comparison as we made with the big, brass-mounted fellows around here. Tried to run up to town for ice and oil, but being ebb tide and head wind (N. W.) gave it up as taking too much time, and made for Greenport. Out of the harbor we had a coarse S. W. by W., and set topsail. Off light ship, lay to while we had breakfast. The wind freshened as we approached Plum Gut, and we took in topsail. In the Gut met a violent tide rip all of a half mile wide, and the water boiling and tossing in large waves as if dashing over rocks close to the surface. But inside of the beacon we were in a beautiful bay, and in smooth water and with a good breeze we went skimming along. The schooner Norna passed us here bound for the same destination. Until now we were never so fully impressed with the extent and beauty of the water for small yachts in the vicinity of New York, surpassed by none in the world probably, and this particular bay we thought the most charming we had yet found. We entered the reach on which Greenport is situated at 1 P. M. On the east shore at a place called Dimock Brook we observed a large excursion steamer had just landed a picnic party and we concluded, as it was early in the day, we would join the picnic for an hour. Ran along the shore to find anchorage, but to within 50ft. of shore it was 3 fathoms deep. Finally anchored above the wharf, had lunch and then went to the picnic. The excursion was from Norwich, Conn. Looked on at the dancing and then walked through the grove on the bluff where there is a lovely view, and the sport of the lovers who had progressed as far as a parlor sofa-ride; but out of the crowd saw but one or two good looking persons. At 4 ran over to Greenport and anchored in 4 fathoms, close in. The New York sloop Whileaway, schooner Norna, steamer Lookout, sloops Pirate, Arrow, also Coast Survey schooner Silliman and others around the island steam yachts coming and going every now and then.

Went ashore and spent an hour walking about the town. There is a Long Island appearance about the place and the inhabitants, and the absences of the appearance of business, or enterprise and thrift, which characterizes the towns on the opposite side of the Sound. The main industry here seems to be the menhaden fishery, and at least a dozen steamers have come in this afternoon and are lying at the wharves. Saw the crew unload from one a wet 180 fathoms long, worth about $240, and it was all difficulty that they piled it all on a two-horse wagon. It was to be spread out on a grass field to dry.

Returned aboard, with more ice and more provisions, about dark. Had a visit from a lady, boy and her two daughters, from one of the

other yachts, I think aged about twelve and fifteen, who were invited aboard by the skipper upon hearing them express surprise at the "little boat." They were interested in everything about her and the voyage we had made, were pleasing and genteel in their manners, and their visit was enjoyed. We did not introduce ourselves. Had a late supper, after they left, and laid off and smoked and read the New York morning papers, which we had procured on shore, played the flute afterward on deck a little while, and then turned in.

SUNDAY, Aug. 20.—Being a day of rest, we concluded to remain in port and take it easy. Turned out at 7, but it was 8:30 before we were through breakfast (salt mackerel fried and potatoes fried in egg batter *à la* Greenport, and coffee and sliced tomatoes). Then scrubbed decks and cleaned up generally, and after that laid off under the awning and read what was left unread last night of the *Herald* news, and wrote up the log. Had a chilly last evening and cold at night, but now it was blazing hot. Ice cold lemonade and cake came in acceptably. Finally G. suggested fishing, or it was suggested to him by seeing the fish jump up all around. So he went ashore and procured three crabs. As we had to steal them, the owner being absent, he was too conscientious to steal any more. He had hardly dropped his line overboard before he hauled up a sea bass about eight inches long. That started me up. I caught one and he two more. Then the bait was gone, and he had to go ashore for some more. This time he brought four clams. We soon had nine fish, and concluded we could not put any more to good use, so we stopped. Had lunch, and at 3:30 P. M. got up sail with the intention of running up the bay and trolling for bluefish awhile. We had been told last evening ashore that there was good fishing of the kind in Shelter Island Sound. Wind moderate, N. W., barometer 30.55, highest yet. There was a delightful breeze and beautiful, clear, green water and smooth, and failing to find the location of the fishing grounds, decided to run on to Sag Harbor. With topsail set we went skimming along through waters not so wide as the Thames, and sandy beaches with occasional wooded high lands, about twenty feet high only. Dropped anchor to eastward of the wharf at Sag Harbor at 6:30, shortly before sunset. Snugged up everything on deck and then prepared supper—the nine fish fried and six cans of green corn, coffee, and a good appetite.

We are getting so accustomed to the limited quarters of our little boat that we find all the comforts we want on board of her, so that, although in port all but the three hours out of the twenty-four, neither of us have been ashore.

Before we left Greenport, the schooner Haze, sloop Cute, and several steam yachts came into port and others departed, the Arrow early in the morning. Barometer 30.65. This place (Sag Harbor) is the quietest place (next to Port Jefferson) we have been in yet—except the church bells and the town clock there is not a sound. But few vessels in port, and only one sloop yacht, and she and ourselves showing the only lights in harbor. It is evidently not a favorite resort, the channel being narrow and the waters around shoal. Anchored in two fathoms; moon in first quarter.

MONDAY, Aug. 21.—After breakfast took a leisurely walk ashore and around the town. This is quite a substantial old place, quite large in the size of Greenport and more substantially built. Several large brick buildings, one a flour mill, a watchcase factory and others. One church of modern architecture of stone and a half dozen frame, and several large mansions with extensive grounds. Got 30 gal. under way with the intention of trying the bluefishing in Peconic Bay. Last night, after we turned in, it came on to blow very fresh from the north right into the harbor, and caused quite a swell at our anchorage. Slept uneasily and had to go on deck once and pay out more chain; up to 4 fathoms. In the morning we shifted berth to N. E. and moderated, and at the time we started it was easterly and light; set topsail before weighing anchor. A few miles up the straits at about 9 wind came out from S. W. and fresh; took in topsail. A dozen large fishing sloops were ahead and following us, heading towards Big Peconic Bay, and thinking they were after bluefish, we followed past Little Hog Neck, before we discerned that they were on their way home. Put about for Jessup's Neck, where, we remembered, we had been told were the traps of the Fishers Island fishing sloops with fishing parties trolling, and among the number were recognized by the parties who visited us Saturday evening at Greenport; returned their salutation. Trolled for about an hour without catching anything, or seeing any other party more successful and started sheets for Greenport again. Were attracted by a number of sails at Prospect Point, and running into Deering's Harbor, behind the land were surprised to find about thirty boats, some of them quite large, anchored there. As it was perfectly land-locked and average depth of 3½ fathoms, decided to anchor, and did so. Ran over to Greenport for some pressing articles and then back, and after supper took a walk ashore. Were surprised to find such a pleasant place here. It is quite a town, but a summer town only; inhabited not more than three months in the year; roads well graded with gravel sidewalks and handsome cottages lining them. A large hotel is also on the grounds, with a pavilion down by the water's edge. Here we found handsomely dressed ladies and gentlemen rolling ten pins, and the former very beautiful. At the hotel was also a child's party, and we saw the last dance—9 o'clock. One little thing, not more than five years old, was the most graceful dancer in the room.

[TO BE CONTINUED.]

A CANOE WEIGHING TEN AND ONE-HALF POUNDS.

Editor Forest and Stream:

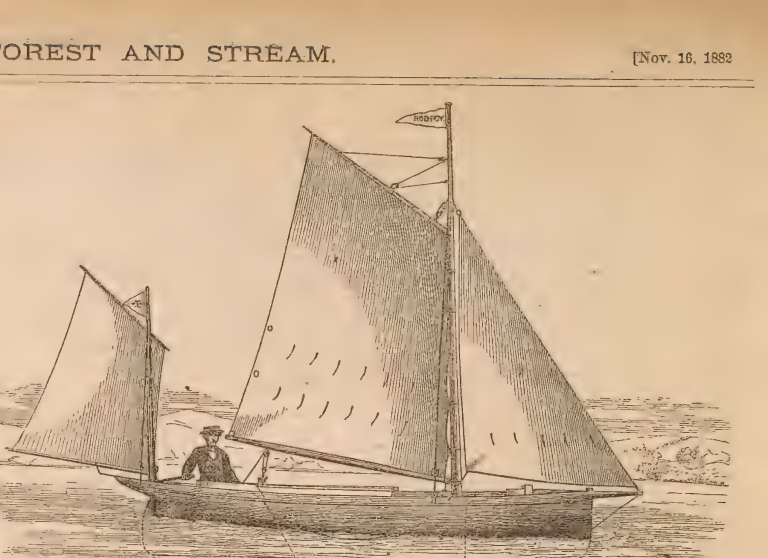
As nearly all your readers are interested in anything pertaining to boating, and as my own name has been mentioned by various correspondents in connection with light-weight canoes, I thought it might be of some interest to a few of them at least to give my own views and experience on the subject, both as an individual and a builder.

I have just completed to the order of your correspondent, "Nessmuk," what I believe to be the smallest and lightest canoe ever made. It is 9ft. long, 2ft. wide, 8in. deep amidship, and 1ft. at the ends, outside measurement. Her keelson, siding, gunwales and very short decks are white cedar. The siding is scant 3-16in. thick. The stem and stern posts are of white ash, and all ribs—27 in number—are red elm. She is copper fastened and finished in oil and varnish, and weighs just 10½ pounds.

Will such a craft float any one? Yes; she has floated me—110 pounds—on a draft of 3in., having 4in. above water, which is necessarily very frail, but I have no doubt "Nessmuk," who is a veteran of light weight, will do what he proposes, viz: make a successful trip through the Adirondacks in her.

Would I advise anyone to buy such a craft? Certainly not. It is too small, too frail for any but a light weight enthusiast, who is willing to incur some risk and sacrifice some points of comfort that he may be able to say he has "done the wilderness in the smallest, lightest craft that ever floated a man." Still it proves the value of that system of construction which makes it possible to build a boat so light.

As an individual I should prefer a canoe 13ft long, 30in. wide, weighing 30 pounds. With that I can carry plenty of duffle, can shoot my 10-bore with 5 drachms of powder all day, take a yearling buck in over the broadside in open water—this requires care and skill, but I have done it—or I can stand up and move about in her and ride a big sea without danger of capsize. She is also large enough for two persons with small outfits each, and three weeks' outfit, and will stand a reasonable amount of racket.



If I had a long distance to go and couldn't have any dinner till I got there, I should take the Long-laker, as I believe her to be the fastest rowboat in the world. The guides stick to her because she pulls easy. They are used to her and to nothing else, not enough. A man can, I suppose, get so that he would call a racing shell steady. The hardest two hours I ever sat in a boat was once upon a time in the bow of a Long-laker, floating for deer. I expected to capsize it if I got a shot, and was very glad when her bow was turned toward camp.

As a builder I have no choice. I please myself best when I please my patrons. He who foots the bills should have his choice—he can with me, to all reasonable latitude. We are building a great variety of small craft, but are always willing to undertake new work, and work out the ideas and plans of others when they are at all practical. The best way for a man to get what he wants is, first, to read FOREST AND STREAM a second time, then write to us and tell us what he wants—and all live builders do—for a catalogue. Don't forget to write plainly your name and post office address. I always find it difficult to mail a catalogue to those who forget to tell me who they are or where they live, and I presume other builders find the same trouble. When you get the catalogues, read them; they are printed for that purpose, and in most cases describe what the advertiser has to sell. Only now and then a man tells you what his neighbor has not got, and he does it under the impression that you will think he has everything else.

If you find in any of the catalogues what you want, order it. Don't be afraid of ordering it a day ahead. A boat is all the better for being built a little time before using it. If you haven't a place to store it, the builder will keep it until called for, only in that case he may want a small advance to insure him against loss if for any reason the boat should be left on his hands. If you do not find in any of the catalogues a description of what you require, write any or all the builders, stating plainly your needs. When you have all desired information, purchase where you please.

J. H. RUSHTON.

CANTON, N. Y.

MR. McGREGOR'S YAWL ROB ROY.

SINGLE HAND YACHTS.

[CONTINUED.]

SINCE the commencement of these articles a large amount of correspondence has reached us, and numerous inquiries have been made concerning small yachts from the designer of the lines recently published in this journal. From this and the encouraging indorsement of many we conclude that in the subject of "Single Hand Yachts" a theme of great popular interest has been touched, fully justifying the trouble we have been to in drawing attention to a phase of yachting still almost entirely neglected in America, and really not yet understood even by persons who ought to know better. Small yachts constitute a nursery for amateur seamen, and being within the reach of a thousand where but one can afford or cares to go beyond the sum of five hundred dollars, it is natural that such widespread interest should be taken in what we have written concerning these boats, and we hope the ultimate outcome may be a fleet of able and complete little craft out of which so much pleasure, health and instruction is to be got.

Single hand yachts and decked boats generally of moderate tonnage capable of distant cruising are nothing very new, but in British waters make up a numerous lot in every port around the coast. It is all the more strange, therefore, that their virtues and the possibilities they present should be hardly understood and completely underrated on this side of the Atlantic. Attention has been attracted by catboats and ballast-shifting traps instead, the safe and comfortable homelike little vessel having been so far overlooked that many a person most anxious to follow the sport, but disdaining the scant satisfaction a catboat affords, has considered himself forced to abandon all idea of owning a ship-shape yacht until his worldly fortune had swelled to exceptional dimensions, by which time gray hairs were likely to make their appearance and youthful fire would be found quenched through years of toil and disappointment.

In nearly all the correspondence which has reached us two ideas or doubts seem to be uppermost in the minds of the writers. For one thing they lack confidence in the safety of two and three ton yachts, and for another they question their fitness for anything but nearly sailing and harbor use.

As to safety fears may at once be set at rest. There is little or no connection between safety and size. It is a common enough experience to find a large vessel abandoned during the heaviest of the gale, which has caused her loss, by taking to the small boats, while she often survive the foundering of the ship, though poorly devised, and not half as well supplied to meet the fury of an ocean storm as a well-built and properly-equipped yacht of a few tons burthen, to say nothing of their being overcrowded and in charge of men whose training and experience is of little account in the handling of small boats. Model, strength, outfit, rig, and stowage of weights are the elements of safety, and with these tonnage has nothing to do. There is many a yacht of two or three tons we would sooner be afloat in at sea than some sloops and schooners twenty times that tonnage we might cite. The smaller the yacht the stronger she is, or ought to be, in proportion to the strains she has to manage. She is built of fewer pieces, with fewer butts and scarphs, and of clearer material, and in small work much better fitting and fastening in detail can be had than in a large vessel. Moreover, in a yacht destined for hard service, special precautions to insure strength by ample tying are easily provided in iron floor straps, clinched copper fastening and stiffening with knees of perhaps grub oak. The small yacht, if well built, is of vastly greater strength than the average hooker voyaging up and down the coast year in and year out without harm.

In point of model, it is true enough that the catboats and their kind which constitute the majority of the small fleet in America are sadly deficient and positively dangerous for aught but smooth water sailing. But the dangers to which such contrivances expose their crews must not be accepted as the criterion by which designs of a very different nature are to be judged. With two essential requisites prominent in a design, a small boat can be made perfectly safe in any kind of a sea, however uncomfortable her limited dimensions may make her. These two essentials are low enough ballast to make a capsize a physical impossibility, and buoyancy enough to rise clear of an oncoming crest of a sea. The first is secured by the use of outside ballast, for the obvious reason that its leverage to right increases with the depth of its position. If enough ballast be stowed low enough, the boat may be knocked down by wind or wave time and again only to come back to her normal position as soon as the cause of the incident has passed. It need hardly be added that the boat must be kept free from shipping and retaining water, as that would derange the contemplated arrangement of weight, and might be the cause of a serious catastrophe. To this end yachts intended for work in open water should be decked fore and aft, and what cockpit is needed for convenience should be cut off from commication with the hold of the boat. This presents no difficulties whatever, though failure to entertain some such provision has been the cause of sending more than one craft to the bottom, through the inopportune filling of the hold and the eventual sinking through destroying the spare buoyancy necessary to keep the boat afloat with her ballast and equipment.

In practice a mishap of the kind is prevented by building the cockpit water-tight, and carrying the door sill of the cabin high up, about the level of the deck, with the slide so arranged that a single motion on the part of the crew effectually closes all access to the interior. An excellent plan has been devised by Mr. H. W. Eaton, whose cabin house or skylight in the new cutter now building by Stephens, of Staten Island, is arranged on the plan illustrated in the design for a single-hand yacht recently published in these pages. Entrance to the cabin is effected not by a door as usual in smooth water sloops, but by means of a flap or lid on top of the skylight. This can be closed in an instant, a spring button catching and holding the lid down close and practically water-tight. But if the usual doors are preferred, a little genius will suffice to accomplish much the same end. In this connection it should be remarked that so far as ventilation is concerned, a square foot of hatch overhead is worth as much as half a dozen in a vertical bulkhead, and for comfort in harbor a port forward or a second "lid" lifted an inch or two will supply all the fresh air and draft down below that can be desired. Ample buoyancy to lift out clear of everything, and to give enough "life" to the boat is obtained by high freeboard, forming a goodly above-water body which refuses to be sunk, and lastly upon rising with the same deadmacy a bucket forced down will display. This spare buoyancy is more readily secured in narrow vessels of high sides than in broad boats, which would become top-heavy with the same amount of freeboard. Given then low enough weights to prevent a capsize, and freeboard and tight decks for buoyancy, and the boat, no matter how small, will, like a corked bottle, "bob up serenely," right side up, under the worst circumstances.

Such a boat is primarily indistructible and all other requisites may be considered subordinate to the above. There is, of course, something in the rig, since the yacht is not merely to be safe, but also to be manageable. The rig must first of all be stout, as to spars, wire, rope and fittings and the iron work must be perfectly reliable. Attention to details is all that is necessary, coupled with proper proportions in all cases. It is not all too common spectacle to see an iron rod or a wire stay capable of withstanding a strain of several tons set up to a hook or by a lanyard which would burst upon the application of one quarter the strain. As no part of the rig is stronger than the weakest part, so too stout wire and heavy gear affords no safety against accident if the hooks, shackels, seizins, splices, iron work and its fastenings which go to make up the whole are in the least neglected. Screw eyes and bolts, slim necked hooks, threads liable to strip, spikes which are apt to draw and slovenly weldings are the weak spots to be guarded against in fitting up. Builders are surprisingly negligent in these matters and it behooves owners to have an eye upon the work or get a friend of mechanical attainments to look after the job for them, or they may get left in some trying movement.

As for the rearrangement of sail, no special rule can be laid down to govern all cases. So much depends upon the kind of service the crew proposes to engage in, that fitness for the purpose must be the guide. The following considerations have a bearing upon the decision. A distribution of sail which might offer no trouble to a couple of hands for an occasional short sail in pleasant weather in well known waters, might become altogether impracticable under more exacting circumstances, such as a long day's work, taking the weather as it comes and picking your way in strange latitudes. What may be no more than light exercise for an hour or two becomes unbearable toil if continued day in and day out, and sometimes twenty-four or thirty-six hours on a stretch. The sail plan suitable for smooth water is not fit for rough and tumble in a jump all day, and what may be conducive to speed and handiness under some circumstances will be discovered to be the reverse under others. For small boats the cat rig seems the simplest and easiest to manage. Perhaps it is in smooth water, but in a sea, the weight of the mast in the eyes of the boat is a very serious objection, a strain on the hull, and liable to go by the board for want of proper staying. The long boom is a tripper, the yacht will yaw violently, and steering becomes a hardship requiring too much attention; nor can the rig be honestly said to be the certainty and safety of others. While well suited for an hour's dash about a harbor, the cat rig is not to be thought of in a regular cruiser.

The sloop is a much better arrangement, and for moderate work fairly acceptable, though under trying conditions it fails seriously short of what a handy rig should be. In fair weather all goes well, but when overtaken by a squall—common enough in summer—the boat must be luffed, the mainsail lowered to reef, while the sea knocks you out, the jib flies, and off goes your pay before you are ready. Or the yacht gathers sternway, your helm is then wrong, and you quickly drop the work in hand to get the boat once more under control. If you drive off under jib alone, there may not be sea room enough to do it, or you run to leeward of the intended course, and if in company of a crowd of trading vessels a mess is the most likely end of the ill-started proceeding—trying to reef a sloop underway. Anchoring is a lubber's device—takes time—cannot always be done and involves a good deal of work when it can be done. Heaving to in a sloop is invariably put off till the last moment in consequence, and trouble always imminent. Still, anyone content to take his chances in running for shelter, or make the best of a bad job, will find the sloop a much better way of disposing his sail than the cat rig.

We have been upon long tour runs, with plenty of work in view for the day there is a third distribution of sail in vogue which for handiness and safety is incomparably superior to all others. We refer of course to the "yawl," an illustration of which has been given in the sail draft of the design by Stephens. It can best be described as a sloop with the boom cut off at the rudder head and the canvas thus clipped put into a small sail over the stern, known as a mizzen or a driver, as they have it in San Francisco, where the yawl has become a great favorite. This rig has been fully considered in a series of articles and contributions in a previous volume of this journal. Its advantages are so apparent that a casual glance at the sail draft for the single hander will disclose its economy and adaptability to anyone. The yacht is driven under control with jib and mizzen, so that mainsail may be reefed at leisure, or if stowed altogether leave you under reduced sail equal to hardening down two or three cringles without as much as touching a knittle; again for passing through squalls, the mainsail can be flowed and hauled to and fit will without the need of luffing out. You may box about as a catboat under mainsail only. You are prepared for the worst in an instant; you can reduce speed and enter strange places under jib and mizzen. The sails being small and low easily hoist and trim easily. The jib is smaller than in the sloop owing to the stepping of the mast, and the yacht is not hard on her helm in going large. In harbor the boomkin unships so that nothing projects over the stern to invite carrying away. This rig is pre-eminently to the cruiser's taste and has been given the preference by those who have made a specialty of sailing by themselves as captain, cook and crew, as witness the illustration of McGregor's little Rob Roy in which he made a most interesting voyage from the Thames down channel, up the Seine to Paris in 1867 and return.

We have been induced to consider the safety of small boats at sea in satisfaction of the queries of correspondents. Owners of small yachts, especially if sailing single-handed, though they may like to take a turn in the offing when they have the most serious conditions, are not likely to be found away from the coast without a port in easy reach, unless as an exceptional experiment, for the good reason that sleep must be had and harbor must be made for that purpose. Their interest in the question is but minor in the power and capacity small boats possess for cruising in roughish water, for it takes but a little breeze to knock up a bubble which, though ignored entirely by a large yacht, would be a serious enough obstacle to cruising in a small boat, unless she were capable of performing satisfactorily to some purpose in what to the little shaver is quite a troublesome kick-up. It is within bounds to say that while a vessel of some tonnage may meet a bothersome sea only once in a fortnight, the same weather might prove quite boisterous every day for the little two-tonner, hence the importance we lay upon the necessity for a "seagoing" model, a controllable rig and a complete outfit for the enjoyment of the cruise. Apart, however, from this we must say a great deal of nousense is written by abdicated old relics and failures in life concerning the fearful terrors and dangers of the sea,

With such people an initiating cruise or two in the reeking atmosphere of a forecastle teaches a higher premium upon sensation than upon veracity, and a liberal discount of ninety per cent. upon their nursery yarns will sound somewhere near the truth.

As a fact, following the sea possesses no greater danger or risk than many another walk in life. It is safe to say that a down-town business man crossing crowded, filthy Broadway every day takes larger risks and puts his life in more imminent peril than his brother plowing the briny deep. The great majority of the disasters to shipping arise, not from the fury of the sea or stress of weather, but from reckless disregard of the commonest dictates of prudence. Vessels down to their scuppers, top heavy with deck loads, cranky with shifting cargoes, leaky old tubs, shippers neglecting "the three I's," avarice and false economy, crowd the lists of wrecked and missing through man's own blind stupidity. His sins and omissions are not rightfully charged to the elements, nor should the gammon of old Nancys deter young blood from essaying a field of adventure some old fossils seek to blame for their own dismal failures. The sea has its share of dangers, to be sure, which can only be met with impunity by a cool, experienced head, with the proper tool under foot, but that those dangers are more exacting and frequent in proportion than in other spheres of life, an extended experience afloat has failed to establish in our mind. With this digression though, the owner of the small yacht has little to do, as his voyaging is necessarily limited to creeping from port to port along the coast, varied perhaps with an occasional run from one headland to another or to some outlaying isle at the most.

[TO BE CONTINUED.]

LAKE YACHTING.

Editor Forest and Stream:

The nipping frosts of the last few nights admonish us that the yachting season will very soon be closed. In fact it has virtually closed here and at the ports on Lake Ontario, the only sailing craft now in commission here being the Gracie, which is always the first to begin and the last to end the work of the season.

The Atalanta arrived a few days ago, having had a long and hard experience in the Erie Canal, and a very rough night on the lake on her way hither from Oswego. She has been laid up for the winter here, and in the spring will be thoroughly overhauled and taken to Toronto, where it is expected a purchaser will be found for her.

The past season was the most successful, in a yachting point of view, that has occurred on the lower lakes for several years past. While the sport has shown a slight decline locally, it has "boomed" briskly in Toronto and Oswego, and the yachts which have done most to make or sustain a reputation, have been the deep-keel cutter Aileen, and the light-draft centerboard sloop Cygnet, which latter carries a double head rig, as does also the Atalanta now. Unfortunately, in all the matches that took place the wind was very light, and, in some instances, changeable as well. Oswego started the ball with a gentle zephyr, Belleville followed with more of the same, and the three days' racing given at Toronto by the Royal Canadian and Toronto yacht clubs were favored with similar unsatisfactory weather.

The handsome Herreshoff steam yacht Nereid, owned by Mr. Jay C. Smith, of Utica, N. Y., with her owner and Judge Sutton, of Utica, aboard, paid a visit to our harbor last week. She was much admired in all respects, but particularly as regards her coil boiler and her light, though powerful, engine.

It is probable that Mr. Wm. Pike (treasurer B. Q. Y. C.) will, during the coming winter, convert his keel sloop Sylvia into a cutter, and replace her present lead and inside ballast of iron with a fountain keel of lead. With such alteration it is quite on the cards that the Sylvia may astonish the natives next year. Yours truly,

PORT TACK.

BELLEVILLE, Ont.

A VERY GOOD EXCHANGE.

THE owner of a now famous cutter expressed it to us in this way: Suppose for a moment my cutter is two, three or four minutes slower over a forty mile course than a sloop? What of it, do I not receive in exchange for a loss of a few minutes in a six hours' sail nearly double the accommodation, perfect safety and seagoing ability and cool cabins in exchange? And is this exchange not greatly to my advantage?

The logic of the gentleman we certainly consider sound, but it is not even necessary that the exchange should be made at the trifling sacrifice of two or three minutes in a six hours' sail, for the Bedouin has recently demonstrated that with like opportunities a cutter can be expected to sail quite as fast as a really fast one than the best of our sloops, besides possessing all the advantages enumerated which appeal to the cruiser's comfort and satisfaction.

VAYU.

THE water lines in the half-breadth plan of this cutter, illustrated last week, were taken from the builder's model, and represent molding size. The frames are spaced 12in. between centers, every third one being shown in the plans, and every alternate frame being steam bent instead of sawn.

WHAT IT COSTS TO KEEP A YACHT.—It is said that the owner of a very successful forty-tonner is so disgusted with his yacht's success that he has advertised her for sale. The yacht's original cost, so the story goes, is £2,500. It is difficult to believe that the cost of racing a forty-tonner could be so much, even for winning thirty prizes in one season, as I am told that the new sails, spars, and copper which the yacht had this season would not, or ought not, to have cost more than £500, including the re-casting of lead keel; the wages of crew and extra hands £400, and the prize money £500, including bonuses to sailing master and pilot. This would make a total of £1,400, and this was the exact amount represented by the prizes won; so, from a business point of view, the owner accounts, on my estimate, balanced. As to the odd £1,100, surely the owner must have included his own personal expenses.—*London Truth.*

LOG-LINE.—A correspondent wishes to know why "such an old salt like you" marks a lead-line with overhand knots instead of in the regular sea-going fashion. Because experience in sailing small yachts has taught us to use knots in preference to white and red rags, strips of leather and nothing at all for the "deeps". The knots can be counted by the touch at night and the rags require frequent renewing, while the "deeps" have to be guessed at which is not close enough work in a small yacht. We consider our plan much the more advisable, and more readily understood by casual amateurs using the line.

EXTORTION.—A canoe still seems to most railroads a dangerous article, the transportation of which should be classed with white elephants, savages or diamonds in bulk. A gentleman having bought a Racine Shadow in Buffalo, wished to ship her to Florida for the winter, but the charges proposed were so outrageous in proportion to risk and weight that it took exhausting argument to reduce the demands of the railroads to something half way within reason. We hope some day to see special rates adopted for canoes all over the country. By the way, Mr. T. P. Frank's canoe is the first one in Buffalo. There ought to be a thriving man in that vicinity.

CABLE-BEND.—Another old friend is greatly troubled at our taking two half hitches with the end instead of only one as per regulation hook long for bending a cable to an anchor. Once upon a time, riding to a long scope with ugly breakers astern, we discovered the seizing around the end had chafed away and the single hitch made with the small line in a fair way to dissolve and the boat in danger of leaving her bones on jagged rocks. Since then we prefer to put confidence in two half hitches when bending small lines and advise others to do the same.

ROYAL CANOE CLUB.—This parent organization of canoeing sailed seventeen races last season, the annual regatta having been held at Teddington, July 1, for which $125 and four goblets were offered in prizes, the purses ranging from $10 to $20.

OBITUARY.—Mr. Geo. A. Osgood died Monday last at an advanced age. He was well known as the owner of the schooner Fleetwing and latterly of the steamer Corsair.

OUR READERS *will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the* FOREST AND STREAM, *but who would presumably be interested in the paper.*

NERVOUS SPORTSMEN.

SOME of the most enthusiastic sportsmen it is our pleasure to know are but second-rate shots. Indeed, their shooting occasionally is execrable, and at the same time they are nevertheless accomplished sportsmen, when not considered exclusively in the light of game-slaughtering machines.

The only reason why these men and hundreds like them are not nearly such good shots as they ought to be, is that they are nervous and excitable when after game.

In noticing this great drawback, "Marksman," in the reprint of his excellent book, has in many of his remarks hit off the state of affairs admirably.

There are many sportsmen who, do what they will, are unable to avoid a painful trepidation, palpitation, or state of nervousness when walking up to the dog at its point; and the same if a bird or covey rises suddenly without being pointed by the dog.

An ungovernable nervousness is a great and almost insurmountable obstacle to a man ever becoming a proficient in shooting. If such a man ever shoots well during the day, it will be at the moment of unconcernedness, or when he is quite indifferent as to the result.

The only remedy that can be suggested is to endeavor to recollect yourself, make coolness a duty, and be less anxious and eager as to the result of your shot. Coolness and decision are difficult qualifications to teach, whether verbally or by writing. They should both be inherent in the sportsman, or he must never hope to expect to become a "dead shot," though when perfectly free from tremor or excitement he may shoot as well as the best shot in the land. Such a man, however, will seldom shoot two days alike. Over-eagerness leads to nervousness and confusion, which not only incur danger, but assuredly discompose the young sportsman, and prevent his killing at the most reasonable distances.

A steady hand and firm but quiet nerve are among the highest and most necessary qualifications of a good shot. If possessed by the sportsman he is certain with perseverance and practice to become a dead shot.

Successful shooting gives ease to the nerves and confidence to the shooter, but the fear of not hitting, and over-anxiety to kill, are the certain precursors to missing.

Nervous men generally find the greatest difficulty in keeping themselves free from excitement when a bird is coming directly towards them or when the dog points and they are certain of a shot.

When a man is tremulous or excited, whether at the noise or suddenness of birds springing from the ground or otherwise, he makes an unsteady and different aim to that which he would make if free from tremor and excitement.

An excitable person cannot shoot well, or at all events only in his calm and calculating moments. They are too hasty in every movement. No matter how near a birds gets up the gun is instantly levelled at it regardless of range, and generally the bird is missed.

Nervous men usually shoot best when by themselves. In presence of strangers they invariably shoot badly, some through the vexation and annoyance of being considered bad shots, of losing the reputation, or of being beaten by inferior sportsmen.

Feelings of envy and disappointment are sure to produce bad shooting. Some men when shooting become envious of their more successful companions; perhaps plodding, unpretending fellows, with cool and steady nerves, who seldom miss a fair shot, and who soon tot up a heavy bag, to the mortification of their envious and disappointed companions. When the nervous sportsman misses at fair range, it is either because his trigger-finger is not quick enough in obeying his aim, or having got the right aim, he does not keep the gun moving as the bird moves long enough to insure the shot striking with certainty.

It is impossible to attach too much importance to the consideration of these matters; the disregard of them is frequently the cause of missing a very fair shot, for if the finger errs in any way, or fails to act in concert with the eye, the bird is inevitably missed. There must be no momentary pause—the flying object is rapidly moving—an imperceptible instant between the moment of true aim and that of drawing the trigger causes a delay in the ignition of the powder, and so the bird passes away unhurt by reason of the shot flying below or behind it.

Nervousness is not a fault, but a failing, or rather a misfortune, particularly in one desirous of becoming a good shot.

If a man is naturally nervous, he seldom or never shoots well, particularly in the company of others; but if, possessing the other essential qualifications, he can get the better of the failing, there is no reason why he should not in the course of time shoot well. Some who have attained high distinction in the art of shooting have been more or less nervous in their early performances; so with cricket, and some other games of skill, nervousness is a great impediment to good play, but as the player warms to the game he improves, because the discomposure abates, and accordingly he plays with skill and precision. So with shooting: if the sportsman, possessing other good qualifications, finds that by practice he can overcome the nervous feeling, he never need despair of becoming a good, or even—"THE DEAD SHOT," *in Land and Water.*

HUNTING EXPENSES IN ENGLAND.—Judging from the recently published lists of hounds, hunting shows no signs of decaying during the season of 1882-3. Some idea of the money spent in hunting may be gathered from the annual table. First on the list come the staghounds, of which there are in England ten packs, containing in the aggregate 245½ couple of hounds, and requiring the services in the field of nineteen professionals. Of English foxhounds there are 144 packs, made up of just upon 5,700 couple of hounds; there are 109 huntsmen and kennel-huntsmen and 275 whippers-in. These packs give 425 meets per week, and allowing that each pack costs as many times £600 as it hunts in a week, we get a total of £255,000 as an approximate amount needed to keep the various establishments going. To this large sum must be added the amount spent by those riding to hounds on the purchase, keep, and shoeing of their horses, and the requisite saddlery. Say that on an average there are not more than 100 men in each hunt who follow the hounds, and that they have but two horses a piece at the low figure of £50 each; that gives 14,100 men with 28,800 horses, and their value is £1,440,000. The keep of these horses amounts to a very large sum, which finds its way into the farmers' and corn dealers' pockets. Then as regards labor. There are at the different kennels stablemen, feeders, second horsemen, and stud grooms, while the followers of the hounds must of course, keep their grooms and helpers. Earth-stoppers and game-keepers have also to be provided for, so that in one way or another hunting causes a vast sum of money to be circulated every year, much of which would, were it not for sport, be spent abroad in more pleasant climates.—*Pall Mall Gazette.*

TROUBLE IN INDIANA.—An Associated Press dispatch from Chicago, Nov. 14, reports: The Tolleston Club of this city, composed of many influential and wealthy men, owns several thousands of acres of marsh land in Lake county, Indiana. They procured the passage of stringent game laws, and so incurred the enmity of the "pot hunters" in that section. In retaliation, the latter secured the passage of a law making it a misdemeanor to carry out of the State any game shot within its boundaries. A few days ago a couple of poachers have retaliated by causing the arrest of Judge Knickerbocker of the Probate Court of this city and F. A. Howe, President of the club, and they have been bound over for a hearing on a charge of illegally exporting game from the State. A general war between sportsmen and market hunters is looked forward to.

Answers to Correspondents.

DOUBTER, Washington, D. C.—Elcho did not.

A. H. L., Easton, Md.—We know of no gum decoys.

T. M. S., New Bedford, Mass.—We have not received the books.

J. L. Z., New York City.—See notes of New Jersey shooting in another column.

J. M. A., Coos City, Oregon.—Any one of the makers named will give you a good gun for the price named.

H. D., Lindsay, Ont.—The device might answer, provided the reflection of the sunlight on the glass did not by its glitter defeat your plans.

H. E. W., Newark, N. J.—Do you think 9 drams of powder in a gun barrel would exert more than two-thirds the power of 3 drams? Ans. No.

A. W. P., Fort Plain, N. Y.—Your dog probably has chronic bronchitis. Give him three times daily two or three grains of iodide of potassium.

T. C. L., Little Utica, N. Y.—Hounding deer is at all times forbidden in St. Lawrence county. The season for shooting deer will close December 1.

J. R. B., Montrose, Pa.—Wild rice should be sown either in the late fall or the early spring, in the shallow water at edge of lakes; not in the marshy ground around the lake.

C. R. G., Burlington, N. J.—You may purchase quail of Ledbetter, Shelbyville, Tenn. We presume if you order them this fall they will be sent on, and not kept there during the winter.

T. C. L., Little Utica, New York.—We understand the St. Lawrence county (N. Y.) open deer season to be from August 1 to December 1. Hunting deer with dogs is never lawful there.

N., New York.—Please explain the meaning of the terms 80 ton gun, 40-ib. gun, 6-lb. gun, or pounder. Ans. The 80-ton gun is one that weighs eighty tons; the other weights are those of the respective sizes of shot fired.

R. J. S., Worcester, Mass.—Wants the address of a bear hunter in Arkansas who will guide him to good bear hunting in January. Perhaps R. S. will find what he wants at Crockett's Bluff, where "Byrne" will give him some help.

W. H. S., Germantown, Pa.—If your gun scatters too much you may have it re-choked closer. Perhaps you do not load it rightly. Try various charges of powder and shot, and by experiment see if you cannot make it shoot close enough.

A. RUFF GROUSE, Cleveland, O.—Wants "good partridge shooting within twenty or thirty miles of Cleveland, near some railroad. Or if I cannot find such a place, where can I find an abundance of rabbits? My work will permit my being away but a day or two at a time."

TRINIDAD RIFLE CLUB, Trinidad, Col.—It is usual to prescribe the conditions before the match is shot. You may make it "class-shooting," in which case the highest score takes first (or if there are ties on highest these are shot off for first), the next highest takes second (or if ties, they are shot off), the third highest takes third (or if ties, they are shot off), etc. If you do not adopt this rule, then those who tie on the highest score shoot off for first, second, etc.

W. F. W., Boston, Mass.—Please give the pedigree of Waters's Grouse. Ans. Waters's Grouse is by Grouse, out of Romp, Grouse by P. S. Tramp out of Fay's black and tan bitch, name unknown. Romp is by Horace Smith's Grouse (Bruce-Fly) out of Cora II. (Horace Smith's Bruce-Cora), Bruce was by Capt. Sipple's dog, out of the celebrated Ronwell bitch, who was by the Carter dog, and out of Baldersleve's Tip, Cora, imported in utero, by Buff, out of Gen. Sargent's Fanny.

S. D., Hampshire, N. Y.—In the town of Canisteo, Oct. 27, a hunter shot a deer as white as snow, except a little gray about its face and ears; the rest of its body was all as white as snow. It is not very uncommon? The man saved the skin whole except the feet. Can it be mounted by a taxidermist so it will look natural? If so, would it be of much value? Ans. White deer are rare. See some interesting notes on the subject in our issues of May 11 and 25, and June 3 and 15, 1882. A taxidermist could mount the skin. We cannot say what its value would be.

A READER, Philadelphia.—1. Will the use of No. 10 wads, with brass shells, in a No. 12 gun, 8 lbs. weight, 30 inch barrels, choked to throw 312 out of 500 pellets of shot in a 30 inch circle at 40 yards, bulge or otherwise injure the barrels? 2. Are brass shells preferable to paper in regard to shooting qualities? 3. Are 4 drams of powder, 2 pink edge wads, and one ounce of No. 4 shot, with a card wad over, too heavy a charge for such a gun? Ans. 1. No. 2. Yes. 3. Such a charge is not unsafe; but you will probably get better results with less powder. Try it.

WEST INDIES, Havana.—1. Which are the best places for general December shooting in Florida or Texas? 2. Which are the means of convenience to both places from Havana? 3. What game is likely to be found? 4. What guns and ammunitions are best fitted for the purpose? 5. What is the respective temperature in said season in both places? 6. What clothes are required? 7. Are suitable dogs to be found? 8. Any indication as to reliable and experienced parties to apply to for getting guides, boats, teams if required, and all such assistance and information will be greatly appreciated. Ans. 1. Go to the Lake Kissimmee country in Florida, via Florida Southern Railway; or to Wharton county, Texas, where you can find good board at ranches for $2.50 to $3.00 per week, with saddle horse at 50 cents to $1.00 per day. 2. Steamship, railroad, horse, and mule. 3. Deer, turkeys, ducks, geese, snipe and quail. 4. Double barrel shotguns, with an assortment of shot, namely, Nos. 4s to 6s for ducks; 1gs to 2gs for geese and turkeys; buckshot for deer; 7s to 10s for snipe and quail. You might take a rifle for deer. 5. In the Florida region, about 80 degrees. We do not know the Texas temperature. 6. Light and strong shooting suit. See advertisements. 7. If you have a good dog, take it with you; well trained dogs are not numerous there. 8. You will probably have no difficulty in securing all needed assistance, if you announce yourself as a sportsman.

New Publications.

GUENON ON MILCH COWS.—A treatise upon the bovine species in general. Translated from the French by Thos. J. Hand. Illustrated. New York: Orange, Judd & Co., 751 Broadway.

KATE SANBORN'S SUNSHINE CALENDAR.—A handsomely illustrated wall calendar, with a selected bit of poetry for each day in the year. Compiled by Kate Sanborne, and published by James R. Osgood & Co., Boston, or C. T. Dillingham, New York.

N. W. AYER & SON'S AMERICAN NEWSPAPER ANNUAL, 1882, contains a carefully-prepared list of all newspapers and periodicals in the United States and Canada, arranged by States in geographical sections, and by towns in alphabetical order. It gives the population of the United States, and of each State, Territory, county and county seat, the chief cities and towns, and of nearly every place in which a paper is published. Similar information is given concerning the Dominion of Canada. It also contains a carefully-prepared description of every county in the United States, as well as of each State and Territory as a whole, and of each of the Canadian provinces, giving valuable information concerning their mineral deposits, chief agricultural products, principal manufactures, nature of the surface and soil, location, area, etc. On page 8 is given a tabulated statement of newspapers in each of the various sections of the country, giving the number of each issue in each State, Territory and province; also the number of counties and towns in which papers are published, and how many of the towns are county seats. Complete in all its departments, thorough in its details, giving just the information needed and only that—simply arranged, easily referred to, carefully compiled—it is, in fact, a model work of its kind. Price $3. N. W. Ayer & Son, Philadelphia, Publishers.

Those Complaining of Sore Throat, Hoarseness, or "taking cold," should use BROWN'S BRONCHIAL TROCHES. The effect is extraordinary, particularly when used by singers and speakers for clearing the voice.—*adv.*

CYPRUS SPONGE FISHERIES.

THE fishers are Greeks from Sini, Colymnos and Ruad, in the Gulf of Antioch, whence they come all this distance in tiny little boats in which no other mariner would venture even on a pleasure sail. The Government of Cyprus impose a tax of £10 upon each ordinary boat and £50 upon boats carrying a diving apparatus, and as many of the sponge-fishers evade this payment, which the Turks never dreamt of enforcing, the Admiralty keeps a revenue cutter in Cyprus waters during the season, and as I was fortunate enough to be acquainted with the officer commanding her I obtained permission to cruise in her among the boats engaged in this perilous trade. Cyprus sponges are known and appreciated all over the world, but those of superior quality never reach foreign markets, from the great demand for this useful appendage to the toilet among the ladies of the great harems whose constant visits to the Turkish baths bring the sponge into daily requisition.

Only those of the very finest quality are used by the Turkish and Circassian belles, who make the size, shape and quality of their sponges as much a matter of fashion as the Parisian lady does the trimming of her bonnet or the color of her parasol. This quality is known as the "apidi" or pear, and "aspro veloudo" or white velvet, and commands fabulous prices the moment it is brought up, as Constantinople and Cairo merchants are always moving about among the fishers ready to pay almost any price for the much-desired quality. I saw some few specimens of this sort, and must say that it is beautifully fine. In shape it is like a hollow pear, cafe-au-lait colored, soft, elastic and velvety, and some idea may be formed of its value by the fact that a sponge-fisher refused £4 in my presence for a sponge of the size of a newly-born baby's head.

The fishermen are of an almost amphibious nature, and are from their infancy exposed to the hardships and privations of fishers generally, aggravated by the circumstance that the islands they inhabit have not a drop of water save only such as is preserved in large stone reservoirs, and which has to be brought periodically from the other islands or the opposite coast in large flat-bottomed lighters, constructed for this exclusive service, and serving often in the periods of forced idleness as a home for some of the poorest fishers, who thatch them over and secure for themselves a shelter from the prolonged winter rains. The real and best season of the year for sponge-fishing is during the months of July, August, September and October, when the regular sea breezes are to be depended upon, as well as the light wind off the land during the night. While the men and boys are thus engaged the women and very small children are the sole inhabitants of these barren islands, during which time they are often attacked by pirates from the mainland, who, after shamefully ill-treating the women, depart, loading their boats with anything worth carrying away they find in the cottages.

In the golden light of morning it is something really delightful to watch the sponge-fishing fleets, their sails palpably white against the glorious blue horizon, skimming like so many birds of light and beauteous form over the gentle billows, and sailing with the extraordinary velocity for which they are so celebrated and which alone adapts them to the service upon which they are employed. At this time of the year we are blessed with the most delightful weather, and as no boisterous gusts or squalls disturb the water the sponge-fishers can see through it to an almost incredible depth. Several methods are employed by the fishers, one of which is to stretch large drags from one boat to the other and so making a sudden sweep across them, as it were, under the water by sailing across each other's tracks until they consider them sufficiently entangled to admit of the divers following up their occupations. This modus operandi will be prohibited by the government next year, as it exterminates the young sponge, and as the commodity is fast becoming scarce, the contemplated restriction is considered wise by all parties interested, even by the fishers. About one-tenth of the boats are provided with diving-machines, and the quantity of sponge taken by them far exceeds that of the other boats.

The most interesting, however, of all the methods is that of simple diving; and as I have watched several of the parties thus engaged, I will describe it. These little boats contain, as a rule, three men and four boys, and are provided with a few ropes and poles, the latter screwing into one another, and being used in shallow waters. They dive in turns, and when not under water are receiving the sponges brought up or beating and washing them. A hard and dangerous life do these poor divers lead, and one which at any moment exposes them to instant death. Yet they are a robust and cheerful people, always full of mirth and frolic, singing, joking and spinning yarns. The most astonishing thing about them is the wonderful length of time they can remain under water, in which they far surpass the pearl fishers of the Persian Gulf, as although the latter can live for three or three and a half minutes, these Greeks remain under water for four and even five minutes, which to me, watch in hand, appeared as so many hours.

Indeed, I had fully made up my mind that the first boy I was timing had been drowned long ago, and that although my timepiece was ticking the hands had ceased to move. As a rule they avoid these long stretches, but very often the dive is so protracted, owing to falling upon a good field of sponges, that when the poor fellows reach the surface again they are utterly exhausted, and the blood gushes from their mouths, noses, eyes and even ears. Many cases have occurred when they have overrated their powers of endurance and succumbed to the loss of blood and exhaustion, five of such cases having happened during this season, besides seven men and boys having been killed by sharks, which were unknown in the Mediterranean previous to the cutting of the Suez Canal, but are now becoming very plentiful and dangerous.

Some of the divers carry bags for their finds, others tie the sponges in bundles under water, while many simply carry them under their arms. On returning to the surface, they climb into the boat carrying their harvest with them, and as soon as they are seated down go the others who were in the boat, naked and basking in the sun. The sponge when found looks far different from the sponge we know, resembling in appearance dirty, sticky black clay, and unless it is immediately beaten and washed it remains black and valueless. It smells most offensively, so much so that during the whole of the time I was among the fleet of boats I could compare it to nothing but a mass of putrid fish.

The sponge is beaten with heavy wooden bats, water being continuously poured over it, after which it is kept in nets hanging over the side until one of the shore-boats, which are engaged to run between the fleet and the land, comes alongside, when a boy takes it ashore and washes it with fresh water. Sponge is sold by weight, and in order to increase the natural weight the fishers place it in casks containing sand, thus getting a quantity of it in the pores; another method is to dampen it. The merchants, however, know all their tricks, and have means of discovering both the quantity of sand and water contained in the sponges.

Not a few of the fishers evade paying the license, and they are very difficult to catch, as long before the revenue cutter approaches them they set sail and run before the wind, and as their little craft attains an incredible speed the commander does not think it advisable to chase them. We caught one, however, though hiding behind the cape, and found that, besides not having a license, the owner had a heavy stock of gunpowder and tobacco on board, which he evidently intended to smuggle, and as the papers found on him gave the names of his confederates ashore, these gentleman were arrested in the evening and large quantities of smuggled goods were seized in their houses. The captain of the boat we captured is a jolly sort of a tar, and from him I found out that nearly all the sponges we buy are "doctored," especially those nice yellow ones, and that, although the "doctoring" gives them a good appearance, it destroys the sponges.

"When you want to buy a sponge," he said, "see that it is the color of coffee and milk mixed, and not yellow. It must not be trimmed, which can easily be detected by the traces of the scissors. It must be soft, elastic, velvety and very light. Squeeze it till your fingers meet, to find out if it contains any sand or shells, and shake it to see if it emits powder like smoke, which is poisonous and hurts the skin. When you find a sponge with none of these 'doctorings' buy it; it is worth anything they may ask for it." The most important thing, however, I found out from this man, is that when sponges get sticky, or "sick," as he called it, if they are washed well and left to soak in salt water or hard well-water, they become as good as new.—*Correspondence New York World.*

PUBLISHER'S DEPARTMENT.

The Belvoir hounds have been kept uninterruptedly by the Dukes of Rutland since 1750. There is a list extant of the hunters and horse hunting with these hounds in 1738. The horses numbered 200. The original sport with hounds in England was not with foxes. A journal kept by the second Duke of Beaufort, in 1729, shows that his hounds were first harriers and then deer hounds. About 1750 certain packs began to be used exclusively for fox hunting.

ABBEY & IMBRIE'S

"Highest Quality"

SNELL HOOKS.

Finest Spring Steel Hooks tied on Selected Spanish Silk Worm Gut (the Gut and Hooks our own make), or Best White Silk Wired Gimp.

Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**

MASS. ARMS COMPANY, Chicopee Falls, Mass.

MAKE HENS LAY An English Veterinary Surgeon and Chemist, now traveling in this country, says that most of the Horse and Cattle Powders sold here are worthless trash. He says that Sheridan's Condition Powders are absolutely pure and immensely valuable. Nothing on earth will make hens lay like Sheridan's Condition Powders. Dose, 1 teaspoonful to 1 pint food. Sold everywhere, or sent by mail for 8 letter-stamps. I. S. JOHNSON & CO., BOSTON, MASS.

Standard Works.

FOREST AND STREAM BIRD NOTES.

An Index and Summary of all the matter relating to ornithology contained in the first twelve volumes of the FOREST AND STREAM. 195 pages, paper. Price, postpaid, $1.50.

A SPECIALTY.

Special designs furnished on application free of charge.

[ESTABLISHED 1869.]

UNITED STATES CARTRIDGE COMPANY,

LOWELL, MASS.

Our paper shot shells are made with great care upon new and improved machinery, and the paper is subjected to a process that renders the shells waterproof, pliable, and capable of withstanding large charges of powder without bursting, and are reloadable from four to ten times, if desired. They also keep their smooth shape stiff, inside and out. We offer them as equal, if not superior, to any other makes, and warrant them in the full sense of the word.

PAPER AND BRASS SHOT SHELLS.

ROSEWOOD LOADERS, CAP EXTRACTORS AND RECAPPERS.

Rim Fire and Central Fire Cartridges for Pistols and Rifles.

POCKET RELOADING TOOLS FOR ANY CALIBRE. PRIMERS AND BULLETS FOR RELOADING "THE RICE SHELL EXTRACTORS." BENCH CLOSERS, Etc., Etc.

NO GOODS SOLD AT FACTORY BY RETAIL.

NEW ORLEANS AGENTS: A. BALDWIN & CO.
NEW ENGLAND AGENTS FOR SHOT SHELLS: JOHN P. LOVELL & SON, Boston, Mass.

The Colt Club Gun.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The marvelous performance of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary. Every genuine Colt Club Gun has the rubber heel plate with the words "The Club Gun" around a circle, within which appears the rampant colt beautifully embossed. We are also agents for the new Harrington & Richardson Hammerless Guns, which at about half the cost surpass all imported hammerless guns. Address.

P. O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.

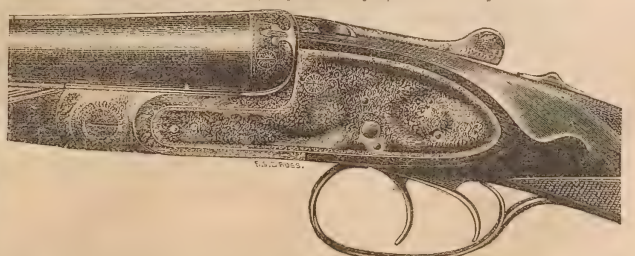
B. F. NICHOLS & CO.,

BOSTON, MASS.,
Manufacturers of
HEXAGONAL SPLIT BAMBOO FISHING RODS,
REMOVED TO 153 MILK STREET.

We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Massachusetts Charitable Mechanics' Association Fair for our superior goods. Send for catalogue.

NOTICE.

JAMES PURDEY & SONS,



OF 287 & 289 (late 314½) OXFORD ST., LONDON,

Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that on January 1st, 1883, they will remove to the new and large manufactory they are now building, and that after that date their address will be

Audley House, South Audley Street, London.

They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN,** which, after the most careful practical trials and severe tests, they confidently recommend as by far

THE BEST AND HAMMERLESS

ONLY PERFECT GUN MADE.

Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers; or through the agencies of SCHUYLER & DUANE, 189 Broadway, New York, and JOS. C. GBUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States

J. PALMER O'NEIL & CO.,

68 Fifth Avenue, Pittsburgh, Pa.

AGENTS IN THE UNITED STATES FOR THE

Westley Richards Hammerless Gun.

Manufactured by WESTLEY RICHARDS & CO., London, England. (Established 1820.)

INVENTORS AND SOLE OWNERS OF THE ANSON & DEELEY HAMMERLESS LOCK WITH AUTOMATIC SAFETY BOLT.

Making the Safest, Simplest and Most Durable Breech-Loading Gun to-day in Use.

SAFEST, because the triggers are effectually bolted whenever the lever is moved to open or close the gun. SIMPLEST, because the lock contains fewer pieces (only four) than any other gun. MOST DURABLE, because the four parts are very strong, and the swivel and bridle—the weakest parts in the ordinary lock—is entirely dispensed with.

The Anson & Deeley hammerless lock has been subjected to the severest test, having been fired EIGHTY THOUSAND times in a wear and tear trial without cleaning, and without showing any evidence of wear. The Anson & Deeley action is made in its perfection by Westley Richards & Co.

From every quarter unsolicited come testimonials of the excellence of these guns. We quote a few extracts:

"The Westley Richards Hammerless Gun excels any gun that I have ever used."—GEORGE W. BROWN, Conneautville, Pa.

"The action is simply perfect; there is no possibility of accidental discharge."—E. J. CARPENTER, Cincinnati, O.

"The Hammerless Westley Richards works to a charm, and brings the ducks right out of the sky."—CHARLES J. CLARKE, Winnows Point Shooting Club.

"The little seven-pound Westley Richards Hammerless Gun, purchased from you last summer, has given entire satisfaction. For hard shooting, easy manipulation, and perfect safety, it cannot be excelled. I used but three drams of powder and one ounce of shot throughout the entire season, killing my birds as clean in September as first of October."—ALEX. REYNOLDS, JR., Kittaning, Pa.

"The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun to buy a Westley Richards Hammerless."—PATRICK HENRY, Clarksville, Tenn.

"I find perfect ease in manipulating the gun, and absolute safety secured from accidental discharge by the automatic safety bolt, which never fails to go to safety when the lever is moved to open or close the gun. You know how prejudiced I have been against hammerless guns. Well, I am thoroughly subdued, and I unhesitatingly say it is 'the gun of the future.'"—I. R. STRAYTON, Secretary Allegheny County Sportsmen's Association.

"I feel as if I ought to let you know how the 10-bore, 9¼lbs., 30in. Westley Richards Hammerless works. At the target with four and a quarter drams of Orange Lightning powder No. 6, and one and a quarter ounces No. 8 shot, I can get over 400 pellets in a 30-inch circle, 40 measured yards, every time, with beautiful distribution and wonderful penetration. With the same charge of powder and one and a quarter ounces No. 5, it is sure death to ducks at fifty yards every time. I made two successive shots at single mallards sitting on the water at 50 and 53 yards, and killed both times, and this with the above light load in paper shells. A mallard flying at 50 yards drops as if struck by lightning. Let me thank you for having furnished me what I have so long been looking for, i. e., a gun that suited me in every way. I've got it now and money cannot buy it."—F. W. COTTLE, Lincoln, Ill.

We have just received a large invoice of these matchless weapons in all grades and gauges, including the smaller bores, 14, 16 and 2½-gauge, and can fill all orders promptly, or will import to special order without extra charge. Our stock of Fine Goods is *without exception* the largest in this country. Constantly on hand, bargains in fine second-hand guns with hammers. New catalogue now ready containing illustrations and prices of all new and useful implements.

THE TWO BEST GUNS IN THE WORLD.

Harrington & Richardson Hammerless

is the highest achievement of American gun enterprise. The workmanship is equal to the finest London Premier guns, and the fitting is closer, every part being made by machinery to a gauge. For close hard shooting nothing in the world can excel them. In every respect equal to imported hammerless guns costing twice the money. They are made on the Anson & Deeley patent, and the work is inspected Mr. Deeley. The rubber butt plate is of the most exquisite design, and all the lines are in the finest taste. Size—12-gauge, 7¼ to 8¼lbs.

No. 1, Laminated steel barrels, outline engraving.....$100 00
2, Damascus barrels, good scroll engraving, selected stocks.....150 00
No. 3, Same as No. 2, but finer in all points.....$200 00
4, Premier quality, every part made with the most scrupulous care, and most exquisite finish, 300 00

The Daly Gun

Has been in the market for ten years, and has the largest sale of any strictly first-class gun in the country. Hundreds have been in the hands of professional hunters for years, and are as sound to-day as when they were bought. C. R. Shelton, manufacturer of auxiliary rifle barrels, New Haven, Ct., has shot one over 20,000 times in showing his invention, and it is sound as a dollar and hasn't had one cent of repairs. Here is asample testimonial:—Jefferson, Texas, Aug. 19, 1882. "The Charles Daly Gun I bought in 1880 is the most perfect gun I ever saw. A microscope cannot detect the slightest flaw in the fitting. I have shot it 2,000 times and the action is as strong and tight as when received. The gun is a beauty and the admiration of all my friends.—WM. T. WARE.

No. 42, **Scott Action**, Damascus barrels, bar rebounding locks, pistol grip, patent fore and extension rib.....10 and 12 g. $80 00
53, Same as No. 42, with Purdy double bolt and horn butt plate.....10 and 12 g. 90 00
35, Same as No. 53, with 3 pin locks and engraved mountings and ornamental rubber butt.....10, 12, 16 and 20 g. 100 00
60, Same style as No. 55, fine laminated steel or Damascus barrels, fine engraving and chequering, first-class workmanship.....10 and 12 g. 130 00
100 **"Diamond Quality."**—The most superbly finished gun in the market, every part of the finest quality and most elegant workmanship, and equal in every respect to the finest London Guns, 10 and 12 g. 200 00

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

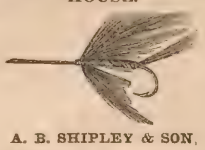
A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, } 30 per cent. less than others,
} Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.



In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

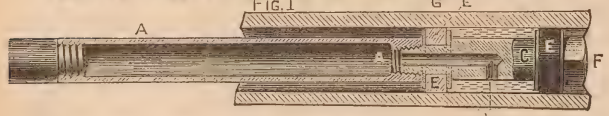
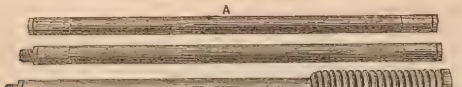
Climax Gun Cleaner.





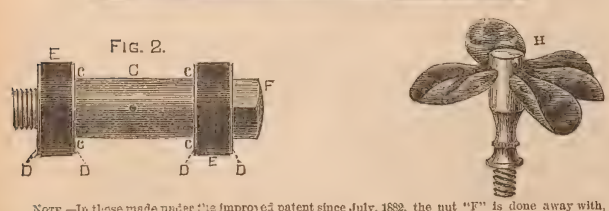


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In these made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1883, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. M. MUZZY
45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

ANGLERS' CASTING TOURNAMENT.

New York, Oct. 19, 20 and 21, 1882.

The Leonard Rod Won Every First Prize

When in competition. For distance it surpassed all competing Rods 15 feet.

A Leonard 4½ ounce rod cast 82 feet, exceeding by 6 feet the longest cast of other makes of rods of any weight.

The Leonard was the only rod used in the tournament that was awarded the highest possible score for both accuracy and delicacy.

Prizes and winning rods can be seen at

FARNHAM'S
Automatic Trombone Field Whistle

No Strings or pockets. Tone changeable. All brass, nickeled, with moulded rubber holder, hands and fingers free, for $1.00, postpaid. One whistle with holder and three pairs, assorted sizes, my Lever Fasteners, adapted to sportsmen's gloves. Illustrated circular free. Address FRANK GUNN FARNHAM, Inventor and Manufacturer, White Mills, Pa.

Ammunition, etc.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

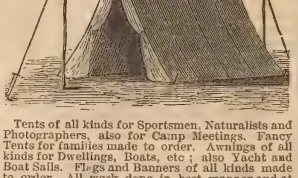
FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

63 PINE STREET, NEW YORK.



Special Notice. Books for the Holidays.

I am prepared to offer the public a choice collection imported and American editions) of the works of following celebrated authors: Shakspeare, Moore, Byron, Burns, Cooper, Bulwer, Thackeray, Maryatt, De Quincy, Hawthorne, Dickens, &c., &c., in plain and ornamental binding, at prices which defy competition. My Bindery being one of the largest in America, I am enabled to compete successfully in price for binding serials of all descriptions, as well as rebinding old volumes—no charge being made for collection or delivery.

Every description of Children's Gift Books will be on hand during the holidays at wholesale prices.

JOHN BEACHAM, 7 Barclay street, New York.

SPORTSMENS TENTS.

Tents of all kinds for Sportsmen, Naturalists and Photographers, also for Camp Meetings. Fancy Tents for families made to order. Awnings of all kinds for Dwellings, Boats, etc; also Yacht and Boat Sails. Flags and Banners of all kinds made to order. All work done in best manner and at very low figures. **Send for illustrated circular.** Address S. HEMMENWAY, 60 South st., Opp. Wall st. Ferry House. **Factory, 39 South st., Cor. Old Slip, N. Y. City.**

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 23, 1882.

VOL. XIX.—No. 17. Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Address all communications,

ANSWERS TO CORRESPONDENTS.

GAME LAW AMENDMENTS.

IT is almost time for the tinkering to begin. Simultaneously with the assembling of the various State Legislatures will be heard the agitation about the amendment and further improvement of the game laws. A dozen bills, or perhaps twice that number, will be drafted and presented. Some of them will contain excellent provisions, and others will be framed solely in the interest of the pockets of a few selfish individuals. A majority of those who are to vote on the bill know nothing of the subject of which it treats, and are therefore quite incompetent to decide what shall or shall not be done—to sift the corn from the chaff in the heterogeneous mass of bills presented for their consideration. A bill, therefore, will not pass because it appeals to the understanding of the men who vote on it, but because more influence in its favor can be brought to bear on the voters than any other bill can command. Sportsmen make up so large and influential a class of the community that their voice, if properly directed, cannot fail to carry great weight. It is, therefore, of the highest importance that the influence of all sportsmen of the better class should be concentrated so that it may be used to the best advantage and may carry the greatest weight possible. There appear to be two courses from which to choose, that is we may either abstain from all interference with the laws as they now stand, and may labor simply to secure money and machinery to enforce such laws, or we may direct our efforts to the securing of a short, simple and easily understood new bill that will effectually cover the ground. In case the first course should be adopted it seems probable that an appropriation of $15,000 to $20,000 with a considerable force of game wardens might be secured, and if the pay of such public servants were made liberal and politics were not allowed to influence the appointments, we have no doubt that this plan would work more good to the game than all the laws that have ever been passed concerning it.

Last summer we had something to say on this subject, and our remarks then are still more pertinent now. We said that it is—

Natural enough that the movement in favor of game protection should first take shape in the enactment of protective laws, which provided penalties against the killing of game at certain seasons when it was least fit for use. This method of protection, while it was well enough as far as it went, did not go far enough, since in most instances neither machinery nor money were provided for the carrying out of the provisions of the law. In this respect the enactments for protection present a curious anomaly, differing as they do from any other statutes passed by the Legislatures of the various States. The clamor for reasonable and proper laws statesmen are willing to yield to, but it does not appear, except in rare instances, that appropriations of money to enforce such laws have never been either asked for or granted. The fact is that those interested in the subject have fallen into a rut, from which they do not seem able to extricate themselves, and so, at every session of the Legislatures of the different States, we hear of proposed alterations and amendments of the laws, which those who advance them apparently think, will cure all our present evils. * * * * * * * * * *

Now, no one will say that our game laws, as they at present stand in the various sections of our country, are at all what they should be, but if they were properly and sternly enforced, they would do a vast amount of good, instead of, as is now too often the case, accomplishing nothing at all. The laws should be short and simple so that they can be easily understood by all, and so that under their provisions convictions may be easy and there may be no loophole for the escape of the offender. A cumbersome and intricate law, full of exceptions and special provisions, should be by all means avoided. But it is a great mistake, and we wish we could induce everyone to think so, to apply for relief in this way only. Why can we not next year leave the laws as they are, and devote ourselves with all our energy to securing appropriations and the appointment of officers to enforce those that we already have? This expenditure of effort to secure changes in the laws is a waste; it is firing in the air.

The efforts to secure enactments which are perfect is very well, but long before they have been passed the need for them will have ceased, for the game will all have disappeared. We should begin now at the right end, and make provision for the enforcement of such laws as we have, and then, after having inculcated in the public a wholesome respect for, and fear of, the law, it will be time enough to make efforts to improve them. It is a shame and a disgrace that, as is now usually the case, the enforcement of the statutes should be left wholly to private individuals, societies and corporations. And it is not only a shame, but it is the worst possible thing that could happen for the general shooting and fishing public, since, as we have more than once shown, the natural result of such a state of things is to induce wealthy clubs and corporations to secure the most desirable grounds, which are thus of course closed to the public at large. Cases of this kind are constantly being brought to our notice, and the rapidity with which this movement is now going on shows that the appreciation of the existing state of things is widespread. The matter is one which touches so nearly every one who at all depends upon shooting or angling for his amusement and recreation, that it is difficult to account for the apathy that appears to exist among sportsmen in regard to it. We can understand why the club member, who can go in September to his marsh on the lakes and later in the season to the points and uplands of the Southern States for his shooting, should be careless in the matter, but how the man whose occupations only permit him to take an occasional day or two in the country near his home, can view with equanimity the gradual disappearance of game we do not exactly see. Of course this is a matter that interests sportsmen, and them alone. If the prospect is a satisfactory one to them, no doubt it is equally so to the rest of the community, but it certainly seems a pity that the result, which is inevitable unless some earnest action is taken, should come to pass. Things grow worse each year, game is less abundant and harder to find.

In the meantime, we cannot urge too strongly upon those who have already put their hands to the plow, who have actively interested themselves in seeing that the laws are enforced, the necessity of not looking back, of not ceasing from the labor of love which they have undertaken. For the present our hopes rest on them, and each man should do his best. But next fall and winter, when the Legislatures meet, let us all try to do something which will really tell, and no longer fire into the air.

The shrewder and more far-seeing sportsmen are discouraged at the prospect which they behold in a future that is not very distant. The clubs which purchase or lease lands, do so simply because they know that when they absolutely control a region they can absolutely protect it. If only thirty men shoot over a country where there is room for one hundred, it is clear that with anything like moderation in shooting, the thirty will have birds for all time. The best shooting grounds everywhere are being thus secured, and the public grounds are therefore continually becoming more contracted. It certainly appears to be time for the men who do not and are not likely to belong to clubs to do what they can to make the State take some efficient measures for the protection of the game to which every citizen has now a right.

Laws are well enough as far as they go, but by themselves they amount to nothing. Of what avail would the statutes against criminals be, were there no officers to hunt them down and bring them to the bar of justice?

The second course is even more radical than the above, and therefore presents, to our mind, less chances for success. Briefly, it is this: Substitute for the present cumbersome statutes a short, simple law which shall cover the whole ground, with no exceptions for certain counties, certain waters, or certain hotels. Let spring shooting be abolished, jacking, or fire hunting, forbidden, the hunting of deer with dogs carefully restricted, a uniform and short open season adapted to the special demands of each State for quail, ruffed grouse, and woodcock; let penalties be made severe; a clause be embodied in the bill providing for the appointment of wardens who are not to serve in the counties from the pay of such appointed, or in which they reside. Let which they are men be liberal and so that they may do their work well.

To accomplish anything we must have paid game wardens, who shall be trustworthy and efficient, just as we have tax gatherers, just as we have custom house officers, just as we have police officers.

DOG STEALING.—The stealing of valuable dogs for the reward which is almost certain to be offered for them has become a regular industry in this and other large cities. The thieves watch the houses where dogs are owned, and usually find it an easy matter, in the early morning or in the evening when it is having its short run, to pick up the animal. Pet dogs, and the small toys, that can be hidden under a coat or in a pocket, are most likely to be the victims of such raids, but the larger animals do not wholly escape, and many an owner of a fine pointer or setter has paid a large reward to get back his well beloved field companion. The stolen dog is taken to the den of the thief, where it is kept until the notice of its loss, accompanied by the promise of a liberal reward, appears in the papers. It is often the case that no attention is paid to the first offer, and the fond owner, anxious and discouraged, offers another and larger one. He is then approached by one of the accomplices of the thief who gives him the desired information as to where he may find the lost one. Often the same dog may be stolen a number of times, and may thus cost his owner many times his money value. The true way to deal with rascals of this stripe is not to advertise a reward, in other words, to break up the nefarious traffic by making it unprofitable. Besides this it is well to put the lovers of dogs on their guard, so that the thieves may be unable to sell the animals which they have stolen. If this were done always, a short time would suffice to turn the attention of the dog-stealing fraternity from this particular branch of thieving to others more lucrative. We are always glad to help owners who have lost their dogs to recover them, and we will do our part toward making stolen dogs unsaleable by publishing without charge, when they are sent to us, any descriptions of dogs that have been lost. Such notices will serve to put buyers on their guard, and may very likely prevent some of our readers from being victimized.

AMERICAN SPORTSMEN IN CANADA.—A party of American gentlemen, among them one of the most distinguished physicians of this city, recently went on a duck shooting excursion to Lake St. Francis, in Canada. Although they took great care to comply with all the provisions of the game law, their presence in Canadian waters had a somewhat remarkable effect upon certain of the residents. Sundry individuals were greatly perturbed in spirit, and the Montreal *Witness* went off at half-cock over the matter. One of the party, which was the innocent cause of all this pother, writes us a letter on the subject in order that Canadian sportsmen may not be misled by the false statements of the journal in question. There is perhaps little need of such explanation, for we know that the intemperate course of the *Witness* does not represent the sportsmen of Canada.

"WINTER TALKS ON SUMMER PASTIMES."—The initials appended to this series of papers (the first of which was published last week) are familiar to most of our readers as those of Mr. George Dawson. There is no man better fitted to write on this favorite topic; and we felicitate our angling readers upon the acquisition of these graceful contributions to the literature of the art.

AN EARLY PRESS DAY.—The FOREST AND STREAM next week will go to press on Tuesday instead of Wednesday as usual. Advertisers are requested to send in their copy as early as possible.

THE TEAM CAPTAINCY.

THE resignation of Col. Bodine from the position of captain of the team of 1883 leaves the way clear for really effectual work in the making up of the American representatives for the battle of July next. We have heretofore spoken very freely of the merits and failings of Col. Bodine. An excellent shot, he has fairly won the title of "Old Reliable." As a member of a team he could always be depended upon for creditable work, and American riflemen and modern rifle practice in this country owe to him a great debt. He was bold enough to accept the captaincy of the team of 1882, at a time when he must have known from an examination of men and weapons that defeat was inevitable. He did what he could with the material at his command, but in executive ability he displayed a woeful deficiency, and in his report upon the match he antagonized the press, the public and the militiamen of the country. He lost the confidence of the very classes to whom he should appeal for support in making up a strong team, and it could only have been intended as a compliment, and not as a real appointment, when the board named him as captain of the coming team.

The question of the best method of selectiong a team captain has always been an open one, and very diverse views are held on this subject. Those who hold that the team captains should be appointed without any special reference to the wishes of the team men point to Great Britain for examples. There the team captain is decided upon and the men join the team under him. Here such a plan is distasteful to the shooting men. It flavors too much of a mild despotism and is not democratic enough to suit our American notions. All the American teams that have met with success in their matches have been under the management chosen by the men, and the suggestion that any other plan was to be substituted acted as a wet blanket upon the enthusiasm which was growing upon the question of the match of 1883. Now, however, when the shooting men come to learn that after all the team men, who may fairly be expected to have their best interests at heart, are to be permitted the choice of a team captain, a new and heartier interest in the matter may be counted upon. Such is the only just, the only American, and what is more important, the only successful method.

THE SPARROWS MUST GO.—The latest Boston institution is an anti-English sparrow society for the repeal of all existing laws protecting that bird, and the adoption of efficient means for his destruction. The ladies of the Hub are the prime movers in this crusade. If they really desire to see the sparrow exterminated, let them demonstrate its edible qualities. The Massachusetts Governor-elect is a great friend of song birds, and will be apt to give gubernatorial sanction to the sparrow slayers.

FISH PICTURES.—At the American Art Gallery, No. 6 East Twenty-third street there are now on exhibition studies of a striped bass and one of a red snapper. These pictures are by the late Mr. S. A. Kilbourne, which is saying all that can be said in their praise. The exhibition is one of artists' studies and is well worth a visit.

FABLES FOR SPORTSMEN.

IX.—THE CAT AND THE PIKE.

A CAT would go a-fishing, but could catch no Fish for fear of wetting his feet. Seeing a Pike in the depths below him, taking with ease and great pleasure all the Dace, Roach and Perch he desired, he called to him, saying, "How is it, Master Pike, that you can take Fish without wetting your feet?"

"Verily, Master Grimalkin," answered the Pike, "it is the easiest thing in the world for me. I have no feet!"

MORAL.

Try Wildfowl shooting in December or watching a Runway in wintry weather, or wading to thy knees in a cold Bog for snipe, or fishing in a pouring rain, or anything which is sport to some, but misery to others, and thou wilt shortly discover whether thou art a Cat or a Pike.

The Sportsman Tourist.

GOOSE HUNT ON THE RIVER PLATTE.

THE River Platte is noted as an excellent shooting ground for wild geese, especially in the fall, as they are migrating southward. At that season of the year it is chiefly a bed of sand, dotted here and there with towheads of various shapes and dimensions, among which the stream cuts its way, in the form of thousands of rivulets, that make myriads of sandbars upon which the geese will gather sometimes by the acre, when undisturbed for any length of time, to loiter away the while between their hours of feeding. Now and then a large island, of many miles square, intervenes, but usually, in such cases, the water of the river, during a low stage, runs chiefly in one channel, leaving the other comparatively dry. These larger islands, for the most part, are very fertile and settled up with farmers. The adjacent country, especially in the middle part of the State, is pretty well under cultivation, and the fields of corn and wheat furnish ample provender for the geese. These leave the river about the dawn of day and go out in quest of food, returning from nine to half-past eleven in the forenoon to drink, take a rest, and chew their cud. The chances of bagging many of them as they go out are not numerous. Occasionally a "single-footer" will come into the decoys for company, and once in a while a small flock, in their investigations, will come near enough to offer a shot at long range, but ordinarily the shooting does not become serious till the return from the fields. The geese go back to the country between 3 and 4 o'clock in the afternoon and return about dark. These habits vary some, according to the state of the weather. If the day is bright and clear, the birds do not stay so long away from the river; on the contrary, if it be dark, with little wind, they loiter about in the fields the larger part of the day, and in rainy weather occasionally do not come back at all. I speak now of the habits of geese that appear upon the Platte.

Last year, on account of a hitch or two, I lost an opportunity to accompany a party of good boys who went up the river on a goose hunt and who had fine sport, but I then made up my mind that that thing wouldn't occur again. I began preparing for it early in March by borrowing two dozen first-class decoys of the Marooner Club at Vicksburg, and bringing them up here with me a day or so later. From the hour of my arrival here till the affair was definitely settled, I was busy "fishing" around for an invitation to be one of the party who knew the grounds and had arrangements for quarters during the hunt. I pledged myself to be faithful in chasing and bringing to bag the wounded geese, and that pledge apparently decided the matter in my favor. Mr. O. F. Foote, an intelligent farmer who lives some sixteen miles north of Juniata, a little town on the Burlington & Missouri River Railroad (in Nebraska) about one hundred miles west of Lincoln, had agreed to write Jack Lanham, of Crete, when the geese were down in sufficient numbers to warrant out coming.

The party, as originally constituted, was composed of the said Jack Lanham, H. D. Hathaway, manager of the State Journal Company; C. L. Baum, of the hardware house of D. & C. L. Baum; Dr. S. F. Rouse, manager of the Whitebreast Coal Company; Mr. Kendall, Land Commissioner of the State and myself, all of Lincoln, except the Crete man, who was boss of the expedition.

On Monday, the 16th of October, Mr. Foote wrote to Jack that the geese were there and ripe, but owing to some delays in the mail this news did not reach us till the following Saturday. Wednesday was set as the day for startiag. In the meantime Kendall got mixed up in politics and could not well extricate himself, so retired from this hunt. His place was filled by Hon. A. G. Adams, of Burlington, Iowa, a young man of wondrous avoirdupois, but an enthusiastic sportsman. This member came down to Lincoln on Monday. The big stories he heard about geese on the Platte so stirred his youthful ardor, there was no holding him. He cavorted about like a young colt in a canebrake. Rouse was not much better. He was up there last year and he knew what was in store for him. I never saw such nervous men. Monday afternoon I dropped into Doc.'s office and found the two busily loading shells, their faces aglow with pleasurable anticipations.

"What's the matter?" says I, "What's your hurry?"

"Oh, we can't wait," replied Doc, "we are going up to-morrow, my young friend here has come on for this hunt, and don't feel like loafing around Lincoln two or three days. I am ready, and so we'll go up to-morrow."

The rest of us, after vainly remonstrating with these wild huntsmen, held a council and expressed our views. One said he hoped it would rain the day after they got there and the shooting would be poor, or that Adams would stick in the quicksands; another thought these men would frighten away every groose within a radius of ten miles, and we all knew they would go up there and go all over Foote's house and select the best room and softest bed in it; but we managed to curb our passions before any one got crippled, and allowed Rouse and Adams to depart in peace on Tuesday with the two dozen decoys we had made for the occasion.

The next day Hathaway, Baum and I took the Denver train at noon, picking up Jack at Crete, and arriving at Hastings near five o'clock; ate the lunchman out of house and home. Here we changed cars, and took the Kearney extension of the B. & M., and after a run of thirty minutes, reached Juniata. Our team was awaiting us at the depot. It was a tip-top pair of horses, driven by George Watkins, and we had a charming moonlight ride over to Foote's, whose house we reached before nine o'clock. As we drove up to the door our two friends came out to greet and welcome us and help us in with our traps. They soon gave us an account of the situation. To start with, the geese were "thin," much "thinner" than they were last year; they were wild; the river was lined with hunters, native and foreign born; the weather had grown warm since Foote wrote, and the geese had mostly taken to parts unknown, the few that remained having learned that death lurked within the numerous blinds that loomed up from the sandbars, and usually gave them a wide berth. Adams and Rouse had killed only twelve geese during the entire day. It was not such news as we had hoped to receive, but it did not discourage us. We resolved to work harder.

Mrs. Foote's beds were clean and soft, the rooms were comfortable and we slept as soundly as hunters usually do under such circumstances. The drawbacks were those of our own creation. Adams and Baum snored outright and lustily, Jack had a kind of exhaust or cut-off to his, Hathaway's was a species of cluck that gave variety to the entertainment. I was the tooth gritter of the party, but that the boys might have a little sleep I put a string in between the teeth of the upper and lower jaw, but I guess that during the night I must have swallowed it, for I was aroused by Doc Rouse yelling at the top of his voice. I looked over that way, and saw Doc sitting up in bed. The full moon was shining in at the window by his bed and revealed a face haggard and careworn.

"What is the matter, Doc? Are you sick?" I queried.

"Sick! the d—l! I wish I was! Just listen at this racket. Who ever heard such a fuss. Was that you crushing corn just now? I could stand the sawing you new hear going on, but when a man goes to smashing every tooth in his head human flesh can't stand it. Even the baby has been aroused down stairs. Gods! listen to the noises around me! I have been lying here two mortal hours suffering agonies of the damned," and with that he raised his voice and in tones louder than a war whoop yelled, "Give us a rest!"

Of course this settled it. Every one of the seven sleepers up stairs, Mr. and Mrs. Foote, and every chick and child down stairs awoke as though an earthquake was tumbling the house upside down. Directly we heard the work of getting breakfast in progress, when all hands tumbled out of bed and got ready. Let us pass over the consumption of Mrs. Foote's food. No human being would credit the story were I to tell it.

Mr. Foote's house is on the southern bank of the Platte. Ordinarily the best shooting is near the house. Rouse and Adams were located just above. After breakfast Hathaway and Lanham built blinds from willows not far away from the house, using a part of the artificial decoys and dead geese from their neighbors' blind, while Baum and I had George take the team and drive us a mile and a half down the river. Here we loaded the wagon with brush, and driving out upon the bar unloaded it, built our blind, put out twenty-four artificial decoys and awaited the flight. Three miles below us was a large party from Falls City, in this State; above the house was another party from Salem, shooting from sink boxes, with single individuals sandwiched in now and then till the river was one unbroken picket line. When the geese, near nine, began to come in from the fields, they seemed to give Baum and me the "go by," and as we heard the thundering up and down the river from the other fellows, we grew restive and unhappy. At last, near noon, five brant passing our way, catching sight of our decoys, came in and we knocked down three of them. The other two circled around awhile and coming back to look after their dead companions, we "lifted" them, thus annihilating the entire flock, and somewhat soothing our feelings. A little later we secured a pair of Canada geese, and from that time until after three o'clock did not get a shot. Hailing George, we had him drive the wagon out to us, when we loaded up our blind and traps and went a mile further down the river, where we rebuilt the blind and put out decoys, having completed this work by four o'clock. From that time till dark we had fair shooting, running our score up to nineteen, seven of which were brant and the only brant he and I killed on this hunt. On returning to the house we found the scores of the others about equal to our own, but nobody enthusiastic. Supper was awaiting us and it did not require two invitations to induce us to sit down to the table. It would have made the heart of a dyspeptic quail for him to see us demolish things. In his eagerness to get in his work, Jack poured the cream, intended for his coffee, into the sugar bowl, and Baum appropriated a two-gallon dish of stewed onions to his own use and began eating from it, when he was brought to consciousness by other members of the party who had a fondness for onions as well as himself. After supper guns were cleaned, and then in the big room, around the fire, the incidents of the day were recounted. There had been many clear misses during the day, but every one was going to do better on the morrow.

Just north of the blind occupied by Baum and myself was a wide channel running around an island about two miles in length, and through which flowed a little stream about fifteen feet wide and three or four inches deep. This seemed to be a favorite resort of the geese, and they would collect there by the hundred. Once during the day Baum waded the river and put them in motion, and later I did the same thing. They left the place reluctantly, but when they got fairly started in their flight up and down the river the music began. After they had passed out of sight we could note their progress by the booming of the guns from the blinds as they flew over them. Having told the boys of this place it was decided that Jack and Adams go down there and try it. Jack was to look after Adams, pilot him across the river and see that he did not go down in the quicksands. The young man feared his avoirdupois, and the quicksands are bad in the Platte. So these two gentlemen went down in the wagon with Baum and myself the second day, carrying down some dead geese for decoys, and crossed the river, where Baum and I built our first blind, Jack carrying over the biggest load. But Jack is wonderful on the carry. That night I was telling the boys of the load I saw him take across the river, when they related what they had seen him do the day before. On going out from his house he and his party found a large blind left by other parties that needed repairs. Billy Foote, the old gentleman's son, hauled out a load of brush with the pony to make repairs, a load so large that the pony stalled upon the sands and some of the party had to go to the rescue. During the day it was decided to move the blind near half a mile down the river, and Jack's partner went off to arrange for it. While he was absent Jack tore down the blind, whipped a stout cord out of his pocket and tied it around it, then deliberately shouldered the unwieldy bundle and marched off with it. Hathaway says—and Hathaway is a truthful man—that when he saw the thing going down the bar he though it was the pony loaded down to the guards on both sides with brush and Billy on top of it.

But Adams and Jack, especially the latter, did not meet with much success in the new territory, and Jack changed again the next day to a position where he had fair shooting, the reverse falling to the fate of Adams, who abandoned his blind, but in crossing the river at night to join Baum and myself in the wagon on our return to the house, fell in with quicksands, got over his depth, and went to the house afoot to keep from freezing, beating us in by half an hour or more. The next day, both Jack and Adams moved back to blinds near the house for the two days remaining to us. George ferrying the dead geese in what we called the dead channel, across the river on horseback and then hauling all from both their blinds up to the house, where they went out upon the bars to do duty again as decoys. Baum and I stuck to our position down the river till the last day but one of the hunt, when at night, after an unsatisfactory day's sport, we tied up our geese in bunches of six, loaded them in the wagon, and hauled them to the house, where they were hung up in the corn crib. On the morning of the last day Baum borrowed some dead geese from other blinds and went into a small one of his own, while I went into the blind with Jack, all near the house. During all this time Hathaway had stuck to his original blind and had set out so many dead geese that his decoy was very attractive and brought in the living ones. One day that cool, quiet, patient hunter brought to bag twenty-eight geese and a few ducks, the latter from flocks that happened to fly his way in passing up and down the river. One day a flock of geese lit in the water near our blinds (we had the third day erected two small ones instead of the one large one) and at the signal by Baum he got in his first barrel as they sat in the water, and I as they arose. Owing to smoke interfering I could not see the flock after the first discharge, but banged away in their direction. When the smoke cleared away we saw two geese "dead as a mackerel" and six wounded ones making off in every direction, two of them striking for the swift current near the opposite shore, where I chased them for nearly half a mile, once getting in water that came within an inch of the top of my wading pants. Baum raced around over the bars and in the shoaler water after the four others. We succeeded in capturing them all, but returned to our blinds nearly exhausted. That same day four geese came into the decoys, and at the signal Baum's gun cracked, and I tumbled my goose. I then drew upon the next one I saw, but just as my finger bent upon the

trigger "bang" went his gun and the goose began to fall, though too late for me to check up. "Clean work," says he, and upon asking him where the other goose had gone, "Got two with my first barrel," he replied.

One day Hathaway got six geese out of one flock, one with each barrel when they first came in, then the same as they came back, and the same when they decoyed for the third time. At this juncture the rest of the flock began to suspect something was wrong and took their departure. Adams was too awfully fat to walk to dinner, and one of the party usually carried it to him. On the last day of the hunt, as we were going back to our blinds from dinner, we saw a big flock of geese set their wings and sail for Adams. We stopped on the bar and watched for the result. The entire flock alighted among his decoys, and while we were all swearing the man had gone to sleep, up went the flock, then two puffs of smoke rolled out of the blind and down came five geese, one of which soon recovered and flew away, the others coming to bag.

There was one day—I will not name it—when our score was nearly a blank. Every man in the country for miles inland seemed to have concluded to go hunting. It was a cool, frosty morning and there was thin ice on the small pools. Baum and I went down to our blind early, but before we reached it a couple of geese sitting near the opposite shore attracted him and he waded over to interview them. As I crossed the little island abreast of our blinds I was confronted by three countrymen in black, with muskets, standing in line on a sandbar as near our decoys as they could get for a narrow channel of water that intervened, while the black hat of a fourth stuck out of Baum's blind as a prominent warning to any goose going that way. As I walked out to where this individual was he remarked, by way of apology, that seeing a good lay out and no one about, he concluded to occupy one of the blinds. He said that some geese has been flying about there, but that none came into the decoys. I told him if he thought a goose green enough to hover around so near where a party of men were on parade with loaded muskets he was very much mistaken. With this remark I began taking up the artificial decoys, the wind having set in so strong as to shake them up too much; besides we had some sixty dead geese set up.

Directly the man holding the fort vacated, and joining his companions they started up the sandbar all abreast. Before they had gotten out of speaking distance three more came in sight, and I had the task of freezing these out by sitting down in my blind and keeping quiet. And thus it was through the entire day. A drove of cattle were driven down to the bank opposite us and herded there. At one time eight men on horseback were charging about among the herd, and separating the younger ones from the rest of the herd. Later, two boys, each having a musket, took a seat on the bank near by to get the benefit of our decoys, not knowing that neither of us would get a shot while they sat there, so we had to persuade them to depart, but they went only two hundred yards down the river and settled themselves again, where they remained till late in the afternoon. Just below us a party sat up a target for pistol and rifle practice, and banged away there for hours. The others of our party had similar experiences. Of course one could not expect a big bag under such circumstances. Baum and I got only six geese all day, three of which he brought as the result of his side issue in the morning. Whether these three geese were picked up dead or wounded, or pilfered from the blind of some absentee, I will never know. That night we loaded our geese into the wagon and hauled them up to the house.

The following day was our last, and we made it count. I occupied the blind with Lanham, and enjoyed that excellent fellow's company as much as I did shooting at geese. His enthusiasm never flagged. When a flock set their wings for our decoys, and he had cautioned me to "keep close," "lie low," etc., he invariably spat vigorously upon his hands before clutching his Scott hammerless for the assault. Directly after dinner George began carrying the dead geese from around the blinds to the house, taking twenty-four on the horse each trip. It was after dark when he got through. Some of these dead geese had served as decoys for five days, being left on the bars night and day. Four were missing from the blind of Baum and myself the morning there was such an outpouring of natives, and those were the only ones we lost during our stay.

Our count was 313 geese, two sandhill cranes and thirty-one ducks. At four o'clock next morning, with Mr. Foote's wagon, with sideboards on, loaded with geese as long as one would lay on, and thirty or more, and our traps in George's wagon, we started for Juniata, which place we reached in time for the eastward bound train. Here Mr. Adams expressed thirty-five geese to his friends in Burlington, and we tagged a few bunches to some of the railroad gentlemen, and at Crete dumped off fifty or sixty for Jack's host of friends, taking the rest on to Lincoln, where they were hauled up-town to the store of D. & C. L. Baum and given away.

The gentlemen connected with the railroad treated us royally, furnishing us with every facility for the transportation of our game and traps, and doing it cheerfully and pleasantly. To the Eastern people who were at the depot when our cargo of geese was unloaded it was a novel sight. Wild geese by the wagon load was something new to them.

If any one wants good, clean sport, that won't wear him out, let him go up on the Platte in the fall, when the geese have come down from the North, and take a bout at them, while he may sit in a soft seat in a comfortable blind. And if he goes by the way of Juniata, let him be sure that George Watkins, the prince of fellows, takes him over to Mr. Foote's, where Mother Foote will treat him as though he were a favorite orphan. BURR H. POLK.

LINCOLN, Nebraska.

FROM MOOSE TO RUPERT'S HOUSE.

I LEFT Moose Factory on the 20th of June, at about one o'clock in the afternoon, in one of the hay boats. Our hay here has to be brought a distance of fifteen miles from the marsh. It is poor in quality and slightly salt from the brackish water which flows over it during high tides. The boat is about thirty feet long and of a shallow draught. I had as a companion a gentleman who was going to take charge of one of the inland posts in connection with Rupert's House. We had only a square sail, which made it impossible to do much without a fair wind, and oars, which at the best was a slow means of progression.

Arrived at Middleboro Island, at the mouth of the river, we camped there, as the tide began to come in and the wind was against us. Our marquees being pitched, we prepared supper, and after a few pipes we turned in. Although we had two tents we used one to sleep in and put our baggage, etc., in the other, as we found it rather solitary work sleeping alone. We did not do much in the way of sleeping, the flies being too numerous, mosquitoes, black flies, etc,. For this reason we were quite ready to start when the guide woke us at 4 A. M. After breakfast we started, and got as far as Ship's Sands, off which the vessel from the old country anchors. The wind being still against us, and the water too rough, here we had to stay the rest of the day, for had we started and the weather become worse we had nowhere to run, for the land being so low and no harbors. In the fall there is very fair goose and duck shooting here. There are gray geese, "whaveys" or Canada geese, both white and the blue. At Rupert's House are found only the blue, and at Albany the white, it being quite an exception to see the two kinds. It is certain that the white mate together, and that the blue also keep together, although at times the white and blue mate, but it is rare. We managed to get a shot at a few ducks, uranicks and stock ducks, but I spent most of the day wandering about looking for plants, of which I only found a few grasses and reeds.

Here and there we came across a pole stuck in the soil with a lot of goose bones and the beak upon the top tied up in a bunch. These are the bones of the first goose an Indian has eaten in the spring, and they are placed here as food for rabbidoes, an imaginary sort of Robin Goodfellow, who has to be propitiated, and also to bring good luck. The skull of the bear and beaver, the feet of deer and the antlers are treated in the same way. The great northern diver or loon is a bird of mystery; its bones are thrown into the water, for the Indians say that in time they come together again and become another loon. Sometimes the bones of the beaver are thrown in also but not always.

When the snow lies deep the geese keep to the rivers, as their food is scarce in the swamps. Occasionally in the fall a goose is found frozen into the ice; one was found last November frozen in by his legs. I noticed here a nest of a grass-tit close up to the side of my tent. The birds did not seem to be frightened in the least of us but would come and take crumbs scattered in front of the tent door. We only saw a few small, three-spined sticklebacks in the small creeks and no other fish at all.

In the evening, having nothing else to do, I gave a small conjuring entertainment to our Indian crew. It was most amusing to watch their faces, as it would be of no use to expect to hear them express surprise, for I cannot say that I ever heard it. The true Indian conjuring consists mainly of ventriloquism and a few very crude tricks. When an Indian conjures he builds himself a tent of seven sticks peeled and set in a ring of about four feet; he then places three hoops of willow round it, which are fastened to the sticks, around this is strained his tentings; he then takes his place in the center with his conjuring drum and drops the tenting—there is no roof to the tent. He then begins his conjuring song and beats his drum. Presently the tent beging to rock backwards and forwards more and more furiously. At last a voice different from the conjuror's is heard talking in the tent, the drum beating the whole time, which is taken as a proof that the movement of the tent is not caused by the conjuror but by the spirit. I had at home spent much time in learning the art of magic and have had much amusement from it here among the natives; and having spare time I have made myself pretty perfect in it. Some of their other tricks are more of the nature of the modern conjuror's illusions, but of course they put it down to supernatural causes.

We turned in and did our best to sleep in spite of the flies. Rose again at 4 A. M. and left the sands and got to within six miles of Netitiche, when the wind turned dead against us, and large quantities of ice being in front of us distant about half a mile, we were obliged to run back again for Ship's Sands, which we reached about 5 P. M. We had hardly camped when a heavy shower of rain came on that lasted for about an hour, and after this was over the flies came out in all their might and nearly devoured us. During the night I heard a bittern booming. We got off again in the morning at about 5 A. M., passed Netitiche at about 10 A. M. and got into Hannah Bay, which was full of ice, but by dint of shoving off the smaller pieces and dodging the larger ones, we got as far as Mistoquamish by 4 P. M. Our goose hunt takes place at Spanish Bay, and as we depend largely on salt goose for winter provisions you may be sure a good hunt is of great interest to us. I cannot say I have yet acquired the taste for salt goose, not that if cooked properly it would be bad, but anyone wishing to see to what a pitch bad cooking can be brought should visit Moose and then he will be satisfied with the dirtiest restaurant in New York or London afterwards. At one time there was a post in the bay called Hannah Bay House; this was about forty years ago. The Indians made a raid on the place and murdered all the inhabitants. One man, an Indian, is still alive who had his brother shot in his arms by the murderers as he was on his way to give the alarm at Moose. An armed force was sent to capture the murderers, which they did, and brought them to Moose, where they were tried and the chief instigators of the crime executed.

In the evening we found ourselves off Gull Islands, where we camped upon the stones—rather a hard bed, but as no brush was to be had, we made the best of it. Soon after landing, we went to look for gull eggs, which are not bad eating if fresh, and are not as strong as a person would think. We managed to get about eighty in ten minutes. While on the look out for nests, which were mostly those of black headed gulls and kittawakes, we came across a bear's track, but he had evidently swam off again. The next day we got to a stony point of land on which an Esquimaux interpreter lies buried under a pile of stones. We camped near this. A very large erratic block of stone about twenty feet long by twelve high and about the same thick, evidently carried there by the ice, lies just behind the grave. The whole of the coast is covered with these blocks, but as a rule they are smaller than this one. During the whole of the day we were among the ice and were unable to get ashore, so we were obliged to do our cooking by a fire lighted on a barrel of sand in the boat.

A thick haze was over everything when we rose the next day. After we started it deepened into a fog as soon as we got among the ice cakes, and with care we managed not to damage the boat. In the middle of the day the fog cleared and we put ashore for dinner on a small stony point. Gulls had built on this point, but some one had been there before us and taken the eggs as the nests were all empty. In the afternoon about five o'clock, we got clear of the ice off Caminerpercashe, and a good breeze springing up, we soon flew past Black Bear Point and reached Rupert's House at about 10 P. M., not at all sorry to have got over the trip, only a distance of about one hundred and twenty miles, which we should have done in two days with a good wind and no ice, instead of in six. Rupert's House is a very pretty little post with a background of trees that show up its yellow and white houses with their red roofs to advantage. A few Indian tents were pitched outside the pickets, but the bulk of the Indians were not yet in.

After a very pleasant four days' stay here I started back for Moose, leaving the place about nine o'clock in the morning. On leaving the post, an Indian was started smoking for a fair wind, blowing the smoke in the direction the wind is required to come from, this being according to their ideas a certain way of obtaining it if the smoker is a good conjuror. We reached Black Bear Point in time to have dinner; where I heard a lot of snipe but did not get a shot at them. By about six o'clock in the evening we were off Caminerpercashe where we had to camp. To get ashore we were obliged to wade for at least a mile through mud and water. After about four trips we managed to get all our bedding etc., on the shore and fastening the canoe to a stone—for I left the boat at Rupert's House, and returned in a half-sized canoe with three Indians—we went to work to make the camp. Just as we were going to pitch the tent, we concluded to change the place, as we found that a nest of snakes had been before us. A family of eight were curled up in a knot, rolling about and hissing, not at all a pleasant sight; although they were not poisonous, the idea of having a few in bed was not pleasant. The tent being pitched nearer the shore, I walked about a bit to see if there was anything to shoot. I saw bear and fox tracks, but no game. Two of the Indians followed the bear tracks, but came back saying they could not see the brute. We sat smoking after our supper, when one of the Indians jumped up and said the canoe was off. Sure enough, we could not see it. Presently it swung into sight from behind a stone when off went the Indians' boots and shoes, not to mention pants, and away the three went through the mud, forming quite an instructive spectacle to me as I watched their shirt-tails flowing in the breeze. They got up to it just as it was starting after a slight rest on a small shoal; one of them stayed in her all night, the other two came ashore and dressed and went to bed.

At 3:30 the next day we were off again, and saw the loom of ice in the distance, but not near enough to give us any uneasiness. We breakfasted on a long, stony island near Shaowan, where I saw another garter snake. All these stony islands are formed of water-worn stones of various materials—gneiss, limestone, and a heavy black rock, etc., showing that they have been most likely carried into their position by the ice, on which I have often seen large stones, some as large as flour barrels. We got as far as the Huskies grave during the afternoon, where we had to go to shore and land, as a north wind came up and prevented our going on. After waiting some hours for any sign of a change we pitched the tent and made up our minds to stay till the next day, so taking my gun I went off and shot a few plover and fired several times at a loon, which I did not hit. Unless one has fired at these birds he little knows how quick they are and what a difficult thing it is to kill one. I also saw a bear's track on the sand by the beach. The next morning we were off again among the small islands and shoals on our way to Hannah Bay. At a creek called Washowhow we camped. The walking is very bad here, the land being intersected with small ditches and creeks. It is covered with a coarse grass and a species of equestrina called here goose grass. The reason it gets the name I cannot tell, for all the geese I have examined contain none of the roots in stomach or gizzard, but generally some of the roots of the coarse grass that grows near the swamps.

The place where we camped was very swampy indeed, so much so that even with a good foot and a half of cut grass under me I got quite wet in the night. When we left there was no wind, so we had to paddle, which we did until we got past Netitiche, when the current caused by the tide helped us a little, and we were able to take it a little easier, reaching Ship's Lands by about one o'clock. Here we had dinner and waited for the tide to turn: when it did we went in with it, passing the boat that was down laying the beacons for the schooners. A wind then sprung up, and we came in in grand style, passing the various islands and brought up at the launch by about five o'clock in the evening, having been four days on the return trip, which is not considered bad time for a half-sized canoe with three men. The winter route for the dogs is rather shorter than the canoe route. I was not sorry to get off the trip, although it had been very enjoyable, but the want of company made me glad when it was over. NISTAKESEIK.

MOOSE FACTORY, Hudson's Bay, September, 1882.

Natural History.

CAGED PINE GROSBEAKS.

I REGRET much that I am so frequently a little late, and so seldom report on time. When bears were on the stand I wrote out the "finishing touch" of his, or rather her, history (for a he bear is an arrant coward of no account) but failed to send it on in season, and consequently half its interest was lost. Again, when snakes had a competitive examination, I was behind with my own experiences with a black racer, once a terror in New England, if tradition is reliable. Now there comes up an exhaustive history of the pine, or Arctic grosbeak, the loveliest bird I ever domesticated, and the last, for I have since seen no bird worthy to take his place.

I well remember the first I ever saw. It was north of latitude 45 degrees in Maine, in the winter of '35-6. Coming home to dinner one day, in a blizzard such as is known only in that climate, I could not reach the door on account of snow-drifts. I went back to the wood shed, from which flew out five birds I had never before seen. One dropped a moment in the snow on a roof a few feet from me, and then all disappeared, uttering a soft sweet note to avoid separation in the blinding storm.

Twenty years I looked in vain for that bird whose form, color, and strange habits had been stamped on my brain. At length in mid-winter, in Springfield, Mass., I recognized my birds of the storm. They were feeding on seeds of the ash, and I shot a pair with more satisfaction than I ever felt under similar circumstances. Six years afterwards the birds again appeared in Springfield, a flock of a dozen or so feeding on the berries of the mountain ash, seeds of the black ash, and buds of the Norway spruce. Observing their quiet, unsuspicious habits, I captured with noose and fishing rod five, three males. Placing them in a large cage, I sat down to make their intimate acquaintance. They had

evidently come from a region where men are not known, and consequently were ignorant of human treachery and human invention. It mattered little to them that they were in confinement; like the little redpoll, they would drop together in a clump on the bottom of the cage, uttering, while eating, the softest, sweetest notes of recognition ever uttered by a bird. Then the leader's note would be heard, plain as a human voice, "Come, come, let us go," then like the redpoll, they would all start at the same instant and in the same direction. Reaching the side of the cage, they would cling for a moment to the wires, and then fall back to the perches, sitting for a few minutes silent and dejected, then returning to feed and pick about the cage. This was often repeated the first day, but soon abandoned entirely.

In a few days my birds began to warble a song of soft, notes, louder and more constant. As spring advanced the song resembled somewhat that of the purple finch, but with long, sweeping notes which that bird does not utter. I used to sit hours by the cage, for I never possessed pets I so much loved. They would eat from my hand, pick an apple seed from my lips, interspersing the same sweet music. Not so loud and clear as "wood thrush No. 2." O, dear, I cannot think of that without—well, no matter, I didn't feel so bad on my own account, but neighbor Phelps, of the "Homestead," a man of fine musical taste and culture, found its performance beyond his depth and was moved to criticism, although the point was obscure. Perhaps "Coronation," printed as that was, bottom up, and wrong end to, would be just as difficult.

But to return. My birds delighted to wash, a luxury denied them in their native region. I filled their bathing vessel with snow and water, in which they would wallow till completely drenched, eating snow and ice while so doing. Sitting by the cage one Sunday afternoon, the sun shining brightly, I had placed in it a ball of snow; the birds were sitting on the ball, spreading wings and feathers over it with every token of delight. Suddenly with a scream every bird showed the most intense excitement, not terror, but fight all over, heads in one direction depressed, wings slightly spread, topknot overhanging the beak, and the beak wide open. Turning my head there was a shrike hanging to the sash not a foot away. The robber bird darted off and my pets became quiet. The shrike had discovered the birds from a tree opposite the window, and the birds recognized their mortal enemy at sight, showing no inclination to retreat. My inference was that the shrike dared not encounter the old birds, a single nip of whose powerful beak would cut off the neck of the shrike in an instant.

Wishing another test of their sagacity, I brought to the cage some stuffed birds. They approached them fearlessly, recognizing their own kind, but the instant a stuffed shrike appeared, there was the same scream, the same position of desperate resistance repeated.

One of my birds consigned to friends in New York lived six years in a cage, suffering latterly from those shelly excrescences mentioned by Dr. Coues. My own lived about the same number of years, and at last died of plethora from over-kindness. Of their southern breeding limits little is known. Finding them in summer on Moosilauk, midway in New Hampshire, and having most positive evidence that they come down from the spruce belt on the Green Mountains to feed on currants and cherries in the back settlements of Vermont, I do not hesitate to presume that they may be found much further south than represented to be the case. One fact at least favors this opinion, the bird is almost an annual visitor to us, and has already arrived this first of November, the snow-bunting having come a few weeks sooner, both preceding the cold weather as never before.

"A many years ago" I wrote that in this section of the Connecticut Valley, the Northern and Southern fauna overlapped each other remarkably, and that during the year more of the birds known east of the Mississippi would be found here than in any other spot in the United States. I had the satisfaction, however, of seeing it word for word shortly after published under another name. To show how things are getting mixed up, I will only add that the grosbeak, the bunting and a whippoorwill were seen and shot this first to third of November, 1882, in Springfield, Mass.

B. HORSFORD.

The very interesting article upon the pine grosbeak in FOREST AND STREAM of Nov. 2 reminds me that I have seen these beautiful birds in myriads about miners' cabins, up about timber line on the mountains, in the latter part of winter and early spring. They come there to feed upon the crumbs and scraps thrown out from the table, and are very tame and sociable. If the weather is pleasant they keep up a constant twittering and singing. The snow at such season of the year is generally from four to eight feet deep, and no earth is visible. The colors of their plumage are exceedingly varied, rich and beautiful. I think they breed on the high mountains, at or above timber line, but of that I am not certain. Many small birds make their nests among the furze that covers many of the mountain slopes at 11,000 to 12,000 feet elevation, where there is frost every night.

W. N. B.

DENVER, Col., Nov. 16, 1882.

VARIOUS QUESTIONS DISCUSSED.

"BYRNE" has never had his science or facts questioned before and is not going to put up with it at his time of life. It certainly is a "pretty kettle of fish" that after a long and useful life spent in travel and research, and the study of things *ferœ naturæ* in woods, rivers, seas, mountains and swamps, he cannot tell one species of fish from another when he has often seen, handled, and eaten of both. Therefore I will reiterate that the fish known in the northern waters of the Mississippi Valley as the sheepshead, grunter, drum, and buffalo perch, or grunter perch, rockfish of Georgia (from the so-called stone in its head), and known to fish sharps as *Haploidonotus grunniens*, is not the fish known in the Southwest everywhere as the gasper-gou. Of this I am quite certain, and I have heretofore given my reasons for so thinking; it is, however, a closely allied species of the same family, and I cannot think that a different habitat and environments could make so great a difference in the same fish.

We have another case exactly in point in the fish known everywhere in northern waters as dogfish, bowlin, mudfish, lake lawyer, and known scientifically as *Amia calva*, De Kay. Now this fish is considered everywhere North as unfit for food, yet even so far South as Southern Illinois they are eagerly sought for and considered a choice table fish. I think Prof. S. A. Forbes, of Illinois, when collecting in the waters of Southern Illinois, considered the fish specifically the same as that of the Illinois River. There in South Illinois, and everywhere South so far as I have observed, this fish is called "gundle" and "grindle."

Last fall I dropped a squirrel from a tall cypress on an old Tennessean's back in a cypress swamp, near Little Rock, who was fishing for "gundle," and nearly frightened him to death, and he me. We had neither of us observed the other He was fishing in water not over a foot deep, and had caught four fine "gundle." I asked him if he knew what he was catching, and if they were fit to eat. "Yes, sir, we call them gundle. They are a very fine fish, not so good as trout (bass), but certainly as good as cat or buffalo." The old gentleman was a new-comer in Ar-kan-saw, and I think that when my gun cracked he was the worst scared man I ever saw. He thought he had got into Arkansaw sure enough. Now, is this Southern mudfish, or dogfish, the same as those of the upper waters? I would say that the two fish look exactly alike, as near as one can remember, but we all know that the up-river dogfish is unfit to eat, or, rather uncookable and uneatable. And I would here remark that I think Dr. E. Sterling, in your issue of Sept. 21, has got his ichthyology mixed, for on the Illinois River we found this dogfish the one impossible to cook tender, while the sheepshead, or grunter, is so soft and mushy that it needs no cooking to become tender. Is it possible, as I said before, that different waters, food, etc., can make such a difference in fishes? I, for one, think not, and am confident that when these fishes are brought together and critically and scientifically examined, they will be found to be specifically distinct. Dr. Sterling, I see, sticks to this one name as if there could possibly be but the one species.

Since writing the above I have called on that genial sportsman, warrior, lawyer, judge, editor and statesman, Col. Bob H. Crockett. When I entered Col. Bob's sanctum I found him with a copy of FOREST AND STREAM in one hand, scratching his head with the other, and muttering to himself, "Gasper-gou; what the d——l is gasper-gou? I never saw or heard of such a fish in White River. That Yankee must be off his base. There are no gasper-gous in White—. Good morning, Colonel, take a chair; sit down; what fish is this you and Mr. Robertson of Texas call gasper-gou? I never heard anything called that name except, I believe, the black buffalo, and that is the poorest fish in our river, not fit for anyone to eat who can get anything else."

"Well, Col. Bob, your early education must have been fearfully neglected to live here on the banks of the White River nearly all your life and not know our finest fish, why you don't know as much as Major Lewis." "Well, I declare I do not," said Bob. "The best fish in White River that I know of I never heard called anything but drum." "The very fish," said I, "the drum is the gasper-gou, sheepshead, or grunter, or silver buffalo, or crayfish, trout, or perch, known everywhere along the Mississippi coast—either bank of the lower Mississippi—Louisiana, and Texas, as gasper-gou; and elsewhere, generally in the North, as drum." "Well, I declare, honey, I would never have thought that the drum was the fish meant. Why certainly, it is the best and richest fish we have. I have caught thousands of them," said Bob.

All this shows what our common English names amount to; and it also shows what the present condition of our classical names amount to.

Now, right here an important correction of a misprint in my last article. (See FOREST AND STREAM of September 21, page 143.) The types make me say, "*shoes* in August and September." It should read. "From analogy I should say that the gasper-gou *spawns* in September and October," etc., which seems to be correct, for fish caught here in the past few days seem to be full of ripe eggs. BYRNE.

BIG-HORN SKULL IMBEDDED IN WOOD.—In our issue of Nov. 3, 1881, was given an illustration of a head of a mountain ram imbedded in the trunk of a pine tree. The following extract is from a book entitled, "The Fur Hunters of the Far West," written by Alex. Ross, in 1824: "Out of one of the pines I have just mentioned, and about five feet from the ground, is growing up with the tree a ram's head, with the horns still attached to it; and so fixed and imbedded is it in the tree that it must have grown up with it. Almost the whole of one of the horns, and more than half of the head, is buried in the tree; but most of the other horn and part of the head protrudes out at least a foot. We examined both, and found the tree scarcely three feet in diameter. Here we put up at an early hour, and called the place Ram's Horn Encampment. Our Flathead Indians related to us a rather strange story about the ram's head. Indian legend relates that one of the first Flathead Indians who passed this way attacked a mountain ram as large and stout as a common horse; that on being wounded the fierce animal turned around upon his pursuer, who, taking shelter behind the tree, the ram came against it with all his force, so that he drove his head through it; but before he could get it extracted again the Indian killed him and took off the body, leaving the head as a memento of the adventure. All Indians reverence the celebrated tree, which they say, by the circumstance related, conferred on them the power of mastering and killing all animals. Hundreds, therefore, in passing this way, sacrifice something as a tribute to the ram's head; and one of the Iroquois, not to incur the displeasure of the god of hunters, hung a bit of tobacco on the horn to make his hunting propitious."

A LATE BROOD.—Troy, N. Y., Nov. 12—Yesterday I met a man trying to sell a young great horned owl (*Bubo virginianus*). The owl was as large as the average, but his wing and tail feathers were not fully grown. When placed on the ground he advanced by long hops, using his wings for aid. The owner caught him near the city; he could not fly and made no resistance. I always supposed the owls were matured by this time. Has a second brood ever been recorded?—SEYMOUR CUNNINGHAM. [The great horned owl is one of the first birds to hatch in spring. We cannot account for the immaturity of the specimen above referred to].

EARLY CROSSBILLS.—Boston, Nov. 14—A friend, while walking through a grove near the outskirts of Brookline, some two weeks ago (Nov 4), observed a small flock of birds feeding on some pine cones. To satisfy his curiosity as to what species they were, he fired into their midst; three came tumbling to the ground. Greatly to his supprise, one proved to be a white-wing and the other two red crossbills. Is it not unusual to take these birds in Massachusetts at so early a date?—FRED LEWIS. [It is unusually early, but this year the pine grosbeak and snow bunting and crossbills have all come very early.]

A NEW SWIFT FROM SOUTH AMERICA.—In the annals of the N. Y. Academy of Sciences, Vol. II., No. 11, 1882, Mr. Geo. N. Lawrence describes a new species of bird of the family *Cypselidæ* from New Grenada. *Hemiprocne minor* differs from all its near allies in its much smaller dimensions, and in the character of the collar which encircles the neck. In this species the plumage above is lustrous black; the upper tail coverts are smoky blackish brown; wings, black, quills, with the exception of the outer three, being narrowly margined with grayish white at their ends; the chin and throat are fuliginous brown; breast, abdomen and under-tail coverts are smoky brownish black; the white collar about the neck is narrow and well defined behind, but in front it is not so well marked and widens out on the breast, where the feathers have their centers mottled with black. The collar on the hind neck is one-quarter inch in width, on the breast at widest part it is three-quarters of an inch in width. Bill, black; length, seven inches; wing, seven; tail, two and one-eighth.

A REMARKABLE CONTEST.—Como, Wyoming, Oct. 29, 1882.—Thursday, the 26th of this month, I saw a strange battle between two kid antelopes and an eagle. The antelopes, when first seen by myself and Mr. Carlin, were running in our direction, and above them, about one hundred feet, was a large golden eagle, which made a swoop down at the antelopes. When the bird did this one of the kids stopped, turned round and reared on its hind legs and beat the air with its fore feet, and the bird of prey rose high in air, only to make another dash, with the same result. This was repeated at least a dozen times, when the eagle, seeming to become tired, flew away and settled himself on a rock, and the antelopes trotted away to join a large band on a near hill side. I have several times seen an eagle catch a jack rabbit, but in twelve years on the plains never saw one try an antelope before.—W. H. REED.

Camp Fire Flickerings.

"That reminds me."

A HISTORY of the navy during the late war, in giving an account of the operations of the ironclad fleet before Fort Sumter, contains the following paragraph: "While waiting to renew the attack a fire broke out on board the Nantucket which, however, was extinguished after doing a slight damage." (I quote from memory, not having read the account for a number of years.) As the writer of this was an eye witness, and as one of your correspondents was a prominent actor in the incident above quoted, I hereby give you an account as witnessed by myself:

We were lying off Fort Sumter, just inside the bar, hatches all fastened down and the sea washing clear over the deck fore and aft, only one small hatch open to get up through the turret, when late one afternoon I heard the cry of "Fire! the yeoman's room is on fire!" Ten feet from the yeoman's room was the magazine. Under the berth deck were small lockers filled with eleven and fifteen-inch shells, and when I got on my feet there was a sheet of flame pouring out of this store room, and not more than two feet separating the fire from the shells. The crew was mostly made up of "raw recruits," and every sinner of them saw and knew the danger at once, and there was a rush for the small ladder leading to the turret. I started with the rest, but soon perceived that there was no chance for me where seventy or eighty men were struggling to get through a small hole two by four feet. Turning back to the fire I saw two or three old men-of-war's-men at work rigging the fire hose, and my fright left me at once. Perhaps as a boy I did not realize the full extent of the danger. The first thing that drew my attention was a dark form dancing up and down in the midst of the flame trying to stamp it out, and thoughts of a salamander and of the "Hebrew children" flashed through my mind.

In a few minutes the hose was connected, and a large stream of water soon extinguished the fire, when there emerged from the smoke the most forlorn looking Lieutenant it has ever been my lot to behold. A short time before our ship boasted of the finest pair of mutton chop whiskers in the fleet, the pride of our First Lieutenant. But now their glory had departed; the fire had singed one side completely, while the other had been preserved intact, ditto the hair.

Imagine, if you can, a crew of sailors ten minutes later, drawn up in line, trying to keep sober faces, while listening to a lecture from this comical looking object, on the folly of panics in general and fire panic in particular.

Long life to "Pisco," and may his shadow never grow less; notwithstanding that he did drill us at fire quarters rather savagely for the next two or three weeks, some of us believed it was for our own benefit, and not to revenge the loss of those whiskers. For my part, I shall never read a letter from your correspondent without recalling to mind the picture here presented. H. A. S.

CHELSEA, Massachusetts.

I send the following reminiscence of one of many jolly up river hunting trips, taken in the "fall of the year" by a few choice spirits.

Scene—on board yacht Lolita, at anchor in a dense fog, near Alvarado marshes, all hands on short allowance of Eastern oysters in shell, and Budweiser beer. On deck we see sailing-master Charley K. and high private W. A., busily inspecting a lot of nondescript wooden decoys. There is a gleam of mischief in the eye of the gallant sailing-master, as the wonderful birds are overhauled. Below, in the cabin, the very Hon. Mr. Austin T., and Mr. Elijah F. are seen, deep in the mysteries of Pedro. Ten minutes later, the "Hon." and his comrade come on deck to "stretch their legs." A beautiful specimen of the canvas-back mallard is seen, feeding in unconsious security, a few furlongs off. The Hon. Austin: "By George, I see a duck!" Elijah dives below, brings up his gun and "gives it to him." By-and-by, the fog and smoke lifting, the bird is seen, still in unconscious security, or else he has smelt powder before. Chorus of, "Give it to him again 'Lijah, he didn't hear you." 'Lijah doesn't "give it to him again," but goes below to take up the thread of Pedro, where he dropped it. W. A.

SAN FRANCISCO, California.

We were sitting around the camp fire in the wilds of Arizona. One and another had contributed a song or story save Jerry the guide, who had sat in silence the entire

time. "Oh! come, Jerry," said John, "do give us a song—a real old war-whoop—one that will awaken these mountain echoes; they seldom hear so good a voice." "Well, boys," said Jerry, "before I sing you a song, I will have to fire off a story, and then if you want me to sing afterwards, why I'll go ahead. You see, boys, I was away up in these mountains with a prospecting party 'searching' for gold. I strayed away off from the fellows one day, and losing the trail and night coming on, I thought to myself the best way for Jerry to do, was to camp. So I sat myself right down where I was, stretched out these pins, and, wrapping my blanket about me, turned in for the night. But I wa'nt to sleep, at once. No, indeed, for soon there came such a howling and snapping of teeth about me, that my hair stood on end. There, in a circle about me sat as lively a pack of wolves as you ever did hear on, and being without my gun, you'll bet, boys, I thought my time had come. Well, my mother had taught me, when only a sprout, many a good thing or two, and among others I remember her saying, 'Now, Jerry, my son, if you ever get into a tight place, just you say yer prayers and then sing a song, and all will be right.' So I got right down on my knees, but after I rose up I saw the varmints gitting closer and closer. But I was bound to carry out the whole programme, so I cleared my pipes and at it I went on the tune of 'Old Hundred.' On finishing the first line, the wolves commenced to kind of shake their heads, and look at one another. At the end of the second, they rose up and bawled. At the end of the third, they tore around like mad, plowing the ground in all directions, while at the end of the fourth, they went a flying down the mountain side as if Old Nick was after them. And now, boys, if you want me ter sing, jist say the word." "Not much," said John, seizing his gun, "not this evening." PADDLE.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

SOWING WILD RICE.

IN the beginning of April, 1881, we received from one of the parties advertising in your paper nine bushels of wild rice, which, although none of us had seen it before, looked to be good seed, and let me state right here that in relating our poor success, we do not in the least wish to reflect upon the quality of the seed nor the fair dealings of the seller, but lay our partial failure to other causes. We soaked the seed in water for two days, and two boats spent some six hours each sowing it into every place in the lake which from descriptions read in your journal we considered a suitable spot for it. The kernels sank rapidly out of sight, and many long weeks lay before us until their reappearance in anticipated waving fields of grain. The month of August came, but no waving fields of rice with it; after careful searching we discovered here and there a solitary stalk where we expected hundreds of them. These stalks bore fruit, but having thrown into such a place perhaps a peck of seed, with such poor results, how could we expect that a few stalks in the same place would amount to anything? Well, this summer came, and we were almost afraid to ask each other about wild rice.

One day in August last, while talking about clay pigeons and smoke balls and shooting prospects, one of our crack shots happily surprised us by the remark that he had lately been hunting for wild rice again, and had found hundreds of stalks where a year ago there had been scarcely ten. This was good news indeed, and we did not fail to verify his story by finding it just about as he had told us. Now please understand that there are no waving fields of it yet. The stalks are still rather far and few between, but it is a settled fact that there grew considerable more rice this summer than last, and our hopes may yet be realized of seeing the swampy corners full of it, and the ducks tumbling to the music of our bi-piped organs.

Should any one desire to introduce wild rice, we wish to advise him to sow it in the fall, as that is its natural seeding time, and as the water in most any lake or river is lower in that season than in the spring, you can see where you sow it and will not risk wasting seed in places which either freeze out in winter, or are only covered by water in spring and not all the year round. Do not be afraid that it will fall into too deep water, we found stalks in spots 8ft. deep in the fall, and 11 or 12ft. deep in the spring, though we consider a depth of 3 to 5ft. in the fall best.

C. GERBER, JR.

WEBSTER, Mass., Nov. 1882.

NORTHERN MICHIGAN.

Many men, of many minds,
Many birds, of many kinds,
Many fishes in the sea,
Many men that don't agree.

THE boy who straggles home tired, dirty, and hungry, after a day's fishing in the shallow crooked stream running through the village, with a half dozen sunfish, a rock bass, and perhaps a small turtle, tells of his adventure for the day; what a nice string of fish he caught, and how many whopping big bites he had, and with face all aglow, and in emphatic terms, says it was, "the best fishing he ever saw," and exhibits his trophies, with a delight and satisfaction unequaled. Another, out for a day's shooting, rambles along the bank of the same stream and brings home with the same pleasure and expressions of delight, a couple of blackbirds, a chipmunk, and perhaps a squirrel, and in relating his day's experience sums up by saying it was "the best shooting he ever saw." In fact this experience is simply a reflection, or example of our own, for each and every one of us know just where we can have "the best fishing or shooting we ever saw," and with sincerity know the sport we have had to be excellent and unequalled. This all comes from degrees of comparison, under the personal experience of the sportsmen, and from which he alone can judge, although the sport he may have had is not a comparison to that of the same character to be had at other points, still the degree of satisfaction is the same, and the boy who has spent the day at the brook, catching sunfish, is equal in this respect to the man who has taken his seven-pound trout from the Nepigon.

On the strength of this personal ignorance the writer has for a number years made Northern Michigan the point of operations for his gunning and fishing (a number of letters on this territory from him, have in the last few years appeared in the columns of FOREST AND STREAM) and he, with other followers of the faith, feels as though the sporting in the wilds of the northern portion of the lower peninsula of Michigan offer to those who delight in the recreation and pleasure of fishing and hunting, unequalled territory for such sport. Fish of nearly all kinds are abundant, game abundant, pure air, pure water and all the essential features necessary to a pleasant vacation can be found in this, to my mind, the sportsman's paradise.

The visitors during the past summer found many changes, improvements for their convenience and benefit, railroads, boat lines, new hotels within easy reach of good fishing and hunting grounds. Many were the parties who availed themselves of their advantages, and all who understood the proper manner of enjoyment in the wild woods and on the beautiful cold streams, will return again to the "best fishing and hunting grounds they ever saw," while their winter days and evenings will often be brightened by thoughts of a lovely camping place by the side of a swift running cold stream, where water could be dipped up as cold and clear as it could be taken from the water cooler at home, and visions will rise to their memories when out of such stream they had a "terrible time" landing a trout or grayling, and they will, as the bright spring days appear, look up their gun, clean it, and see that it is ready for service, and look over their fishing tackle, while a streak of anticipated pleasure will run up their spinal column and catch the short hairs on the back of the head with a slight tendency to raise them up, in answer to the wave summons, as they contemplate and prepare for a rehearsal of their last summer's experience in "the best place to fish and hunt they ever saw."

Northern Michigan is now being hunted over by many sportsmen after deer, and I regret exceedingly to hear that in many instances the character of the true sportsman is sacrificed to that of a butcher, as the objective point seems to be how many deer can they kill instead of how many deer should they kill, in justice to themselves and their brother sportsmen, and with a prospect of a future ground for recreation and amusement. The Michigan Sportsman's Association deserve commendation for their untiring efforts to protect the game of the State, and although not able to dictate and enforce a rule as to just how many deer a single person or a party shall kill, still their oversight and their strict statutes, which they are endeavoring to see fully enforced, will go a long way to aid in protecting the game of the State, and enables them in a great degree to regulate the slaughter, and they can only leave to the parties who are shooting throughout their territory their own sense of propriety and decency as to the amount of game they should be satisfied with; and we all who love the sport will join in a request to such parties who now or may hereafter shoot over the district to spare useless slaughter, and not make the special boast of their exploits and experiences the great number of deer they have shot in "the best place for deer they ever saw." FRANK N. BEEBE.

AMERICANS IN CANADIAN WATERS.

Editor Forest and Stream:

In the waters of the St. Lawrence, during the month of October, large numbers of ducks are accustomed to assemble on the good feeding grounds furnished by the shoals of that river's frequent wide expanses. Especially abundant were the redheads and broadbills last month on the lower part of Lake St. Francis, not far from the line dividing Ontario from Quebec.

The president of one of our oldest and most respected shooting clubs, who lives near the Canadian frontier, is the owner of a very commodious and comfortable yacht whereon his many friends are used to accompany him to fish during the season for black bass, and to shoot in September and October.

His generous hospitality included my name in the list of last month's invited guests; and with three other ardent lovers of sport, we reached the Lake St. Francis in the early half of the past month.

To shoot in the Province of Quebec requires a license, the fee for which is twenty dollars for each citizen of the United States. As respectors of law and order, each person was duly provided with the legal authorization, although early all the shooting was done in Ontario, where no such license is required. Individually, I did not fire a gun in the lower province.

Knowing that ill-disposed persons might object to our carrying guns and ammunition over the line, my host took the precaution of going to a Canadian Custom House and entering all his "munitions of war." Thus fortified, we hoped for good sport and fraternal recognition from our cousins over the board r.

A few days after coming to anchor a "keeyind friend" sent us the Montreal *Witness* containing the following:

AN AMERICAN VESSEL ANCHORED IN THE DUCK GROUND—ALLEGED ILLEGAL DESTRUCTION OF GAME—A WORD TO THE AUTHORITIES.

Sportsmen who have during the last few days visited the neighborhood of River Beaudette have been much disgusted at beholding anchored in the stream an American steamboat whose only object in being there is the slaughtering of duck, presumably for the New York market. Some of the residents say that these intruders have swivel guns on board and as the ducks are still in very large flocks in the channel and have not yet taken to the reeds, they are able to kill them wholesale by these unlawful weapons, while lovers of legitimate sport are seldom able to get within range at all. These Americans have constructed canvas far out into the lake, in which boats from the steamer are concealed. On Saturday there was rather a heavy swell on Lake St. Francis and it was not very comfortable shooting out in the channel, but notwithstanding this seven or eight loud reports were heard from the steamer and the boats around it every time a flock of ducks appeared.

It is said that these Americans are not sportsmen at all, and it is only proper that the attention of the authorities should be directed toward them. A resident who holds some sort of a commission in connection with game preservation when asked why he did not take some action in the matter or report it to the authorities, replied that he was not sure whether those waters were in this province or Ontario, and that the game laws of Ontario were different from ours. It would, however, be too great a task for an isolated constable to undertake to make any arrests, but the proper authorities should undoubtedly take some steps to prevent the illegal destruction of our game, especially by intruders. The Fish and Game Protection Society should investigate this matter further.

Our shooting was from flat boats drawing less than four inches of water, in which we sat upright, partly concealed by rushes, or by small branches of evergreen trees covering the sides. The boats were anchored in the lake—frequently a mile from the shore—along the edge of which the Canadian blinds were built.

The shooting was fair, for the country; the bags, however, being very small in comparison with those we had been accustomed to make in Currituck Sound or in Chesapeake Bay, and I need not assure you who have so long known me, that no violation of sportsmanlike propriety was committed.

The sending of threatening anonymous letters was offset by the politeness of the habitants, who thought us theologians on a tour of relaxation. They never spoke of us to our attendants except as "them D—D Yankees." And yet there was not a doctor of divinity among us. You know how polite a Frenchman or his descendants must be, and will readily understand the highly flattering estimation in which we were held.

The concealment of our boats in "caches far out into the lake," is something quite new to us. We hardly know what the writer means. We are equally in the dark as to those "seven or eight loud reports," from the steamer or the boats around, every time a flock of ducks appeared. We occasionally tried to get for preservation a loon with the help of a Winchester rifle, but we did our duck shooting in a legitimate way, from the small flat bottomed boats—our only "caches." In two of these there was barely room for one man and his gun. In the third, two shooters could find place. Where the concealed boat would come in, we should like to know.

After a week or ten days a very polite resident who holds "some sort of commission in connection with game preservation," came to one of our party shooting from a single flat and told him he was violating the law and must cease firing and fall back. My friend asked what provision of the law had been violated. "Am I using a swivel gun?" "No," said the guardian. "Have I a night light?" "No." "Is this a sunken punt?" "No." "Is this a battery?" "Well, yes, I will call it a battery, and you must stop shooting from it." A polite attempt was made to explain what the general world understood as "a battery," but it did no good, nor did we cease to use our flats, as they contravened no law. I think the guardian objected to decoys, but he withdrew objection to them after a few days.

Some Canadian sportsmen were using a sunken punt in our near neighborhood, and I saw others go into a blind built to hide a boat. To the latter no one could reasonably take exception. Certainly we did not, nor did the "game constable" object to their sunken punt.

I will not refer to the scurrilous anonymous letters written to my host, inasmuch as no gentleman could have produced such communications.

On one occasion a sudden spell of warm weather caused some ducks to spoil. These were thrown overboard, and were regarded as "marking our tracks with blood," and showed us to be possessed of a simple love of gore.

Knowing the very high estimation in which Canadian gentlemen sportsmen hold the FOREST AND STREAM, I have written the foregoing that their minds might be disabused of any unjust impression conveyed by the Montreal journal in question.

We violated no law, and we thought ourselves entitled to decent respect and consideration, even though we belonged to the big big D.'s (two of 'em) who live south of the Dominion. THE OLD DOCTOR.

NEW YORK, Nov. 18, 1882.

FROM KALAMAZOO TO KANKAKEE.

NOTICING, one morning, about fifty-five mallards lying by the express office, and hearing they were the product of a week's shooting on the Kankakee River, Indiana, by a friend, I immediately sought a companion for sport of the same order. My friend R. being equally enthusiastic, we started. Arrived at "Old Hoosey's" house, and his good wife informed us that Hoosey and his son were down the river interviewing the ducks. A fine string of ducks was hanging on the side of the house, which somewhat consoled us for being too late for that evening's shooting. Soon the barking of our dogs admonished us of our host's approach, and through the dourway came a conglomeration of men, dogs, ducks and guns. After a careful classification the result was, five men, five guns, three dogs and thirty-two ducks—all fine mallards. Supper over we smoked the festive pipe and listened to Hoosey expatiate on the merits of his sixteen-bore gun, which, by the way, brought down fifteen of the thirty-two ducks, until the big feather bed in the room adjoining had its peculiar charms for us and we retired to its ample embrace. Having been admonished by our landlord that the early morning shooting was poor (and it being a very agreeable bit of information) we breakfasted at seven and started for a snipe ground near by. My friend had been killing ducks all night, although his game bag was as empty as when we first arrived.

Reaching the snipe grounds, our well broken setter soon found the snipe, and my luck gave me the first bird. Alternating our success, two hours' shooting gave us twenty-two fine Wilson snipe. After dinner we started down the river for the ducks. Arriving at one of the largest of the sloughs, we worked our boat into the wild rice, until we could wade on the uncertain bottom, and hauling our boat along, went about seventy-five rods from the river, where we covered our boat and took to the water, depending entirely on our dogs to retrieve the ducks. Owing to the frequency of parties losing their boats in the almost inaccessible marsh, I took the precaution to erect an oar with an empty beer bottle attached, which afterwards proved very fortunate. The fast setting sun started the ducks and soon the reports of the artillery down the river announced that fun was at hand. At first the ducks flew rather high, but soon two fine mallards came along within range. My luck again served me and the right and left barrels of my ten-bore Colt brought them both down—the first blood for me.

Hoosey had told us that at about sundown we would not know which way to shoot, so thick and close would they come. I was somewhat incredulous, but was soon made a firm disciple of his theory, for they came right and left right down upon us, alighting within ten rods of our boat, and would often have settled nearer had not the persuasive power of our ten-bores loudly spoken their conclusions. As it was the rapid firing heated my gun so that a glove on my left hand was very comfortable.

Darkness soon spoiled our sport and we turned our attention to finding our boat, with a string of seventeen fine mallards and (I regret to say) we had left nearly as many more, food for the wolves, which infest the marshes. Knocking around in the mud and water nearly to the top of our hip boots looking for our empty beer bottle (and the one which was not empty) soon convinced us of the efficacy of taking that class of supercargo for the beacon light. Luckily we soon found the boat and pulled for the warm stove, and baked duck awaiting our voracious appetites.

Two more nights and equally good success gave us fifty-nine large mallards; and strange to say, all the ducks killed were mallards, it being too early for redheads and bluebills. On arriving in Kalamazoo we were the "admired of all" with our ducks laid out on a dray, (to give them plenty of air) for transportation to our homes. GEO. H. WINANS.

KALAMAZOO, Mich., Nov. 15.

LONG ISLAND WILDFOWL.

THE fowl shooting in this region in the month of October has not been as good as usual this year, owing, doubtless, to the mild weather of the fall, the birds not leaving their northern Labrador haunts for their southern migrations as soon as usual. So, the wildfowl did not appear in our bays in great numbers until November came in.

There is a large extent of waters, their favorite feeding grounds, between Greenport and Montauk and Orient Points, the former place being some twenty-five miles distant and the latter about twelve miles. On the first approach of the cold weather in October, the flocks first begin to collect, and finding good feeding in the watery pastures of Gardiner and Peconic bays, they settle and abide there till the increasing cold and the gathering ice admonishes them to spread their wings and depart for Virginian and Carolina waters. They first begin to gather around the rocky shores of Montauk, and a few years since the geese and brant, the black duck and widegon were there found in abundance, more especially on the Great Pond at Montauk. So, when the geese and brant were plenty at Montauk, there was excellent sport with them at Cartwright's Bar on the south shore of Gardiner's Island, and in Goose Pond, on that island, and there we have had fine sport with them.

But in later years, when Great Pond has been open to the salt tides and the fresh grass of the ponds has been killed thereby, the ducks and geese ceased to frequent the place, and the shooting was greatly diminished.

But there was no decrease in the numbers of the innumerable coots, sheldrakes, old squaws and loons. Their feed consists chiefly of small fish, (for sheldrake and loon) and small clams, muscles and scallops for the coot, as these are as plenty as ever. Those fowl are here as abundant as ever before.

The most successful mode of killing them here is by using small battery boats, resting almost level with the water's edge. It requires the use of two boats for that purpose; one, the low-lying battery boat, in which the gunner is concealed, and the other a larger row boat in which the attendant gunner rows around, keeping the fowl in motion when they settle upon the water, and picking up the dead and cripples shot down from the battery boat.

But as before said, the fowl were scarce in October, and not until we had some cooler weather in November did they collect in great numbers. But now they are in great flocks all the way from Montauk Point, to Fort Pond, and thence to Fire-place Point and still further west to Roam Island, on the southeast point of Shelter Island. They are also to be found further west in Noyack and Peconic bays, for the distance of thirty or forty miles.

Great numbers of the fowl have been lately killed by sailing on them. The fowl, before they have been much disturbed, will allow a fast-sailing catboat to come down upon them from the windward, and will not spring from the water until too late, and then the gunner takes them easily on the wing. As they must rise then against the wind, they must approach within easy distance of the fowler. The boats have been thus cruising for them successfully for the last three weeks, and great numbers have been killed. An old gunner (Capt. Bill Ross, of the yacht Nahma) has just dropped into my room to tell me of his late trip for fowl. He had with him in his comfortable craft a small party of gunners, but Bill says they went more for frolic and rest from work than for real sport, and did not kill one-quarter as many birds as skillful, earnest fowlers might have done. They got only about ninety fowl, chiefly coot, with a dozen black duck and twenty sheldrake. He says the fowl will continue to be very plentiful until the cold weather in the middle of December, and then they will disappear.

Bill has a fine boat with large cabin, and as he is a skillful navigator, and knows all the best places, a gunning party will always do well to secure his services. Your correspondent "B," has had good times with Bill, and is expected daily to be here for his fall cruise.

ISAAC MCLELLAN.

GREENPORT, L. I., November 20, 1882.

BEAR HUNTING IN MAINE.

THE following letter (writes Mr. George Shepard Page) may be of interest to your readers. The writer has frequently served as my guide at the Rangeley Lakes. As his story indicates, he is a man of great courage and endurance. He is very well informed, having been employed in teaching school for several terms. In meeting him for the first time, one would hardly realize that a noted bear slayer was hidden in the courteous, intelligent person with whom he was conversing. Mr. Taylor has killed nearly thirty bears. His letter is dated Byron, Maine, May 3, 1882; it has been awaiting my return from Europe. He says:

I have had some exciting bear hunts since I saw you. Last winter I hunted a little. Bears are very plenty, and quite bold. I lost quite a large number of sheep last spring and summer, killed by bears—one large sheep was killed in my pasture and dragged about twenty rods into the woods before she was eaten. It must have been a large bear, for he dragged her over a log which was about three feet high.

Two winters ago I spent twenty-nine days hunting bears. I saw six, and shot three. A. S. Young was with me part of the time, and part of the time I was alone. On Bald Pate Mountain in "Andover Surplus," we had been following a large bear several days, and were going over the smoother, hard, frozen snow and ice, cutting places for our feet with the ax, when we suddenly came to a fresh track of an old bear and two cubs. There was a little light snow on the hard crust. Add Young, Ben Mitchell and myself were together. We followed these tracks about twenty rods, when we came to their den, in a cave in the rocks. We, of course, thought that we were sure of all three of them, as Add had a Ballard rifle, Ben a 44-calibre Remington revolver, and I my two-barreled shotgun, one barrel loaded with a ball, and the other with buckshot; but I changed with Ben, and took his revolver, as I was going into the mouth of the den to start them out, while the others were to take stations around and take them when they came out. But they didn't start easily, and I got a pole and was trying to punch them out, when Ben cried out, "There comes one above there." Of course we all looked in the direction.

The old bear came out first and her two cubs followed her. We fired eight shots at them, and we thought that we had killed the old one, but she finally came on her feet again and went off, leaving a trail of blood. We followed till dark, then went to a logging camp in the valley below and stopped all night. The next day we drove one of the cubs out of another den on a high bluff and followed him two days, when we decided to divide the crew, and Add was to follow this cub while Ben and I went back to look after the old bear and the other cub. We found their trail and followed it to another den which they had found among a pile of huge boulders. It was a hard place, and we were not certain that they had stopped there till we had cut away the ice sufficiently to get down and look into a cave about twenty feet under the flat side of a large rock. I got a long pole and punched in till I saw their eyes glisten, then I knew they were there; but we couldn't drive them out, so we cut the ice away and I got down flat on my belly and crept in about half my length so as to let the light shine in over my head, and with my pole I punched her till I could see her eyes shine, then I took as good aim as I could and fired. I backed out pretty soon. I fired twice before I hit her. The second time I put a large bullet in just to the left of her right eye. Then the cub curled down behind his mother so snug that I could only just see his eyes and ears, and when I stopped punching him he would be entirely out of sight. I fired three times before I killed him. It was almost dark when we got them out of the den. We left them there that night. Next day we got help and hauled them down to the road and took our team and went home. I have the pictures of this bear and cub. Perhaps you would like to see it? Addison S. Young has killed two or three lately. A very large bear was shot in Weld last week.

STEPHEN TAYLOR.

THE NEW YORK GAME LAW.

Editor Forest and Stream:

DEAR SIR—Will you please allow the "Utica Fish and Game Protective Association" a hearing on the subject of game laws. For the past two sessions of the Legislature, important changes have been pending, withoutavail, mainly on account of the great diversity of opinions. Doubtless the subject will again be before the coming session, when it behooves those interested, to unite upon such changes as are most needful and best calculated to attain good results.

The Utica Fish and Game Protective Association was incorporated about two years ago, to meet the wants which its name implies—revive the lagging interest in the game law—and to enforce its provisions when its violation was the rule, and its enforcement only an exception. The results of its efforts have been highly successful and gratifying, as far as the existing laws will permit. This association is an organized detective force of over 100 members, and they have employed and paid other special detectives. A like organization is needed in every county. As a result, we may safely say that during close season there has hardly been a violation, and the game was found undisturbed at the opening of the season, as it should be. There have been, it is true, one or two slight violations in remote places, but with all our members reporting at headquarters, every violation has been known and watched.

In Oneida and Herkimer counties, woodcock and partridge shooting opens September 1, while we regret to notice in other counties woodcock may be killed August 1. This allowed shooting around us, has made our efforts to preserve woodcock in August more difficult, but yet with our vigilance we have substantially succeeded.

In the practical workings of this law we have gained much experience, and from the results ascertained, we are satisfied that this is a most salutary law for the whole State, as it is impossible to preserve partridge, when woodcock may be killed in August.

There is no reason why woodcock should be killed before September and every reason why they should not be killed in August. The reasons urged are that gunners are anxious to get out sooner. That is no reason at all, else why not an open season the year round? Why any law at all against it? Another assigned reason is that in certain northern parts of the State, "woodcock leave about September 1 and are not found where they were in August." This might be some reason if true—but it is not true, as everyone knows who understands their habits. They do not leave even Canada before the 20th of October and frequently not till November or December. They do change from summer to fall ground, but that they are not found in September where they were in August is better accounted for by the fact that "poachers" have cleaned them out in advance, for the benefit of Saratoga, Sharon, Richfield, and like places. The reason then utterly fails.

Now all true sportsmen (market hunters and club houses excepted) will agree upon one proposition, viz: that game should be protected in the most practical way. The object of this article is to lay before your readers the results of our most careful observation, experience, and study upon this subject, viz.:

1. That there is from year to year a marked decrease in both fish and game, owing to the improvement of guns and tackle, the increase in the number of sportsmen and their dexterity.

2. That if we would prevent the entire extermination of both fish and game, within a few years, there needs to be a correspondingly greater protection and shorter seasons.

3. That the increasing demand for choice fish and game at fashionable resorts has contributed to their destruction, by making fish and game a mere matter of traffic. The question arises: What shall be done, and how shall we do it? To this purpose I will further relate our experience, and ask the co-operation of yourself and readers.

1. The laws as they now are, are well as far as they go; but we need changes and further provisions.

2. That laws are of no avail unless enforced, and to enforce them needs an organization like our own in every county, by which each member pledges himself to act on the detective, and uphold the law against violations, and to aid, assist and urge on the game protectors, who have done and are doing a great amount of good work.

3. All sportsmen will abide the season and zealously uphold the law if assured that when the season opens the game will be found undisturbed. They feel confident when each is one of the detectives and knows what is going on.

4. The open season for both fish and game should be shortened, especially for trout, woodcock and partridge.

5. Open seasons over the State should be uniform as far as possible.

6. The open season for woodcock and partridge should be the same, so as to prevent killing of partridge under pretense of hunting woodcock in August, if we would protect partridges which, as we have found, have been killed and served up at club houses as "short-billed" woodcock where August woodcock are allowed.

7. To prohibit catching trout through the ice at any time and in any way.

8. To prohibit catching and marketing of undersize trout, either dead or alive, so as to protect the fry sent out by our State hatcheries to stock lakes and streams. This is a very important necessity.

9. To prevent spring duck shooting on their flight to breeding grounds.

10. To prevent the netting and trap shooting of wild pigeons. This was a few years ago the most plentiful, but now become the rarest game bird of this State. Their natural flights afforded the finest and most abundant sport, but are now so depleted by nets that their flights are limited to other sections.

To some of your readers the force of the above propositions will readily occur, to others a word of explanation will be proper.

Why shorten the open seasons beyond what they used to be? Answer: Sportsmen have increased tenfold in number and dexterity, with improved appliances. Game is growing scarce in spite of the best protection. If we would prevent total extermination we must either shorten the seasons or prohibit altogether for a time. The shortened season is preferable.

Why prohibit woodcock shooting in August when it used to be in July? Answer: Better ask why kill woodcock at all in July or August. In July some of the young can fly, but others cannot; the weather is hot; birds are soft, quickly decay, and are no more in season than a fresh-hatched chicken. In August they are moulting and sickly. There is no reason for killing them except to enable pot-hunters to supply fashionable resorts. A game dealer stated to the writer, "Why do you prohibit woodcock in this county in August? If I could buy and sell them I might make a few pennies." He was pacified on being told that Oneida and Herkimer birds were all being saved, and that he could make these "few pennies" in September just as well, without supplying sickly birds to his patrons. Besides this—and a greater reason as every sportsman knows—in August the broods of partridges frequent the same low grounds as woodcock, and the temptation is great, even to the conscientious sportsman, against discrimination on the wing. We have discovered that young partridges have been killed, shipped, sold and served up in August as "long and short billed" woodcock. Result is, that the law-abiding sportsman for sake of shooting sickly woodcock in August finds himself robbed of partridges in September and October. Better to wait till September, and all have an equal chance, without putting temptations and excuses in the way of pot-hunters. Let them wait. Keep their guns silent meanwhile in the brush. They can wait. The season then is long enough, especially as their wants tend to the destruction and add nothing to the preservation of game.

Shorten the other end, also, to at least December 1. Why? Because after December the cold rains and snows set in. Sportsmen do not go out then; the brush is deserted. Then the partridge snarer takes his opportunity, after sportsmen have left. Then they snare with impunity, which they could not do, while sportsmen frequent the brush, without being caught at it.

This "trapper" is most destructive of game; he works for profit, not sport; he will let the birds alone if he can't sell them. Therefore, take away the now best month of his opportunity—December—if you would preserve partridges. It is difficult to catch these men in the act, although the birds exposed for sale give an idea of its extent. They are readily distinguished from killed ones by their black throats. One man in this section snared over 500 birds in one season, others in proportion. There is scarcely a bird left for seed.

Why stop trout fishing through the ice? Answer: It is nearly as destructive as spawn-bed fishing. The sun shining through a hole in the ice draws the trout around it for air and warmth, where they are caught in large numbers by men who make it a business, to the depletion of lakes and streams when the summer fishing comes on. Prohibit all trout fishing till May 1, also.

Why stop catching small trout and marketing them? The reason appears above as to the State small fry. There are other reasons. 1st. You cannot have large ones without first having small ones. 2d. The small ones are easily caught around the spring brooks where they are spawned. They are being caught in such vast numbers as to threaten utter depletion. They are caught, kept alive in pens, and carted off to restaurants and markets, where they are kept alive to be served out to customers. Over 100,000 were caught and taken from one stream in this section in one year. This destruction of small trout under six inches long is the hundredfold destruction of larger ones. As they are mostly for sale in markets, their sale should be prohibited, or else abandon the idea of stocking streams. If we would preserve trout, we must preserve the little ones.

I cannot expect to go over the whole subject in this article. In conclusion, allow me to hope that at the coming session we may be able to obtain these necessary provisions and changes in the law, and that sportsmen may unite without diversity to obtain the object.

If we keep steadily in mind the "preservation" of fish and game, we can do much good; but if we lose sight of this by granting special privileges to individuals, market hunters, marketmen and clubs, we shall fall short of the great good we all desire. "Proper protection" means a "limited season" in limited ways, and is not found in what marketmen, market-hunters or fashionable resorts, may call their "best interests."

There has been much clamor by individuals for special privileges—that game laws should be made more accommodating—as that when we go fishing in the Adirondacks we may take our guns and kill a few deer, or when we go to kill deer in November we be allowed to catch a few trout on the spawning beds. Fishermen with trap nets have also asked that they be allowed a couple of months to fish with nets, as a reward for holding off the rest of the year, and the like. Now, all these may seem reasonable; but the fact is that privileges to one are equally for all, and can only result in utter destruction if tolerated. The "Armstrong bill," once passed and vetoed, was mainly prepared by this association with great care and consideration, and embodies the provisions which are so much needed. It was framed to meet actual occurrences. We invite the co-operation of all earnest sportsmen in its behalf and support.

JOHN D. COLLINS,
Vice-Pres't Utica Fish and Game Protective Association.

UTICA, N. Y., Nov. 14, 1882.

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

"UNCLE AB." McILRATH.

WE have received intelligence of the death of Mr. Abner C. McIlrath, of Cleveland, Ohio. Mr. McIlrath or, as he was known and loved by scores of men who shall read these lines, "Uncle Ab.," was one of the best known of the old school of Ohio sportsmen. "The local press (writes Dr. E. Sterling, of Cleveland) never gives more than the obituary of a man, further particulars may now and then be printed, but ninety-nine readers out of a hundred have forgotten the connection. Therefore it occurred to me that if you should insert in the FOREST AND STREAM some of the particulars, in the extracts from local papers which I enclose, you might receive from those who have hunted with him some continuation of the story of Abner's life. I myself witnessed that jump over the string (mentioned below) and I believe to-day that Abe in his prime could worry any animal in existence. There is a volume in his hunting life. Genial and kind, they say he never struck a man with his fist, his flipper was bad enough, and fortunate was the man who aggrieved him and was treated in this kindly way. Some of the stories of his ways and doings might be too strong (be it true) for any but a fox hunter's ears. Indeed, numberless stories in court and field can be told of this stalwart man who was always cheerful and with broad hard and open countenance would say, 'Boys, come out to-morrow and we will have a hunt. Mother (his wife) has piles of doughnuts, mince pies and turkey.' I write this merely to give you an idea of one of the most remarkable men I ever met with. By the way, you ought to have seen the two "Abes" embrace one another at the Weddell House, when President Lincoln was on his way to Washington to be inaugurated. On that occasion a measurement was taken of the two, at the request of the company present. They stood back to back, and it was discovered that "Abe" the president was half an inch shorter than "Ab." the hunter.

Born in 1812, he came at the age of five years, with his father's family, to the then wilds of Ohio. The company, with their household goods, were conveyed in two wagons, one of which was hauled in a primitive manner by a yoke of oxen and the other by a span of horses. After a journey of thirty days' duration they reached Euclid township, where they settled on three hundred acres of land that the elder McIlrath had purchased. A portion of this land included a part of what is now used for the Lake View Cemetery. The country between this farm and the site of the present great city of Cleveland was an uncleared forest. It was amid these surroundings that young McIlrath grew up. In 1833 he was married to a Euclid lady, Miss Francis Eliza Pier. By this union the couple had thirteen children, three of whom are not living. In 1836 Mr. McIlrath erected the hotel which bore his name, located six miles from the city, on Euclid avenue, and he kept it for thirty-six years, ending in 1872, when it was torn down.

Mr. McIlrath in many respects was an extraordinary man, physically speaking. He was a giant in his build, as he was six feet six and a half inches in his height, and his average weight was about 264 pounds. As an athlete he probably did not have a superior in the country, certainly not since the days of the great muscular man of Northern New York, Joe Call. In addition to his athletic characteracteristics he was a great fox hunter, and many are the stories told of incidents connected with his chase after Reynard. He was gifted with tremendous long wind, and the story has been told that he would frequently chase after a fox on foot and run it down! In spite of his great weight, large bones, and apparently ungainly size, he was a remarkably quick as well as marvelously athletic man. He once lifted with his hands from the ground an iron shaft weighing 1,700 pounds, which would be equal to lifting double that weight were he harnessed with straps to weights and allowed to lift under the best advantage. Two men would hold a string two inches above his head and he would step back two or three steps and jump over it without touching it, making the leap about six feet nine inches in height. He has been known, rather than to lead his horses around to the other side of his barn, to put his long arms under a horse and lift it up to the floor of the barn, which happened to be three or four feet above the ground. Another of his well known feats was lifting a horse over a fence and then throwing the buggy over after it.

Some forty years ago a gang of rowdy sailors, a dozen in number, went out to "Ab. McIlrath's Tavern" on purpose to have "a muss with him." Uncle Ab. was a most peaceful sort of a man, and would submit to a great deal of abuse before resorting to the last argument, but on this occasion his ire was exceedingly excited at the preposterous idea that a dozen ordinary men could run over him in his own domicile. The result was, he went among them, and in spite of their all piling upon him, he took them one by one by the coat collar and seat of the pants and threw each some distance out of the door into the snow! The sailors thereupon retreated, the most disgusted of Jack Tars at being whipped by a solitary man. He told the writer that during that "scuffle," as he called it, he did not dare double his fist and strike for fear of killing. He had a very good opportunity in 1839, when he was twenty-seven years of age, of testing his athletic ability, which proved very conclusively that at that time he was probably the strongest man perhaps in the world. He met in Buffalo Charlie Freeman, who was then a sailor, and was known as the American giant, he being about seven feet in height. These two giants had a wrestle to find out which was the "smartest man." The Cuyaghoga giant was too much for Freeman, for he threw him with ease. Three years afterwards Freeman went to England as the champion of America and engaged in a prize fight with the champion of England, known as the "Tipton Slasher," and easily defeated him. These facts will give a good idea of "Uncle Ab's" great muscular strength and activity. Like Joe Call, he literally never met with his match and never doubled his fist on a man for fear of killing him. Anyone who had ever seen his tremendously long, heavy boned arms, encased in muscles of iron, with his sledge-hammer like fists, realized perfectly that a kick from him partook of the nature of a kick from a horse, and it is not at all surprising that Mr. McIlrath never doubled his fist on a human being.

During his life he had gone through some ludicrous episodes which will bear being told. On one occasion, after having hauled a load of barrels to town, says the *Leader*, he was on his return, when he stopped at Doan's tavern to water his horses. A couple of conceited young bloods from the city had just got into their buggy, and as they drove by "Ab." they thought it would be fun to give him a cut with their whip, which they did, and then drove off as fast as they could away towards the town. "Ab." not relishing that kind of treatment, his Quaker-like disposition yielded, and he gave chase on foot after the young bucks. For a mile the frightened fellows managed to keep just so far ahead of him, but their horse commenced giving out, and they were overtaken. "Ab." got into the buggy, took the reins and whip out of their hands, and drove back to the corners, where he gave these foolish fellows a thorough flogging with their own whip, in the presence of a crowd, and then let them go. On another occasion, during the days of stage coaches, while he was on his way to town with a load of barrels, a stage came along and ran into his team, and created a general smash. He came to town and called at the stage office of Neil, Moore & Co.'s line of stages, and demanded of the agent, the late Captain Startwell, compensation for damages. The captain refused to settle, and "Ab." became somewhat excited in his language. The captain finally ordered his man Friday, Norton by name, to "put that man out of the office!" Poor Norton innocently undertook to perform the operation, and he found himself flying through the air and landing on the sidewalk on all fours!

Several years since he gave a grand fox hunt, in which many of his intimate friends participated. He had captured an extremely large and vigorous fox in the wild hills of Euclid township, and held it in captivity for this especial event. When the morning of the chase arrived, the hunters, all mounted on fleet-footed steeds, put in an appearance at the old hotel, eager for the anticipated sport. Reynard was brought out and released, and away he dashed, taking a straight course for the lake, with a pack of hounds baying at his immediate rear, and the hunters following as fast as their horses could carry them. The time was December, and the winter king held all nature in his frigid embrace. The terrified fox kept flying over the frozen fields, and through thick woods, while the clatter of hoofs in his rear only goaded him on in his dash for life and liberty. Finally the banks of old Erie were reached. Reynard took one comprehensive view of its frozen bosom, and in another was bounding away over the vast expanse of ice. When the hunters reached the bank they all pulled up with one exception, and that was Uncle Ab. With his eye firmly fixed on the rapidly disappearing fox, he dashed the spurs into the sides of his panting steed, and to the horror of his companions, started across the treacherous field of ice, toward the Canadian shore. On he flew, on the top of the reliable old black's speed, until he disappeared from the sight of his terrified companions, who were satisfied that they would never see him again. Several hours elapsed, and the party of horsemen waiting anxiously on the bank had about given up all hopes of Ab's return, when a black speck made its appearance away out over the lake. Nearer and nearer it came, until the manly figure of Uncle Ab. filled the anxious watchers on the shore with feelings of unbounded joy. He was still in pursuit of the fox and riding like a demon, nothing could stop him; the weary fox took to the woods, but Uncle Ab. followed, cheering on the hounds, and in a short time he returned with Reynard's lifeless body hanging from the horn of his saddle. On the way home that night he told the boys the story of the perilous chase, how he lost sight of the land, but how he kept bravely on, determined to capture the game or perish in the attempt. He had cooled down somewhat then, and he remarked to one of the Nimrods nearest him, that he would not repeat the experience for a bag full of gold.

On another occasion he and a party of friends had planned a fishing excursion to Wickliffe. The majority of the anglers drove down and left Uncle Ab. to bring the boat, tackle, rations, etc.

The yacht was anchored in what is known as the dugway, a small stream which empties into the lake from East Cleveland township, and, as is common at the mouths of such tributaries, a long sand bar had formed for several rods out into the lake. Uncle Ab. had reached this point all right and was sailing around this bar with a view of going up the shore some distance to take on the necessary supplies for the trip, when the boat suddenly capsized. Unfortunately Uncle Ab. could not swim, and so he clung to the upturned boat with desperate energy. Suddenly the boat began to drift out, and visions of a watery grave rose before him. He turned pale, and with a voice filled with terror called to his son, who was calmly viewing the scene from the shore. "Con., if you ever expect to do anything for Ab., do it now." Con. choked back a laugh, and told him to just lower himself down and see how deep the water was. He reluctantly took the advice, and to his chagrin found that it was hardly waist deep. Con. was cautioned not to say anything about it, but somehow or other the fishermen learned all the details of the laughable affair, and Uncle Ab. never heard the last of it.

"Artemus Ward" was a frequent visitor at McIlrath's tavern. He and Uncle Ab. were great friends and used to go fox hunting and fishing together, and the latter frequently figured in Ward's writings. Mr. McIlrath died at his residence in Cleveland, November 16.

SHOOTING NOTES FROM KANSAS.

I HAVE seen some doubt cast upon the statement, in a California paper, that a hunter in that State had killed in a four hours' hunt a pheasant, a partridge, a quail and a mallard duck. This is a variety, but I could any day, in less than four hours, and on my own land, kill chickens, quail, prigtail, butterball, teal and mallard ducks, geese, jacks, American snipe, plovers, cotton-tail and jack rabbits, and inside of ten miles' jump a gray wolf, coyote or deer. My average for 1881, for table use, was three birds per day for 365 days.

I think the use of explosive and express (hollow-pointed) balls should be forbidden by law on game, and only allowed on beasts of prey and reptiles. If a sportsman has not science enough with a rifle to kill an elk, deer, or other large game with an ordinary rifle bullet, he should not try. Imagine the effect on our game in ten years from now if all riflemen should use explosive balls.

I have had a great amount of experience with different sized guns, and for my locality I find that a 32-inch barrel, full choked (for five shot), 11-pound, 10-gauge, breech-loading gun is superior to any other. I use three drams powder in summer and five in winter. I have used common powder in my gun for ten years and the barrels are to-day as beautiful inside as they were when they came from the factory. I never allow my gun to stand over night while dirty, and clean by taking off the barrels, shoving in the extractor, then put a funnel in at the breech and pour through the barrels one quart of boiling water. In about a minute the heat of the barrels has dried them, then I dry, wipe them with four different rags, using a stick wiper, then oil with best winter strained sperm oil. Two shots from a brass shell will foul a gun as much as ten with a thick paper shell.

In loading I force the primer on the shell with a hickory punch and hammer, put in my powder, then one No. 8 Winchester wad, forced down even, then one wad of mutton tallow (cast in a .44 calibre rifle barrel and cut the thickness of wads) then one No. 10 Winchester wad pressed down till the tallow is as thin as possible, then one ounce of No. 8 or 10 and one and one-quarter ounces of 4 or 6 shot, and at least one-half of a Winchester No. 8 felt wad. The latter wad I split from a regular wad, but prefer cardboard when I can get them. I force the powder wad down with as large a stick as will go into the shell, thus seating them very even and level. In seating the shot wad I use a stick that will just go in the shell, with the other end small enough to go up through my tunnel from the bottom, and fit into a knob or handle. A brass shell soon bulges in my gun so that a tunnel (or funnel) will not set down over them only about half way. After placing my ramrod up through the tunnel as I have described, I set my shell on the block and spread out my split No. 8 wads, and taking my tunnel in my right hand place it down over a wad, thus picking it up, then place the whole down over my shell as far as the tunnel will go (half down), then shove the wad home. This way of seating a No. 8 wad with a tunnel saves crumpling it, and seats it as even as if it had grown there, and at the same time you avoid cutting your thumb as you would if you did not use a tunnel, and if a No. 8 wad is forced through the throat of a tunnel made for paper shells, it will be too small for your brass shell.

I do not claim to be an expert shot, but I make a better average than most of them described in your paper. I make my poorest on mallard ducks, as on the prairie we have to shoot at from fifty to eighty yards rise, and I have not had but one chance to shoot "on the set" for the last twelve months. I average two shells for one mallard and three teal for two shells.

Quail are shot here by a hunter taking each side of a hedge at noon, when they are resting, and as they "whir" straight down the hedge we have no difficulty in bagging them with No. 10 shot.

In using tallow in a gun there will be no hard, dry dirt at the muzzle, and an ordinary rag pulled through the barrels by a string will clean them perfectly.

By proper loading, my gun makes a pattern of over 400 No. 8 shot in a thirty-inch circle at forty yards, with brass shells.

I make my best pattern of buckshot by using five drams powder and two wads, then three No. 2 buckshot put in loose, and then an Ely shot concentrator filled with two layers of No. 4 buckshot, consisting of three to each layer.

The three No. 2 shot will just chamber in the muzzle, and the six No. 4 shot will just chamber in two layers in an Ely No. 10 shot concentrator. KANSAS FARMER.

IOLA, KANSAS.

OTTAWA DEER SHOOTING.

Editor Forest and Stream:

I have read, with much pleasure, "B. G. A.'s" letter in your number of 9th inst., explaining that he had been misled by parties in Ontario as to the close season for deer in that Province.

I would take this opportunity of impressing on officers of game protection clubs the necessity of paying more attention to the dissemination of a knowledge of the close seasons and of the other provisions of the game laws throughout the country. An experience of many years as an officer of the Fish and Game Protection Club of this Province, convinces me that this most important function of such clubs is sadly neglected.

I cannot agree with "B. G. A." in his strictures on the close season for deer in Ontario. In the northern parts of that Province fawns are dependent on their mothers until near the 1st of October, when the open season commences; the season when hounds may be used is retricted to the period commencing 1st of October and ending 15th of November, and all hunting must cease on the 15th of December. No person is at any time allowed to hunt or kill deer for the purpose of exporting the same out of the Province. Of course, in a vast and unsettled territory, such as exists in Canada, the game laws cannot always be strictly enforced. Notwithstanding what "B. G. A." states, I do not believe that any hunter can kill twenty-five or thirty deer a week during the lawful season, nor can I agree with him that the 1st of October is too late to enter the woods for pleasure, as at that date there are no mosquitoes or flies to annoy the pleasure seeker. I have just returned from deer hunting in the Ottawa district (November 13) and found the weather most enjoyable.

I hope "B. G. A." will make many another trip (in the open season) and favor your readers with his experiences, told in the same genial and lively manner as that in which his present papers are written. H.

MONTREAL, November 18.

Writing on this subject, the *Canadian Sportsman* says: "We cannot agree with his ["B. G. A.'s"] opinion, when he says that the Ontario laws deprive the sportsman tourist of a great deal of pleasure and do not protect the deer, merely reserving all for the wholesale slaughter made by the practical hunter when cold weather arrives; and again, our American friend thinks 'Oct. 1 is too late in the season for a party to enter the Ontario woods for pleasure. The law should give pleasure parties the right to kill deer sufficient for camp use, commencing with Sept. 15, and in the far North Sept. 1 would not be too early. The only time when deer can be successfully hunted is after the falling of the leaves and through the cold weather, when none but the regular hunter thinks of visiting the woods. The law as laid down to-day practically says to all of us who seek health and recreation during the beautiful and unequalled days: "'Gentlemen, you seem out of health, and we welcome you to the pure, invigorating air of these mountains and forests; breathe it without stint and enjoy it till your heart's content, but you must bring your own provisions. We have plenty of deer, but they are all engaged, and we are pledged to reserve them for our hunters.'"

"Now we desire to point out the great mistake that would be made by any such changes in our game law as outlined by 'B. G. A.' In the first place the weather is invariably too warm in September to admit of venison being kept fit for use more than a few hours after death, unless the sportsman is supplied with ice, which is not very likely, so that the chances are that after the deer was slain a few tit bits would be taken off and the carcase left. During twenty-five years' experience of the climate in this province, during which

time we have done a good deal of hunting in sections not very remote from the Ottawa district, we can call to mind very few years in which the weather was suitable for hunting so early as the first of September. But what surprises us most in the letter we are alluding to is the statement that the 1st of October is too late in the season for a party to enter the Ontario woods for pleasure. It would be difficult for 'B. G. A.,' to make any of his Canadian friends believe such a yarn, and it would make gunners smile to be told that October was too late to shoulder their guns and hie to the woods.

"We regret that our Connecticut friend should have advanced any such statement. Previous to it we had mentally pronounced him a good sort, but after such a declaration we are in doubt about the soundness of our judgment. We are almost inclined to pronounce him a feather-bed sportsman, one who demands hot water to shave with, and an umbrella in his kit, for fear of a little soft water.

"The man who pronounces October too late in the year to enter our forests must have been seized with ague in childhood's days and had shaken all the nerve out of his system. Our glorious, bright October days to be thus condemned! Why, many a time, with dog at heel, and our old muzzle-loader in hand, we have roamed the Canadian forests, and felt at every breath that we were inhaling a tonic before whose recuperative power all medicines were as nothing.

"The trees, robed in their autumnal glory, feasted the eye with a thousand forms of beauty, while the bright blue sky overhead formed a fitting canopy to the beauty of nature's handiwork. It is the one month in the year in which the true sportsman delights; the one to which, during the year, he looks forward to, and to be told, when it does come, that it is too late in the year to enter the woods, is something no fellow hereabouts can understand.

"Again, while we are satisfied that 'B. G. A.' and his party were but on pleasure bent, we regret that the great majority of his countrymen who travel this way, gun in hand, have no such sentiment in their soul. The almighty dollar is with them the first consideration; and the deer of our northern woods is by them valued, not for the pleasures of the chase, but for the cash value of the venison in the market to which they ship their game.

"The sportsmen of Ontario delight to welcome a member of the brotherhood, hail from where he may, but they have had such a sickener in the gang of pot-hunters that have invaded our forests for the past few years that they earnestly desire to abate the nuisance. The latter word is almost too mild a term to use. The pot-hunter is the bitter enemy of the true sportsman. He is invariably a selfish fellow, who cares for nobody's welfare but his own, a chap that is quick to throw down a farmer's fence or open his gate, but terribly careless about putting up the one or closing the other. Game is with him the one great consideration; and if he kill two deer to day he will damn his luck that it wasn't three or four. He will start a camp fire, and when it has served his purpose, cares very little what damage it might cause by being left burning. In fact, his presence in such numbers has become a nuisance that must be stamped out, and we hope to see our gun clubs take action, and at the coming session of the Legislature see to it that a law be passed to remedy the evil. We doubt much if the mere enforcement of a license fee would meet the case, but it is quite possible to stop the exportation, and by other legislative enactments put a stop to the present trouble. If such a step is not soon taken, a deer in the Ontario woods will ere many years be as rare a sight as a ruffed grouse on King street."

[Our correspondent "B. G. A." is compelled by an unavoidable interruption to postpone for a time the closing papers of the "Nutmeggers on the Ottawa" series.]

AMERICAN WILD ANIMALS IN BRONZE.

OF Mr. Edward Kemeys's "Still-Hunt," which is now on exhibition at Tiffany's, in this city, Mr. Julian Hawthorne writes to the *Tribune:*

It is a work of which Americans have especial reason to be proud, being, as it is, the production of a native-born American artist, choosing for his subject a wild animal peculiar to our country, and treating it in a manner which betrays no indebtedness to foreign schools and methods, but which, none the less, indicates a vigor of conception, a truth of observation, and a mastery of technique that would do credit to any school whatever.

The figure, which is of colossal size, cast in bronze, has been purchased and presented to the City of New York by a number of gentlemen, who have thereby avouched a public-spirited liberality and an artistic appreciation which are worthy of praise and imitation. It represents the female American panther crouching before her spring. The neck is outstretched, the head and eyes fixed in a terrible intentness of gaze; the hindquarters are drawn up ready to launch the body forward; the fore legs are gathered far in under the breast, and the right paw has just been half lifted from the ground with that peculiar "churning" motion characteristic of cats when in the leash, as it were of a leap. The combination of intense life and latent action, with muscular restraint and immobility, could not be more powerfully portrayed. The whole body of the great animal writhes with tense controlled strength; the next instant, it seems she must hurl herself forward. The angry play of the tail enhances the fierce suggestiveness of the pose; and, indeed, the entire composition, down to its least part, says one thing; we feel inevitably that nothing in it could be otherwise and be right; and the culminating impression produced upon the spectator is forcible to the degree of being appalling. The rigid, stealthy stare of the beast fascinates the eye; and the longer we contemplate the composition the more strongly does its spell hold us. The savage presence of the huge cat not only fills Messrs. Tiffany's window, but makes itself felt as far up the square as the eye can reach it.

It is a pleasure to know that this superb production has thus assumed permanent form, and will for many years to come add to the attractiveness of our beautiful park. In view of the rapid destruction of our native wild animals—a destruction that bids fair, in the course of a few years, to result in extermination—it is much to be regretted that we have not more examples in bronze of Mr. Kemeys's genius. At his studio in West Fifty-third street, are to be seen models in clay or plaster, of most of the animals in question, wrought in a style not inferior to the "Still-Hunt," but not, unfortunately, in the same imperishable material. Will none of our wealthy and art-loving citizens arouse themselves to profit by this opportunity? The studios of no European sculptors can afford them anything more truly artistic, more unique in design and *motif*, or more certain to increase in value with time. It is none too soon for those who have the discernment to do so, to recognize and encourage the presence of genius in our own midst, instead of going in dubious quest of it to the other side of the Atlantic.

JULIAN HAWTHORNE.

A STEAMBOAT LOAD OF DUCKS.—As the steamer Emma C. Elliott was coming up the river last night the cabin passengers and the crew were startled by a singular whistling sound in the air all above the boat. No one could account for the noise, and the more they tried the more unaccountable it seemed. Capt. Postal went to the electrical machine and turned on the light, 800 candle-power. In a moment the whole foggy river was flooded with light. It was seen that the noise proceeded from an innumerable colony of wild ducks on their way southward. The blinding glare startled the fowls, and rising in great crowds they began flying straight at the lamp. For 20 minutes the boat was literally full of ducks. Some of them would hit heavily against the glass around the light, and fall stunned to the deck. Others fell into the faces of the men, and were knocked down with sticks and canes. In all, several hundred were secured. Thirty-six were found concealed in different parts of the cabin this morning when the boat came into the wharf at St. Louis. Others were found about the boilers and in the engine room, and a great number were killed by the wheels. The ducks were mostly in the water when the boat ran into the immense flock, and when the electric light was turned on them they seemed to go crazy with fear. They rose in great droves and whirled around in the air before dashing themselves against the lamp. The men on the Elliott say that never on the river has there been so many ducks and geese as at present. Every slough and creek along the river between here and Cairo had several hundred ducks floating on it this morning. A great many of the ducks killed fell back into the water and were lost.—*St. Louis Dispatch to the Chicago Times.*

PHILADELPHIA NOTES.—The flight of woodcock from the North appeared to come all at once this year. Certainly the bulk of them came together. This was doubtless caused by the sudden far northerly cold snap we have read of as having taken place. Springfield, Mass., friends write me there were no "flight birds" around there this season, although they were expected between October 15 and the 1st of November. Would it not appear, then, the flight of woodcock this fall was as I have stated? Birds are now being killed in Maryland and Delaware, where in summer cock breed. We are now having good quail shooting weather. Birds are not so plentiful in some localities where it was expected they would be found fairly numerous this season. Some that have returned state they have found no quail at all where it was known they were freely bred. I imagine that just as soon as the food in the woods (where these birds are now, and for this reason hard to find) is covered with fallen foliage or consumed, the quail will resort to the stubbles more and be discovered more readily. If the shooter can't find coveys in the stubbles in early morning and toward evening in sections where he is positive birds breed and abound, he may be sure he will find them in the woods, especially if he is making his trip during the first two weeks of November. I am referring now to shooting in Delaware and Maryland, where most of our people choose their stamping grounds. Braut are now plentiful at Barnegat and Tuckerton bays. The weather thus far has been so fair but few have been killed. Wait until the next easterly weather comes and a few will be killed.—HOMO.

IS AN "AIR SPACE" DANGEROUS?—Philadelphia, Nov. 18, 1882.—*Editor Forest and Stream:* A Western correspondent lately wrote me this question: "Will my rifle burst if I fail to ram the bullet quite home?" To which I answered "No." I am aware that the current opinion, in many parts of the world, is that if any great space exists between the powder and the ball, the barrel will bulge or burst; and the late fearful explosion of the thirty-eight ton rifle on H. M. S. Thunderer, some officers thought, was due to a slipping forward of the great projectile. But these "bursting" ideas, I think, are erroneous. This "dangerous" doctrine I have had no faith in since 1864, when certain arms which, according to venerable and modern books, should have bursted, sent their bullets out much as usual. Two friends here, one a gun dealer and the other a gun maker, stoutly assert that my position is "utterly ridiculous"—that "the further away from the powder the ball is put the severer is the strain on the barrel." But they are in error. I claim that the further away the (normal) ball lies, the less is the strain on the barrel. I do not speak of "wedged" or "fast" bullets, but of ordinary bullets, such as a man can run into a rifle with the ramrod in the usual manner. If the bullet be left in the middle of the barrel, even, the rifle will not be harmed.—W. McK. HEATH.

TENNESSEE GAME NOTES.—Nashville, Nov. 11.—A very handsome deer, killed on the Belle Meade farm from Gen. Harding's famous drove, was presented to the ladies of the Mission Home to serve at their kitchen this week. These good ladies opened this kitchen for a few days for the purpose of raising money sufficient to pay a debt due upon their worthy institution, and I am glad to say that through liberal patronage and donations of dainties by the citizens, they were enabled to accomplish their purpose. A number of quail were offered in market this morning at twenty-five cents each. Squirrels and 'possums are particularly abundant this fall, though the weather continues too warm to warrant killing them. Col. Akers's hunting party have been delayed in their sporting undertaking from the same cause. Their dogs, servants and camp equipage are all down in Trigg county awaiting the first decided frost for the "bosses" to join them.—J. D. H.

TEXAS GAME NOTES.—El Paso, Texas, Nov. 10, 1882.—Between Big Springs and Pecos, on the Texas and Pacific Railroad, one can have the very finest sport at this time. Parties should hire a caboose or a box car and fit themselves up for housekeeping, as no hotels can be had in this wonderfully interesting game country. Sand Hills, Metz, Pyute, Midway and other stations are good places to stop. Parties will find "a world of antelopes," and enough ducks and quail to answer any demand. A hunt of a few days in this section will satisfy the most ambitious hunter. I saw a small herd of buffaloes a half mile from the road a few days ago, but I understand that there are very few to be found in all the plains country. Near Grelton there are a few chickens to be found. All kinds of game in these parts are in excellent condition, and the antelopes are fat as butter.—GEO. W. BAINES, JR.

TENNESSEE SPORTSMEN ON THE WING.—Capt. Thos. F. Perkins, Dr. Cliffe and sons, of William.on county, and Major Carpenter, of Nashville, fully equipped for hunting and fishing, left yesterday for Reelfoot Lake, where they will go into camp for two weeks or longer. Jim Palmer and Hermann Buckholz will start for the same famous hunting grounds in a few days. Burt Bray and his Bowling Green Club will be off to the same place soon, and when they get there ducks, geese and swan will have to keep their weather eyes opened or be gobbled up by the expert shooters. Andy Meaders is organizing a party for a few days' shooting in the low counties of West Tennessee. They will confine themselves to turkey, deer and quail shooting. Andy may take a run to the lake, as he handles the most of the fish taken from its waters, which come to this city. The weather has at last turned cold and our local sportsmen will be after the large quantities of quail in our surrounding country. Several gentlemen from different parts of the State have been out deer stalking in the mountainous parts of the State and report excellent sport. Game plenty and in superb condition. Col. Geo. F. Akers has at last succeeded in collecting his pack of dogs, and will soon be off to the coaling grounds in Trigg county, Ky. This will be the grandest party of the season from all that I can learn. They have had log huts constructed in the forests where they expect to hunt, and had them fitted up with every comfort. A number of ladies, the Colonel informs me, will accompany their "lords" and prove to the natives that the Dianas of to-day are as brave and expert as the goddess of old was herself. In case an occasional bear may be found in these primitive regions, Col. Akers has purchased an immense bulldog from "Pat Solan" with which to bring him to bay.—J. D. H. (Nashville, Nov. 16, 1882).

TEXAS FLIGHT SHOOTING.—Galveston, Nov. 16, 1882.—Our second "norther" has arrived, bringing with it an immense flight of wildfowl of every variety. They are now to be seen sitting out in the bay in masses that closely resemble floating islands; they are very wary, and he who would float down upon them must indeed be skillful in disguising his skiff so as not to excite their suspicion. The reward would well repay one for his trouble, however, as I am confident he could fill his skiff in two shots. This style of shooting is not in vogue here, not even the market hunters practicing it. Our flight shooting, which lasts from daylight until about nine A. M., and again in the evening, is by far the most desirable and prettiest we have, and to give an idea how mercilessly the poor ducks are pursued, I will tell of a flock of eleven redheads, only one of which lived to tell the tale of how his friends were slaughtered in trying to make the pass. My friend and self took stands a few mornings since, in a locality where ducks were known to be plentiful, and during the hour we shot our guns were employed incessantly, to such an extent that upon quitting we had the satisfaction of counting thirty-five sleek ducks at our feet, mostly redheads and bluebills.—NEMO.

PENNSYLVANIA.—Wrightsville, Nov. 15.—Ducks on the Susquehanna are abundant, a goodly number of which are black ducks, bluebills and readheads, although the majority are coots. One sportsman killed eighty-eight coots in a few hours, which gives you an idea of their vast numbers. Squirrel hunting has been nothing extra around here, but have been reported plenty down the canal further. Rabbits are plenty this season, but birds are very scarce. Very few 'coons and 'possums have been killed so far. Quite a number of foxes have been seen, but only two or three of them were killed.—RAZOR.

WILD RICE —From the answers to inquiries made by us some time ago, it appears that the sowing of wild rice has not been in general attended with the hoped for result. In another column a correspondent reports that the rice which did not do well the first year improved the second. We think it very desirable to know something of the general success or want of success by those who have sought by means of the rice to improve their ducking grounds, and should be pleased to hear from such parties.

THEY HAD GAME FOR THANKSGIVING.—In his Thanksgiving Day proclamation Gov. Long, of Massachusetts, says: "In 1621, our harvest being gotten in, our Governor sent four men on fowling, so that we might, after a special manner, rejoice together after we had gathered the fruit of our labor." Thus the Pilgrim Governor Bradford instituted the harvest festival of the New England Thanksgiving."

WYOMING —Elk Mountain, Nov. 11.—Hunting this season I think fully as good as it ever was. More deer than usual, but not so many elk. A party killed three bears a few days since.—J

SOUTH CAROLINA.—Rock Hill, Nov. 9.—Birds will be plenty here when it gets a little cooler, which will be soon, I think.—W. T.

PUBLISHER'S DEPARTMENT.

Diving Decoy Co., Rochester, N. Y.—*Adv.*

HOW TO KEEP A STORE.—By Samuel H. Terry. New York: Fowler & Wells, 753 Broadway; 1882.

THE KENNEDY RIFLE.—Attention is called to the advertisement of the Kennedy repeating rifle, an arm which has won the unqualified approval of sportsmen who have made themselves familiar with its merits as a field weapon.

GUNNING.—Chatham, Mass.—One gent can be accommodated for the branting season of 1883, which is seven weeks from the 10th of March. A good house and all the paraphernalia for gunning; live decoys and boats. Price $125 for the season. Inquire of I. G. Curtis, Post Office Box 1231, Boston Post Office.—*Adv.*

A SCREAM FROM THE AMERICAN EAGLE IN DAKOTA.—This is a report of a Fourth of July oration, delivered by Col. P. Donan, of the Fargo, D. T., *Argus*. It is reprinted by the passenger department of the Chicago, Milwaukee & St. Paul Railway as a characteristic bit of American eloquence. Sent free upon application to A. V. Carpenter, general passenger and freight agent, Milwaukee, Wis.

A NEW REEL.—In our advertising columns will be found a new reel called the "Follett Reel," made by W. & J. M. Aikenhead, of Rochester, N. Y. We have seen the reel and find that it is all that is claimed for it, a strong, low-priced one. The principle is like the "Billinghurst," but it is struck from brass instead of being made with wire. It is silent running, and for those who do not care for a click and wish a low-priced winch, as they are termed in England, this one will fill the bill. At a dollar and a half there is no need of the boys going without reels.—*Adv.*

THE B. AND A. RED BOOK contains an exhaustive compilation of election statistics and as the work is confined solely to the official return it is compact and very handy for instant reference. This special edition is intended for circulation in the State of New York, where, as it embraces the latest returns of elections for State officers, Congressmen and President, it must prove of no ordinary interest. The B. and O. Red Book for New York is intended for distribution throughout the State, and all who are unable to secure it through local ticket agents can do so by addressing C. K. Lord, G. P. A., B. & O., Baltimore, or C. P. Craig, G. E. P. A., 315 Broadway, N. Y.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Grayling, *Thymallus tricolor and T. montanus.*	Striped bass (Rockfish), *Roccus lineatus.*
Black bass, *Micropterus*, two species.	White bass, *Roccus chrysops.*
Maskinonge, *Esox nobilior.*	Rock bass, *Ambloplites*, 2 species.
Pike (N. Y. pickerel), *Esox lucius.*	War-mouth, *Chænobrytus gulosus.*
Pickerel, *Esox reticulatus.*	Crappie (Strawberry bass, etc.), *Pomoxys sicromaculatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*	Bachelor, *Pomoxys annularis.*
Yellow perch, *Perca fluviatilis.*	Chub, *Semotilus bullaris.*

SALT WATER.

Striped bass, *Roccus lineatus.*	Smelt, *Osmerus mordax.*
White perch, *Morone americana.*	"Sea trout," *Cynoscyon carolinensis.*
Tautog or blackfish, *Tautoga onitis*	Drum. *Pogonias chromis.*
Bluefish or taylor, *Pomatomus saltatrix.*	Red bass, etc., *Sciœnops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

Nothing is more important in the education of the young than the indoctrination of a love of open air exercise and the formation of an acquaintance with nature. Every boy, if his surroundings make it possible, should be given the opportunity of becoming an angler. If he takes to it, he will be grateful through all his life for the physical and mental improvement and enjoyment which are certain to accompany him in practicing the gentle and contemplative art.—*W. C. Prime.*

WINTER TALKS ON SUMMER PASTIMES.

II.

When time, which steals our years away,
Shall steal our pleasures too,
The memory of the past will stay,
And half our joy renew. —*Moore.*

ABOUT BASS.

THE most highly esteemed member of our coterie devotes his leisure in angling for bass. He was born on the banks of the St. Lawrence, and before he had mastered his alphabet or shed his short-clothes he had become familiar with the haunts if not with the habits of this gamy fish. Indeed, although he has passed his three score years, his "memory runneth not to the contrary" when he would not rather fish than eat. The implements he used were primitive but effective—of just the form and calibre of those we often now see in the hands of our juvenile Waltons—less ornamental than useful, and intended not to "play" a fish but to "yank" him, with the least possible ceremony, from his aqueous element. It is not strange, therefore, that he is passionately fond of the pastime and as eager, now that "his hoary head is hid in snow," as when, "in the morn and liquid dew of youth," he gladly accepted the task of keeping the family table supplied with the results of his infantile labors.

There are few busier men in the marts of trade to-day and no man anywhere less likely, from habit or temperament, to squander either time or fortune. He never turns the back of his hand to a friend nor the back of his coat to an enemy, and would sooner lose the best customer on his long list than forego his visits to bass waters in July and October. I never knew a man with a more perfectly balanced double nature. As a merchant he is sedate, reticent and absorbed. As an angler he is cheerful, voluble and merry-hearted. Ten words suffice him to sell a hogshead of sugar, but he will talk an hour on the felicity of striking, fighting and killing a five-pound bass. I once asked him the weight of the largest fish he ever caught. His response was:

"I am not sure that I can answer your question. I caught what I believe to have been my largest bass when we never thought of weighing them. In my early days, when I fished with a hooppole and corresponding appendages, this thing happened to me: A rough dock extended a few feet out into the river in front of my father's farm. It was placed at a point in the river where the current flowed with moderate rapidity over a pebbly bottom. It was not merely just the kind of water bass take to in October, but its attractive qualities were augmented by the moss-covered logs which constituted the base of the rickety old dock from which I was wont to angle. On one memorable occasion—I could not have passed my tenth year—my hook was seized by the largest fish I had ever seen of the bass family. My line was not more than twelve feet in length, and it took my lusty visitor but an instant to run off with the slack and force the barb clean through his ponderous jaw. The result was a leap that made my hair stand on end, and brought me to my feet quicker than you could say 'Jack Robinson.' My first impulse was of course to 'yank' him, but I might as well have tried to 'yank' the dock itself from its moorings. Finding him bent on mischief, and foreseeing a long fight, I followed his lead and managed to get on the pebbly beach where I hoped to be able to take him out of the net. But, do my best I could not manage it by any of the processes with which I was familiar, and finding myself dragged toward a slough in which I would have been incontinently swamped if I had attempted to cross it, in sheer despair I made a bee line for the bushes, and very unartistically but very surely ran him ashore—the largest bass, by the common verdict, ever known to have been caught in those waters. I have since landed hundreds of large fish, scores of them running from seven to ten pounds, but none of them at all approximating the dimensions of this gamy monster. Making all due allowance for the exaggerations of dim distance and the fervid imagination of inexperienced youth, I have not a doubt now, and never had, that he weighed fully twelve pounds, avoirdupois. That was nearly fifty years ago," he said, with a sigh, "but the recollection of the incident is as fresh in my memory as any event of the last twelve month. But more than that, I attribute to the ecstasy which came to me from the capture of that fish the passion for angling which has grown with my years, and from which I have derived more real pleasure (to parody an old couplet) than

——'Any modern Cæsar feels
With an obsequious Senate at his heels.'"

"I suppose," queried one of the party, "other fish than bass were abundant in those days?"

"Oh, yes! superabundant. Pickerel and maskalonge were 'plenty as blackberries.' But I never took to either. Pickerel were my especial boyhood abhorrence, and how any true 'brother of the angle' can so much as touch one of the slimy brutes is beyond my comprehension."

This remark was received with cordial approval, and fresh cigars all round. Not all present were veterans in the art, but none of them had the bad taste to call pickerel fishing a pastime. In commenting upon the subject, the veteran *par excellence* among us spoke thusly:

"No man ever fell in love with poetry by reading doggerel, nor did any one ever acquire a passion for angling by catching pickerel. It had been my habit from youth up to idle away an hour now and then fishing for perch, sunfish, bullpouts and low down trash of that sort. But I did that simply as an incident in my summer afternoon rambles by the lake shore and river side, and not because I cared a straw for or hankered after that kind of fishing; but once in my out-of-the way saunterings I fell in with a friend who was patiently whipping a trout brook. It was a real pleasure to recline beneath the shadow of a great rock and watch his graceful "casts." He had very few responses, but when a response came, the delight he evinced as he played and landed his four or eight ounce fish was fully shared by myself, and I soon found myself fascinated by what my friend was doing. The stream which ran through a beautiful valley, was cast into deep shadow by the graceful forest trees which lined its borders. Not a sound was heard, save a few bird-notes or the rustling of the leaves as they were moved by the gentle summer breeze which fanned them. The whole scence was a poem, and although I have been in just such places and passed through just such experiences a thousand times; this first picture of the first trout stream I ever saw, comes up before me as distinctly and as vividly as it presented itself to my vision forty years ago.

"Finding me thus interested in what he was doing, my friend, with the kindliness and generosity characteristic of the brotherhood, proffered me his rod for a cast. I timidly accepted his offer, and tried, very awkwardly, to do as he bade me. You can imagine with what success. He was an expert; I was a novice. He could cast fifty feet without an effort. When I essayed so much line as the length of the rod the fly came back upon me as if in derision. But I very soon succeeded in reaching the center of the stream, when there came a leap and a strike which made every nerve in my body quiver like a thrummed harp-string. I stood in motionless ecstacy for a moment, but, as I think, there came to me the inspiration of the born angler, for I played and landed that pound trout with the skill and judgment (my friend being witness) of a veteran. It was the largest trout known to have been taken from that stream in many years. That incident fixed my destiny. Until I had that experience fishing had no more attraction for me than any minor amusement with which we "kill time" when we find it a burden. From all of which I merely wish to say that no amount of pickerel or bull pout fishing could ever have inspired in me or in anyone the emotion needful to create the passion for such sort of angling as fascinates while it invigorates and augments the wisdom of the wise and makes good men better. Such sort of angling inspires something more than rod and line, 'with a worm at one end and a fool at the other.' There must be rivulet and lake, forest and mountain, sunshine and shadow, the music of birds, the melody of running waters, delicate tackling, and the rise and strike and swirl of bass, trout or salmon. Where such things are combined with the love of nature inherent in the contemplative, mild-mannered and gentle disciples of the historic fathers of the art, angling becomes an irresistible fascination, and gives rest to the weary, vitality to the over wrought, cheerfulness to the despondent, ambling rhythm to the life that now is, and a clearer appreciation of the promised felicities of the life that is to come."

A quiet ripple of applause greeted this rhapsody of the honored mentor of the happy group, when our bass fisher from the St. Lawrence was asked:

"Did you never hook a muscalonge? They are certainly a gamy fish, quite deserving the attention of the most fastidious angler."

"Oh, yes; I have often taken muscalonge on a trawl, and their capture gave me a great deal of muscular exercise, but nothing else. They hook themselves, and all that is required of you is to drag them in, hand over hand, as rapidly as possible. It requires a little skill to get them in your boat without upsetting, but not much more than to do the same thing with a water-soaked log, and hauling them in is very much like hauling in the same weight of deadwood against the current. Yes, I have caught muscalonge of all weights, from five to thirty pounds, but I would rather take a five-pound bass on an eight-ounce fly-rod than a score of muscalonge at the end of a two or three hundred feet trawl."

"How do the quantity and weight of bass in the St. Lawrence now compare with forty years ago?"

"I do not think the quantity has materially diminished, but they have changed their haunts. I find very few now where they used to be abundant, and places where we never had any luck in old times now teem with them. They are not nearly as plenty among the Thousand Islands as they used to be, and no wonder. What with steam yachts and fishing boats, 'thick as autumnal leaves that strow the brooks in Vallombrosa,' and net and spear and indiscriminate slaughter, in season and out of season, by thousands of experts and amateur idlers, it is a marvel that the whole species was not long ago exterminated. And the weight of the fish has fallen off in even greater proportion at that point. The capture of a five-pound bass to-day is something to talk about; forty years ago bass of that weight uniformly made up one-fourth of my catch. The truth is, the fish haven't time to grow—with so many to beguile them, they are caught as soon as they can snap at a hook or rise to a fly. But there are still pleasant and prolific places in the St. Lawrence—I will name some of them to any of you in a whisper—where I never fail to take them as abundantly and of as great weight, with my eight-ounce rod and tiny fly, as I did forty years ago with my mammoth hoop-pole and ponderous tackling."

"But you do not now confine yourself to the St. Lawrence in your search for bass?" was the next query, not because we did not know, but simply to start him off on his favorite hobby and hear him expatiate upon the pleasant places to which he is beguiled during the season when it is right to go a-fishing.

"By no means," was his reply. "I find it true in angling as in everything else—'variety's the very spice of life.' With my love of the pastime has grown my love for, and appreciation of, the grand and beautiful in nature, and I have fished for bass in all waters, from the unbroken wilds of Canada to the primitive forests of Northern Michigan. The lakes where they most abound, wherever found, are invariably gems of transparent purity, and are almost as inviting to the appreciative eye because of their picturesque surroundings as because of what they hold for the angler. Wherever I have gone, whether to the remote North or to the far West, I have never failed to find what I went for, plenty fish, good sport, magnificent scenery, mental repose and physical recuperation. It is a pastime that gave moral fibre to the apostles and æsthetic delectation to the simple wise men of all ages."

To this, of course, all present gave cheerful response, as will all others who live virtuous lives and like to go a-fishing.

G. D.

WITH HACKLES AND GENTLES.

VI.

"When this old rod was new,
Our fathers lived like men;
They wrought their toil with joy,
O'er all their native plain;
And merrily foamed the ale,
Which each goodwife could brew,
For all untaxed it ran
When this old rod was new."

"But time hath wrought sad change,
A change the land shall rue—
No keeper marred the sport
When this old rod was new."

THERE is a pathethic and, oft, pitiful side to every sport, pastime, or joy of this earthly pilgrimage. It were vain to attempt to portray this—the daily experience of every heart—but there are moods of the mind and occasions, when it thrusts itself upon one like an intrusion and half unwelcome guest. Then it is that the thoughts "hark back," as a huntsman would say, and begin to run riot in the by-ways of the past.

"When this old rod was new," is to the angler a very suggestive sentence. It may not be as old as that celebrated in the quaint English song, from which I have quoted, but with it may be connected associations and scenes that are very pleasant to recall in quiet, thoughtful hours. Joint by joint, as it were, we put the rod together until its tapering length extends far into other days and o'ershadows, but for its talismanic powers, well-nigh forgotten waters.

"When this old rod was new" perchance, we made with it the first cast with our first hackle for the first trout; it may be coeval with our experience as an angler, and has served us faithfully ever since that prime, notable essay. We were younger then than now, to be sure, but we forget our age when we touch or when we behold that venerable rod, and if we brace our nerves to feel its lissome spring, a youthful tremor is communicated to us from head to foot. Its tip may not be quite so jauntily prim as in its earlier days, but its deviation is suggestive of the trials and experiences it has passed bravely through. In some way, in some form or other, Time marks everything and everybody with his keen tooth—who, or what, so staunch, or impregnable, as to be unscathed?

There, snug in its case and dust-covered, over those book-shelves, may be seen my old rod. It has been on the "retired list" for some years, for, although able to do duty, I have, of late, fancied a lighter one than it is and—must I confess it? one of more elaborate finish. However, I love it none the less, and e'en while using my new rod, I often think, with pride, of its prompt and efficient action in every crisis of piscatorial experience.

In days agone, when far away from any fishing waters, I have been wont to take it down, and without doors to give it a bit of sun and air. Barring honorable scars (which are no blemishes), it is now in condition for reasonable service (always provided a careful and judicious person is at the butt thereof), and is not wholly destitute of a smartness, a pretty gleam of polish, that once distinguished it and made dull, country eyes to open wide when it went afield with me. "lang syne." To me each scratch and spot upon it is a record of some event, of some "moving accident by flood and field," that reminds me of the days when

"My bounding heart from care was free,
My cheeks with health did glow,
My float went dancing down the Lea,
A long time ago."

Not so very long time ago doth it seem when I have it in my hand and let it lead my thoughts untrammeled with the present. My heart is not a day older than on the morning when I first heard the click of its reel and saw the line run out through its rings. 'Tis an excellent thing to keep the heart young when the hair and moustache grow gray and you cannot walk a matter of a score of miles so easily as when you carried less weight than thirteen stone between cap and gaiters. Keep the heart young by all means!

As a kind of consort and honorable companion to my old rod I keep an old fly book near by; they have taken many a journey together and 'twere a shame to part them. Turning from the one to the other what I fail to remember by the rod I find recorded on the parchment of the book—dates, weight of fish and number, names of comrades and the waters fished are all here, and bring vividly to mind the scenes of other days.

This book never met the fate of others—a drop into the water at a critical moment, a soaking in a down-pour, or the ignoble fate of being lost altogether. No, here it lies, in a safe and warm corner, and ready for use at a moment's warning, as the ordinary tackle or outfit of a sportsman ever should be.

There are times I wot of in the life of an angler when a glance at rod, creel or line, at gaff, fly or pocket book, is an inspiration, a necessity or a comfort. One or the other recalls to the mind less jading and perplexing times than the present, and he goes from the object rested and refreshed with his glance backward. Like the old angler who—

* * * * "had the fashion every year
Of going to the brook,
With rod in hand, and creel on back,
To get a farewell look,"

I love to take, now and then, a "farewell look," as it were, of a favorite line, or fly, ere I stow it away during the close season. What may happen ere I use it again? Indeed, I may never use it more, and the thoughts range hither and yon for an angling friend dear and true enough to fall heir to so esteemed a treasure!

Heighho! my pipe is out and I will end my reflections on the "old rod." Peace to thee, and may no unworthy hand ever clutch, no ungentle heart ever love thee, most venerable angle!

O. W. R.

BLACK BASS FOR ENGLAND.—Mr. Silk writes us that his trip with the black bass has been quite a successful one. He promises us the particulars of it as soon as he gets an opportunity.

THE ANGLER FISH.

ON Saturday last, while engaged on some stone work at a breakwater off Tempe's Knob, I saw a fish that might stick even a member of the famed Ichthyophagous Club when it came to the table. Brother Phil. and I were boating off shore. The day was good for this season, perfectly calm, with a bright sun. At this time of the year the water is very clear. We were both looking over the boat's side admiring the beauties on the bottom. Suddenly Phil. cried out, "A monster skate!" I looked and sure enough there was a large fish on the bottom which it so resembled in color and general conformation that it was difficult to distinguish it at first. I saw that it was not a skate, but what our fishermen call a "goosefish," or "bellowsfish." Both I think are misnomers, and that it is the angler or devilfish.

This fellow was in about five feet of water when we first saw him. He evidently had lain in the same place and position for some time, as some very slender and long sea weeds were standing up through the seam between one of his pectoral fins and body. The bottom was so hard and rocky that he could not bury himself if he wished to, still he was so like it in appearance that there was no need of concealment. He was also provided with a fringe of imitation rock weeds and mosses which grew clear around his body, and on such a level as to appear to be growing from the sides of a partially buried stone. But more than all the rest was the lure he employed, even in our presence—he had a "fishing rod" and bait, but no hook or line; in fact, he had two "rods," but something had stolen the bait from one of them. His "pole" was seven inches long and the bait about two. When fishing the "pole" which was baited, and also happened to be the one situated nearest his mouth, nearly on the top of his head, was raised up perpendicularly and then gently agitated so as to give the bait the appearance of a bit of clam waving and swinging from side to side as it settled to the bottom on being dropped overboard. This had an exceedingly natural look and we both admired the genius which nature displayed. The mouth of this fish was a feature not to be forgotten. It might have been six inches wide from side to side, and was open some two inches, displaying several rows of rather formidable looking teeth. In other specimens I have noticed that the teeth are not very sharp or strong set, and are easily broken off near the roots. This fellow's teeth showed very plainly and gave his countenance a "most diabolical grin," as my brother said.

His eyes were set on top of the head about four inches apart, they were large and were raised like a toad's by being placed in a protuberance so that the fish could see about him. Whether his range of vision extended upward or backward we could not find out. He noticed the shadow of our boat, and would stop fishing when it covered him; then we saw that the "pole" was dropped flat on his back, pointing toward the tail. These "poles" were in a line formed of the dorsal fin, which fin is well back, and are about four inches apart. I noticed a third rudimentary on back of the others. They seemed to be moved by the flexibility of the skin on the head.

We wished very much to see him have a bite, for he fished with the most commendable patience, but at this season there are few fish cruising near the shores.

We caught a sea-spider and let it settle down on his head, where it struck just back of his "rod." He must have possessed a very phlegmatic temperament or the utmost *sang froid*, for he never winked or even stirred when the spider crawled along his back and finally down through the crevice between one of his thick fins and body. The titillation caused by the spider's feet did not disturb him in the least, and a starfish dropped in front of him drew no more attention than the other.

We let him lay till the tide went out so that there was only two feet of water over him, then the temptation to catch him was irresistible, and we got on the sea side of him and with oar in hand we went for him. I gave his tail a prod to wake him. He waked and started ahead with a half turn, didn't seem very vigorous, but leered horribly at the oar blade. We drove him into shoal water, and Phil tried to lift him out by the tail; 'twas a heavy lift, and the tail too slippery to hold on to. By putting an oar in his mouth we got him out. On the land he was helpless enough, and did not look near as well as while in the water. He puffed out his head and opened his mouth, but did not show much disposition to bite anything. We noticed that his teeth were very retractile like a serpent's, and were designed evidently to hold whatever it seized in spite of its struggles to escape. The mouth was cavernous in extent and silvery white within, and looked much cleaner inside than the fish did out. We saw that the opening to his throat was closed very tightly, yet it possessed great capabilities in the way of swallowing, and took in an oar handle easily. We thought that when a fish approached his lure or imitation bait that sudden opening of this great mouth and the consequent influx of water might draw in his unfortunate prey, and at the same time draw him ahead, which would add to the certainty of its capture.

His under parts were of a pale dirty white, some like a toad's. The color of his back was brown, with little yellowish spots of the size and shape of rye kernels, and out of water it had a very dirty look. His eyes were gems; the pupils were metallic green and resembled a toad's eye in looks as well as in position. We cut off his "fishing rods," and saved them as curiosities. The bone in each was as clear as glass and very slender, tapering from the size of a knitting needle to a fine point.

After examining our prize we let him go again, but he seemed rather confused, and did not get far from shore in any of his attempts to escape. Some time after I saw him beached near where we put him off. Two ladies who passed by looking for shells stopped to examine him. They were much interested in our account of his fishing, and a fine setter that was with them was equally interested in a personal examination of his body, much to the distress of his mistress, who feared he might be swallowed whole or dragged under water.

I had seen this fish before, when they were cast on the shore of Massachusetts Bay, in Truro and Provincetown, but never saw a live one except in the present instance. Once while in Wellfleet, mine host at Holbrook's told of catching one which had swallowed or had in its mouth three coots, velvet, or black ducks. If that were true, what might be the fate of many an innocent water witch or grebe that should see the seductive bait when under water himself after fish? MERGUS.

EAST WAREHAM, Mass., Nov. 13.

[The fish was the "Angler," or "goosefish," etc. (*Lophius americanus*). The Ichthyophagous Club has eaten them. They are pledged to eat everything that comes from the water, and the constitution of the club requires the officers to taste of all aquatic products, under penalty of banishment for the president, imprisonment for the head taster, and death for the naturalist. In cases of an extreme character, aggravated by persistent refusal, the family of the latter are drowned, also, while in case of a merely temporary repugnance they are simply strangled.]

WHO CAN EXPLAIN IT?

I SEE in your issue of November 9 that "X.," writing from Central Lake, Mich., "wonders if 'Kingfisher' would put in an appearance on the 10th, prepared with a dipper and desirous of laying in his winter's stock of American sardines," this referring to a statement made by me in FOREST AND STREAM, date August 3, in regard to the migration of certain of the herring family from Central Lake to the waters above on the 10th of November of each year. Friend "X." has, no doubt, learned that I was not there with my dipper; but I have no doubt that, had I been, I could have scooped out a supply, had my dipper been of sufficient dimensions. He says he has "heard that old hunting story years ago," etc. There's where he has had the "bulge on me" all along. He has heard it so often that it may have aged on him and become a trifle threadbare. I hadn't heard it; it was fresh to me, and I made the statement on the authority of two or three persons at Central Lake, whom I had, and still have, confidence in, and I put it down as given to me, having no desire or motive to "overstate" the statement.

As to the "quantitudinous quantities," to quote my friend "the Scribe," of the fish that annually seek the higher waters, my informant may have used a "leetle too much line;" but were friend "X." an "honest angler," he would scorn to spoil a good fish story for the matter of a herrin' or two, more or less, when they are so plenty.

Taking a bird's eye view of his article it would appear that he is a little over anxious to parade in the ranks of the scientific men, as for instance, "I should have thought little of the matter had not the writer (meaning 'Kingfisher') expressed a desire that the multitudinous migration of these fish should be explained by scientific men." The fact is, I said nothing whatever about scientific men or any other man. I simply asked, "Can any one of the readers of FOREST AND STREAM explain it?" (see page 4, current vol.) and being a thoroughly *un*scientific sort of a man I did not care a "dime" whether it was answered by a scientist, a naturalist, or a natural fool.

As to the methods of observation of the rural districters, I admit they are not always of value, but I believe they are usually more capable of solving a question of woodcraft than we "city fellers" are, and that any of us—not leaving out friend "X."—may learn something of the humblest of them that will be of benefit to us in some shape. I have met some very intelligent and observant rurals in Antrim county, and other places for that matter, and I expect to find more of 'em, and I am going to be credulous enough to take stock in a good many of their "methods of observation."

When a man like Jim Wadsworth, of Central Lake, says "These fish in question (be they American sardines, 'herrings,' or horse mackerel, from a scientific standpoint) make their way up that river on the 10th day of November of every year," why, that is all there is of it, for I believe him to be a keen and intelligent observer, well versed in all the mysteries of the woods and the waters, and also truthful.

If friend "X." would claim they migrate on the 9th or 11th I would certainly have to "allow" a little on it, for if his "methods of observation" are as careless as his method of reading, he is not to be trusted to make a clean score.

When I penned the query at the head of this article I was only curious to know the why and the wherefore of the movement occurring always on the 10th of November, and if the range of the fish extended below Central Lake. Friend "X." has referred us to an "analogous movement" of the "bluebacks" (he might have added the "blue bellies" as well) of the Rangeley Lakes of Maine, and the meanderings of a similar fish in Squam Lake, N. H., "and probably in most of the other Northern lakes of any size," and he "has no doubt that these 'herrings' are common to all the lakes of the Intermediate chain," etc. He has examined it, and made the whole thing as clear as mud, and has certainly earned the thanks of FOREST AND STREAM, and of

KINGFISHER.

CINCINNATI, O., Nov. 1882.

HABITS OF COLORADO TROUT.

A FEW weeks since I saw a statement from a correspondent at Dumont, Col., in regard to finding spawn in our mountain trout at this season of the year, in which he expressed surprise, and inquired if it was not singular to find our trout full of spawn, etc, and in the same paragraph you invite communications on the subject.

I have made the habits of our mountain brook trout a study for the last seven years, and have hatched them artificially for four years. We have two species. One is called (local names) the brook trout and the other lake trout, or salmon trout, the latter being found in lakes and streams running out of or into lakes. The lake trout has reddish flesh, while the brook fish has white flesh. Sometimes a fish will be caught in lake or stream which seems to be a cross between the two. At the north inlet of Grand Lake, on the Grand River, I have taken both species at one cast. I found the red-fleshed fish in Upper Chicago Lake, 400 feet above timber line—say, 11,000 feet above sea level. In the lake, 400 or 500 feet below this, I found both white and red-fleshed fish. The fall between the two lakes is so steep that trout cannot pass up from below, nor can those above go down alive; at least I do not think it is possible. The outlet from the lower lake is navigable for trout for fifteen miles to Idaho Springs, where its waters join Clear Creek. I have not observed any difference in the spawning habits of these two fish. Both spawn in the spring and summer.

As to any of our native trout being full of spawn in October, I must say I consider it an optical delusion in the observer. The fish he saw was only about one-third full. The spawn or egg of the Rocky Mountain trout when mature, varies from $\frac{1}{16}$ to $\frac{1}{8}$ of an inch in diameter, depending upon the size and age of the fish, and in number will average 700 to an eight-ounce fish, and I have taken 300 from a three-ounce fish. At this time the eggs in our native trout are about the size of the heads of pins, and none of them can be expressed and vivified before the first of May. My ponds were situated in a warm locality, at an elevation of about 7,000 feet, and the ice disappeared early in March or late in February, but I never have succeeded in obtaining any eggs before the first week in May, and then only from my older and larger fish. The majority spawn along the first of June, and I have taken eggs as late as July 5. The temperature of the water in the ponds from May 1 to July 15 ranged from 40 deg. Fahr. to 70 deg., being warmest at one o'clock P. M. The wild trout in the stream commenced running up stream in April, and I believe they spawn higher up mostly in May and June. I have captured female trout as late as July 15 with a few mature eggs in them, but the fish never had a healthful appearance.

The largest trout I ever caught here weighed two and a half pounds, but I fed one in my ponds on beef and mush until "he" weighed five pounds.

The Eastern brook trout, *Salvelinus fontinalis*, does exceedingly well in our mountain streams, growing more rapidly than the native trout. In March, 1880, I hatched 500, and in November of the same year some of them were six inches long, and now they range from nine to thirteen inches in length. The colors are very brilliant and clearly defined, the fish being, if possible, more beautiful than in Massachusetts. *Salvelinus fontinalis* here retains the habit of spawning in the fall, as it does in the East, at least all that I have observed. At Green Lake, Clear Creek county, they spawn in October, and at my place I found them spawning October 26 this year. It is possible that the fish may become a spring spawner sometime, as the water in our mountain streams is lowest in the fall, and frequently freezes solid on the riffles in December.

As indicating the rapid growth of *Salvelinus fontinalis* in our climate, I may state that W. E. Sisty, Esq., our State Fish Commissioner, reports that some hatched last January are now nine inches in length. SAME.

GOLDEN, Colo., Nov. 13.

ECHOES OF THE TOURNAMENT.

JUST before the tournament, when the contestants were preparing for the contest by daily practice, it was the custom of Mr. Harry Prichard to go to the ship yard of James D. Leary, foot of North Sixth street, Williamsburg, and indulge in a little practice. The waters here are foul with all kinds of refuse, and a scum of petroleum adds beauty to the surface by its prismatic reflections. A fish straying into these waters would probably die from asphyxia as soon as a man would if shut up in a Third avenue street car, and the group of laborers looked with surprise at the first appearance of Mr. Prichard with rod and line. Some of these men had been familiar with salmon fishing in the Emerald Isle, and, leaning on their spades, they opened their eyes in wonder at what they thought to be a mild form of lunatic. After a few casts, one of them approached the spot where Prichard stood, and asked, "An' what'll ye be catchin' here, now?"

"Oh, maybe a trout or two," answered Prichard.

"B'ys," said the man, "it's trouts he's after in the stinkin' water; hould yer whist till ye's see him hook one; it's more likely a dead rat he'll get. Sure, he's daft intirely."

The casting went on for half an hour or so, the men furtively watching it while at their work, until finally the line was reeled in and the angler departed.

The next day, at the same hour, he appeared again.

"Howly Moses! here he is ag'in! Did ye get e'er a trout yesterday?"

"I saw a few leap, and I thought I'd come back and try to get some of them to-day."

So the practice went on until the men found out what the object of this casting was by reading of the tournament in the daily papers. They then organized a match among themselves, and cast with a rope weighing thirteen pounds, no rod nor attached weight, line to be retrieved after every cast, and Prichard's trolling cast barred. The shortest cast was to drive the blind horse, while the others had choice of horses when teaming was to be done.

The following is the score:

Entries.	Feet cast.	Entries.	Feet cast.
Mr. John Donnelly	40	Mr. Dan. Rogan	29
Mr. Mike McNamara	35	Mr. Monroe	33
Mr. Conn. Sullivan	30	Mr. Charmer	33
Mr. Bill Cole	39	Mr. John Kerwin	34
Mr. Pete Rafferty	38	The Lobster	23
Mr. Pete Kennedy	37		

This settled the blind horse question, but the loser, the unknown man who prefers to be known as "The Lobster," saw his way clear to get out of losing in the next contest by having points for delicacy and accuracy, and with these added, and a friendly judge to look with favor on his casts for these points, he now gets off from paying for the beer, which is daily cast for, although his distance is always short.

It having been claimed that in retrieving a line some advantage could be taken by using an automatic reel in recovering line that the judges could not see, Mr. Reuben Wood wishes to say that he will give $10 to any one who will show him how it can be done.

LONG ISLAND FISHING NOTES.

THE fishing here in Peconic Bay has not been good this season, that is for bluefish, weakfish, sea bass, blackfish and porgies. A few years since they were innumerable here; but the bunker steamers and yachts have scared off or killed off their natural food the bunker, and so diminished the sport; and the numerous fykes, pounds and set nets have so caught them up that the sport for the hand-line committee has been much injured. But the real place for fishing in this region is in the Sound, and here the fish above named are as plenty as ever, and it is easy to catch a half bushel of them at any time when the water is smooth enough to allow the launching of a flat-bottomed boat.

ISAAC MCLELLAN.

GREENPORT, L. I., Nov. 20.

LARGE BASS IN THE SUSQUEHANNA.—Meshoppen, Wyoming County, Pa.—On the 10th day of November I took, with a small trout rod, four small-mouth black bass weighing seventeen pounds. The two largest five, and five pounds two ounces. I took from the same stream on the 11th, one yellow bass, sometimes called the Otsego bass, weighing eleven pounds and one ounce, on a small trout rod and a No. 2 N. Y. trout hook. I caught, another day, five bass, weighing fifteen pounds. I have taken in all this fall about one hundred large fish. Bass are plentiful in the Susquehanna.—S. A. S.

FISHERIES OF NEW YORK.

WE have received "Census Bulletin No. 297" which gives the commercial fisheries of the Middle States, compiled by R. E. Earll, special agent for the sea-fisheries, and M. McDonald, special agent for the river fisheries, and submitted by G. Brown Goode, in charge of the Fisheries Investigation. From this we extract the following figures relating to the Middle States, New York and New Jersey.

The statistics of the sea fisheries of New York have been gathered from the manuscript of Mr. Fred Mather, who has visited all the important fishing settlements of Long Island in the pursuit of his investigations. Before passing to a review of the business in New York, the report presents the following interesting table concerning the fishing interests of the Middle States:

Persons employed	16,017
Fishing vessels	1,211
Tonnage of vessels	23,576
Fishing boats	8,501
Capital dependent on fishing industries	$4,519,928
Pounds of fish sold fresh for food	55,377,770
Pounds of fish salted for food	2,484,000
Pounds of other products for food	36,758,923
Pounds of miscellaneous products for fertilizers and other purposes	319,905,500
Value of products in marketable condition	$8,874,892

The greater portion of those employed in the traffic are native born Americans, and a large majority have families depending on them for support. Assuming that 12,000 are married, each having an average of four persons (a wife and three children) depending upon him, and that half of the remainder depend upon their own resources, we have about 62,000 persons largely dependent on the fisheries for a livelihood. Thousands of others scattered along the numerous bays and coves are interested in the fisheries to the extent of supplying their own tables and occasionally those of their neighbors with fish and oysters.

The sea fisheries are more extensive than either the fresh water or oyster fisheries and the products have a greater value. The entire oyster industry, however, which includes the enhancement in value of Southern oysters in preparation for the market, exceeds in value the sea fisheries by nearly $1,000,000, though fewer men are engaged in the work. New York takes an important part in the fisheries, coming fourth in the list of fish-producing States with products valued at $4,380,365. Her menhaden fisheries are more extensive than those of any other State, and in 1880 the value of the oil, scrap and compost reached $1,114,158, being more than half of the yield for the entire country. The value of the products of the oyster fisheries for the same period reached $1,577,050, which is greater than that for any of the other States except Maryland, Virginia and New Jersey. The New York fishermen secure annually larger quantities of both hard and soft clams than those of any other State; in 1880 the amount realized from the sale of these two species was $517,691. In the shad fisheries she ranks third on the list, the catch in 1880 reaching 2,733,600 pounds. The fishery interests of the State are thus shown in detail:

Persons employed	7,366
Fishing vessels	541
Fishing boats	3,411
Capital dependent on the fishery industries	$2,029,586
Pounds of sea products (including oyster meats)	$25,785,572
Value of sea products (including oysters)	$4,060,745
Pounds of river products	3,667,500
Value of river products	$161,950
Pounds of lake products	4,070,000
Value of lake products	$155,870
Total value of products to the fishermen	$4,380,565

New Jersey produced in 1880 $3,176,589 worth of fishery products, taking the sixth place in the list of fish-producing States. Its oyster products, valued at $2,080,625, are exceeded only by those of Maryland and of Virginia. Its crab fisheries, from which the fishermen realize $162,612, are more extensive than those of any other State, while its quahaug (hard clam) fisheries are second only to those of New York. In the menhaden fisheries it stands fifth on the list, the oil, scrap and compost produced in 1880 being valued at $146,286. Its river fisheries are of minor importance, the total yield being only 2,752,000 pounds, netting the fishermen $91,435.

Over three-fourths of the entire catch in the United States is menhaden, 318,588,700 pounds having been taken in 1880. The next species in importance for bulk is the oyster; and allowing seven pounds of meat for each bushel of shell-oysters, we have 23,238,100 pounds of oyster meats. Of the other species mentioned the following are taken in quantities exceeding 5,000,000 pounds: Squeteague, 11,063,500 pounds; bluefish, 6,710,800 pounds; hard clams (allowing eight pounds of meat to the bushel), 5,933,664 pounds; codfish, 5,247,000 pounds; shad, 5,207,200 pounds. Fourteen other species are produced in quantities ranging from 1,000,000 to 5,000,000 pounds each.

The products of New York's fisheries are thus classified:

Species.	Pounds.	Value.
Bluefish	3,000,000	$57,000
Cod	3,580,000	67,125
Clams (hard)	2,795,840	262,110
Clams (soft)	3,407,750	255,581
Crabs	1,624,583	69,234
Lobsters	135,000	5,062
Menhaden	288,331,200	1,114,358
Oysters	7,303,100	1,577,050
Squeteague	4,000,000	120,000
Herring	250,000	3,750
Shad	2,733,600	136,680
Sturgeon	144,000	8,640
Trout	569,500	23,100
Whitefish	1,174,000	56,000
All other species	13,874,400	613,775
Total	335,313,173	$4,380,565

The outfit for this vast catch, consisting of vessels, boats, nets, fykes, pots, baskets, factories, etc., is valued at $2,029,585.

PENNSYLVANIA ANGLERS' ASSOCIATION.—Philadelphia, November 17.—Ben Butler once said that it was no lack of laws but the lack of enforcement of those already in existence that caused many of the troubles complained of. Here in Pennsylvania we have fishing laws sufficiently stringent for all practical purposes, but, as can easily be demonstrated, they are next thing to worthless, simply because a proper observance of them is not insisted upon by the authorities. This is especially the case in Eastern Pennsylvania, and notably in regard to the Delaware, Schuylkill and Susquehanna rivers and their tributaries. With a view to obviate this abuse, an association of anglers was organized on Wednesday evening last, at Lincoln Hall, Broad street and Fairmount avenue. The avowed purpose of this association is to promote fisheculture by the restocking of streams and the enforcement of existing laws, which are so frequently infringed. A. M. Spangler was elected President, Washington I. Sellers Vice-President, and R. M. Hartley Secretary and Treasurer. A committee was appointed to draft a constitution, with instructions to report at the next meeting, which will be held in the same place on Saturday evening, November 25. Already a large membership has been secured, quite a considerable portion of which is from the counties adjacent to Philadelphia. Those desirous of joining the association are requested to attend the next meeting or send their names to Malcolm Shipley, 503 Commerce street. It is the purpose of the association to secure comfortable headquarters, and combine some social features with those already named.

Fisheulture.

CARP FAIL TO APPEAR.

WEBSTER, Mass., Nov. 14, 1882.

Prof. S. F. Baird, U. S. Commissioner of Fisheries, Washington, D. C.:

Respected Sir—It is just about a year ago that we received from you five cans containing one hundred young carp from two to four inches long, which had stood the journey from Washington so splendidly, and we were then already anticipating the pleasure of seeing not only our "Big Pond" (with the long name) but through their medium all the numerous ponds and rivers in this vicinity stocked with this valuable food fish. However, with feelings of sorrow I am obliged to write you that our enterprise turned out a failure, as we cannot find a trace of our little carp.

As instructed by you we placed them into three small ponds, which we considered especially adapted to their welfare, and which besides a few small shiners contained no other fish.

Early last spring the farmer living near one pond found two or three dead ones floating on the water, and a friend imagined to have seen one in the grassy part of another of the ponds, and that is all we have seen of them. In May and June I took particular pains to find them in the most promising pond and watched for them repeatedly with patience and in the best light, but failed to find them. Then came the unprecedented dry weather of last summer with scarcely a drop of rain in this section from early July until September 12, which dried up everything and also one of our carp ponds. The owner of it was much interested in our attempt and brought me a two quart pail full of little fish such as were put in before it finally dried up, but they were all common brook shiners, and my closest questioning him and showing him pictures of carp only convinced me that not a carp had been seen in this pond since the ice left.

The steward of the estate in which the third pond was located reported to me that, with the closest search during the summer, and also in the dry season, when the pond had been reduced to half its size, he had been unable to discover any of the carp.

After learning all these disappointing facts, I went to Mr. Woodard, some three miles from here, who, I learned, had also received some carp with ours, and he told me the same story, viz., that he had not seen any since last winter, and that the drought had dried up the brook which fed his pond completely, and also, almost, the pond. He, too, considers his attempt a failure, but referred me to Mr. Davis, another farmer, living a few miles further, who also had some carp at the same time, and whose pond, being considerably larger than any of ours, had kept pretty full all through the year. He has been, however, impossible for me to pay him a visit, and, owing to the lateness of the season, I don't think of seeing him now, but shall do so next spring, still hoping to see some of my beloved carp in his pond, of which I shall not fail to notify you.

How to account for the loss I don't know. The cold of winter could not be the cause, as none of the ponds froze to the bottom, and the carp stand as cold winters in Germany, which I know from my own experience. I saw a turtle (and killed it) of the size of this page in one pond and a three-foot water-snake in the other. Could these pests have cleaned them out? They are a nuisance impossible to avoid. Neither have the carp been carried out with a flood, as we had provided ample and well-screened outlets.

The question now most naturally arises: "Would you have the kindness to favor us with another supply of carp to try the experiment over again, of course in a different way, and heeding our past experiences?" and should be much pleased to receive a favorable answer.

It has been our opinion that we would have had a better chance of success if we had risked them right in the "Big Pond," for which they were finally intended, for, although exposed to the danger of hungry pickerel, they would have found more food, more shelter, and generally better accommodations than in the small ponds.

I have sent a copy of this letter to FOREST AND STREAM for publication, and trust that this will meet your kind approval.

Believe me, sir, yours very truly,

C. GERBER, JR.

TENNESSEE FISH NOTES.—The carp placed some two years ago in the Capitol ground ponds have increased in number largely, and size amazingly. As it is too much the case, however, in this part of the country, no attention is paid to these valuable fish, and small boys are angling them out by the scores, instead of distributing them to pond owners in the country. Quantities of fine fish still continue to be caught out of the Cumberland River. Bass weighing from two to four pounds, are of frequent occurrence. A large party of sportsmen left to-day for Reelfoot Lake, where they propose remaining a week or more in camp. A shad was reported to me having been caught with the hook last week, but as I did not see the fish, I am rather skeptical as to the reliability of the statement. If those fish were placed in this river at the proper stage of water I think they would do well; in the Ouachita that is the case, and the distance from salt water is about the same.—J. D. H.

WHITEFISH CULTURE.—Detroit, Mich., Nov. 15.—The whitefish work of this State has at last fairly commenced. We are following up the experiment which we made last year, taking the fish and keeping them in large crates and handling them every day until we get every egg from them. Last year we tried the experiment with twenty-six males and females, and only lost two, and they were injured in the net. We kept them the most of the summer and still have one of them in the tank. We have in the crates fish that will produce us 10,000,000 eggs now, and will put in enough to give us 50,000,000, which will be the largest hatch ever made under one roof. We have proved that the handling of whitefish does not injure them and cause them to die, as many have supposed. Of course a man must understand the business.—A. J. KELLOGG, Commissioner of Fisheries.

CARP IN MAINE.—The first German carp that have ever been introduced into any waters of Piscataquis county were planted in Squaghnquigh Pond, in Munson, Nov. 9, by G. A. Mathews, Esq., of Lowell, Mass. Mr. Mathews is an active member of our Game and Fish Protective Society and he, with sundry other gentlemen of the same city, are doing much to make the Monson lakes and ponds a popular resort.—J. F. SPRAGUE.

SCOTLAND.—We learn that Mr. Archibald Young has been appointed Inspector of Salmon Fisheries for Scotland. Mr. Young has had much experience in fisheculture and the fisheries and his appointment to this position is a good one. We can congratulate the friends of fisheculture in Scotland on having the right man in the right place.

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. K. Slayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. Washington A. Coster, Flatbush, N. Y.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

EASTERN FIELD TRIALS.

HIGH POINT, N. C., Nov. 18.

THE Fourth Annual Field Trials of the Eastern Field Trials Club commenced yesterday with a good attendance of sportsmen from all parts of the country. Much enthusiasm is manifested by those interested, and should birds prove to be plenty enough to run the Trials through without dragging, the meeting will prove a great success. The Bellevue Hotel is headquarters and is filled to overflowing. The proprietor, Mr. Waldrop, is doing everything in his power to make his guests comfortable. Many of the land owners are kindly disposed toward the visitors, and freely offer their land for their use. Some of them, however, are disposed to look with disfavor upon the horde of sportsmen, and refuse to allow them to shoot over their grounds. There will be no difficulty on this score as plenty of ground has been set apart and strictly preserved for the running. Birds have not yet been found very plenty, as the weather has been warm and very dry. To-day, however, we have had welcome rain, and we expect on Monday to find all the birds necessary.

High Point is situated on the Piedmont Air Line Railroad, sixty-three miles south of Danville, and 145 miles west of Raleigh. As its name implies, it is the highest point for quite a distance around, being one thousand feet above the sea. It is a very pleasant place of about two thousand inhabitants, and reminds us more of a thrifty New England village than any place that we have seen in the South. The main products of the country in this vicinity are corn, oats and wheat. There is quite a large cotton mill here, which, we understand, is doing very well. There are also quite a number of other mills of different kinds here, and the town is rapidly growing, as the number of new houses and the increased price of village lots attest, the latter having trebled in value in the last three or four years. The celebrated Hoover gold mine is near here, and there are also a number of other mines in the vicinity where gold, silver, and copper are found, and the mining industry will undoubtedly soon become of considerable importance, as there are indications of valuable deposits of the precious metals. The lumber interest is also fast increasing in importance, and is destined to form no inconsiderable source of wealth, as there are to be found very large quantities of valuable timber, that finds a ready market.

This has long been a favorite resort for sportsmen, and a great many birds are killed in the vicinity every season. The hard winter two years ago killed off considerable numbers of them, but they have since increased, and this year are fairly plenty again. The country is not well adapted for the holding of field trials, as there are too many scrub oaks and pine thickets, into which the birds at once pitch, making it very difficult for the judges to see the dogs as they should be seen; but for the style of shooting usually practiced in this part of the country where only one or two shots are taken at a bevy, and they are then left for a fresh one, it does not make so much difference. To our mind this style of shooting is far from satisfactory, as we consider the work on scattered birds much more enjoyable, affording as it does a greater scope for those finer qualities, both natural and acquired, which preeminently belong to the pointer and setter.

The first event upon the card was the Members' Stake. At a meeting of the club on Thursday evening, Mr. Elliott Smith, of New York, was appointed as judge in place of Mr. Snellenburg, who was detained at home by sickness. The other judges are Col. James Gordon, of Pontotoc, Miss., and Judge John M. Kinney, of Staunton, Va. Col. Gordon needs no introduction to our readers, having very satisfactorily served as judge at several of our most important trials. Both Judge Kinney and Mr. Smith are well known to us as practical sportsmen well qualified for the position.

Diana II. having been withdrawn the remaining dogs were drawn to run as follows:

PEG. Dr. N. Rowe, Chicago, Ill.—Blue belton English setter bitch, 8 years (Leicester-Dart),
against
BUCKALEW. W. A. Coster, Flatbush, L. I.—Orange and white English setter dog, 3 years (Druid-Heller's Ruby).

PLANTAGANET. James H. Goodsell, New York.—Lemon belton English setter dog, July 16, 1880 (Dashing Monarch-Petrel),
against
DASHING MONARCH. J. C. Higgins, Delaware City, Del.—Black, white and tan English setter dog, August 25, 1878 (Dash II.-Countess Moll).

BESSIE. J. Otto Donner, New York.—Orange and white English setter bitch, 3½ years (Ranger II.-Belle),
against
BROCK. Geo. T. Leach, New York.—Red Irish setter dog, 3½ years (Count Bosco-My Duchess).

DASHING ROVER.—T. F. Taylor, Richmond, Va.—Black, white and tan English setter dog, 3 years (Dash II.-Norna),
against
MARCHIONES PEG.—Dr. N. Rowe, Chicago, Ill.—Black, white and tan English setter bitch, years (Druid-Peg).

DAISY LAVERACK. James H. Goodsell, New York.—Lemon and white English setter bitch, June 19, 1879 (Thunder-Peeress),
against
TICK. Geo. W. Post, Brooklyn, N. Y.—Liver and white pointer dog, 15 months (Bob-Dido).

DON. Chas. P. Stokes, Richmond, Va.—Black, white and tan setter dog, 3 years (Pedigree will be given next week),
against
DOLLY. J. E. I. Granger, New York.—Lemon and white pointer bitch, age unknown (Viscount-Dolly).

COUNTESS. Geo. T. Leach, New York.—Red Irish setter bitch, 3½ years (Count Bosco-My Duchess),
against
BILLY FLINT. J. Herron Crossman, New York.—Liver and white English setter dog, 4 years (a son of Rob Roy-Waddington's Fanny).

Of these, Plantaganet, Dashing Monarch, Daisy Laverack and Tick failed to put in an appearance. It singularly happened that the dogs that were absent, were drawn to run

together, so that none of those remaining derived any benefit from their absence.

Friday morning was all that a sportsman could wish. There was a slight haze, which tempered the heat of the sun, and a gentle breeze from the southeast. The air was balmy and invigorating, and we were strongly reminded of a perfect New England September day. Owing to some delay in settling preliminaries, we did not get started from the hotel until half-past eight. Taking an easterly course we halted some three miles from town at the edge of an oak grove. About two hundred people were present. The judges, reporters and marshals, Major Geo. R. Watkins, of Brooklyn, N. Y., and Dr. Wm. M. Williams, of Springfield, Mass., who kindly consented to act, were on horseback, the others were on foot. We were under the guidance of Mr. A. Holton, to whom, with his brother, Mr. C. Holton, great credit is due for their kindness in offering and preserving their plantations for the use of the club. Taking down the fence we entered an old field, and casting off the dogs the running commenced.

THE DOGS AND THEIR WORK.

PEG AND BUCKALEW.—The first brace, Peg and Buckalew were cast off in an old field at 9:40. Peg is eight years old, and in her younger days was a capital animal on all kinds of game. She is still a good one, but has not been on quail for two years. She was a little lame from the effect of a thorn in her foot, and did not range equal to her usual form. She looks very well, notwithstanding she is the mother of half a hundred puppies; not very stylish, but has quite a gamy appearance when on point. She is under very good control, and appears quite intelligent. Buckalew is handy enough to be a good one. He is faster than Peg and much the widest ranger. He is of good size, makes a stylish point, and is without doubt a killing dog. Both dogs started off well, but quite a circle was taken before birds were found. Working down in a bottom, Buck challenged, and then swung wide, and found a nice bevy, which he pointed in good style, and held until Peg was brought up to back, which she did to order, but very indifferently. The birds were flushed to order, and missed by Mr. Coster, both dogs droppingnicely to wing. Ordered on, Buck took a few steps, and again pointed nicely. Peg refused to back, and went on ahead, and between her and Coster, who was walking up, the rest of the bevy were flushed. Working on in a thicket a single bird flushed near Buck and Coster, and several more got up near Dr. Rowe. Then Peg made a good point, which Buck backed nicely. Dr. Rowe flushed to order and missed. Following the birds up the hill, both dogs were out of our sight for a few seconds, and when we got through the dense thicket they were both pointing. Peg a few yards in front, flat, and Buck with his head in the air. The judges gave Peg a point, and Buck a back, but we thought him entitled to a point as he could not see her. Flushing the birds to order, two rose and Mr. Rowe missed the first but killed the second, which Peg retrieved very well. Working on, Peg challenged and roaded a short distance very nicely, and half pointed, just as the bird rose a little wild, the Doctor missing it in good style. Moving on, two birds flushed near Coster, and Buck who dropped to wing. Swinging to the left, Peg dropped flat, and the Dr. claimed a point, but she soon moved on, and flushed a single bird under the pines, but as the judges could not see her, she escaped the penalty, so far as they were concerned, but did not escape the whip. After a little further search for the rest of the birds, without success, we returned to the starting point, where a short rest was taken and then we tried the other side of the road, drawing several likely looking places blank. Finally Buck found a bevy of half grown birds, near a small stream, and pointed them in good style, but they flushed wild as we came up, and in a few moments the spectators flushed another bevy of larger birds, partly behind us. Taking the dogs round to where we could cross the stream, or branch, as it is called here, they were sent on, and Peg at once pointed nicely, and the bird was seen to run in front of her. In the meantime Buck was pointing down by the branch. Coster flushed to order and missed. Moving on Buck challenged, and roaded a short distance, but the bird got up wild before he established his point. Peg then dropped just as a bird got up close to her, and had the judges seen it, she would have very nearly scored a flush. Moving on Peg half pointed and commenced roading, when Mr. Coster, after asking permission of the judges, ordered Buck to go on, but the bird flushed wild before she could establish a point. Dr. Rowe claimed a foul and lectured Mr. Coster because Buck went on, but failed to convince him that he was to blame. Moving on, Buck pointed a single bird very nicely. Peg, brought up to back, refused and went ahead of Buck, and both moving on, between them they flushed the bird. The judges gave Buck credit for a point, and scored Peg a refusal to back, and gave both a flush. Dr. Rowe objected to their decision, but the score was not changed. A little further on Buck again pointed, and Peg again went by her and scored another flush. Swinging into the pine thicket, Peg flushed three or four, and dropped to wing. Moving on a little, another one got up close to her, and she again dropped. On a little further she challenged, but after moving forward she dropped to order. When the judges came up a bird flushed at the edge, and Dr. Rowe claimed a point, but the judges did not agree with him. Working through some corn into weeds where birds had been marked, Peg made a capital point. Buck thought this a good opportunity to pile up old scores, and walking in ahead of her he flushed the bird. A little further on Peg flushed a bird. She was hot and evidently could not smell so well as in the morning. Buck then flushed one that he should have pointed, and soon after another one got up near him in the sedge. A bird was marked down and the handlers were ordered to go and kill it, in order that Buck might have a chance to retrieve. Some time was spent looking for it, but it was finally flushed by Peg and handsomely missed by the Doctor. Following it up, Buck pointed it in good style, but as the dogs were not under judgment their behavior was not noticed. The bird was flushed and both handlers cut loose at it, but the bird would have lasted through the heat if it had not flown within reach of Hart Haight, who, by request, grassed it very neatly. Buck, when sent to retrieve, pointed another bird, but was ordered on and the bird flushed. He then spent some time looking for the dead bird, finally finding it and bringing it in good style. The judges consulted a long time, but arrived at no conclusion, meanwhile Buck went into the brush and flushed a single bird. The dogs were then ordered up and we went to lunch, as it was nearly one o'clock. The judges decided that honors were easy, and as Peg had not backed they agreed to put them down again at a favorable opportunity and let this decide the heat. They were accordingly put down toward night to the point of Billy Flint. Buck backed grandly, while Peg only stood still, except that her head and tail were moving, but the judges again consulted, and finally gave her the heat. Down three hours and five minutes.

BROCK AND BESSIE.—It was singular that the brace who ran the concluding heat in this stake last year should be drawn together. They were cast off at 1:45 in the woods, where a bevy had been marked. Bessie challenged, and trailed the birds up the hill in good style, but Brock worked ahead and flushed them. Working toward them, three were flushed by Mr. Leach, or Brock, we could not tell which, as they were close together. A little further on, one got up near Mr. Leach, and he killed it, Brock retrieving it nicely. Working on, Brock pointed a single bird Bess did not see him and went round him, and pointed also Mr. Leach flushed it to order, and killed neatly, Bessie retrieving it very well. Then we went down the road and crossed the creek, where both dogs made a beautiful point on a bevy, which was flushed to order but not shot at. Moving on, both again pointed the same bevy, which were flushed to order, and both handlers killed in good style. Brock retrieved in good style, Bess not very well. Moving on, Brock pointed a single bird, but advancing down wind, he got too close and scored a flush. Bessie coming up, also flushed one. Bessie then pointed, and Brock backed, but she soon moved on, and swung for it. Crossing a fence, she struck the scent and dropped nicely. Mr. Donner flushed to order, and missed. Working on down the branch, Brock made a grand point, which Bessie refused to back, but went around the dog and flushed it. Mr. Donner then flushed one, which he killed very neatly. Bessie, sent to retrieve, flushed another, and they were ordered up and the heat awarded to Brock. Down one and a half hours.

DASHING ROVER AND MARCHIONESS PEG were now called for. Rover was on hand, but Peg was with the teams. Dr. Rowe understanding that we were to work back that way, had not sent for her, and after waiting twenty minutes she was declared out under the rule, and the heat was awarded to Dashing Rover.

DON AND DOLLY.—This brace was put down at 3:10. Don is a black, white and tan dog, of rather ordinary appearance until he starts off, when he shows up very well. He is seven-eighths Gordon and one-eighth Irish. He is a very good moving dog, with a fair amount of speed, and has lots of hunting sense. He has a way of jumping in the air without slacking his speed, and then turning his head to catch sight of his master, that is very pleasing. He makes a stylish point, and appears to know where to look for his birds. Taking him all round we consider him above the average of dogs that run at the trials. Dolly is a nice little pointer, very stylish and gamy-looking, and is without doubt a capital woodcock dog, but she has not speed enough to compete with a flyer like Don. Just before they were ordered down, Dolly made a capital point to a single bird, but working a little too close, she flushed it. When they were given the word, Don swung wide, and pointed a bevy that had been marked down, Dolly backing him nicely. Judge Smith flushed them, and missed in as good style as we had so far seen. The birds pitched into a brier patch, where Don got a good point on a single bird, which was flushed by the judge's horse, when the rest of the bevy got up wild. Working back, over a knoll, Dolly made a grand point, which Don backed, but as nothing was found she scored a false point. Then on to where the birds went down, Dolly made a point, but the bird flushed wild; then Don made a grand point, and was nicely backed by Dolly. Mr. Grainger flushed to order and killed. Don, ordered to retrieve, had his eye wiped by Dolly, who got there first. She brought it only fairly. A little further on Don again pointed, and Dolly, coming up, backed to order. The bird was flushed, but not shot at. On a little Don made another handsome point to four birds, which flushed themselves. Mr. Stokes hit both birds that he shot at, but only bagged the second one, which Don retrieved very well. They were now ordered up, and the heat awarded to Don. Down forty-seven minutes.

COUNTESS AND BILLY FLINT.—Countess is of medium size, with no great amount of speed. She was undoubtedly "off," as she did not show much nose. Billy Flint is undoubtedly a good one, but never having been handled by his owner, he was not under good control. He goes at a fair rate of speed, and is quite stylish when on game. Countess got the first point in a gully. Mr. Leach flushed the bird to order and killed it. Countess, sent to retrieve, did so, but bit the bird badly. Mr. Leach, when he handed the bird to Judge Smith, who is president of the Wood Powder Company, insinuatingly remarked that the Wood powder killed cleaner than anything that he had seen; but this well-timed compliment did not save Countess the penalty, although the wit of the excuse was fully recognized. A little further on, Billy made a capital point, which Countess very gracefully acknowledged. Buckalew and Peg were ordered up to back and it was quite a while before they came, but both dogs were perfectly steady. When the dogs came up, Buck backed in good style, while Peg remained quiet close to her handler. This was a very good performance, and keenly enjoyed by all. Mr. Crossman flushed the bird to order and missed it. Billy dropped to wing but was a trifle unsteady to shot. The other dogs were steady. Working through the pine thicket, Billy pointed a running bird, and Countess backing nicely. Roading too close, Billy flushed, and was unsteady. Both handlers missed the bird. Then while the judges were consulting, and the dogs were not under judgment, Countess went over the fence, and half pointed, then she roaded, and flushed a bird that she should have pointed. Now turning back the last bevy were again flushed. Working toward them, Billy flushed one and soon another; it was late, and they were running, and would not lie. Both pointed, but the birds ran away from them, and they were ordered up to go down again in the morning,

SATURDAY'S WORK.

Saturday morning it was cloudy with every indication of rain, but we started out to finish the stake if possible. We had not gone far before it began to rain, and this, with slight intermission, continued through the day. The dogs were put down at 9:30 at the place where we left off the night before. Billy at once made a point, and some of the spectators saw the bird running away from him. This was hard luck, as he failed to find it, and was scored a false point. Then on top of the hill he flushed a single bird, and a little further on scored a false point. They were then ordered up and the heat awarded to Countess. Down altogether fifty-six minutes. This ended the first series, with the following summary:

First Series.

Peg beat Buckalew.
Brock beat Bessie.
Dashing Rover beat Marchioness Peg, by default.
Don beat Dolly.
Countess beat Billy Flint.

Second Series.

PEG AND BROCK were put down at 9:30 on the knoll, where the last brace were taken up. Swinging through some pines, and then back to the gully, a bevy was flushed which settled in a brier thicket and could not be found. We then crossed the road, and after some time, a bevy flushed near Mr. Leach, which were marked down, and followed, but they again flushed wild. Brock pointed, and then roaded a single bird, but got too close, and scored a flush. A little further on, both challenged and backed each other; then moving on, Brock again flushed. When working along the edge of some brush, Brock challenged and roaded, finally establishing his point, just as Peg, who was a little to his left, pointed. This was very pretty, and much enjoyed, in spite of the rain. Two birds were flushed to order, but not shot at. Working back down the creek, Brock crossed over, and made a grand point at the edge of some corn, and held it a long time for Peg to be brought up to back. She finally got there, but was taken round to get the wind, and instead of backing she took point alongside. This was a capital performance for Brock, who showed his steadiness under trying circumstances. Then, circling round through some woods into tall weeds, Judge Kinney rode into a large bevy, which were followed. Mr. Leach flushed and killed one, which Brock retrieved very well. Both then pointed, almost simultaneously, but Brock got credit only for a back. Mr. Leach then flushed a single bird, which he missed; then Brock dropped, just as one rose, which Mr. Leach killed. Peg, sent to retrieve, flushed two. Moving on, Brock dropped, just a second before one got up. Swinging back, Peg made a point, which Brock backed nicely. Mr. Leach flushed to order and missed right and left, while Dr. Rowe killed a very nice shot, which Peg retrieved in capital form. A little further on, Brock made a beautiful point. Peg, to all appearance, was going past him, when Mr. Leach sang out "Whoa!" and she stopped. The bird was flushed, but not shot at. This was very good all round. They were now ordered up, and the heat awarded to Peg. Down two hours and twenty minutes.

DON AND DASHING ROVER.—Don we have already described. Rover is of good size and about the equal of Don in speed. He appears to be very high strung, and Mr. Taylor, who has not seen him for several months, could not control him. Working up the gully Don made a capital point, which Rover backed in good style. When Mr. Taylor came up the birds flushed and Rover took a jump or two, but at once dropped to order. Following them Don pointed, and Mr. Stokes flushed to order, but missed. Don was a trifle unsteady. Taking a turn, where nothing was found, we came back, when Don scored a flush in some alders. Then going to lunch we warmed up at a rousing fire and concluded to keep on, so the dogs were again put down and worked up the creek, where Don challenged, and then roaded awhile, and dropped flat to a large bevy. Rover came round, and, going between him and the birds, came to a beautiful point. The birds flushed themselves. Then on in woods Don pointed, and Rover, coming up, also pointed, but moved on and scored a flush, and soon repeated the performance, whereupon the judges ordered them up and awarded the heat to Don. Down altogether one hour.

PEG AND COUNTESS were now put down, but as the heat was unfinished and very unsatisfactory, owing to the rain and sleet which was falling fast, we shall defer our comments until next week.

ALL-AGED STAKES.

HIGH POINT, Nov. 19.

At a meeting of the club, held this evening, it was voted to give a cup valued at $100, or its equivalent in cash, at the option of the owner, to the best pointer. They were therefore drawn together and it was voted to run them first. Mr. Elliott Smith who had judged in the Members' Stake, was appointed to act as third judge in the setter class and final ties, provided that he had no entry left in, and Mr. J. Otto Donner was appointed as third judge in the pointer class. They were drawn to run in the following order:

MONARCH. H. E. Hamilton, New York.—Liver and white ticked pointer dog, 4 years (Ranger-Queen).

against

CROXTETH. A. E. Goodfroy, Guymard, N. Y.—Liver and white pointer dog, 4½ years (Young Bang-Jane).

RAB. Elliott Smith, New York.—Lemon and white pointer dog, 3 years (Rush-Romp),

against

BRAVO. Geo. N. Appold, Baltimore, Md.—Lemon and white pointer dog, 2½ years (Bragg-Kate).

LADY DUFFERIN. John G. Heckshер, New York.—Lemon and white pointer bitch, 4½ years (Duke-Fan),

against

LALLA ROOKH. Luke W. White, Bridgeport, Conn.—Lemon and white pointer bitch, 11 months (Sensation's Son-White's Grace).

Sensation Jr., and Don were both lame and did not complete their entries.

All of the setters except Countess made their entries good and were drawn to run as follows:

TOM. Major George R. Watkins, Brooklyn, N. Y.—Orange and white setter dog, 4 years (Royal Duke-Bessie),

against

DON PEDRO. Dr. Henry J. Aten, Brooklyn N. Y.—Orange and white English setter dog, 3½ years (Ranger II.-White's Daisy).

against

SHADOW. Luther Adams, Boston, Mass.—Black, white and tan English setter bitch, 2½ years (Lincoln-Daisy Dean),

against

LINCOLN II. John C. Higgins, Delaware City, Del.—Lemon and white English setter dog, August 28, 1879 (Lincoln-Petrel).

LONDON. H. Bailey Harrison, Tilsonburg, Ont.—Blue belton English setter dog, 2½ years (Paris-Lill),

against

DAISY LAVERACK. Jas. H. Goodsell, New York.—Lemon and white English setter bitch, 3½ years (Thunder-Peeress).

GLADSOME. J. W. Foster, Leesburg, Va.—Blue belton English setter dog, 19 months (Gladstone-Leila),

against

BESSIE. J. Otto Donner, New York.—Orange and white English setter bitch, 3½ years (Ranger II.-Mallard's Belle .

LORNA. Dr. Wm. Jarvis, Claremont, N. H.—Red Irish setter bitch, 4½ years (Elcho-Rose).

against

RACKET. James H. Goodsell, New York.—Black, white and tan English setter dog, Sept. 26, 1878 (Rattler-Leda).

CHIEF. Max Wenzel, Hoboken, N. J.—Red Irish setter dog 3 years (Berkley-Duck),

against

DASHING ROVER. T. F. Taylor, Richmond Va.—Black, white and tan English setter dog, 3 years (Dash II.-Norma).

BROCK. Geo. T. Leach, New York.—Red Irish setter bitch, 3½ years (Count Bosco-My Duchess).

against

SMUT II. T. M. Aldrich, Providence, R. I.—Black English setter bitch, 3 years (Trim-Smut).

FOREMAN. Wm. Tallman, Worcester, Mass.—Black, white and tan English setter dog, 2 years (Dashing Monarch-Fairy II.),

against

BUCKALEW. W. A. Coster, Flatbush, N. Y.—Orange and white English setter dog, 3 years (Druid-Heller's Ruby).

PLANTAGENET. Jas. H. Goodsell, New York.—Lemon belton English setter dog, 2½ years (Dashing Monarch-Petrel),

against

PRINCE HAL. Dr. S. Fleet Speir, Brooklyn, N. Y.—Orange and white English setter dog, 3 years (St. Elmo-Maida).

ELCHO III. Adolph Nelson, Brooklyn, N. Y.—Red Irish setter dog, 4 years (Elcho-Rose),

against

DOC B. Robert Betty, New York.—Lemon and white English setter dog (Jersey Duke-Topsy).

DIANA II. Charles Heath, Newark, N. J.—Black and white English setter bitch, 3 years (Dash III.-Diana),

against

TRINKET. T. F. Taylor, Richmond, Va.—Black, white and tan English setter bitch, 2 years (Crack-Diana).

MAIDA. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black and white English setter bitch, 5 years (Dick-Clio),

against

LUNA MAY. A. H. Moore, Philadelphia, Pa.—Lemon belton English setter bitch, 3 years (Paris-Pearl).

RALEIGH. A. H. Moore, Philadelphia, Pa.—Red Irish setter dog, 4 years (Elcho-Rose),

against

BESSIE. Luther Adams, Boston, Mass.—Black and white English setter bitch, 2½ years (Dash III.-Countess II.).

POLLUX. Edward E. Hardy, Boston, Mass.—Black and white English setter dog, 3½ years (Dash III.-Hardy's Diana.)

A bye.

[Special Telegram to Forest and Stream.]

HIGH POINT, N. C., Nov. 21, 1882.

The heat between Peg and Countess was not concluded on Saturday, and this morning the dogs were again put down in the woods, and after being down an hour and three-quarters the heat was awarded to Peg. The weather was cold and the birds were running.

DON AND PEG now came together for the cup. The bitch was unsteady and made some flushes, while Don worked well. The heat was finally awarded to Don, who thus wins the cup.

SUMMARY.

First Series.

Peg beat Buckalew.
Brock beat Bessie.
Dashing Rover beat Marchioness Peg.
Don beat Dolly.
Countess beat Billy Flint.

Second Series.

Peg beat Brock.
Don beat Dashing Rover.
Countess a bye.

Third Series.

Peg beat Countess.
Don beat Peg.
Don wins the cup.

ALL-AGED STAKES.

The running for the pointers in the All-Aged Stake was next in order.

CROXTETH AND MONARCH were first cast off. The former worked in fine style, and won the heat with ease.

RAB AND BRAVO were now put down. This heat was much longer, as very few birds were found. Rab finally won.

LALLA ROOKH AND LADY DUFFERIN came next, and the puppy, which is only eleven months old, came in a winner, to the astonishment of most of the spectators.

First Series.

Croxteth beat Monarch.
Rab beat Bravo.
Lalla Rookh beat Lady Dufferin.

CROXTETH AND RAB were next put down, and after more than two hours' work the old dog was declared a winner.

CROXTETH AND LALLA ROOKH now came together for the decisive contest, and while they were at work it became dark, so they were ordered up, to go down again on Tuesday.

[By Telegram to Forest and Stream.]

HIGH POINT, N. C., Nov. 21.

This has been a good day and the running has progressed well. Birds are plenty and we have had some good work. Croxteth won the pointer prize, beating Lalla Rookh. Then we commenced with the setters. Following is the result:

SUMMARY.

Tom beat Don Pedro; Shadow beat Lincoln II.; London, beat Daisy Laverock; Gladsome beat Donner's Bessie; Lorna beat Racket; Chief beat Dashing Rover; Brock beat Smut II., absent; Foreman beat Buckalew; Prince Hal beat Plantagenet, withdrawn; Trinket beat Diana II.

Raleigh beat Adams's Bessie, Elcho III. and Doc B. unfinished. Martin was dissatisfied with the ruling of the judges against Rocket and withdrew all his dogs. All other decisions have been well received. The number of heats run to-day has not been equalled at any previous trials and it looks like a finish this week.

CARE OF PUPPIES.

AND A CURE FOR MANGE.

IN answer to "O. W. R," in FOREST AND STREAM, Oct. 5, '82, who tells us the way he didn't save his beagle from worms, fits, and death, I would say that I have been raising puppies—hounds, pointers, and setters—all my life, till now I am gray-headed, and never lost one, except by distemper.

The best thing for suckling puppies is to give the mother a teaspoon of flowers of sulphur every day; or, if you have a puppy and see by his coat or appetite, or by the rattling of his intestines, that he is out of condition, give him half a teaspoon of sulphur every day for a week or ten days. After he is three months old a full teaspoon is not too much. Indeed, flowers of sulphur is the best dog physic in the world. It acts like a charm on skin, bowels, and liver, and cleanses him of all intestinal parasites. I have given it in tablespoonful doses with the happiest effect. Put it in the feed always.

For a young puppy there is no better food than corn-bread, well cooked and made soft and palatable with chicken soup or stewed-chicken gravy. Egg-bread, well buttered, makes a good breakfast; and it looks to me as if oatmeal was much more suitable for puppies than for people; but I have never tasted it or given it to a puppy. Any milk except mother's milk is always bad for young puppies, in my opinion, and so is fried meat or fried gravy of every sort. To thrive well, they should be fed five or six times a day.

The following is a sure remedy for mange: Equal measures of train oil (and it must be train oil) and spirits of turpentine, flowers of sulphur enough to make a paste, and three or four tablespoonfuls of fine table-salt. Wash the dog off and apply this mixture thoroughly. Three applications will cure the worst case of mange any dog ever had. This I know.

I could do nothing with distemper till a gentleman, who used to raise dogs fifty years ago, told me of turpith mineral, and an old Scotchman told him. Give three grains of turpith mineral at a dose, and give a dose every day for three days in succession. I have never known it to fail, and Yonatt's prescriptions never saved the first dog for me. RALLYWOOD.

ALBEMARLE COUNTY, Va.

COCKER SPANIEL IMPORTATION.—*Editor Forest and Stream:* There are several errors in the pedigrees of the spaniels you notice as having been imported by Dr. Niven. Lass of Breda is an own sister to our dog Bonanza, shown at New York this year, and is by Brush II., ex Lawson's (now Niven's) Nellie, who was by Don, ex Saff, by Rowley's Ben. She is a beauty, but you will pardon us for saying that it is because she is all over a spaniel, and not because she "does not trespass too much on the spaniel for her build." She is in whelp to our recently imported Dan (not Don), which we have renamed Hornell Dandy. He is by Bucephalus, out of Black Bess II., owned by Dr. Niven, and was bred before that smart little bitch was imported by the Doctor. Dinah, the other little bitch which came with Lady of Breda, is by Brown's Prince, by Beverlock, out of a sister to Beau. It was arranged when Dr. Niven took the brace from Mr. Graham that we should have the refusal of this bitch, as the Doctor only wanted Lady of Breda, and Mr. Graham would not split the brace. It is unnecessary to state that we gladly availed ourselves of the opportunity. She is longer in the barrel than you imagine, but, being a little high on the leg, does not show her length as she would if more of the spaniel build. She will have the prefix "Hornell" added to her name, and will be bred in due time to Hornell Dandy.—HORNELL SPANIEL CLUB (Hornellsville, Nov. 10, 1882).

PHILADELPHIA KENNEL CLUB.—It is reported that the Philadelphia Kennel Club will hold a bench show sometime during the coming winter or spring.

COL. STUART TAYLOR'S BULL TERRIER BITCH "KITTIE."

KITTIE.

KITTIE is a pure white bull-terrier bitch, by Billy out of Peg, by Little Gambler. She weighs, when in condition, 14lbs., although at the time the photograph from which our illustration is made was taken, her weight was 19¼lbs. Kittie took the first prize in her class at the Westminster Bench Show of 1882. For beauty, game qualities and affection, it will be hard to find her superior. Her owner is Colonel Stuart Taylor, Cheyenne, Wyoming.

THE ST. BERNAND CLUB SHOW.

[From the London Field, Nov. 14.]

A FIRST attempt, with an entry of over two hundred and fifty, including double numbers, is indeed a flattering result of the labors of the St. Bernard Club during the few months in which the society has existed. Such was the impression which forced itself upon us very forcibly as we wended our way towards Knightsbridge on Thursday last, full of hopes of witnessing the show *par excellence* of the year. On our arrival, however, common honesty compels us to confess that, though the two hundred and fifty dogs were there, our hopes were rudely shattered. The confusion which existed was chaotic; and how the judging was carried on at all, it is difficult to understand, as the space reserved for Mr. Macdona to decide upon his awards in, and which must euphemistically be called the "ring," was so prescribed in its dimensions, that any description of the dogs as they appeared before the judge is simply a matter of impossibility. Mr. Macdona judiciously commenced operations with the litters of puppies; but, as far as we could see, there was no attempt made to keep him free from hindrance during his labors, and he was in consequence hunted by a well-dressed mob as he made his circuit of the pens. The latter, too, were next the entrance, which certainly was not a good arrangement, as it is bad enough for young puppies to face a show under the most favorable circumstances, without having additional dangers forced upon them.

It must not, however, be imagined that we in the slightest degree desire to throw cold water on the efforts of the St. Bernard Club, which includes a large number of the leading breeders among its members. The fault of the acting executive lay in leading their visitors to expecting too much, and also in depending upon their own exertions and experiences—the latter being in some cases not of the widest—to ensure success. Had a thoroughly competent manager been secured, we venture to predict that better arrangements would have been made, and a very great deal of grumbling would have been obviated. As it was, the moment the arrangements controlled by amateurs were passed, and those placed in the hands of professionals commenced, things mended rapidly, for the benching supplied by Spratt & Co. was splendid, and the feeding and watering of the dogs was all that could be desired. It is but fair to Messrs. Spratt & Co. to repeat the remarks of one of the most successful exhibitors to the show, who said to us, that he had never seen his dogs more comfortable when away from home than upon the present occasion. Next year we trust that a more successful show will be held, and that such arrangements will be made as will give the public who pay to see the judging a chance of finding out for themselves what is going on. The secretary, the Rev. Arthur Carter, worked as hard as he possibly could to meet the difficulties which arose, but it was then too late to stay confusion. He nevertheless deserves our thanks, and those of our readers, for the pains he took to supply us with every information in his power, and no man in the show was, we believe, more ready to admit that certain thing wanted rectifying than did the honorable secretary himself.

The quality of the dogs was not above the average. Though almost all the cracks, with the exception of that grand dog Cadwallader, were present, it is probable that they would have been on the benches at any London show where the prizes were good, and which was held about this time of the year. On the other hand, we saw no juvenile phenomenon to counteract the plethora of rubbish which always must appear when over two hundred and fifty dogs of one breed are congregated under the same roof. Experience has taught us that a big show need not necessarily be a grand show, and the first exhibition held under the auspices of the St. Bernard Club has not proved an exception to the rule.

Mr. Macdona's decisions were, on the whole, well received by the exhibitors, and every allowance must be made where differences of opinion arise, as the entrance where the so-called judging ring was situated was so cramped that it was simply impossible for him to do either his judgment or the dogs before him anything like justice. The special class consisted of dogs not for competition, and in this number were the well-known Bayard and Boniface, together with several others, the property of Mr. G. de Landre Macdona. Class 1 brought out the rough-coated champion dogs. Nothing for general St. Bernard character could approach Mr. Joseph Smith's Save. This dog was in splendid fettle, and possesses the true type of head, together with plenty of bone and substance. Unfortunately, he has no dew-claws, which in the eyes of many—the judge himself for one—is a blemish. In fact, we believe that under Mr. Macdona this defect costs the dog ten points. If so, Save must have been, in his opinion, a long way ahead of his opponents—an opinion we do not question. Bonivard was not looking himself. Katerfelto has a good head, but is small and heavy in ear, while Turk, though he has plenty of bone, wants markings, and is light in eye and thick in ear. Rough-coated champion bitches had no entries, and only Dunstan appeared in the smooth-coated champion dogs. He is a very fair one, as smooth-coated ones go, but might have been looking better. Only Amy was entered in the corresponding bitch class, and she was absent, so this prize was not awarded.

The open class for rough-coated dogs was a very good one, the winner turning up in Mr. Richard Thornton's Leonard, a dog who is very good in his body, feet and legs, but deficient in markings. The shade of his coloring is also too pale, and though his head is good, we think there were better in the class. Phantom, who came next, is a very taking dog, and grows on acquaintance. He would be benefited by more white, and is, like Leonard, too yellow in his markings. He is a very heavily boned dog, and will, we think, grow more massive and square in his head as he grows older. Hermit, who came third, is not by any means the type of dog we care for; his body is good, but he should be better on his legs. Faust, a kennel companion of Save's, we thought, would be certain to gain first. He has a good St. Bernard head, with an excellent coat, body, legs and feet. His condition, too, left nothing to be desired, and we certainly are of the opinion that he did not meet with his desserts when he received only a V.H.C. Oswald we do not like; his coat is like a colley's, and he is bad in his fore legs and pasterns, and behind is inclined to be cowhocked. Trojan, an Alexandra Palace winner, wants squareness and St. Bernard character in his head, and his muzzle is too long; on the other hand, his body and bone are above the average. Rector—the biggest dog we ever saw—has a tremendous frame and heaps of bone. He is, however, weak in his head and a little too gaudy in his markings; but his legs and feet are of the best. Thorwald has a good shaped skull, but his eyes are too small. Why that good dog Leigh Rector came to be overlooked we cannot say, possibly in the crush Mr. Macdona missed him; anyhow, his head is superior to most in the class. Rough bitches were marked "a good class" by the judge, and here Lady Norma won well. She is one of the best out, if not quite perfect, and has first-rate coat, legs and ears, with a very well-shaped body. Madam, the next in order, is a good bitch, but rather small in eye and pointed in nose. Bellinzona is light in head. Diane, V.H.C., has a nice style of head, but it is badly marked; she has, however, a good body and bone, but no dew-claws. Beatrice is another fine bitch, but head would be immensely improved by an white. Dame up the pole, Bell, H.C., an Alexandra Palace winner, was not looking her best; and Jafra, V.H.C., who has very badly set on ears, is good in her coat and color, though her muzzle is rather snipey. Mable, H.C., has no dew-claws.

In smooth-coated dogs Beauchief, a clinking good one, was first; he is a trifle long in his loin, and perhaps too rough in coat, but, taken all over, is very nearly at the top of the tree in smooths. Rupert, who came next, is good in skull, but his ears are very big, and he seems to be weak behind. Bruce we do not like; he is too much of a mastiff in looks. Royalist, V.H.C., should be straighter on his hind legs, and Gladstone is only moderate. In the corresponding bitch class we thought that the first prize was a good thing for Irene; she, however, was only third to Hilda, who is a well-built and powerful brindle, but with a very mastiff-like look in her head; and Silber appears somewhat narrow in her muzzle. Nun, V.H.C., has as much throatiness as a bloodhound, and a snipey muzzle.

The classes for dogs between nine and eighteen months old are difficult ones to manage, but there was very little doubt that Alpenstock III. was well ahead; he is good all over, and his legs and feet are so good that when he grows older he is sure to be straight on them, and in the first flight upon the bench. Valour has no dew claws, and would be improved if he were a little shorter in his muzzle; still he is an extremely well-proportioned young dog, and will no doubt be heard of by-and-by. Monarch is nothing wonderful, and sadly wants markings. Mont Leo is good in body, but quite long enough in muzzle; and the commended Golf is a white, and not a good one either, so his receiving a card was a mystery.

The bitches were a bad class, Iswara being the best, and La Flegere, whose head is her great feature of excellence, second. Clytie, who received third, is very weedy and yellow in eye, but there was nothing behind her worth a card. Don II. who won in the smooth-coated dogs, is very stilty behind, with weak thighs, and is just the stamp of dog which a hard day's work in the snow would kill. Zurque is a promising puppy, but twitches behind, and he is a little short in his couplings, which we do not care for. Junibo is very bad in color; and houndy in head; his body is, however, good. Only two bitches appeared, and here Leila, who shows considerable promise, won pretty easily from Moira. It is a matter of impossibility to discuss the merits of the young puppies under nine months old, and we will therefore pass on at once to the maiden classes. Here in the dogs Leonard, the victor in the open dog class,

had a very easy time of it. Sailor, who was second, is not straight in his near fore leg. Granby (Vhc) is a fair brindle and white, with a nice ear, but spoiled by a yellow eye. Peter, also Vhc., is another specimen who will always be noticed as of the stamp required. Leila, who is already alluded to, won easily in the bitch class, with Dacia, who is light in eye, second, but nothing else struck us as being worth notice.

The prize for stud dogs was won by old Champion Barry, who was looking very lean and well, as he always did when upon the circuit. In the brood bitches Irene was ahead with her produce, Beauchief and Hermit. Countess, however, pressed her hard with her offspring, Cerdic and Lady Norma. The selling class was very bad, but some good litters of puppies were shown, the winning pen of Mr. Angell's being considerably above the average. The following is the prize list:

CHAMPIONS.—Rough-Coated—Dogs—1st, J. F. Smith's Save. Bitches No entries. Smooth-Coated—Dogs—1st, R. Thornton's Dumsean. Bitches—1st, R. S. Armitage.

OPEN CLASSES, OVER 18 MONTHS OLD.—Rough-Coated—Dogs—1st, R. Thornton's Leonard; 2d, S. H. Fox's Phantom; 3d, T. H. Goodwin's the Hermit; vhc, J. F. Smith's Faust, and R. Thornton's Oswald; hc, Mrs. E. Clark's Thorwald, J. Gould's Sailor III, and Rector, and S. Smith's Trojan; c, Mrs. Adamson's Basileus, J. Angell's Chancellor, and A. Borton's Colin. Bitches—1st, J. P. Charles's Lady Norma; 2d, H. J. Betterton's Madam; 3d, F. S. Coleman's Bellinzona; vhc, Rev. A. Carter's Countess, Clarke's Mabel, and G. W. Palmer's Lufra; hc, H. W. Carter's Lady Gladys, S. H. Fox's Bella, and R. Thornton's Mabel II. Smooth-Coated—Dogs—1st, W. Well's Beauchief; 2d, J. Russell's Rupert; 3d, A. T. Franklin's Bruce; vhc, L. C. N. Norris's Silber, and J. Vaudrey's Gladstone; hc, Miss E. Morris's Benedictine Monk, Rev. H. Stobart's Garth, and S. Wiehand's ——. Bitches—1st, H. G. Swect's Hilda; 2d, L. C. C. R. Norris's Silber; 3d, T. H. Goodwin's Irene; vhc, E. Clarke's Nun, Lady Isham's Abbess IV.; hc, Mrs. Adamson's Belle of Stirling.

BETWEEN 9 AND 18 MONTHS OLD.—Rough-coated—Dogs—1st, J. F. Smith's Alpenstock III; 2d, S. H. Fox's Valour; 3d, Rev. W. H. Donovan's Monarch; vhc, J. F. Mackilop's Ivanhoe and R. Wall's Prince Leopold; hc, H. P. and P. J. Charles's Mont Leo; c, E. Boddington's Courte-Lion, M. G. Calder's Prince Rupert, F. E. Colman's Mountaineer, J. H. Ellis's Duke, W. G. Marshall's Courage II, and F. Sandeman's Golf. Bitches—1st, S. Cunling's Iswara; 2d, Rev. A. Nash's La Fiegre; 3d, D. W. Gordon's Clytie; hc, H. G. Sweet's St. Nargueerite; c, H. I. Betterton's Madam II, and W. Wood's Fairy. Smooth-coated—Dogs—1st, J. C. Davies's Don II.; 2d, S. W. Smith's Zurque; 3d, J. G. Stokes's Jumbo. Bitches—1st, R. Thornton's Leila; 2d, S. W. Mackay's Moira.

PUPPIES 3 AND 9 MONTHS OLD.—Rough and Smooth—Dogs—1st, Miss Trawshay's Duke; 2d, J. H. Rutherglen's Barrister; 3d, R. Thornton's Naboth; vhc, J. O' Reilly's Jumbo, S. W. Smith's Chum and W. B. Tulley's Duke of Wellington; hc, H. W. Carter's Sir Lancelot, Mr. E. Clarke's The Friar, M. Biggs's Admiral, J. Rutherglen's Bachelor; c, Rev. A. Carter's Rupert. Bitches—1st, F. E. Colman's Maggiore; 2d, H. H. Watson's Bella Donna; 3d, R. Thornton's Pamela; vhc, W. H. Carter's Lady Nellie, W. W. Harvey's Lady Amelia and J. H. Rutherglen's Barricade; hc, H. W. Carter's Lady Di; c, W. B. Meggison's Nellie.

MAIDENS.—Rough and Smooth—Dogs—1st, R. Thornton's Leonard; 2d, H. W. Field's Sailor; vhc, Mrs. Adamson's Granby, Mrs. A. Carter's Peter, S. H. Fox's Valour, W. O. Hughes-Hughes's Grandee, Rev. H. Stobart's Garth, and A. T. Franklin's Monarch III; hc, G. H. Reid's Fo. Bitches—1st, R. Thornton's Leila; 2d, T. King's Dacia; hc, A. Butt's Bertie. J. F. Mackilop's Hilda and Silverbell, and C. M. Waite's Thora.

STUD DOGS.—1st, S. W. Smith's Champion Barry.

BROOD BITCHES.—1st. T. H. Goodwin's Irene; 2d, Rev. A. Carter's Countess; vhc, S. Jagger's Mirza; hc, S. H. Fox's Bella, and J. H. Kay's Khiva.

SELLING CLASS.—1st, H. Towsley and W. V. Carr's Dreadnought; vhc, J. F. Mackillop's Percy, and R. Thornton's Druid; hc, J. H. Brown's Lion VIII., and R. Groom's Napoleon.

LITTERS OF PUPPIES.—1st, J. Angell; 2d, J. K. Kaye, 3d, S. Jagger; vhc, J. R. Crosthwaite, J. Hare and Mrs. J. C. Tinker; hc, T. H. Goodwin.

FOREIGN CLASS.—Roughor Smooth-coated—Dogs—1st and 2d, H. Schumacher-Bahler's Sultan III. and Mars II. Bitches—No entries.

NATIONAL FIELD TRIALS.—Memphis, Nov. 17, 1882.—The late heavy frosts having killed the cover, shooting is much better than a few weeks ago. Birds are plentiful in this end of the State, and those who are preparing their dogs for the field trials will have no excuse from now until December 4 to work their dogs. Mr. W. B. Stallcup is at Brazil, Tenn. He has Countess Mollie and Frank for the Derby and Bessie Leo and Phyllis H. for the free for all. Mr. D. C. Sanborn is at Holly Springs, Miss. He reports birds plentiful and his dogs doing well. Mr. B. Waters is near Holly Springs and expects to be at Grand Junction with a few good ones. Any one wishing rules and entry blanks can have them mailed by applying to me.—D. BRYSON, Sec. N. A. K. Club.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of both.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Smut. By Mr. J. E. McQueston, Pawtucket, R. I., for liver and white ticked English pointer bitch, 10mos., by Diamond (Ponto—Fan) out of Poppy (Gath—Dot).

Phinney Jane. By Mr. J. Satterthwaite, Jr., Jenkintown, Pa., for red Irish setter bitch, whelped Feb. 17, 1882, by Berkley (Elcho—Lou II.) out of Nora (Elcho—Fire Fly).

Boxy. By Mr. August C. Krueger, Jr., Wrightsville, Pa., for white and lemon beagle dog puppy, whelped Aug. 4, 1882, by Mr. Geo. Pownall's Victor out of his Nelly.

Susan. By Mr. August C. Krueger, Wrightsville, Pa., for black, white and tan beagle bitch puppy, whelped Aug. 4, 1882, by Mr. Geo. Pownall's Victor out of his Nelly.

Rassie. By Mr. August C. Krueger, Wrightsville, Pa., for black and tan beagle bitch puppy, whelped Sept. 13, 1882, by Mr. N. Elmore's Flute out of his Bunnie.

Captain. By Mr. E. P. Hodges, Pittsburgh, Pa., for silver-gray, with black spots, Irish or German boarhound dog, whelped Sept. 17, 1881, from imported stock.

Bevis. By Mr. E. P. Jones, Pittsburgh, Pa., for English mastiff dog, fawn color, with black muzzle and ears, whelped Sept. 3, 1882, by Thomas II. (Lenfield) out of Mr. Howard Hartley's imported Dinah II.

Rainbow. By Mr. E. Odell, New Orleans, La., for liver and white pointer dog pup, whelped Aug. 10, 1882, by Bow out of Roxie (Faust—Jessie), bred by Mr. C. C. Pettit, Galveston, Texas.

Bound Boy. By Mr. Geo. W. Moore, Pittsburgh, Pa., for lemon and white English setter dog puppy by Mr. Howard Hartley's imported Laverack dog Royal Blue out of Dolly Day.

Royal Dolt. By Mr. Geo. W. Moore, Pittsburgh, Pa., for lemon and white bitch puppy by Mr. Howard Hartley's imported Laverack dog Royal Blue out of Dolly Day.

Glendale and Bay. By Mr. J. W. Percival, Palo, Mich., for lemon and white pointer dogs (Jerry—Snowflake).

BRED.

☞ *See instructions at head of this column.*

Belle II.—King Pepin. Mr. Fred. H. Loudon's (Rock Hill, S. C.) Belle II. (Alten's Glen—Belle) to King Pepin (Dashing Monarch—Petrel) Oct. 26.

Dol—Mac. Mr. A. R. Hayward's (Rock Hill, S. C.) Dot (native bitch) to Mr. W. Tallman's Mac (Fox—Fly), Nov. 6.

Dolly Dale—Foreman. Mr. W. Tallman's (Worcester, Mass.) Dolly Dale (Waters's Grouse—Daisy Dale) to Foreman (Dashing Monarch—Fairy II.), Nov. 7.

Nettle—Tyke. Mr. W. R. Hill's wire-haired fox-terrier bitch Nettle to Mr. J. E. I. (Grainger's wire-haired terrier dog Tyke.

Flirt—Teddy. Mr. A. E. Godeffroy's (Guymard, N. Y.) cocker spaniel bitch Flirt to owner's Teddy.

WHELPS.

☞ *See instructions at head of this column.*

Fly. Mr. J. Satterthwaite, Jr.'s (Jenkintown, Pa.) beagle bitch Fly (Pet—Beauty), Oct. 15, five (three dogs), by C. Cameron's Racket (Rally—Louise).

SALES.

☞ *See instructions at head of this column.*

Rosy, Anna, Rassie. White and lemon beagle dog puppy and black, white and tan beagle bitch puppies, whelped Aug. 4, 1882, by Victor out of Nelly, by Mr. Geo. Pownall, Christiana, Pa., to August C. Krueger, Wrightsville, Pa.

Bell. Black and tan beagle bitch puppy, whelped Sept. 13, 1882, by Flute out of Bunnie, by Mr. N. Elmore, Granby, Conn., to August C. Krueger, Wrightsville, Pa.

Pete, Jr.—Roxie whelp. Black and white pointer dog pup (Pete, Jr.—Roxie), whelped June 19, by E. C. Alden, Dedham, Mass., to Mr. Geo. L. Tyler, Wayne, Mass.

Dandy—Daisy whelp. Black, white and tan, by Mr. W. J. Percival, Palo, Mich., to Mr. F. E. Sweet, Sheridan, Mich.

Cowan—Croad whelps. Two foxhound puppies, dog and bitch, by imported Comus out of Crowd (Music—Sailor), by Mr. Geo. D. Conner, Hillsdale, Mich., to Mr. W. J. Percival, Palo, Mich.

Monitor—Cartun whelp. A foxhound puppy, by Mr. L. M. Woodin, Rochester, N. Y., to Mr. W. J. Percival, Palo, Mich.

Champion Dash III.—Opal whelps. By Mr. Nicholas Hatheway, Fall River, Mass., English setter puppy, white and black ticked, by champion Dash III. out of Opal (Ike—Fanny) to Mr. George Delano, New Bedford, Mass.; also bitch puppy, same litter and color, to Mr. Geo. Delano, New Bedford, Mass.; also bitch puppy, same litter and color, to Rev. John Hatheway, Providence, R. I.; also bitch puppy, same litter and color, to Mr. Stephen Hatheway, Freetown, Mass.

DEATHS.

☞ *See instructions at head of this column.*

Gipsey—Turk whelps. Mr. Wm. Wade's (Pittsburg, Pa.) Gipsy has lost by death one dog and two bitches of the litter whose birth was noticed in our issue of Nov. 16.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE TEAM SELECTION.—At a special meeting, to be held a week hence, the Board of Directors of the N. R. A. will take up the question of a selection of the team to be sent abroad in June next. It is to be as far as may be a competitive scheme, and there will be given an opportunity for all National Guardsmen to enter for places. There will be, however, some important modifications of former trials for places, and the board will retain more rights of rejection of men whom they consider unfit for any reason. Marksmen in any part of the country may fully qualify, and if they are eligible in every way that they will get upon the team, and to that end practice should be energetically pushed.

THE TEAM CAPTAINCY.—At a meeting of the Executive Committee of the National Rifle Association held Nov. 18, the following letter of resignation was received from Col. John Bodine:

GENTLEMEN: For reasons which are satisfactory to myself I deem it expedient to most respectfully tender my resignation as Captain of the American Military Rifle Team of 1883. On severing my official connection with the Rifle Team I beg to thank you most heartily for the courteous treatment received at your hands and for your efficient support in my efforts to promote the efficiency of the late team as well as to organize a representative military team for 1883, which it was to have been my honor to command. Hoping you to accept my earnest thanks for the great favor conferred in appointing me to the responsible position which I now reluctantly resign, and assure you that I still retain the keenest interest in the match, and will spare no effort to promote its success. Very respectfully yours,

JOHN BODINE.

The resignation having been received, Col. Bodine was urgently requested to withdraw the same, but reasons of a personal character compelled him to resign, and he urged the acceptance of his resignation. A motion to that effect was adopted.

COLONEL BODINE'S REPORT.—The report of the operations of the American team of 1882, and his criticisms upon the work done by that body, is receiving much attention abroad. The *Military Record and Volunteer News*, of Glasgow, Scotland, gives space in its interesting columns for a full abstract of Colonel Bodine, and comments upon it as follows: "Colonel Bodine, who acted as captain of the American Rifle Team in the recent match with the team of British Volunteers, has presented to the American National Rifle Association an elaborate and exhaustive report on the shooting and skill of the American riflemen, and on the comparative excellence of American and British military small arms. The gallant Colonel commences his report by words of praise for the team he commanded, and says they deserved success for their indomitable pluck and steps resolve to win if possible, and confidence that effort will insure their future success, to effect which the American National Guardsmen will spare no effort. The report throughout seems to us very much of an apology to the American people for their team not winning the match. It is strange as illustrated that the American rifleman are at least the equals of the British under more equal conditions. The inequality of these conditions, we discover, for the first time, is the asserted inferiority of the American military rifles, and a semi-disparagement of British weapons being actual military arms. Colonel Bodine says that the rifles used by the British team were in fact small bore match weapons by the most celebrated of our gunmakers, with military breech actions. When we take into consideration the great premiums were offered the American gunmakers to produce an arm superior to any of the much vaunted rifles in use in the American army, and that the United States Government influence was solicited to aid in the quest for and introduction of such an arm, no statement of a contrary character is inferior in their possession of the most effective fire arms which we hardly expected from an American source. Our home gunmakers may thus consider themselves honored and flattered by the admission, more particularly when it is known that Sir Henry Halford, the Captain of the British team, will have the rifles he has been used, being satisfied with the military weapons with which they have been armed for years and with which they have practised in the contests of Wimbledon, Edinburgh, Altcar, the West of Scotland, and other British rifle ranges in previous years. There may be no doubt that the handling of their old and trusted rifles, instead of hunting about for something new, in dread of superior American weapons, gave our British team confidence at least in an intimate knowledge of their weapons, and under the conditions they harally expected that these same weapons should become the theme of confession as to their marked superiority over the American military arms. In regard to the mode of selection and training of his team, Colonel Bodine gives some interesting details which may be useful to our own team captains in future contests, and which are historically worthy of notice. In their training, Colonel Bodine says the American team were hampered in their action by having to observe certain conditions imposed by the practice of the British team, but it is, at the same time, fair to state that the British team, while abiding like their rivals to strictly military conditions of firing, had to adopt, in the mutual concessions of the match, some things which were purely American. There can be no doubt that every one will admit that as much side has the conditions should be equable and fair. The Americans had to give up the use of a wind gauge, which is used only by British riflemen in long range or scientific, but not in military, or service shooting. Thus the Americans had not been taught to depend upon their judgment of accuracy a field marksmen in the rough-and-ready conditions of war. Colonel Bodine praises highly the intelligent discipline of the British team, and narrates the strenuous efforts he made to instil discipline and united action into his men. He has much side has no hesitation as to praise them for their zeal and the resolute courage they displayed in the prospect of certain defeat, to narrow the victory to their opponents by the smallest number of points. There is much in the manifesto of the captain of the American team which may be studied with interest and advantage by team leaders and shooting men. In fact the report constitutes in many respects a treatise on target rifle shooting, and the chapter devoted to ammunition is instructive. We note that Colonel Bodine anticipates that the American gunmakers will continue to the rescue and make improved military weapons, and that he also expects that American riflemen will pay more attention in the future than in the past to military long-range shooting. For these reasons hints are suggested for a postponement of the proposed contest which could be anticipated and desiderated acquirements have been attained. We should be sorry, indeed, if anything whatever occurred to prevent us seeing our American friends and cousins at Wimbledon in the forthcoming summer. We have no hesitation in confessing that we had looked forward to the late match with some fears and misgivings that the Britishers might get again licked at Creedmoor. We based these forebodings on the assumed superiority of American small arms, as well as on the historic renown of our transatlantic friends in rifle shooting. The vonsiderable movement in Great Britain has created a taste for and a skill in rifle shooting which seems to have resulted in a victorious position over our late friendly antagonists. The vast forests and hunting grounds of the New World has made the rifle a familiar implement in the hands of American citizens in their expeditions after game on the woodlands, plains, and mountains, and both their rifle-makers and sportsmen have profited by manifold experiences over the condition of the British people of a quarter of a century ago. The Volunteer movement of 1859 has created a new impulse in the direction of defensive weapons, and has placed the rifle in patriotic hands to become as powerful means of national protection as was the old victorious yew bow with its cloth yard shaft in the nerved grasp of our ancient archers. We believe that the manifesto will be read with interest and profit by all our shooting men and by every enthusiastic Volunteer. We have not yet had Sir Henry Halford's report to our own National Rifle Association, but when it appears we have no doubt that it will also contain much that will be for the benefit of Volunteers and military organizers to know in the management of small arms."

NEWARK, N. Y.—At the meeting of the Newark Rifle Association it was decided to commence the tournament on the Essex Range, corner Lush and Bank streets, on the evening of Nov. 30. The clubs will shoot in the following order: Warren, Essex, Plymouth, Celluloid, Frelinghuysen, Nameless, Domestic. The clubs will furnish referees and scorers as follows: Warren will furnish scorer for Essex and referee for Nameless; Essex, scorer for Plymouth and referee for Warren; Plymouth, scorer for Celluloid and referee for Essex; Celluloid, scorer for Frelinghuysen and referee for Plymouth; Frelinghuysen, scorer for Nameless and referee for Celluloid; Nameless, scorer for Warren and referee for Frelinghuysen.

There will be a subscription match on the 21st at each range during the tournament. Entrance fee twenty-five cents, money divided as follows: 30 per cent., 25 per cent., 20 per cent., 15 per cent., 10 per cent. to the highest scores made on each match, scores made on match to count only. The prizes to be shot for in the tournament will be awarded at the close of the shooting season.

The officers of the association are: J. Hugh, President; J. K. Walsh, Vice-President; G. M. Townsend, Treasurer; A. C. Neumann, Secretary.

GARDNER, Mass., Nov. 15.—The following are the scores made at the last regular meeting of the Gardner Rifle Club at Hackmatae Range. The Creedmoor and inch ring target combined was used. Distance, 200yds., off hand.

	R.	C.	R.	C.	Totals.
A Mathews	37	45	33	47	150 — 95
G F Ellsworth	37	46	35	47	182 — 93
I N Gordon	33	42	36	44	149 — 86
H G Goodale	34	43	35	43	141 — 88
C Merrill	32	41	31	44	133 — 87
S Sharp	31	42	31	42	132 — 84
B Williams	33	43	35	41	118 — 83

WORCESTER, Mass., Nov. 15.—The Rifle Association had their regular shoot at their range to-day. The wind was 9 o'clock, sunlight was strong. The score tells the story:

Massachusetts Target.

J N Morse, Jr.	12	11	9	12	9	12	10	10	11	11	—107
C Dusenberry	11	10	9	10	9	10	8	10	8	11	—96
J W Murphy	9	8	10	10	10	6	9	8	11	10	—94

Creedmoor Target.

A L Rice	4	5	4	5	4	4	5	4	4	5	—44
John Norman	4	5	4	4	5	4	5	4	4	4	—43
J W Murphy	4	5	5	4	4	4	3	4	4	4	—40

Ring Target Rest.

T Henry	12	12	12	11	11	11	11	11	11	9	—111
Stedman Clark	12	12	11	9	11	11	12	10	10	12	—110
A O Wells	10	11	11	12	11	10	9	10	11	10	—105

ZETTLER'S GALLERY, New York, Nov. 18.—Teams composed of Western Union telegraphers shot a match on Massachusetts targets, reduced for gallery distance, 10 shots per man.

McDonald	11	10	9	10	11	9	10	10	6	10—94
Fulton	11	10	10	11	10	10	11	7	11	12—103
Van Smith	11	9	11	9	11	10	7	9	10	11— 98
Richmond	11	11	10	10	8	12	9	9	11	10—101
Bunce	10	10	10	12	10	8	9	10	12	10—100
Coogan	7	10	9	9	9	4	10	8	9	10— 83
Watson	10	11	11	8	6	7	6	10	6	6— 79
Cusack	10	8	12	9	9	10	8	10	4	9— 89—351

NEW JERSEY.—Brinton Range is closed for the season, but will be opened for parties to practice on Thanksgiving day, when a party from this city will engage in shooting for cash prizes, and probably squads from other cities will be on hand. Two tons of lead have been taken from the butts at Brinton Range, and it is not all recovered yet. The lead will be taken to Trenton and remoulded or sold.

LEICESTER, England, Nov. 16.—A banquet was given last night to Sir Henry Halford, captain of the rifle team which visited America recently. Halford said the rifle contest brought together two armies and made them friends. He proposed the health of the National Guard of America, which was drunk cordially.

THE TRAP.

NARRAGANSETT CLUB.—Providence, R. I., Nov. 18.—At the annual meeting of the Narragansett Gun Club the officers for the ensuing year were elected as follows: President, B. Lockey Vose; President, W. H. Sheldon; Secretary and Treasurer, H. L. Palmer; Directors, S. D. Greene, Jr., G. W. Cary, O. A. Baker. The semi-annual shoot of the Narragansett Gun Club took place to-day. Following is the score. Tenth Badge shoot: 20 glass balls per man; 18yds. rise; Holden trap:

W H Sheldon	11111	11110	11111	11111—19
W G Crandall	11111	11011	01011	10111—16
J B Valentine	10111	11111	11101	01011—15
G W Cary	11111	00001	11101	11111—14
S D Greene, Jr	00110	10101	01111	11111—14
F A Tobey	11011	01001	00011	10101—11
L Bennett	10011	00011	01001	10011—10
H L Palmer	11101	00001	01010	10101—10
E W Tinker	10111	01100	10000	00101— 9
W H Waterman	00110	00110	00001	10010— 7
P H Baker	00101	10001	01000w.	

W. H. Sheldon wins the badge, third time.

Fourth Cup shoot; 15 clay pigeons per man; 1yds. rise.

G W Cary	111011011111111—13	F A Tobey	011011010011110— 9

Cox	0111011011011010111011—17
Glover	1011111111011101101101—19
Fenton	1101110010111111111111—19
Davenport	1110011011111111111111—22

The new officers elected are L. M. Cox, president; Mr. Layman, secretary; and Mr. Eaton, treasurer. The next meeting will be held on the first Tuesday in May.

Answers to Correspondents.

W. B. R., Gambier, O.—Yes.

A. J. M., Brunswick, Ga.—We shall shortly publish something on the subject.

F. S. W., Michigan.—We have not heard of the success attending efforts to transplant the wild celery.

C. E. W., Troy, N. Y.—The articles on dog training are published in book form. See advertisement elsewhere.

E. D. H., Marshall's Creek, Pa.—We do not know to whom you should apply for live quail for stocking purposes.

FOR WORMS IN PUPPIES.—Give upon an empty stomach two grains of finely hardened areca nut for each pound of weight, and follow in two to four hours with a dose of castor oil.

H. H. Z., Norristown.—1. Can black bass be successfully put in a pond 400ft. long by 50ft. wide, stone and gravel bottom, supplied with spring water; and where can they be obtained? 2. As to food, what do they require? 3. Can the German food carp still be obtained of Mr. E. G. Blackford, New York city? Ans. 1. The pond is small for black bass, but they may thrive to some extent. They will not grow large in it. No one is now supplying them, unless it may be

Mr. Livingston Stone, Charlestown, N. H. They can be had from the Delaware River, if you can get some one to catch them. 2. They eat small fish, crayfish, insects, etc. 3. Yes.

W. Z., San Francisco, Cal.—There are no ostrich farms in this country at present. A number of ostriches have just been imported and are now at the Central Park, in this city, and are to be taken to California, where an ostrich ranch will be started.

NORTH CAROLINA GAME GROUNDS.—C. W. B., Boston, wants the best quail and partridge shooting in North Carolina during the month of December; also the address of any party who would be willing to accommodate a party of three, together with their dogs. Would prefer a range of country that might hold snipe and woodcock as well as quail and partridge.

J. T. H., Harrod's Creek, Ky.—I have a pond 90x80 feet. It has a grade from four to six feet. I wish to know what kind of fish to stock it with for rapid growth. I would prefer game fish. It is fed by a never-failing spring. Can you name what our best native fish which will live in confined waters. It the temperature of the pond does not rise above seventy degrees in summer try brook trout. The pond is small for bass, but you might try carp.

C. W., Minnesota Junction.—If you wish to buy a rifle you may be assured of fair dealing by purchasing of any one of the firms adver tising in this journal. We are not familiar with the "Ideal" gun.

H. T., East Machias, Me.—The eider duck is common along the northeast coast of Maine, where they are called sea ducks. The male in breeding attire is white, creamy tinted on breast, with the sides of head marked with green. Under parts, from breast, lower back, wings, tail, quills and a forked patch on crown, black. Female, reddish or yellowish brown, barred and spotted with darker. A large, handsome duck. The bill has long, club-shaped processes on each side, running up on to the forehead and a feathered interspace between these two.

H. D. B., Hoboken, N. J.—When does the deer first grow its horns, at what period, and how often do they get new horns? 2. How old may a deer get, or what is the average age? 3. Do they grow new horns when living at an old age, or do they stop growing at a certain age? Ans. 1. The horns in the young buck start in the early spring following his birth, and thus begin to grow when he is nine or ten months old. The horns are renewed annually, being shed in late December, in January, February, or even March, according to the latitude of the deer's habitat. The young horn shoots in March or April, earlier in the South than in the North. 2. A deer probably lives to be from twelve to fifteen years old, but it must be remembered that the moment the natural powers of the animal begin to fail it falls a prey to some one of its many enemies. A deer, therefore, never has a chance to die of old age. 3. We imagine that deer continue to grow new horns as long as they live, but it would be extremely difficult to say positively that this is the case.

Yachting and Canoeing.

THE GROWING CUTTER FLEET.

THIS winter promises to see great activity in the building of cutters, and the large number launched last season bids fair to be doubled for 1883. There are at present six cutters under way in New York. Concerning the first two information is still withheld. The third in point of size will be a fifty-tonner, about sixty feet load line, with rather liberal allowance of beam—somewhat on the plan of Mr. Sullivan's Wenonah. The fourth is a fifteen-tonner, similar to the imported Maggie in general dimensions, but of the Julianar class in other respects. She will be commenced at once in Greenpoint, and has the looks of a goer, with a wonderful lot of room below decks. She will have a clear deck fore and aft. Her forecastle, galley and pantry, private berth, saloon, steerage with berth and closets, and ladies' cabin aft, with no end of lockers and stowage generally. Common sense is to rule in the furnishing of the cabins, use and neat display in part being kept in view. The joiner work will be got out with taste, but with a regard for ship-shape appearance. House architecture will have no place aboard this cutter. We are glad to see a return to good sense and propriety in the matter of cabin furniture, and hope this example may be generally followed. The gorgeous extravagance and lavish outlay for luxurious ostentation below decks is inappropriate to the legitimate uses to be expected from a yacht, and too often born of a vulgar desire to overreach your neighbor in the display of wealth. A little more cash put into build and rig and a little less of the "what's the odds" down below will place our future large yachts more nearly on a par in real worth with those built abroad.

The fifth cutter in hand is a ten-tonner for a gentleman who proposes to cruise in Jarvis waters. The sixth is nearly ready to the most advanced modern ideas. She represents the outcome of Mr. John Harvey's experience in building narrow and deep boats of large displacement, carrying small rigs. Mr. Harvey has designed this five-tonner for knocking about outside and for fishing, without reference to any restrictive rule, American and foreign. She will be 37ft. on loadline, 42ft. on deck, with 6ft. beam, and 7ft. 9in. depth of hold. That is about six beams to loadline length, regular Julianar proportions. Now, it is well known that Julianar is a horse in a seaway and an excellent cruiser, remarkably able and dry. Mr. Harvey's experience points indisputably to boats of such proportions as affording the maximum attainable on the length in the way of accommodations of practical availability, power and rough-water qualities, speed under all circumstances, and the smallest of rig, and therefore the most economical in crew, coupled also with safety. The new five-tonner will offer an excellent opportunity of putting to test on a small scale what has been found such a success in larger vessels. This cutter will have a displacement of twelve and one-half tons, eight of which goes for ballast, about four tons being outside lead, bolted to a very broad keel, and tapered down in continuation of the boat's body proper.

The rig will show a hoist of about 34ft., boom about 31ft., gaff 23ft., and bowsprit 12ft. outboard, a comparison with this boat's sail area and that of a sloop of like length teaches an instructive lesson. The area of lower sails of the cutter is about 950 square feet. The area of a sloop's sails would be about 1,650 square feet or nearly double that of the narrow deep sloop. This means that if the owner and one hand can work the cutter, it would require owner and two hands to work the sloop with equal ease. The expense for crew would be just double and that expense is the chief outlay in the keep of a yacht. The small sail area required by a narrow boat is for this reason of the utmost importance. The new boat is flush deck with headroom from stem to sail room down below. The forecastle will have five accommodations for two hands, lockers, transoms, table, etc. Abaft this is a pantry, galley, wash room and w. c. between bulkheads. Then the main cabin with 6ft. 6in. sofas each side. Beyond this is an after stateroom with two berths, the floor being raised somewhat to act as floor for a deep cockpit, having a hatch to slide back, so that the interior can be closed altogether at sea or for the night when the weather is fine. Between the cockpit and the main cabin there is a regular bulkhead with panel door. The sheer plan bears resemblance to that of the Julianar, though with less drag to keel and a plumb cutwater. Accommodations are governed by length and depth, beam contributing under floor of cockpit. Beyond a certain point, say 8ft., outboard work adds nothing to "fit," they are a nuisance and in narrow waters that point is reached much later than where the waves are unconfined. In some waters the point is never reached, hence a blow is more likely to curtail a small yacht's ability and usefulness in harbor sailing than outside. Thus upon one occasion we found it almost impossible to beat a three-tonner across the Lower Bay up to the Hook, but once outside the seas were found so long that, though higher, the yacht went along in comparative comfort and dryness.

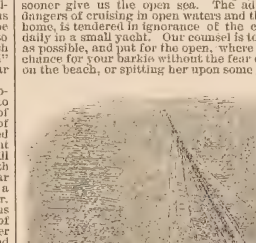
Probably many readers have occasionally noticed a small boat making better weather of it than a large one close aboard, and have attributed this to superiority of model, whereas for the small boat the seas had simply passed the "fitting" point, which they had not yet reached for the larger one, and the former took less notice of the disturbance than the latter in consequence. From the very nature of small yacht sailing, however, the operations are, as a rule, restricted to more or less confined stretches of water, and they are likely to meet a short, steep lump nine times in ten as often as the long roll of the ocean; hence the power and ability to put in work to some effect under such circumstances should be the very first consideration in design, next to the matter of safety.

A small yacht unable to cope with the weather to be expected half the time, is a useless sort of toy and gives little satisfaction, hence the importance we lay upon a model possessed of what is rightfully called "seagoing" qualities, and whether she ever pokes her nose outside or not such qualities should be sought in either case. That they are not to be found in shoal beamy boats such as the customary catboat or jib and mainsail, or even small cabin sloop everyone having experimented with them will bear witness. The only remedy open to boats of that style is to weight heavily with a cargo of sand and human freight, and smash through everything regardless of consequences. But to the cruiser neither sandbags nor a numerous crew offer a solution. He must look to skillful design to accomplish with safety and comfort what the others effect by risk, brute force and physical inconvenience. The cruiser moreover proposes to knock about all day, where the sandbagger gets his fill and a salt water bath in an hour or two of rough and tumble, which comes nearer to punishment or athletics than to the consummation of the yachtsman's dream of life afloat.

With this clearly settled, the reader will be prepared to follow our selection of model all the better. The difficulty in a bobbery is to make your boat go comfortably about her business, holding a wind and refraining from wild antics to no purpose. The action of shoal boats is to climb the seas, and in playing vigorously at pitch and toss they forget to go ahead, bringing up all standing, spilling the wind out of her sails, and slatting things round generally. They pound and throw water in a spray, and in their fierce war with the waves chop off to leeward at every bounce. Their peculiarities are now so well understood that they will be conceded unfit for the service intended. The wide and deep, or bulky, chubby boat is little better in her action, though safer in other respects.

She is much like a cork, a buoy or a football, and so full of life that, though lifting clear of all, her weatherliness is destroyed by that very buoyancy and tossing, as though on gimbals amidships, she pitches away from the approaching mount and looking you in the face, at one moment upon her head, at the next upon her heels. Of course with such wild cavorting, little driving force is left to send the craft ahead, and the skipper, after wearisome efforts to keep her head on, turns for a lee in disgust and blames his boat for being too small when the trouble was not at fault at all, but the model. The object in the design of a small yacht should be to correct these bouncy tendencies, to subdue exhuberant life and harness her powers to serve the ends she was built for. How this can be accomplished will form our subject next week.

SINGLE HAND YACHTS.



[CONTINUED.]

LAST week our attention was taken up with the safety of small boats. We will now examine into their ability. It is often said that small boats have no business outside of sheltered waters, such as New York Harbor, the "Lower bay," Long Island Sound, Boston Harbor and similar protected stretches, and that therefore "seagoing" qualities ought to receive no consideration in such designs. In fact, the mention of such qualities in small boats has excited ridicule in quarters where one might reasonably have expected some understanding of the question. But those who are qualified to speak from experience, invariably place great importance upon the "seagoing" powers of a small yacht, and for the very good reason that even in so-called sheltered waters, the craft of only a couple of tons finds all the sea she can take care of in weather ordinarily considered quite moderate when scanned from the decks of a forty or hundred ton vessel. Moreover, those experienced in the management of little shavers know full well that in the sheltered waters, beyond which landlubberly verdicts would not have them dare, the chief danger and discomfort to small boat sailing really lies.

A FAIR DAY SINGLE-HANDED.

Squalls and puffs are more frequent and sharp, influenced by the hills and valleys along the shore, and their advent is often unheralded and unseen until their full force is felt. With sea room all around, squalls are far less frequent and less to be dreaded, as their coming is announced some time ahead, and precautions can be taken in time. Nor are there in open water obstacles to free maneuvring, such as vessels at anchor, a shoal or rocky shore close aboard, involving risk in luffing out, and entailing the necessity of putting the boat broad off for room, with the chances of catching a fresh knock down flaw right abeam in the operation. About the most trying business to one's nerves in a single-hander is skimming an unknown weather-shore with the wind coming down in spiteful gusts. Far sooner give us the open sea. The advice of veritants as to the dangers of cruising in open waters and their admonition to keep near home, is tendered in ignorance of the conditions met with almost daily in a small yacht. Our counsel is to clear from harbor as quick as possible, and put for the open, where you have free play and a chance for your barkie without the fear of luffing her high and dry on the beach, or spitting her upon some jagged rock.

RECKONING LOST. WAITING FOR A CLEAR UP.

So much for the wind and now for the sea. It takes but a very moderate summer's breeze to kick up trouble enough for a two-ton cruiser, and that trouble is wrought in shelter or confined waters much sooner than where there is a long sweep. For it is not a high sea the little fellow needs fear, but a short, hollow bobbery is what the small craft most dislikes and what is apt to disgust and scare the skipper. For every size of vessel there is a corresponding sea which "fits her." Beyond that, as the sea rises, it bothers the vessel much less providing the sweep allows it to grow longer as well. But up to the point where the swells reach dimensions enough to "fit," they are a nuisance and in narrow waters that point is reached much later than where the waves are unconfined. In some waters the point is never reached, hence a blow is more likely to curtail a small yacht's ability and usefulness in harbor sailing than outside. Thus upon one occasions we found it almost impossible to beat a three-tonner across the Lower Bay up to the Hook, but once outside the seas were found so long that, though higher, the yacht went along in comparative comfort and dryness.

Probably many readers have occasionally noticed a small boat making better weather of it than a large one close aboard, and have attributed this to superiority of model, whereas for the small boat the seas had simply passed the "fitting" point, which they had not yet reached for the larger one, and the former took less notice of the disturbance than the latter in consequence. From the very nature of small yacht sailing, however, the operations are, as a rule, restricted to more or less confined stretches of water, and they are likely to meet a short, steep lump nine times in ten as often as the long roll of the ocean; hence the power and ability to put in work to some effect under such circumstances should be the very first consideration in design, next to the matter of safety.

A small yacht unable to cope with the weather to be expected half the time, is a useless sort of toy and gives little satisfaction, hence the importance we lay upon a model possessed of what is rightfully called "seagoing" qualities, and whether she ever pokes her nose outside or not such qualities should be sought in either case. That they are not to be found in shoal beamy boats such as the customary catboat or jib and mainsail, or even small cabin sloop everyone having experimented with them will bear witness. The only remedy

THE PAST SEASON IN GREAT BRITAIN.

IT cannot be said that the past yachting season has been a very satisfactory one; neither, on the other hand, can it be said, as some assert, that it was very unsatisfactory, and we shall not perhaps be very far wrong in saying that while we have seen better racing in different localities on former occasions, so also have we seen worse. There are those critics who roundly assert that the present system of measurement adopted by our clubs is having the effect of reducing the entries at our regattas; but with all due deference to these gentlemen, we very much doubt whether this is the case, for no matter what rule of measurement may be adopted, a number of vessels would at once be built to suit the rule, and some one or two would prove greater successes than the others, and as a matter of course these others would be deterred from entering at the different regattas against the cracks of that day. We are much more inclined to think that the system of forcing owners and pilots in the way they are now feed, putting the owners to so much expense, and the rushing from one regatta to another of a few of the fastest vessels afloat, are the real reasons for paucity of entries. But, after all, when a correct look at the craft that have been contending along our coast this last summer, can it be said that the season has been such a bad one? We really think not, and when we find a new ninety-ton cutter in the field built to suit our present system of measurement this year to contend against such vessels as Samoena, Vanduara, and Arrow, there really is not in this instance much cause to complain, and we may say that the racing was fairly interesting and the palm between Samoena and Vanduara.

Again, in the forty-ton class a new vessel was built also to suit the present system of measurement, and to help with Siesta hound, which has undergone some few improvements, to try and wrest the laurels from Amaona. So that in these two classes there was really not such a great lack of vessels, and all that was required was that they should be sailed in a little more evenly matched, as it is, Amaona is undoubtedly the fastest of her class. As to Fife's new ninety, Erycina, she did certainly not come up to the expectations of her owner or builder, while the same thing may be said of the new forty, the Siesta; but in these two new crafts given the old ones a little more trouble the racing would have been very good indeed in those two classes.

With regard to the twenties, we are afraid that we must confess there was a great falling off of sport in this class, though here also a new vessel was built to contend with the existing twenties, and which was intended to put Freda and Amethea under her lee. The Lenore, however, did not do this to the extent that her builder anticipated, still she more than once showed great speed, and we have an idea that Lenore has been raced as hard as Freda and Amethea, and her crew therefore more accustomed to racing than they were, the new twenty would have done better than she did. At the same time, while admitting that four entries for the larger class of vessels may be considered a fairly good one, we cannot but be considered to be the case with twenties, which should muster much stronger than they have done, for in the south it was nothing but perpetual Freda and Amethea, while in the north only Lenore and Vespa were added to these two. As with the twenties so with the tens, for while it was the universal disturbance in the Solent that kept Irex and Verve in the north; and many there are who were not a little glad to find that the latter was able to get the better of the hitherto invincible Buttercup. It gives some hope that moderate length may yet have a chance, for there were two new tens, the Eddie and Sea Star, but the former only put in her appearance the latter end of the season, when, with new gear, etc., etc., she had to meet the Buttercup all shipshape, so that it is not fair to give an opinion as to her speed; while Sea Star only contended at the Tyneside and Welsh regattas, showing, however, great speed and weatherly qualities on each of these occasions. There should at the same time be better entries for the ten-ton class, seeing that a ten-tonner of the present day is a really seaworty vessel, and can go anywhere short of the North Pole.

We have now run through the cutter class in a cursory way, and will turn to other rigs. With regard to the schooners and yawls we have little to say, because there has been no good racing in these classes. Amaryllis, the schooner Miranda is pre-eminently a yacht, besides being an unusually smart vessel she has a captain and crew second to none in our racing fleet. Miranda met Fiona, Waterwitch, Australia and Lenore on several occasions, and the cutters and yawls on others, when she invariably proved a marvelously fast boat and formidable antagonist. The new Lenore, designed by Watson, was the fresh importation this year to the racing schooner class, but as with the new 50-ton cutter and the new 40-ton cutter, so with the new schooner, she could not wrest the laurels from Miranda, which is at present decidedly the fastest schooner afloat.

We now come to the yawls, which did not muster in force so far as the larger vessels are concerned, the consequence being that Lorna, which came out as a *fast cruiser* last year, had it pretty much her own way. The contests among the smaller vessels were more numerous, that is to say between forty and sixty tons. Raven, Gertrude, Gudrun, Neptune, Arethuse, Hypatia and Coralie sailed with varied success, the two former perhaps scoring more runs and proving themselves faster than the others.—*Hunt's Yachting Magazine.*

THREE FAST CUTTERS.

Editor Forest and Stream:

I note that you give some credit to Kelpie, Maris and Beetle for beating the best boats in Boston last year. If my memory is not at fault the Maris and Kelpie were built from designs furnished by me, and may be well claimed as home productions. Three cutters, Maris, Kelpie and Moya were built from the same drawings, except that the scale was enlarged to suit the increased displacement.

The keel was sided 12in. (for a boat of 26½ft. water line) and excited the wonder of a great many, while the freeboard was 2½ft. The Beetle has lead ballast, while the others have iron, and herspeed is in proportion. I am glad to see these boats have been recognized the wisdom of so radical a departure from ancient tenets. My design differs from the orthodox in two points, a very narrow stern and a very wide keel. These two points were held to be fallacious by all Eastern builders at the time.

While I am writing it will be well to give the public a few points about the Bedouin. The ballast was stowed in the most careful manner. The tanks had not been put in until the lead had been put under them, and each piece was cut to fit and spread well fore and aft. They were not driven where a man's weight would be put between the pieces of lead. And when it was all in, the joints were hammered with a maul until they were perfectly tight. This was done to keep it from ever being moved by a sudden keel. A. CARY SMITH.

[In referring to Bedouin's ballast as being improperly stowed we wished to convey that it had not been distributed according to the intentions of the designer. It was concentrated too much amidships for sea work and tended to make the cutter too much of a "rocking horse." No one was to blame in the matter. With the weight spread fore and aft, pitching and scending would have been less marked.]

NOT SO BAD.—The skipper of the Teal and his friend object to eating six cans of corn at one meal, as stated in the log last week. It should have read six ears. Also read "strains they have to undergo" instead of "manage" on page 316.

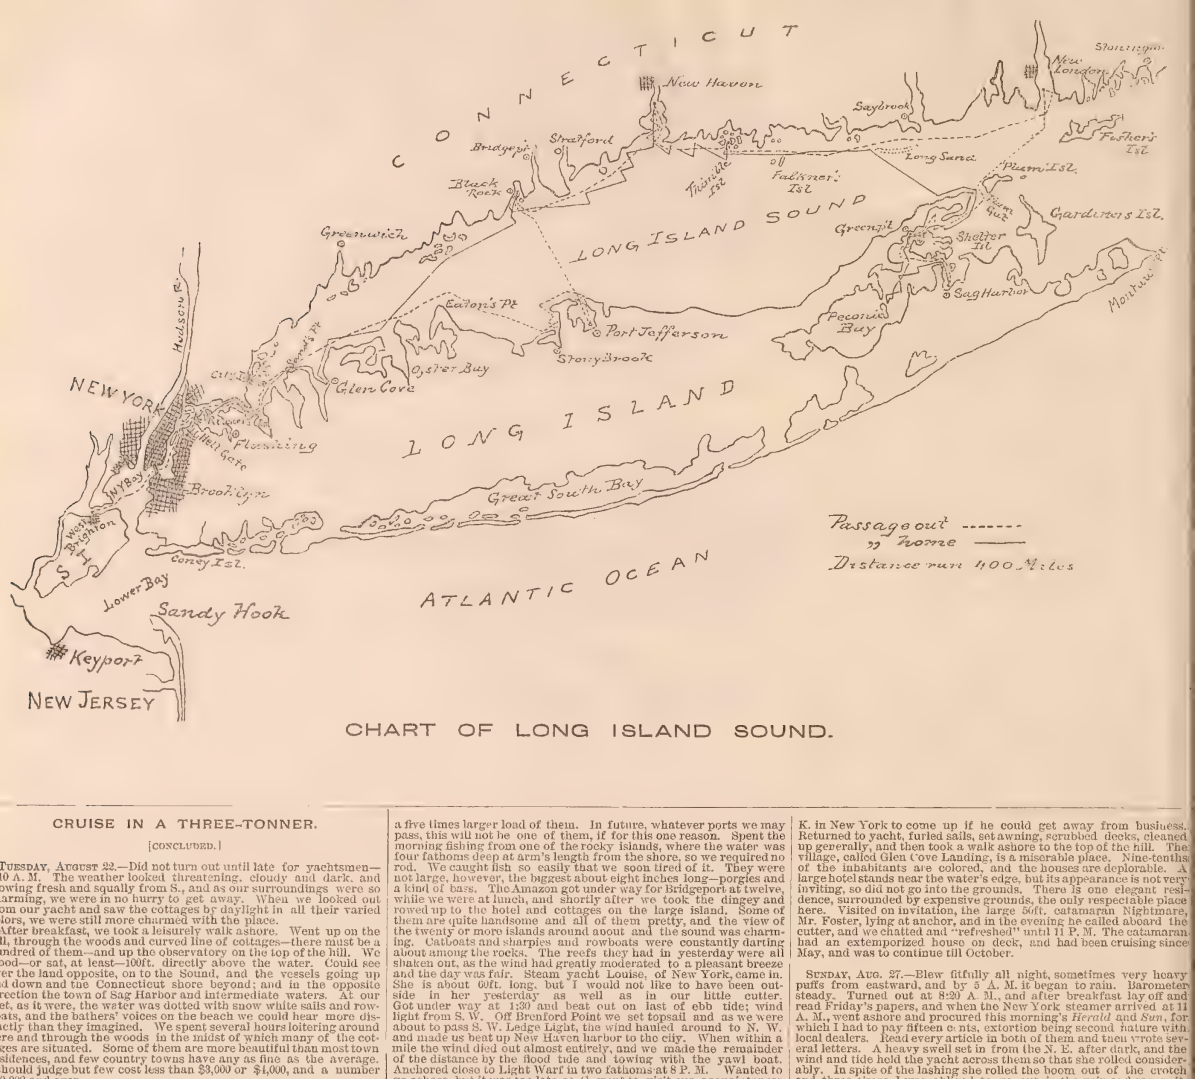


CHART OF LONG ISLAND SOUND.

CRUISE IN A THREE-TONNER.

[CONCLUDED.]

TUESDAY, AUGUST 22.—Did not turn out until late for yachtsmen—7:10 A. M. The weather looked threatening, cloudy and dark, and blowing fresh and squally from S., and as our surroundings were so charming, we were in no hurry to get away. When we looked out from our yacht and saw the cottages by daylight in all their varied colors, we were still more charmed with the place.

After breakfast, we took a leisurely walk ashore. Went up on the hill, through the woods and curved line of cottages—there must be a hundred of them—and up the observatory on the top of the hill. We stood—or sat, at least—100ft. directly above the water. Could see over the land opposite, on to the Sound, and the vessels going up and down and the Connecticut shore beyond; and in the opposite direction the town of Sag Harbor and intermediate waters. At our feet, as it were, the water was dotted with snow white sails and row-boats, and the bathers' voices on the beach we could hear more distinctly than they imagined. We spent several hours loitering around here and through the woods in the midst of which many of the cottages are situated. Some of them are more beautiful than most town residences, and few country towns have any as fine as the average. I should judge but few cost less than $3,000 or $4,000, and a number $10,000 and over.

Returned to the yacht, had lunch, and spent the afternoon cleaning brass-work, oiling up black paint outside, repairing jib sheets which gave way yesterday, and relashing clew of mainsail, the stop of which had stranded yesterday. It blew hard and squally all day, but sailboats, catboats and sloops were darting past and around us every moment, under reefed canvas. Never saw so much sailing, boys and girls, young ladies and gentlemen, old ones and young ones, every one.

WEDNESDAY, AUG. 23.—The clock alarm startled us at 3:25 A. M., and we jumped up. Got under way about 4 o'clock, not yet daylight. A mossbunker steamer which came in last evening and anchored near us got under way a few minutes later. The wind was blowing light from the S. W. Passed the lighthouse near Orient Bay at 6, with scarcely any wind and set topsail; tide ebb. Had breakfast at 6, the boat taking care of herself while both were below. The oystermen, to the number of ten or twelve, came out of the harbor astern of us. They stood down toward the southward, while we ran along the beach. The sloop Annie, of Brooklyn, came along and overtook us at the beacon at 7 A. M. We were all of an hour getting past this beacon, and worked up to Mulford's Point by 9:30; tide against us through Plum Gut. There were no tide rips there this morning. From Mulford Point, stood across W. N. W. for the Thimbles. Finally a breeze came from S. W. which soon strengthened, the sky clouded over and growing black in the N. E. About 12 o'clock it freshened, so we took in topsail, and as it looked squally, and as if the apparent impending storm was coming up from N. E., against the wind, deemed it prudent to get up on Connecticut shore, where we could find a harbor if necessary, as there are none nor any anchorage on the Long Island shore. Changed our course to N. W. and made Long Sand Shoal Light Vessel at 12:30 o'clock, with stormy wind and heavy sea at intervals. From here stood westward in heavy sea and stiff breeze to the Thimbles, where we ran in at 3:30, and anchored, glad to get into such a safe and comfortable harbor. But the little boat behaved well; we carried whole mainsail and jib all through, and never had lee rail under except where for a moment a sea laid us over. We took but little water aboard. Two or three times a big sea would strike us on weather quarter and splash us a little. It rained at intervals during the day. After we got into our snug berth in three fathoms and smooth water we could see the white combers roll in within a hundred yards of us on the south side of the rocky islands. This is a much safer haven in a southwester than we imagined. Found there our friend Beames on the Amazon who hailed us, and after supper came aboard, and we visited him later in the evening; met his wife and friend, Mr. Tripkins, of Clinton, Conn. The wind just howled and it rained pitchforks during the night. The Viola and several other sloops and a large tug with four canal boats had run in for shelter. Lost our boathook during the passage; the lashing not being secure, was carried off the deck by one of the seas.

THURSDAY, AUG. 24.—Did not turn out until after seven, and the bumboat man whom Beames sent to us had been alongside half an hour before. The moment I made my appearance on deck, Tripkins, from the Amazon, insisted on my going over and having a cocktail, the compounding of which was one of his many accomplishments. B. and lady were ashore, so I did not wait to finish dressing. Before the cocktail was entirely disposed of they returned unseen, and I beat a hasty retreat. The bumboat man called later for orders, and at 11 A. M. he returned with bread, milk, and apple-pie, each of which proved afterwards to surpass in excellence any of the kind we had ever before had. Regretted afterwards we had not taken in a five times larger load of them. In future, whatever ports we may pass, this will not be one of them, if for this one reason. Spent the morning fishing from one of the rocky islands, where the water was four fathoms deep at arm's length from the shore, so we required no rod. We caught fish so easily that we soon tired of it. They were not large, however, the biggest about eight inches long—porgies and a kind of bass. The Amazon got under way for Bridgeport at twelve, while we were at lunch, and shortly after we took the dingey and rowed up to the hotel and cottages on the large island. Some of them are quite handsome and all of them pretty, and the view of the twenty or more islands around about and the sound was charming. Catboats and sharpies and rowboats were constantly darting about among the rocks. The reefs they had in yesterday were all shaken out, as the wind had greatly moderated to a pleasant breeze and the day was fair. Steam yacht Louise, of New York, came in. She is about 60ft. long, but I would not like to have been outside in her yesterday as well as in our little cutter. Got under way at 1:30 and beat out on last of ebb tide; wind light from S. W. Off Brenford Point we set topsail and as we were about to pass S. W. Ledge Light, the wind hauled around to N. W. and made us beat up New Haven harbor to the city. When within a mile the wind died out almost entirely, and we made the remainder of the distance by the flood tide and towing with the yawl boat. Anchored close to Light Warf in two fathoms at 8 P. M. Wanted to go ashore, but it was too late, so G. went to visit our acquaintances aboard of the sloop Mystery, of the N. H. Y. C.; while I lay down to rest, being very tired, having had the tiller in hand about seven hours without intermission.

FRIDAY, August 25.—Turned out at 7 to find a strong breeze from the north. After breakfast, at 8:30, went ashore and in the short sweep the wind has off the shore, it made enough sea to throw spray on our store clothes in the dingey. Returned, well loaded down at 11, and a few minutes after had a visit from another New Haven yachtsman who was anxious to inspect the cutter. At 12 got under way for the Westward as far as we could get. Wind very much moderated. Off West Haven shore, it shifted to N. W. and came out in strong puffs and light alternately. Carried our topsail through it all to Stratford Point, where lashing of topsail halyard block aloft parted and we had to take it in. It blew quite fresh at times, but we did not carry lee rail under more than once or twice and that only for a moment.

Wind grew lighter again off Bridgeport, and we decided to run into Black Rock Harbor for the night. Cast anchor off hotel at 4:15 P. M., and almost immediately had a call by a party of gentlemen out in a catboat, curious to see the little cutter again, had never seen any such in these waters, admired her very much, astonished at her accommodations, etc. Housed the topmast and went aloft and relashed the topsail halyard block. After supper sat in the cockpit under the awning, smoking and playing the flute. The water was like a mirror and the moon shining brightly, the evening so still that the voices on the bathing beach and in the boats could be distinctly heard by us. The schooner Albatros came in at 5:30 and anchored a half mile below us, and at 10 P. M. a sloop yacht brought up close by. Did not go ashore as we preferred enjoying the beautiful evening on board.

SATURDAY, AUG. 26.—Other yachts gone when we turned out. Got under way 6:30 A. M., wind N. E., light. Set topsail. Lay to off Norwalk Islands, and had breakfast at 8:30. Wind freshening, took in topsail, and at 10 changed course to S. W. by W. for Glen Cove to allow G. to go ashore for Lake Ronconkoma. Barometer rising to 30.45. Think our barometer is about .25 above standard and needs regulating. Sea increasing. Off Oyster Bay in following sea the dingey towed badly, making severe jerks on painter. Made chain painter fast as preventer. In a short time she broke loose carrying away heavy brass cleat and part of rail with her. Hauled in by the wind and had some difficulty picking her up, having no boat hook, had to run close enough to her to catch by hand from the deck. After fourth attempt succeeded. Fastened chain to main sheet traveler and stood on our course again. In half an hour she broke adrift again, but we picked her up the first time. This time fastened by both chain and rope painter, one to rudder head, and the other to a leader on deck. She held, but at times would give such tremendous jerks, it is surprising it did not pull out her stem. Made Matinnecock Point at 1 P. M., and ran into Glen Cove. We found at anchor there the U. S. schoolship St. Mary's, and schooner Eolus, N. Y. Y. C. Several other schooners, sloops, and one steam yacht came in later, and about 7 P. M. the sloop Genia anchored close aboard.

As we passed by the St. Mary's a boat's crew were just returning with a rescued crew and boat of some vessel which had capsized. It was evidently liberty-day for some of the boys, as several of the ship's boats were out sailing around the harbor with ladies aboard. The water was smooth here, with puffs of air from across the hills.

At 2:30 after lunch of lemonade, pie, cake and water-melon, I took G. ashore and bade him good-bye. Gave him a telegram to send to K. in New York to come up if he could get away from business. Returned to yacht, furled sails, set awning, scrubbed decks, cleaned up generally, and then took a walk ashore to the top of the hill. The village, called Glen Cove Landing, is a miserable place. Nine-tenths of the inhabitants are colored, and the houses are deplorable. A large hotel stands near the water's edge, but its appearance is not very inviting, so did not go into the grounds. There is one elegant residence, surrounded by expensive grounds, the only respectable place here. Visited on invitation, the large 56ft. catamaran Nightmare, Mr. Foster, lying at anchor, and in the evening he called aboard the cutter, and we chatted and "refreshed" until 11 P. M. The catamaran had an extemporized house on deck, and had been cruising since May, and was to continue till October.

SUNDAY, AUG. 27.—Blew fitfully all night, sometimes very heavy puffs from eastward, and by 5 A. M. it began to rain. Barometer steady. Turned out at 8:20 A. M., and after breakfast lay off and read Friday's papers, and when the New York steamer arrived at 11 A. M., went ashore and procured this morning's *Herald* and *Sun*, for which I had to pay fifteen cents, extortion being second nature with local dealers. Read every article in both of them and then wrote several letters. A heavy swell set in from the N. E. after dark, and the wind and tide held the yacht across them so that she rolled considerably. In spite of the lashing she rolled the boom out of the crotch and three times I was obliged to go out in the rain and secure it. Rained incessantly all day and night.

MONDAY, AUG. 28.—Rose at 7:10 A. M. Still raining, but low on the N. E. horizon there was a clear streak of sky. About 8 ceased pouring, and by 11 the larger part of the sky was clear, but the wind was still blowing strong and the high seas outside could distinctly be seen breaking on the sandy points. The swell rolled us about, putting loose articles from one side of the cabin to the other. When the sun came out, about ten, shook out the sails and dried them, but it was difficult, on account of the strength of the wind. Had to run out the second anchor while I was doing it to prevent dragging. After that had lunch and took a walk ashore, through the Appleby place. The residence unoccupied and going to decay. At 1 P. M. the wind had moderated considerably. By the time I had everything in readiness it was 2:15, when I got under way, with full sail and moderate N. E. wind, for a run home single handed. Signal halyards got away from me while attempting to lower spindle and set the burgee, so was obliged to go without a flag, as I couldn't house the topmast alone to get it and too much of a climb to go after it, so unrove the halyards altogether.

Passing Cow Bay observed a large fleet of schooners, sloops, tugs and canal boats which had probably run in there for shelter, and about as many more at City Island. Had ebb tide against me, and there was considerable swell outside yet from the blow of yesterday and this morning. At Whitestone, where the tide splits, met the flood coming the other way, and so I had the tide still against me. The wind becoming lighter, decided to run into College Point for the night. Besides I was getting hungry, and could not sail the boat in such narrow waters and get my supper at the same time. Passed inside of black buoy at College Point and found eight to six feet water; low water at the time. Ran on to the eastern end of Riker's Island and anchored at 6:40 in eight feet water. Furled sails, etc., had supper, and then lay off. Wind changed to S. here.

9 P. M.—Dead calm, full moon, cloudless sky. Climbed to the truck and rove off the signal halyards. Never saw so many vessels crowded together as there were from Fort Schuyler down to Riker's Island, a great many of them being large three-masted schooners.

TUESDAY, AUG. 29.—Turned out at 6:30 A. M. Wind light N., tide, flood. Got under way at 7:35, with light N. E. wind and flood tide. Should have set topsail, but feared attempting to handle it going through East River. Passed through Hell Gate at 9:25, meeting the new Herreshoff high-speed steam yacht Oneota. First of ebb at 11:10. Passed East River Bridge, with no wind and strong ebb. Had a narrow escape keeping clear of steamer Great Republic and a schooner. Bad swell of steamers from every direction. At 11:30 ran through Buttermilk Channel, when the wind came out from S. W., bringing the cutter close-hauled. At 11:45 lashed tiller on port tack, and while I stowed topsail she sailed herself as only a deep boat can do. At 11:50 the wind freshened considerably. At 12:15 the cutter was inside Robbins's Reef Light, with the wind south, enabling me to weather Constable Point. Passed the beacon at 12:30. We went by Sailors' Snug Harbor at 1:20 P. M., and came to anchor in the accustomed berth off Stephens's boathouse, West Brighton, a few minutes later. It was 4 o'clock by the time I had cleared up everything aboard, had lunch, and changed my clothes, and started for the city by ferry-boat. This ended a three weeks' cruise of unalloyed pleasure and brought me back to business with an invigorated constitution. The memories thereof will live fresh a long time and induce similar ventures next year. The cutter proved herself so satisfactory that, should I build a new boat, she will be much on the same lines.

J. C. U.

A SAN FRANCISCO SCHOONER.—The new yacht building for John, Adolph and C. A. Spreckels, was launched recently at San Francisco. In design, workmanship, finish and accomodation she reflects the highest credit on Mr. Turner, the builder. The total cost will be $30,000. Experienced yachtsmen predict she will outfoot the whole fleet. The new yacht is larger than most on the bay. The Aggie is a trifle smaller, and the length of Dr. Merrit's Casco is greater. Over all she will measure 90ft. At the water line a few inches over 72ft. She has 11.05 breadth of beam. Area of ballast line, 728.56sq. ft.; area of immersed midship section 61.58sq. ft. The center of buoyancy is 3.20 aft of the longitudinal center. The greatest transverse section of the hull is 6.10ft. aft of the center of buoyancy. The center of lateral resistance is 1.15ft. aft of the center of buoyancy. Bowsprit outboard, 30ft.; foremast, extreme length, 72ft.; mainmast, 79ft.; mainboom, 50ft.; topmasts, 23ft.; foregaff, 22ft.; foreboom, 26ft. 6in.; flying jibboom outside cap, 13ft. The vessel has a lead keel, weighing 15,991 pounds. The area of the three lower sails will be 3,612sq. ft. The center of these sails is 0.8ft. aft of the center of buoyancy, and 0.85ft. forward of the center of lateral resistance. She will have a triangular-shaped, or Bermudan mainsail. The decks are cedar. The cabin apartments are spacious, and will be handsomely fitted in polished hardwood.

HANDICAPS A FAILURE.—To regulate the varying merits of the small class of boats, handicaps have been proposed, but the dislike which yacht owners, young or old, have to handicaps, appears likely to frustrate all attempts to introduce them. The Royal Portsmouth Corinthian Yacht Club, with an excellent meaning, have striven hard to make boat sailing popular by means of handicaps, and their attempt has failed in the most crushing manner. This club made the initial mistake of making handicaps the dominant feature instead of a subsidiary means of providing sport; the inevitable result was that men would not build new boats for handicaps, and the owners of the mediocrities soon discovered that the committee could not so handicap the good boats as to allow slow boats to win. The end of this has been that, although the club has a large number of resident members, none of them follow up their proclivities for boat sailing by building, as the system of handicapping has taken away all zest or emulation for owning a fast and weatherly boat.—*London Field.*

LLOYDS' REGISTER.—We have received the second supplement of the Register for this year, giving additional details of yachts and subscribers. Among the American subscribers are Lloyd Phoenix of New York, Samuel Stanton of Newburgh, W. Tumbridge of New York, Ross R. Winans, of Baltimore, and the Portland Y. C., Portland, Me. If this volume were more generally taken in America much of the nonsense written in correspondence about cutters they know nothing about would disappear. Among the interesting additions we note the new crack three-tonner Chittywee, belonging to Lord Francis Cecil. She is 30ft. loadline, 4.76ft. beam and 6ft. depth of hold. A fast and very able flyer and one of the narrowest cutters yet built.

OCEAN CRUISING.—Schooner Ranger has left for New Orleans; schooner Actea, of Boston, was at St. Vincent, Spain, a week ago, and schooner Intrepid is fitting out for the West Indies.

POT LUCK FROM EXCHANGES.

Put not your trust in guns nor yet in the sons of guns.—*Puck's Proverbs.*

Mr. Beecher, says the New York *Herald*, told a pretty hard "fish story" to his people at the Plymouth prayer meeting last evening. He said that whenever his father went down to Guilford, Conn., to visit his wife's relatives, he used to think of nothing but finding a good place to catch trout. In a certain pool there was a particularly large trout, and for several years the old gentleman vainly tried to hook him. Finally, during one of his annual visits, he saw the old trout's fins sticking out of the water in a shady spot under the bank. The reverend angler bethought him that he had heard or read that fish could be tickled and captured with the hand. He softly slipped a hand into the water under the motionless fish and slightly tickled its belly with his finger tips. It shot a little distance off, but returned almost immediately, and Père Beecher moved his hand lightly along its scales until approaching the gills he slipped his forefingur in and jerked the surprised trout high and dry upon the bank. The fish weighed three pounds. Mr. Beecher told the story with such dramatic force and so cleverly imitated the old gentleman peering into the pool and reaching his arm down into the water that when he pulled it up a rustle of excitement was noticeable in the meeting. Mr. Beecher's unconscious mimicry in another part of his discourse led him to make a pose and a grimace which would have delighted one of his caricaturists. He said his Friday night congregation was like a brood of callow robins sitting in a nest with eyes shut and mouths open waiting for him to drop in a worm. Mr. Beecher shut his own eyes, opened his mouth to the fullest and sat for a moment with face upturned, looking as much like a young robin as was possible for a gentleman of his age and full habit.

The Albany (N. Y.) *Argus* gives this account of the woes of an unlucky pair of duck hunters: "Last Friday William G. Garder and Levi Duvall, of Troy, planned a raid on the wild ducks that rest at Round Lake in their flights from the Arctic regions. So they took the midnight train and went to Ballston Spa, intending to walk back to the lake and arrive at the hour when the ducks were beginning to bestir themselves. They did this, but discovering no ducks they wandered into the camp-meeting park. Seeing a squirrel and unaware of the posted penalties against discharging firearms in the park, Duvall brought it low. Superintendent Rogers shouted at them, and said that he would have them arrested. To avoid this they took the railroad track for Mechanicsville at a lively pace, and when overtaken by a passenger train, which halted, they boarded it and were captured by Mr. Rogers. They were taken back to Round Lake, fined $10 each by Justice Swift for the discharge of firearms, which they paid, and were then arrested by Deputy Sheriff Harrison, of Ballston Spa, on a warrant charging them with burglary and robbery at Haywood's jewelry shop, in that village, the night before. They were taken to Ballston and locked up for the night, but before the hour set down for their examination it was learned from trustworthy sources in Troy that they were reputable young men, and they were discharged and took the first train home the next morning well satisfied that they were not successful duck hunters."

Mr. William N. Morrison, superintendent of the Tompkins avenue, Bushwick and Greenpoint avenue, and South Fourth street lines of horse railroads, took a vacation for two weeks, says the Brooklyn (N. Y.) *Times*, and made a circuit of Long Island with a friend, behind a spirited team of horses. Fishing tackle, guns, etc., were taken along to enable the gentlemen to indulge in their sporting proclivities, and a royal time they had in yanking fish from the several streams, and in popping the game with which the island abounds. While on the southern extremity of the island, close to the village of Bellport, the gentlemen met with remarkable good luck and leveled many a fine specimen of the "wild duck creation." In the heyday of their good fortune they thought of the friends at home, and among the number Mr. Franklin Woodward, cashier of the railroads represented by Mr. Morrison, was included. Sixteen choicest ducks in the lot killed by the perambulating sportsmen were neatly boxed and expressed to "Franklin Woodward, Esq., Brooklyn, N. Y., Compliments of W. N. M." Well, it so happens that there are name synonymous to the one put on the box, and the expressman took the box to Mr. Franklin Woodruff, who ran for mayor three years ago. Mr. Woodruff was at loss to know who "W. N. M." was, but concluding it was some friend who wished to disguise his identity, he opened the box and his eyes sparkled at the sight of sixteen fat, plump ducks. Of course his family could not eat them all at once so, it is said, several friends were invited to partake of a game supper, and around the festive board lips were smacked over the game and compliments were bestowed on the "incog" friend. His health was drank, and the game was disposed of and nothing but the wrecks of the Long Island shooting tour confronted the guests. Mr. Woodruff felt satisfied that the individuality of the donor would be disclosed sooner or later, and accordingly determined to bide his time. Mr. Morrison arrived soon after and asked Mr. Woodward how he liked the ducks, when a derisive answer was given, and Mr. Morrison was given to understand that he would be remembered in the same way when he went out hunting. Mr. Morrison endeavored to convince Mr. Woodward that he had sent sixteen ducks from Bellport, and indeed felt greatly chagrined to think that they did not reach their destination. An investigation followed, when the mystery was solved by the expressman, who said he thought they were meant for Mr. Woodruff and he accordingly took them to his residence. Many a good laugh has been had at Mr. Morrison's expense.

And here is another "fish story" from the Washington, (Del.) *Every Evening:* One day two residents of Deal's Island, Md., were out fishing. They had paddled and rowed in the hot sun all the afternoon without even getting a nibble. They had just anchored to try their luck again when the Rev. Joshua Thomas, the famous Methodist minister, came paddling along in his canoe. Now, it seemed as if one of the men had long been the subject of the reverend gentleman's prayers, without avail, however. As he came up he saluted them with: "Well, brethren, what luck?" "Bad enough, Parson Thomas, bad enough," replied one of the men. The other called out in a joking way: "Now, look yer, Parson Thomas, you pray an' we'll fish." "Done!" quickly responded the good man. He tied his canoe to a post and went down on his knees. Over went their lines. The parson poured forth his prayers in earnest, not forgetting to put in a word for the salvation of the souls of the men. Presently, excited and enthusiastic, one of the men straightened himself up and exclaimed: "Stop right thar, Joshua Thomas; I've got a bite; I'll jine your congregation." Sure enough the first fish for that day was a large sunperch, honestly believed to have been caught under the inspiration of that prayer.

I talked with a queer old man, in the pine woods in North Carolina, who had observed the restlessness of most Northern people when they first came to the South. He said they always acted "as of they were hung on wires, an' somebody was jerkin' on 'em;" but Southern people "know how to take their time, an' plenty on it." In reply I made the usual sage remarks about differences of character as affected by climate and environment in general, and concluded with the opinion that life in the South during the time of a few generations would change the Yankee blood and temperament, and produce a race of people who could "go slow" on occasion. "Yes, yes," said he; "that's so, young man, that's so. I've seen 'em. It takes 'em jest about three weeks." If you give the negroes time—to say nothing farther regarding these traits in the character of the white people—they, going on in their large, slow, inorganic way, will accomplish important results in the course of the year. Exertion seems less necessary or desirable to dwellers in Southern lands than to Northern people. A distinguished American author has said that a man could be happy sitting in a chair, in the open air, all day, in Venice, and that if one wishes to work he should not stay there too long. I have never been in Venice, but I saw many places in the South that appeared to resemble it closely in these respects.—*December Atlantic.*

Valuable and Convenient. BROWN'S BRONCHIAL TROCHES are widely known as an admirable remedy for Bronchitis, Hoarseness, Coughs and other troubles of the Throat and Lungs. They contain no hurtful ingredients, but may at all times be used with safety. *Sold only in boxes.* Price 25 cents.—*Adv.*

OUR READERS *will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the* FOREST AND STREAM, *but who would presumably be interested in the paper.*

1883. 1883.

FOR TOWN AND COUNTRY.

FOREST AND STREAM

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was permanently enlarged to twenty-eight pages. There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of current achievements and progress in this important work.

The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published. The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N.Y.

68 Fifth Avenue, Pittsburgh, Pa.

AGENTS IN THE UNITED STATES FOR THE

Westley Richards Hammerless Gun.

Manufactured by WESTLEY RICHARDS & CO., London, England. (Established 1820.)

INVENTORS AND SOLE OWNERS OF THE ANSON & DEELEY HAMMERLESS LOCK WITH AUTOMATIC SAFETY BOLT.

Making the Safest, Simplest and Most Durable Breech-Loading Gun to-day in Use.

SAFEST, because the triggers are effectually bolted whenever the lever is moved to open or close the gun. SIMPLEST, because the lock contains fewer pieces (only four) than any other gun. MOST DURABLE, because the four parts are very strong, and the swivel and bridle—the weakest parts in the ordinary lock—is entirely dispensed with.

The Anson & Deeley hammerless lock has been subjected to the severest test, having been fired EIGHTY THOUSAND times in a wear and tear trial without cleaning, and without showing any evidence of wear. The Anson & Deeley action is made in its perfection by Westley Richards & Co.

From every quarter unsolicited come testimonials of the excellence of these guns. We quote a few extracts:

"The Westley Richards Hammerless Gun excels any gun that I have ever used."—GEORGE W. BROWN, Conneautville, Pa.

"The action is simply perfect; there is no possibility of accidental discharge."—E. J. CARPENTER, Cincinnati, O.

"The Hammerless Westley Richards works to a charm, and brings the ducks right out of the sky."—CHARLES J. CLARKE, Winnows Point Shooting Club.

"The little seven-pound Westley Richards Hammerless Gun, purchased from you last summer, has given entire satisfaction. For hard shooting, easy manipulation, and perfect safety, it cannot be excelled. I used but three drams of powder and one ounce of shot throughout the entire season, killing my birds as clean in September as first of October."—ALEX. REYNOLDS, Jr., Kittaning, Pa.

"The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun to buy a Westley Richards Hammerless."—PATRICK HENRY, Clarksville, Tenn.

"I find perfect ease in manipulating the gun, and absolute safety secured from accidental discharge by the automatic safety bolt, which never fails to go to safety when the lever is moved to open or close the gun. You know how prejudiced I have been against hammerless guns. Well, I am thoroughly subdued, and I unhesitatingly say it is 'the gun of the future.'"—I. R. STAYTON, Secretary Allegheny County Sportsmen's Association.

"I feel as if I ought to let you know how the 10-bore, 9½lbs., 30in. Westley Richards Hammerless works. At the target with four and a quarter drams of Orange Lightning powder No. 6, and one and a quarter ounces No. 8 shot, I can get over 400 pellets in a 30-inch circle, 40 measured yards, every time, with beautiful distribution and wonderful penetration. With the same charge of powder and one and a quarter ounces No. 5, it is sure death to ducks at fifty yards every time. I made two successive shots at single mallards sitting on the water at 76 and 83 yards, and killed both times, and this with the above light load in paper shells. A mallard flying at 50 yards drops as if struck by lightning. Let me thank you for having furnished me what I have so long been looking for, i.e., a gun that suited me in every way. I've got it now and money cannot buy it."—F. W. COTTLE, Lincoln, Ill.

We have just received a large invoice of these matchless weapons in all grades and gauges, including the smaller bores, 14, 16 and 2 -gauge, and can fill all orders promptly, or will import to special order without extra charge. Our stock of Fine Goods is *without exception* the largest in this country. Constantly on hand, bargains in fine second-hand guns with hammers. New catalogue now ready containing illustrations and prices of all new and useful implements.

THE TWO BEST GUNS IN THE WORLD.

Harrington & Richardson Hammerless

Is the highest achievement of American gun enterprise. The workmanship is equal to the finest London Premier guns, and the fitting is closer, every part being made by machinery to a gauge. For close hard shooting nothing in the world can excel them. In every respect equal to imported hammerless guns costing twice the money. They are made on the Anson & Deeley patent, and the work is inspected Mr. Deeley. The rubber butt plate is of the most exquisite design, and all the lines are in the finest taste. Size—12-gauge, 7¼ to 8¼lbs.

1, Laminated steel barrels, outline engraving	$100 00	No. 3, Same as No. 2, but finer in all points	$200 00
2, Damascus barrels, good scroll engraving, selected stocks	150 00	4, Premier quality, every part made with the most scrupulous care, and most exquisite finish,	300 00

The Daly Gun

Has been in the market for ten years, and has the largest sale of any strictly first-class gun in the country. Hundreds have been in the hands of professional hunters for years, and are as sound to-day as when they were bought. C. R. Shelton, manufacturer of auxiliary rifle barrels, New Haven, Ct., has shot one over 20,000 times in showing his invention, and it is sound as a dollar and hasn't had one cent of repairs. Here is a sample testimonial:—Jefferson, Texas, Aug. 19, 1882. "The Charles Daly Gun I bought in 1880 is the most perfect gun I ever saw. A microscope cannot detect the slightest flaw in the fitting. I have shot it 2,000 times and the action is as strong and tight as when received. The gun is a beauty and the admiration of all my friends.—WM. T. WARE.

No. 42, Scott Action, Damascus barrels, bar rebounding locks, pistol grip, patent fore and extension rib	10 and 12 g.	$80 00
53, Same as No. 42, with Purdy double bolt and horn butt plate	10 and 12 g.	90 00
55, Same as No. 53, with 3 pin locks and engraved mountings and ornamental rubber butt	10, 12, 16 and 20 g.	100 00
60, Same style as No. 55, fine laminated steel or Damascus barrels, fine engraving and chequering, first-class workmanship	10 and 12 g.	130 00
100 "Diamond Quality."—The most superbly finished gun in the market, every part of the finest quality and most elegant workmanship, and equal in every respect to the finest London Guns,	10 and 12 g.	200 00

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

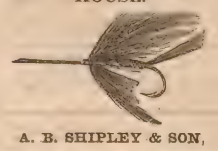
A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, 30 per cent. less than others. Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.



In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

Climax Gun Cleaner.

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

Duck and Deer Shooting

in the West and South, bored for very long range

AMERICAN ARMS CO.,

163 Milk Street, Boston.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

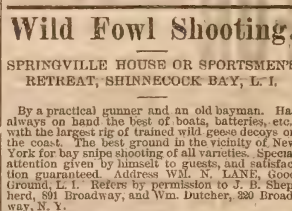
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.



During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and evenliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg, coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

ANSWERS TO CORRESPONDENTS.

OUR READERS *will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the* FOREST AND STREAM, *but who would presumably be interested in the paper.*

THE BRITISH VIEW OF THE MATCH.

SIR HENRY HALFORD has made to Earl Brownlow, the President of the National Rifle Association of Great Britain, a report upon the late International Match, and in another column we give it entire. It is short and to the point, and of course very unlike the extended report of the American team captain. It is much easier to write the story of a victory than it is to mix apology with explanation after a defeat; so the task of Col. Halford was simpler by far than that of Col. Bodine. He proceeds in a matter-of-fact way to give names and dates, with the figures of the match, and then draws the very safe conclusion that the success of the Britishers was due to their superior rifles and ammunition, and to the more lengthened experience of the men. To the latter due weight ought to be given; and the superior rifles were the natural result of the experience which many years' practice on the range had brought about. The wretched incapacity of the American rifles to do the work imposed upon them grew out of the fact that those who were using them had no way of knowing how poor they were. No rifleman could shoot a dozen shots at Wimbledon with a match rifle, stuffing it with a heavy charge of dirty powder and without cleaning, before he would be surrounded by a group of experts who would laugh him away from the firing points. And yet this is precisely what the American team set out to do, and the performance upon which Col. Bodine looked benignly. The result came in the crushing defeat administered to the Americans.

We are sorry to see a tendency towards hypercritical reading of Col. Bodine's unfortunate effort in the reporting line. He did indeed criticise the British rifles as really above the military grade, and really "special" in the ordinary acceptance of that term as applied to military. Col. Bodine rightly explains how a very excellent system of long-range military practice has been fostered at Wimbledon, and that by a liberal expenditure of time and money the British gunmakers, aided by the British riflemen, have produced the rifle with which this match was fought. Col. Bodine says that Wimbledon shooters and armorers had "produced a long-range gun for a special purpose," and in this he is perfectly correct. There is no intimation in the American captain's report that he considers the British rifle to have been prepared for this match, and yet Col. Halford, in a foot note to his report, it will be seen, first misquotes the language of Col. Bodine, and then proceeds very doughtily to demolish the fabric of his own creation. Col. Bodine did not say the rifles were gotten up "for the special purpose," but in talking of Wimbledon practice generally, said that there was a special class of shooting at Wimbledon, and properly chides the American marksmen for their neglect of this particular style of target-shooting. It was in this special line of work that the British Association challenged the Americans to meet them, and without much thought whether they were prepared for such an unequal contest or not, the American marksmen accepted the proffer of a match, with what result the world is familiar. There was a spirit of pluck and manliness about the acceptance which has never been properly acknowledged either by British shooters or press, and now with a palpable misquotation and a misinterpretation it is time to pause for an explanation of some sort.

Sir Henry Halford seconds the suggestions of the American Board for the allowance of wind-gauges on the rear-sight of military breech-loading rifles. In this he is correct, for it would be the height of inconsistency for a match to be shot at Wimbledon next year with rigid, antiquated sights, when the army regulations on both sides the Atlantic permitted the use of a shifting sight. As well have a contest with cross-bows in lofty contempt for all late improvements.

THE INDIANA NON-EXPORT LAW.—The Indiana game law forbids the exportation of game killed in that State. The Tolleston Gun Club, composed of gentlemen who reside in Chicago, own a tract of land in Lake county, Indiana. Some of the members have been arrested under the non-export law, for having carried to their homes in Illinois game killed on their grounds in Indiana. The case will shortly be tried at Valparaiso. The interests involved on either side are such as to render it probable that this case will be carried to the court of last resort. The non-export law was enacted as a remedy for the depletion of game by market-hunters who sold their game outside of the State. As against them the law was much needed; its working has been satisfactory; and it is, therefore, certainly in the interest of Indiana sportsmen to show the law's constitutionality. On the other hand, the Illinois sportsmen naturally regard it as a hardship that they cannot bring home the trophies of their skill, shot on their own land. The result of this case will be awaited with interest, for the principles involved are of importance not only to Indiana, but also to Colorado, Connecticut, Dakota, Michigan, Minnesota, Missouri, Nebraska, counties in New York, North Carolina, Wisconsin and Wyoming, in all of which non-export game laws obtain. The Tolleston Gun Club case is referred to in another column.

CLIMATE FOR INVALIDS.—We are in frequent receipt of inquiries from persons who are in search of the climate best suited to their particular needs. As a rule we are compelled to decline giving advice on the subject. Much as it would be a pleasure to direct such inquirers to the object of their search, we are not warranted in assuming the great responsibility which attaches to giving advice on the subject. A climate which may be life to one consumptive will prove death to another. Because one man has found a marvelous cure in the Adirondacks, or in Minnesota, or in Florida, it does not follow that all other persons, though afflicted with a like complaint, will find there a like cure. It is more than folly for invalids to go off into an untried climate without first having obtained the advice of a competent physician, who knows both the condition of the climate and more than can be learned by general hearsay of the climate to which he sends his invalid. Too often is it the case that the departure from home is delayed until the patient is so prostrated that he cannot endure the rough life that he may be compelled to live in the woods. We can cite from personal knowledge scores of just such cases.

QUAIL FOR MONTANA.—It is proposed by the Moutana Game Association to import quail into that Territory. The Legislature has passed a law protecting the birds for five years, at the end of which time it is hoped that the little Eastern favorite may have become a permanent addition to the game supply.

THE CONTEMPLATIVE DYNAMITER.

THIS time it happened at Belleview, a Pennsylvania town. The man who proposed to catch fish with dynamite was Adam Forsythe, and the victims of his dynamite angling proclivities were his own family.

From the newspaper reports it appears that a party of miners, who were visiting Forsythe, proposed to go fishing. But the old-fashioned method of bob, hook and sinker and one fish at a time they voted altogether too slow. They knew of a much better plan, which was to go dynamiting. The miners had some of the explosive material with them and used it quite successfully, killing about five hundred pounds of fish. Some of the people living in the neighborhood, who saw this wholesale slaughter of fish, protested against it and threatened to prosecute the men; but as they were very poor nothing was done. These kind-hearted persons may now comfort their souls with the reflection that if they had persisted in their objections to the use of dynamite as "fish bait" they might have averted the calamity which followed. For having procured a quantity of the explosive, Forsythe determined to try the sport himself. The miner Fleming, who sold him the dynamite, saw that he was perfectly ignorant of the nature of the explosive, and directed him to thaw it out. Forsythe accordingly went home, placed the dynamite in the oven to "thaw out," and went off to his work, leaving his wife and children at supper. The dynamite "thawed," the stove was blown into a million pieces, the house wrecked, the eldest boy "thrown a distance of twenty feet, where he was found, in a hole in the yard. He was horribly mangled and died about two hours after the occurrence. Mrs. Forsythe was cut and gashed in a most frightful manner. She had been sitting close to the stove and thirty pieces of iron struck her in different parts of the body. She cannot possibly recover. Robert Forsythe, seven years old, was terribly cut about the head and body, while Willie, the youngest of the boys, escaped with slight cuts in his feet. Poor Forsythe is almost crazy about the affair, and constantly exclaims that he is to blame for the disaster. He attempted to commit suicide, but was prevented." This is, it must be confessed a melancholy termination of Forsythe's first attempt in the contemplative pastime of dynamiting.

High explosives are thrown around too promiscuously. There is something lacking in our law when an ignorant man can be furnished with such a tremendous engine of destruction as this Forsythe carried home to put into his oven. For the awful calamity that followed he was less to blame than the man who furnished him the infernal "fish bait." The distribution of dynamite ought to be controlled just as that of strychnine is restricted. There ought to be a law by which the man who hands over dynamite cartridges for ignorant men to "thaw out" in the stove at home, can be held responsible for the effects of that thawing. In short, we want in America such a law as they have in France, where the sale and use of dynamite are under the control of the authorities. Then we should have fewer such ghastly fishing exploits as that of the unhappy Forsythe.

AMATEUR PHOTOGRAPHY.—We have received from Mr. Harry Babcock, of San Francisco, Cal., a number of photographs taken by him while on a summer hunting trip in Northern California. That country is rich in scenery of the grandest description, and the views are most picturesque. Among the number is one of the McCloud River fish-hatching establishment, the first photograph of it ever taken. Others are of Mt. Shasta and vicinity, the set being one of the handsomest collections of amateur photographs ever seen by us, and demonstrating anew the capabilities of this capital addition to the camp outfit.

THE GAME SEASONS.—In response to numerous requests we shall publish in our next issue the tabulated schedule of the open game and fish seasons printed in our issue of July 20. It will be found of value as a reference at this time when the close of the open seasons is approaching. Friday, Dec. 1, marks the expiration of several of the seasons, as follows: The pinnated grouse season in Illinois, Iowa, Kansas and Minnesota; the ruffed grouse season in Maine and Minnesota; the quail season in Minnesota and Nebraska; the deer season in Massachusetts, Nevada, Michigan, New Hampshire, New York and Utah; the woodcock season in Maine; the wild turkey season in Nebraska.

THANKSGIVING TURKEY SHOOTING is to be prohibited by law in Massachusetts. Thus do the degenerate children of the present depart from the ways of the fathers.

ADIRONDACK SURVEY NOTES.

XIII.—THE WOODS OF OTHER PEOPLE.

HAVING given a sketch of the Adirondacks of Mr. Murray, as he pictures it in his truthful and reliable book (let no wretched man attempt to pun on "reliable," the word is not formed from *re* to iterate). It has been suggested that it would be only fair to give a picture of the region as seen through my own spectacles. This would seem fair enough if the aforesaid Brazilian pebbles were believed to differ from those of other lovers of the silent woods that cover nearly one-fourth of the State of New York, but they are supposed to be achromatic and consequently convey the same image to the eye as do those of "Nessmuk," and the host of other good fellows who have written of the woods.

That the pure balsam-laden air of this elevated land is good for those threatened with pulmonary troubles there is no doubt, but that it is the place to bring a hopeless consumptive there may well be doubts. The cold nights often pinch one whose veins are not well filled; and the comforts of home are not to be found. Much as the old campaigners dislike to see the influx of tourists and picknickers, whom they regard as trespassers upon their domain, there is no remedy for it. Ease of access has opened up their old haunts and they will never be closed again, therefore their only refuge is to go deeper in or over to the yet unpolluted wilds of Northern Canada. The Adirondacks of to-day are far from what they were twenty years ago, and those who are only beginning to know them now will sigh with regret for the good old times of to-day, twenty years hence. This is the case with all human retrospect. The old times were the good and the present will become "old times" soon enough and will be looked back to with the same reverence which we now bestow on the past. Times change and men change and the days when the moose browsed along the Raquette and the wolf howled from the hillsides will come no more. Still there is much that is delightful to such as "love quiet and go a-angling." Many small lakes afford a partial seclusion not attainable on the main lines of travel, and tempt the man who is weary of business and the ways of the money-changers to rest and refresh himself.

To persons who know nothing of the charms of a wilderness it is hard to convey a conception of its pleasures; to correctly foot up its delights against the sum of the disadvantages and deprivations which they magnify, and to show a balance in favor of the woods. First and last comes the sense of freedom. This is imperfectly secured at the great hotels, and is found in perfection only in camp. I hurriedly note down the following curses of humanity that one is free from in the woods: Starched shirts, cuffs, collars, shaving, stiff hats, and conventionalities generally, the fiend who whistles or eats peanuts on the cars, the demon who spits all around your boots in the street cars, bells, steam whistles and other rackets, car-splitting cabmen at railway stations, traveling agents and lightning-rod men, milkmen's yells, duns, the sheriff, business, politics, hand-organs, beggars, stair-climbing, and the many other annoyances of life which are sometimes termed minor ones, but which tend to shorten our days. Add to these the newspaper with horrible pictures of Lydia E. Pinchman, that "noted but untitled woman," and the jokes of the alleged "funny man" on those fresh subjects of goats, mother-in-law, and putting up a stove-pipe, also frequent anecdotes of the mule and his playful characteristics, and you have a few more burdens lifted from suffering humanity. The blackfly and an odd mosquito or two are, at some times of the year, the only thing that can be said to detract from your enjoyment of life in the woods. It is claimed that the Adirondacks are becoming hackneyed, and that there is too much civilization there. This is only true of the fashionable routes, and I have several times said that if one breaks away from these he can find lakes where there are no hotels with pianos and no full-dress dinners; places where the guides have not been spoiled by men of wealth, who have given them lavish presents until they are above working for those who cannot, or will not, give them a sum equal to a prince's ransom, in addition to their monthly pay.

The whole Adirondack region is so elevated that the lakes lie above the rest of the State, and it is so evenly divided between mountain and lake that the air is not only pure, but dry, and when the thermometer marks zero one cannot realize that it is so cold because the shivering which is felt in a damp atmosphere is absent. Probably a temperature of twenty above zero in New York city feels colder than when the mercury stands at the cypher here. To get a fair idea of what an elevated source of water supply this region is, take a map and note how the waters flow in every direction from a circle, of which Long Lake is nearly the center. To the northwest, into the St. Lawrence, flow Moose River, Black River, the Oswegatchie, and the streams which lie as far east as the northern part of Franklin county. The Saranac, Ausable, and smaller rivers flow to the northeast into Lake Champlain, and so into the St. Lawrence. From the southern part of Hamilton county most of the waters flow south to the Mohawk, except the Sacandaga River, which, with the streams from the northern portion of the county and those of Warren and part of Essex counties, seek an outlet toward the Hudson. Such a region is always a healthy one, and when we add that swamps and marshes are comparatively scarce, it follows that the Adirondacks are superior as a health resort to most wooded countries. At the same time its restorative powers have been exaggerated in a manner that has sent those who were past restoration into the woods to die.

Trout fishing is the chief allurement in the way of sport, and those who are interested in preserving the attractions here should try to keep the fishing up to its former standard by both protection and propagation. They are very careless in this matter and take little heed of those who violate the laws or who introduce fishes which may prove to be hurtful to the native species. The introduction of black bass into Raquette Lake and pike into Long Lake was an outrage on the trout fisher, and in my opinion the placing of the rainbow, or California, trout in waters where our own beautiful native trout are found will be classed as equally pernicious after our anglers find that they have replaced their favorite fish by their rapid growth, which means a great consumption of food and a crowding of the weaker to the wall. This fish is in season at the wrong time, being a spring spawner, and its capture is prohibited by law between May 15 and September 1. Of what use then will it be to the angler who is only in the woods between those dates? The only quality to recommend the rainbow trout is its rapid growth and its gaminess, and the latter quality has not been fully demonstrated. I have seen no reason why we should have this fish in any waters suited to our native trout, and I have steadily opposed its introduction in such waters, but it being a new thing it has come in with a bit of gushing enthusiasm which may cool off some day, and the fish instead of a blessing will prove the reverse.

As I came up on the cars this last time I sat in the seat with a young man who was just sprouting his first moustache, he eyed my rod for a moment and then asked if the fishing was good where the rod and its owner were journeying. He was told that the season for trout was over, but that perhaps some other fishes might be found, whereon he launched into a glowing account of his first and only trouting experience. He was a salesman in a New York mercantile house and had enjoyed a two weeks' vacation in the Adirondacks. He rattled off the names of a few lakes, hotels and guides, and was evidently "old woodsman" himself. He had never fished before, and had the fortune to take many large trout every day that he fished, and wound up with, "I took one that weighed four pounds."

"Indeed!" said I, "that was a large one, did you take it with a fly?"

"O, yes, I had on a big fly, but my float got under the boat and I nearly lost him."

"You should have kept your float away from the boat, for if he should drag it under the keel your sinker might get fast somewhere and the fish would break away."

"The sinker did get fast on the bottom once and I thought the fish would get off, but I fetched him in."

"How heavy a sinker do you use in the Adirondack waters with a large fly?"

"About an ounce, that is heavy enough where there is no current."

"Yes," I answered, "an ounce should be sufficient, I will have to cut mine down. I have fished a little but never took a trout that would weigh four pounds."

He smiled with satisfaction to think that his trout had not been beaten, and little suspected that he was about the hundredth young man who had told me of taking a four-pounder on his first trip to the woods, and as he left the car wished me "good luck." Leaning back in my seat I fell to wondering how it is that they all do it, and why a four-pounder never falls to my lot, it must be that I don't put the right sort of sinker on my fly. F. M.

FOREST AND STREAM FABLES.

X.—THE FOX AS A SPORTSMAN.

ONCE upon a time there was a Fox who was forever boasting of the great numbers of Mice and Birds which he caught every time that he took the field, and would closely relate all the circumstances of the taking of each one of his victims. And yet he was rarely seen bringing anything home.

One day when met with some of his brethren and bragging as was his wont of his last day's sport, he told how he had killed twelve Quail in one coppice. "First," he said, "I killed the Old Cock in one side of a brush heap, and then the Old Hen in the other side. Then Five of the Young Birds among some wild grass where they were hiding, and seven more along the edge of a Brook which they were trying to cross, for they could not yet fly. After I had secured another, the last of the brood, the Old Cock being now thoroughly frightened, undertook to fly over my head as I sheltered myself behind a bush, for the day was bitterly cold, with a foot of snow upon the ground, when I sprang up and caught him. On my way home I picked up two more of the Young Birds that had straggled off into some young Corn."

He was about to continue his story when an Old Fox who had listened with an apparently careless ear now spoke up, saying, "Hold, friend Black Legs, and begin anew, for either thy memory or thy facts are at fault. Thou hast already killed Eighteen Birds instead of twelve, and the Old Cock twice. Then Seven of the Young Birds were too young to fly, though there was a foot of snow upon the ground; but for all that, Two had got among some Young Corn."

"Upon my Honor," quoth the boastful Fox, while all his companions' heads were opened wide with laughter. "Every word I have spoken is true, but I have somehow mixed Two Stories."

MORAL.

If thou must lie, let thy Story have at least the Merit of Consistency.

The Sportsman Tourist.

BIRCH AND PADDLE

IN NEW BRUNSWICK WATERS.—FIRST PAPER.

IF there be anywhere a paradise set apart for the reward of faithful fishermen, I think the streams of Northern and Eastern New Brunswick must surely constitute one of the most favored portions.

Whether the remote lakes and foaming courses of the Squatook system hold one far from civilization during the hot weeks of August, or the emerald pools and rapids of Green River, nearer the haunts of men, beguile one to a few days of careless delight, whether our eyes have feasted on the luxuriant banks of Tobique and the crystal depths of the lake which is guarded by the beetling front of Bald Mountain, or have grown bewildered among the myriads of bleak pine skeletons which clothe the rounded hills of the Miramichi, whether we have cast our flies on the sunny current of the Restigouche, in a very garden of the gods, walled round by some of the fairest peaks within the four corners of Canada, or have wielded the taper lancewood amid the roaring music and cool breezes of the Nipisiguit, touched by the very spray of the falls, whichever way our paddles may have guided us, there has been the home of salmon or trout, or both, of goodliest proportions and appetites.

The fisherman who goes to the Squatooks, indeed, will find there no salmon, as these are shut out from all the upper tributaries of the River St. John by the insurmountable barrier of the Grand Falls, but he will be amply recompensed by the huge size of the "togue" and the abundance and gaminess of the trout, while, if he know aught of the poacher's art of spearing by torchlight, here he may exercise his skill with clear conscience at the expense of the swarming whitefish or "gizzard."

All the other waters I have named are celebrated equally for salmon and trout, and on one stream—the Miramichi—that fine game fish, the striped bass, is also abundant. To this latter river, every spring, come vast numbers of sea-trout, and swarm up all the tributaries.

About the first week in June they reach a village called Indiantown, at the mouth of the Renous, twenty miles above Newcastle. Here, wading out waist-deep, never needing to change your ground, you may all day long be reeling in alternate trout and bass, and even be blessed, perhaps, with an occasional salmon. The sea-trout go from one to three pounds in weight, the bass up to twelve or thirteen. This good time at Indiantown, however, lasts only a few days, or a week at the most, and then the fish are scattered up the branches.

When one is acquainted with all these various and widely differing resorts, it becomes difficult to make choice between them; each has its own peculiar advantages and disadvantages, but all abound in such good things as the sportsman's heart desires. Perhaps what is known as the "Squatook Trip," taking all into consideration, is the most thoroughly enjoyable. The Squatook Lakes are less widely known than the other waters named. They are frequented chiefly by old habitués, who, having been lured thither once, have needed little persuasion to go again and again. Here the accepted mode of conveyance is "birch and paddle," the canoe made by the Milicete Indians of the bark of the white birch tree being the perfection of small craft for speed, lightness, noiselessness, and carrying capacity. I propose to occupy this paper with some account of an expedition round the Squatooks lately accomplished by five companions-in-arms, bent on escape from the fury of the dog star and on capture of trout and togue.

THE SQUATOOKS AND LAKE TEMISCONATA.

Temisconata is a long narrow lake just outside the boundaries of New Brunswick, in the Province of Quebec, and lying parallel to the general course of the St. Lawrence. Its outlet is the Madawaska River, almost entirely a New Brunswick stream, which empties into the River St. John at Edmundston. Midway up the lake, on its southern side, flows in the Toledi River, which is fed by Toledi Lake and Squatook river and lakes, all in New Brunswick. The little village of Edmundston, shiretown of Madawaska county, is in easy communication by rail with all parts of Canada and the United States. Our order of proceeding was to take canoes at Edmundston and pole up the Madawaska fifteen miles, thence to make a portage five miles across country, on the left-hand shore, to Mud Lake, which empties by means of Beardsley Brook into the Squatook River, to slip down this river with its chain of placid expansions, till we should float out upon the waters of Toledi Lake. Toledi River would then receive us tumultuously, and if we should survive its angry rapids and cascades, eject us forcibly at last into the rude bosom of Temisconata, whence plain sailing back to Edmundston. This makes a round trip of one hundred and odd miles, and all, save the first fifteen, with the current. It is usual, on such expeditions, to take a canoe and Indian guide for each member of the party, a very luxurious plan, by which all one has to do is to loll comfortably on green boughs in the middle of the canoe, while the Indian in the stern propels the craft all day long, by the pole when going against the stream, when in still water or with the current by means of the paddle. But we were old canoemen, and intended to rely upon our own skill and knowledge of woodcraft. The laborious part of such undertakings is the poling, and here we would have only fifteen miles of this, or one day's journey; and as for the rapids and falls to be run, we were no new hands at work of this sort, and eagerly, indeed, we looked forward to the tension of nerve, strain of muscle, and wild excitement amid the foam and spray and roar. We would do then our own poling and paddling, and cooking and tent-pitching, as well as our own fishing and shooting.

It was on a pleasant evening in the middle of July that we found ourselves on the banks of the Madawaska, just outside of Edmunston, with all our impedimenta about us. As we were tired of civilization and eager for the wilderness and its savage delights, we disdained to put up at the village inn, so we straightway pitched our tent in a little meadow beside the landing place, whence we intended making our start in the morning. To run no risk of delay or inferior craft we had brought two stanch canoes by rail with us from the Indian village opposite Fredericton, where they may be obtained for ten or twelve dollars apiece. When the camp was in order and the five "inner men" had been appeased with clam chowder and tea, we went out on the bridge, an old-fashioned covered structure exactly over the Little Falls. The moon was at the full, and the bridge cast a massive shadow, into which sank the river in sullen black

ness, to burst wildly forth below like a fleece of spun silver. A fierce roar throbbed up out of the ravine with the chilly puffs of spray, in strange contrast with the wide-spread silence of the peaceful night. Here we loitered till the ashes in our pipes were cold, and then turned in to warm blankets and pleasant dreams.

The next morning was raw and threatening, but we made preparations for an early start. While packing up we had visitors—lumbermen, trappers, Indians, such as were usually hired for guides. When these found we were going alone their forebodings were direful. They judged a swift destruction was lying in wait for the rash strangers who were going to essay the Squatooks and the Toledi without their guidance, but we were obdurate, and went, in one canoe Stranion and W. B., in the other Ranolf, Sam and myself. The bedding, extra clothing, etc., done up in squares of oiled canvas and laced snugly, served as luxurious seats, while the eatables and other perishable material were stowed in tight, strong boxes, made to fit the canoes.

The first day out is generally somewhat uneventful, and this was no exception. One only excitement fell to us. As we struggled up an obstinate rapid three miles above Edmundston, we came in view of a cosy old farm house, wherein a fair lady, well known to one of our number, chanced to be rusticating. Having heard of our coming, she was on the watch for us, and waved a dainty handkerchief from an upper window. Straightway the canoe which Stranion had in charge became unmanageable, and was swept ignominiously to the foot of the rapid. After this little delay (which we were careful not to refer to) we pushed on energetically, making short stoppage for dinner, and reached the Portage with an hour of daylight to spare. This fifteen miles of poling, against such strong water as we had all the way, we considered a very good day's work. At the Portage an old log cabin, many a day deserted, spared us the necessity of pitching our tent. It was snug, dry, well ventilated and abundantly uncivilized. What a delicious and acceptable supper Stranion concocted for us that night! He was the unquestioned head of our culinary department. Though we all labored with natural diligence at such seasons, his was the controlling, the originating mind. Then, supper over, how prolonged and bitter the strife between us wayworn *voyageurs* and the swarming midges and mosquitoes. These pests we might have avoided entirely had we delayed our expedition till the latter part of August, but this our business arrangements made impossible. We built in the cabin a smouldering fire of cedar bark and rotten wood, which produces an acrid smoke very distasteful to the mosquitoes. While we kept awake the battle was drawn, but when we slept our blood was. In the morning each was loud in ridicule of his neighbor's face, which was puffy, and swollen, and speckled with much decorative skill. As we carried no looking-glasses, we were spared the unpleasantness of self-examination. All this was mainly the work of the midges or sand flies, the most grievously tormenting of all winged pests. The Indians aptly style them "bite-um-no-see-ums"—when they call them no bad names—and the "tenderfoot," on making their acquaintance for the first time, thinks he is being pelted with white-hot needle points, invisible and omnipresent.

After deciding upon this trip we had at once written to Tom Lynch, a character of renown dwelling on the Madawaska shores, engaging him to meet us at the Portage with a team and drag to carry us over to Mud Lake. He was on hand soon after daybreak—much too early for our tastes—with his team, a yoke of half-tamed brindled steers. The drag was on the other shore at a convenient landing place, where the apology for a road which we were about to traverse took its beginning. The passage of the stream, as Lynch conducted it, was a picturesque undertaking. His ferry was a clumsy bateau, in the stern of which stood a chum of his, whom he had brought to assist, poling the craft across the current; while in the bow towered his own stalwart figure, a huge brown patch in the back of his home-spun shirt, his trousers half tucked into his boots. Here he guided, with a rope and vehement exhortations, the swimming of the yoked steers, which snorted heavily alongside. As it were a practical parody, the scene grotesquely recalled one of Arnold's vivid pictures in "The Strayed Reveller"—

> "They see the ferry
> On the broad clay-laden,
> Lone Chorasmian stream; thereon,
> With snort and strain,
> Two horses, strongly swimming, tow
> The ferryboat, with woven ropes
> To either bow,
> Firm harnessed by the mane; a chief,
> With shout and shaken spear,
> Stands at the prow and guides them; * * * * *
> The loaded-boat swings, groaning,
> In the yellow eddies;
> The gods behold them——"

We, our passage safely accomplished and speedily in our light craft, and our limbs now stretched luxuriously on a sloping patch of green, watched all this with calm eyes. Thus, in serene impassiveness, we impersonated the gods.

Before starting through the woods we took means of circumventing the black flies, which by this time had grown well nigh unbearable, burrowing in our hair and ears and eyes, and swarming upon every unprotected locality. We inflicted on them a crushing defeat by the potent aid of "slitheroo." This magic fluid consists of Stockholm tar and tallow, spiced with pennyroyal, and boiled to about the thickness of treacle, and the fly that would not shun its fragrance would be possessed of very ill-conditioned nostrils. When this was thoroughly applied to our skins we were unmolested and defiant, but might have plausibly enough claimed kinship with the generations of Ham. In such panoply marching secure we gave ear to the choice phrases, much more forcible than refined, which Tom Lynch would be delivered of at every rut or mud hole. As the whole way consisted of ruts and mud holes, these latter occasionally variegated with a few spruce poles thrown in for road repairs, it may well be imagined what a strain was put upon Tom's vocabulary, yet during the whole day—this is upon record—he was not once guilty of repetition, neither did the "well of English undefiled" once threaten to run dry. His comrade, a thick-set man with a slouched gray hat, short flaxen beard, and wonderfully stubby fingers, occasioned some dispute among us. Part held him to be Tom's brother, while others identified him with a certain Mr. Griffin of celebrity. I said he was Mr. Griffin unquestionably. En route we "froze to" each other, he and I, and taking our guns went to visit some bear traps which he had set in the vicinity of the Portage road. He gave me much of his autobiography by the way, therefore I speak with authority on the subject. Mr. Griffin was a J. P., and skilled to keep the peace when all bones were broken. He knew also to try conclusions with an antagonist and then fulmine against him with the thunders of the law. Nevertheless he was an amiable companion and a peaceful-minded man. As for the bear traps they had accomplished nothing arduous, so we rejoined the party uninjured.

The middle of the afternoon saw us launched upon Mud Lake, a pond perhaps three miles in circumference, and a very blot upon the face of the country; weedy, stagnant, and swarming with leeches. It hardly exceeds two feet in apparent depth, but the bottom is fathomless slime, stirred up vilely at every dip of the paddle. Its low marshy shores, fringed here and there with dead bushes and tall charred trunks, afforded us but one little bit of beauty, the green and living corner where Beardsley Brook flows out. Here at this season the stream was very shallow; so that two of us were required to go beside each canoe and ease her over the difficult places. I took the less laborious part of wading ahead, with the design of catching a few trout for supper. In so small a stream of course the fish were small, but they were abundant and hungry; so after a half hour of good sport in a mild way I sat down laden with my spoils. When the canoes overtook me I resigned my part to Sam, and took my place by the canoe. By this time our way had become less obstructed and we moved on easily and quickly. We were descending a beautiful alder-fringed stretch when around the bend of the stream below us appeared Sam, with undignified suddeness. He struggled toward us knee-deep in the current, dashing up the spray magnificently before him, his eyes as wide as saucers and every hair on end. "A bear! A bear!" he gasped; and hurling down his rod and fish in the canoe he seized a heavy revolver. What a change now "came o'er the spirit of his dream!" In his mouth and eyes shone sternest determination. We had grasped our weapons precipitately, and halted, but Sam urged us on, leading the way. As thus full armed we pressed forward down stream, he told us in suppressed voice that as he angled and meditated, and there was no sound save the hushed tumult of a little rapid beyond on the recurrent swish of his line, suddenly from the bank behind him rose the angry blatant growl which is the persansive utterance of the she bear with cubs. At this he felt indignant and startled; so he gave a terrific yell, and hurled a rock into the bushes to signify he was not in any wise to be trifled with. Then arose a roar, which put his voice to shame; the undergrowth rocked and crashed with the swift approach of the monster; and filled with penitential misgivings he made haste to flee. How difficult it is to run in water knee-deep, whoever has tried knows well. Nevertheless Sam had attained an almost incredible speed, and when first he broke upon our view in a cloud of spray, we imagined a Western "stern-wheeler" had at last invaded these solitudes. When we reached the scene of the tragedy, the bear, or bears, had vanished. But "they glared through their absences," and we were satisfied.

Now the stream was deeper, the necessity for wading was past, and we pressed on vigorously in search of a suitable camping ground. The weather had turned sullen and raw, and there was a light rain falling. At last, about dusk, we reached a spot that bore plain traces of a previous encampment. Some former tourists had cleared and levelled a space for their tent, and gathered for their luxurious limbs a store of elastic boughs, which we found quite dry, except upon the surface of the pile. This was all very satisfactory, but we were wet and cold, and quite tired out, and no one felt equal to the task of carrying more than his own weary body up the slippery steep of mud before him. Being in charge of our slim canteen I was called upon urgently, and finding only two tin cups at hand proceeded in each of these to mix a double ration. Before this could be fully explained Stranion seized the cup nearest him and made short work of its contents. It held Sam's share as well as his own, and Sam was righteously indignant. But Stranion grasped a canoe, and straightway it was up the bank where we desired it to be. He went to work as if his strength were the strength of ten; we caught the enthusiasm, in a moment the heights were stormed, and we had taken formal possession. The rain still fell, and only by diligent coaxing could the fire be persuaded to burn. The sand flies were more in number than the sands, but we laughed at them from the safe retreat of our "slitheroo." At supper we were all merry but Sam; and he sat cross-legged on his blanket with an injured air, eyeing his plate of fried trout scornfully. He wouldn't look at porridge that night. Though we had made him fullest reparation for Stranion's rapacity, the remembrance of it still rankled in his breast. We on the other hand were very hilarious, and when Stranion raised a modicum of porridge on his big pewter spoon, and, missing his mouth, landed it in his right cheek with such impetuosity that the spoon bent double, then indeed we made night hideous, and our convulsive laughter upset the candle, and nearly the tent as well. But Sam sat there unsympathetic and scolded us sharply; told us not to act like asses, rescued the overthrown candle, and altogether was very abusive. But the uproar, like everything else, finally had to subside, and we slept.

Alas! what despair awaited us in the morning! Ranolf had taken charge of the bottle of "slitheroo" the night before, and had placed it against a tree some distance from the camp for safety. At breakfast the flies came for us, so we went for the slitheroo; but the bottle was standing carefully on its head (a posture sometime affected by half-emptied beer-bottles!) and the precious fluid had all flowed out. We beat our breasts in bitterest lamentation, but of course it was not Ranolf's fault. By co-operation the fiendish flies had done it while we slumbered. This was Ranolf's suggestion, and we accepted it gratefully.

It would have occupied a good deal of time to concoct more slitheroo, and we were in a hurry to reach the good fishing-grounds. So all that day we toiled on under the scourge of the flies, and by nightfall our faces resembled nothing in heaven or earth or sea. Otherwise this day's journey was not difficult, though for the last half-mile of its course Beardsley Brook was so overgrown with alders that at times we were obliged to push and chop our way most laboriously. Here we wasted some time fishing for Sam's pipe, which had fallen overboard among the alders. This pipe was black, with crooked stem, very plethoric in build, and so heavy we all thought it would sink when it fell. When the catastrophe occurred we halted till the water, here about two feet deep, should become clear. Then peering down among the alder stems Ranolf spied the pipe on the yellow bottom, looking blurry and distorted through the tawny current. Long we grappled for it, and poked at it with paddles and poles. We would cautiously raise it a little way on the blade of a paddle; but even as we began to triumph it would wriggle off again as if actually alive, and settle languidly back upon the sand. We all knew without W. B.'s explanations, that its life-like movement was due to its being so little heavier than its own bulk of water, as well as to uneven refraction of the light through the moving fluid, or to some satisfactory scientific cause or other; and finally Sam, getting impatient, plunged in arm and head and shoulder, and grasped our tormentor victoriously. He came up empty-handed and sheepish, and we beheld a huge black tad-pole, now thoroughly aroused, flaunt off down stream in high dudgeon. Ranolf remarked that the laws of refraction were to him obscure, and we continued our journey; but we overtook the *bona fide* pipe further down stream, floating near the surface.

The Squatook River in this part of its course is smooth and swift, and we glided out upon the bosom of the Big Squatook Lake about noon. By six o'clock we had traversed the length of this beautiful and solitary basin, and were pitching our tent near the outlet, on a soft brown carpet of pine needles. Here was a circular opening amid the towering trunks. Between the lake and our encampment hung a screen of alder and wild cherry, whence a white beach of pebbles slanted broadly to the water. While Stranion and W. B. made preparations for supper, the rest of us, going a hundred yards or so further on, whipped the waters of the outlet, where we counted upon good sport. The shores of the lake here draw together in two grand curves, and at the apex flows out the Squatook River, about waist deep and a stone's throw broad. It ripples freshly on for the first few rods, and then begins to dart and chafe, and lift an angry voice. Here the Indians gather to spear whitefish in their season, and to further this they had fenced across the outlet with a double row of stakes. All but the smallest fish are thus compelled to descend through a passage three feet wide or so left in mid-stream; and here the bold Milicete awaits them with impending spear. This fence we found very convenient. Letting the canoe drift against it we perched on top of the stakes, a couple of feet above water, and cast our flies unimpeded in every direction. Ranolf's drop was a small fly with red body and guinea-fowl wing, and no sooner did it touch the water than it was seized fiercely. The fish, which was safely hooked, was evidently a prize, and Ranolf struggled to the beach to land him more securely. After a brave fight, which held our breathless attention, his troutship bowed to inevitable fate, and was gently scooped ashore. It was a beautiful, bright, clean-shaped fish, and the camp scales registered him two pounds. As for Sam and myself, such flies as we were wont to approve for evening casting were flouted, or only patronized by hungry younglings; while the red body and gray wing was in constant demand. Changing our casts to suit the taste thus energetically expressed, we had brilliant sport till it got too dark to see; half-pounders, one after another, and three more fish that tipped the beam for a pound each. By this time a ruddy glare shone out over the lake from our camp fire up the shore, and enticing odors were wafted to our nostrils from time to time, borne strangely on the cool night wind. So we left the gathering gloom of the river and betook ourselves to camp for tea.

We decided to spend some days in this delightful spot, and we named our establishment Hotel de Squatook. Our tent was pitched between the prevailing winds and the fireplace, which occupied the open space among the pines. Lopping the lower branches of the surrounding trees we made ourselves pegs on which to hang our tins and other utensils, and a dry cedar log, which Stranion split skilfully, furnished us slabs for a table. Of course our commissariat was well supplied with campers' necessaries and luxuries which it would be superfluous to mention here. But upon trout above all we feasted, morn and noon and night; sometimes boiled, sometimes broiled, but more often fried in the fragrant yellow meal, and the delicate richness of the hot pink luscious flakes can only be imagined by true fishermen, for true fishermen feast on their spoil where their spoils were taken, with the relish of free air, and vigor, and keen appetites.

Campers prate much of early hours, and of seeking their blankets with the setting of the sun, but no such doctrines for us. Night in the wilds is exquisite with a weird, mysterious beauty, a vague immensity of solitude, such as the garish day can never dream of. Supper over we would stretch ourselves out on the tent floor, pillowing our heads on the folded bedding, the tent curtains at the back, toward the lonely gloom of the forest, laced securely, and our boxes ranged across just inside, making for our heads a snug resting place. At our feet the wide open curtains suffered us to look out across the yellow fire-lit circle, through the trunks and hanging branches, to the still, gleaming level of the lake, whence at intervals would ring out, startlingly clear, the goblin laughter of the loon, and listening intently we would catch the dim, quavering, distant answer.

With candles burning on the boxes at our heads, we sometimes lay reading till near midnight—Stranion with Morris's "Earthly Paradise," Sam, with "Monsieur Lecoq," Ranolf with Eugene Sue's "Wandering Jew," W. B. with "A Tramp Abroad," and the writer immersed in the fortunes of "Henry Esmond." Owing to the habit common to Stranion and W. B. of reading aloud some striking passage every now and then, I often found Lady Castlewood guilty of broadly facetious remarks, or the beautiful unscrupulous lips of Beatrix uttering amorous and tearful verse. Such incongruities are startling till one gets accustomed to them.

Before turning in we would doff our scanty garments, run down the beach, and dash out into the cool lake-waters, there to float almost motionless, till the return of stillness and of the perfect reflections would leave us seemingly suspended in the midst of a starry sphere. And the absolute fullness of peace it was, to yield every limb to the soft embracing fluid, and uphold without consciousness of support, to sway gently with the gleaming crystal surface, drifting as it were, a disembodied spirit through the spangled ether! Then back to our blankets, luxuriously weary; and with the soughing of the pines all about us, whose couch comparable with ours!

CHARLES G. D. ROBERTS.

FREDERICTON, New Brunswick.

[TO BE CONTINUED.]

BOMBONNEL.—M. Bombonnel, the renowned projector of the Algerian wild-beast preserve, has again come to the front. The Paris *Figaro* says that he has been wild-boar hunting in Burgundy, and has now started off to meet Mr. Martinier, director of the *Moniteur de Chasse*, and several Russian sportsmen. He goes in hot haste, having received news from the steward on his African domain of a grand old lion, with an enormous appetite, who is dining daily off a horse or mule.

FLORIDA FISH AND GAME RESORTS.

THE following information, being up to date, will be found reliable. It is contributed by our correspondent, "Al Fresco," to a handbook, "South Georgia and Florida," published by the Savannah, Florida and Western Railway. The editor of the handbook says: "We are indebted to our friend, Dr. C. J. Kenworthy, of Jacksonville, 'Al Fresco' of FOREST AND STREAM reputation, for the subjoined items respecting sport in Florida, than whom there is no better qualified, either in finished skill as a sportsman or angler, or in that happy gift of description which lends to his achievements a graceful attraction peculiarly their own. The mere reference of his name as the author of this article is a sufficient guarantee of its entire reliability." He says:

To the wing shot Florida presents unequaled attractions. Quail can be found in every portion of the State, but for extra sport the gunner must visit Madison, Monticello or Tallahassee. At the former localities good board can be obtained on reasonable terms. In Tallahassee a new hotel is in course of completion, and will be ready for the reception of guests at an early day. Snipe exist around most of the lakes and marshes, and on the lakes ducks are found in countless numbers.

Ducks, geese etc., can be found in every bay, lake, river and lagoon, and owing to the climate and character of the food they are as fat as squabs. Those who aspire to the noble sport of bagging "honk honkers," should visit the mouth of Suwannee River, Dead Man's Bay, west of the Suwannee, and James Island. In addition to geese at the points referred to, the waters swarm with ducks, and the beach and oyster bars at many points are covered with snipe and curlew. In addition to shooting, the rivers emptying into the Gulf are alive with sheepshead and sea trout, channel bass and large-mouthed black bass. If disposed the gunner can leave camp, and in the hamaks and pine woods find good deer and turkey shooting. To reach the points indicated sportsmen should visit Cedar Keys, and charter a sloop of from five to six tons at from five to six dollars per day. The captain provides stove, cooking untensils, bedding and one skiff; and the charterers will only have to furnish provisions. These boats will comfortably accommodate a party of four. If extra skiffs are desired they can be built or purchased at Cedar Keys at from thirteen to fifteen dollars, including row locks and one pair of oars. Persons desiring information regarding the charter of a boat or the building of skiffs should communicate with J. Ira Gore, Esq., Cedar Keys.

My friend, Col. Clinch, recently informed me that at his plantation on the Satilla River, very fine striped bass fishing can be secured during March and April. The fishing point is about one mile above his house. Parties desirous of engaging in bass fishing would be compelled to camp out. The Clinch plantation can be reached by leaving the S. F. & W. Railway at Folkston, hiring a team, and driving twenty-three miles. A supply of provisions can be obtained at the depot. Col. C. informed me that the bass take a large and gaudy fly, as well as the minnow. This point has been annually visited by a noted fly-fisher, and we have reason to believe that we shall incur his displeasure by opening up a new field to the craft.

To those who wish to indulge in fishing or shooting and at the same time enjoy the pleasures of a busy winter resort, the comforts of first-class hotels, and at the same time be within the reach of the telegraph and daily mails, Jacksonville presents a suitable location. By taking the morning train on the S. F. & W. Railway, or the F. C. & W. R. R., and proceeding thirty or forty miles, sportsmen can enjoy eight hours of quail shooting and return in time for supper. Arrangements may be made for the stoppage of trains between stations. Early in the season the river for many miles below the city is literally covered with ducks. By taking the steamer Mabel F. in the morning a number of hours can be devoted to ducking, and parties can return to the city on any of her trips, which are two hours apart. McGirt's and Pottsburghs creeks, within three miles of the city, furnish fine bass fishing. At Jones' boat yard Whitehall boats and good carsmen can be hired at all times.

A fast steamer leaves the city for Mayport daily, and at Burroughs's hotel fishermen can secure a good bed and a square meal at one dollar and a half per day. The creeks and bayous in the neighborhood are stocked with ducks. At the jetties, two miles from Mayport, superior sea trout and sheepshead fishing exist. Fishermen, who will provide boats and bait, can be hired at $2.50 per day. On several occasions I have secured the services of a fisherman named McMullen, and I can recommend him as honest, reliable and industrious; as he fishes for a living, he is acquainted with the points where fish do most congregate.

Sportsmen desirous of engaging in deer shooting should visit the head of St. Sebastian Creek (a tributary of the Indian River), Sanibal Island, the upper Caloosahatchie, the Southwest Coast south of Punta Rassa, or the lower Kissimmee country. A railroad is in operation from Sanford to Kissimmee City on Lake Tahopekaliga, and by Dec. 1 two or more steamboats will be plying on the Kissimmee River to Lake Okeechobee. Lake Istokpoga lies about twenty miles northwest from Lake Okeechobee, and is reached by Istokpoga Creek, which empties into the Kissimmee River, about twenty miles north of Lake Okeechobee. Lake I. is about twenty miles long, and six wide, and is the home of the alligator. Sportsmen can transport a boat from Sanford to Kissimmee City, and secure a tow to the mouth of Istokpoga Creek. The region around the lake has not been visited by sportsmen, and, in consequence, offers a superior field for 'gator killing, turkey shooting and deer and bear hunting. Cattle owners who are in the habit of visiting the country around the lake have assured me that large game exists in great quantity. Based upon our observations and experience in lakes further south, we have reason to believe that ducks exist in countless numbers, and that the fishing must be excellent.

At Lake Istokpoga sportsmen will find an untrodden field, and we feel assured that they would be surfeited with sport. As a corner grocery or store does not exist within one hundred miles, a stock of food must be transported to the camp.

South of Lake Monroe this stream passes through extensive marshes and several lakes; and friends who have visited this section informed me that snipe and ducks exist in great quantities, and that the water is literally alive with fish. In the woods and prairies adjoining the lakes fair deer and turkey shooting can be obtained. A through steamer leaves Jacksonville every Saturday for the upper lakes. As a boat is indispensable one should be purchased in Jacksonville and transported on steamer's deck.

This river, or more properly speaking, salt water bayou, has, to a certain extent, been inaccessible in the past. To reach it sportsmen should take steamer to the upper lakes and proceed to Titusville or Rock Ledge where suitable boats, with experienced captains, can be chartered on reasonable terms. On the river flats good duck shooting will be found, and in the hamaks and on the high lands adjoining the tributary streams, fair deer and turkey shooting can be obtained. At the mouth of the river the angler and hand-line fisherman can occupy their time until muscles cry out *precesi* in the capture of bluefish, sheepshead, cavalli channel bass, mangrove snapper, and many other varieties too numerous to mention.

To the canoeist Florida offers unusual attractions. A canoe can be shipped by steamer to Savannah from Boston, New York, Philadelphia or Baltimore, and by S. Florida & W. Railway to objective point. The canoeist can arrange in Savannah for a passage in the caboose of a freight train, and unload his canoe and impedimenta at the crossing of the Suwannee River north of Live Oak, or proceed to Rowland's Bluff, south of Lake City, and thereby avoid rapids and log booms. The Suwannee River is a beautiful stream with high bluff banks, and the *voyageur* can descend it to the Gulf. If disposed, he can traverse the bay and inside passages to Cape Sable; or, if inclined to prolong his trip, he can ascend the Caloosahatchie River to the Falls, paddle up the canal in course of excavation south of Okeechobee, and when the dredge boat is reached, work to Lake Okeechobee. Before the first of January it is probable that a navigable canal will be completed from the falls to the lake. From Lake Okeechobee the Kissimmee can be ascended to Kissimmee City, and at that point the canoe can be placed in a car and transported to Sanford, at which point the canoe can be launched and the noble St. Johns descended to Jacksonville. If disposed, the canoeist can prolong his jaunt by sailing or paddling his canoe through the inside passage to Fernandina and Savannah.

East of Waldo the canoeist will find an interesting lake region, for within fifteen miles of that place forty-two lakes from 200 yards to 7 miles long exist. These lakes vary in elevation from 70 to 130 feet above tide water. The paddler will find the end of the Santa Fe Canal within 300 yards of the depot at Waldo, which will lead him into Lake Alto, and from Lake Alto a short canal will conduct him to Lake Santa Fe, a beautiful sheet of water covering about 30 square miles. At the easterly end of Santa Fe Lake the village of Melrose will be found, with stores and post office. At this point a conveyance can be obtained to transport canoe and impedimenta a distance of two miles to Five Mile Lake. In many cases a portage of a few hundred feet will enable the canoeist to reach another lake. The land adjoining the lakes is elevated, dry, and remarkably healthy. Duck, snipe, and plumage birds are plentiful, and every lake, creek, and pond is well supplied with bass, perch, and bream. When tired of lake exploration, the wanderer can descend the Etoneah or Black creeks to the St. Johns River. When we consider the healthfulness of the State, its accessibility, its unrivaled climate, and its thousands of miles of placid waters, eminently adapted to canoeing, we can only express our surprise that so few engage in canoe trips in Florida.

No portion of the world presents so fine a field for the fisherman as the southwest coast of Florida. Mr. E., of New York, captured, with the fly, within a few weeks, on the Homosassa River, ten distinct species of fish. Last spring my friend Dr. F., of New York, visited me, and stated that he had fished in the far West, in the tributaries of Lake Superior, in the Adirondacks, and in Canada, but no place equaled Southwest Florida for fly-fishing. He enumerated eleven distinct species of fish that he had captured with the artificial fly—among the number were channel bass, brown snapper, cavallii, ravallier, seatrout, large-mouthed black bass, and skipjacks. And I will ask, where else but in Florida can such a number of fish be captured with the fly on one stream but ten miles in length? On the southwest coast the fish have not been educated, and they will not refuse anything in the shape of an artificial fly so long as it is large and gaudy. One of the best of biters and a plucky fighter is the cavallii. At certain points, more especially on the Caloosahatchie River, above the islands, they run very large, occasionally attaining a weight of sixteen pounds.

As a winter cruising ground this coast cannot be equaled. The climate is all the most exacting can demand. During the winter rain seldom falls, storms are very infrequent, surf and undertow do not exist, health is beyond question, the coast line is shallow, duck and beach bird shooting cannot be equaled, and the fishing is superb.

For a cruise on this coast a boat of from five to eight tons, accommodating four to six persons, can be chartered at from five to seven dollars per day. The charter will include captain, boy, skiff, stove, cooking utensils and bedding. Provisions can be purchased on reasonable terms at Cedar Keys. For a trip on this coast a sharpie from twenty-five to thirty feet long with a large cabin would fill the bill. A boat could be shipped by sailing vessel from New York to Jacksonville, and by train to Cedar Keys. My first trip on the coast from Cedar Keys to Charlotte Harbor and the head of the Caloosahatchie was made in a flat bottomed boat, twenty-one feet long and seven feet six inches beam. My last trip from Key West to Cedar Keys was made in a catboat sixteen feet long and six feet beam. At the passes (entrances to bays and lagoons) along the entire coast superiour fishing will be found.

A party of two can enjoy a trip on this coast if they provide themselves with a boat similar in model to a Delaware River batteau. She should be twenty feet long and seven feet wide, six inches higher in the sides than usually built; decked over for at least six feet forward; cabin, eight feet long, and clear cockpit of six feet; wash board, eight inches wide. With centerboard and cat rig, such a boat would answer an admirable purpose; her draft would be light, and she could be rowed and poled in an emergency. Instead of seats, movable boxes could be constructed and used for the stowage of provisions, arms, ammunition, firewood, etc. At night these boxes could be stored in the cockpit or on the cabin, and ample sleeping room would be provided. With a canvas tent to pass over the boom at night and fasten to screweyes on each side, the cockpit and cabin could be protected from rain and dew. Before parties indulge in a cruise on this coast, they should peruse "Camp Life in Florida," published by Forest and Stream Publishing Company, New York. [Out of print.—ED. F. AND S.]

Until recently this portion of Florida was almost a *terra incognita*, and the first extended notice of it was published in the FOREST AND STREAM and republished in "Camp Life in Florida."

Having spent nearly two months in the region referred to, enjoyed the equable temperature, balmy atmosphere, refreshing breezes, and unrivaled sporting attractions, we sincerely trust that the adventurous tourist and sportsman may be induced to follow in our wake.

Nearly seven years have elapsed since we navigated Clear Water Harbor, Tampa and Sarasota bays, coasting the mainland from Sarasota Pass to Gasparilla Pass, wandered among the islands of Charlotte Harbor, ascending the Caloosahatchie River to Fort Thompson, and succeeded in reaching the almost unknown Lake Okeechobee. Often has memory carried us back to the pleasant scenes of that trip, and we sometimes sigh for an opportunity to revisit the many charming spots found *en route*, and to fight over again our battles with sharks, alligators, devil fish *et al.*

Persons desirous of visiting and camping out at Charlotte Harbor should have one or more batteaux, fourteen feet in length, built a Cedar Keys, costing, with oars, row locks and one coat of paint, about $15. A large and comfortable steamer leaves Cedar Keys twice weekly for Punta Rassa; excursion ticket, $18. Arrangements can be made for the transportation of the boats on the steamer's deck. By making arrangements with Mr. Mitchell, store-keeper at Cedar Keys, a fresh supply of provisions can be obtained as often as necessary; freight about 40 cents per 100 pounds. Fort Meyers, distant from Punta Rassa about twenty miles, possesses three large stores, where a supply of provisions can be secured. The steamer Spitfire plies between Fort Meyers and Punta Rassa twice weekly, and Captain Nelson would execute commissions. At Punta Rassa there is a post office and telegraph station, and although out of the world the wanderer can communicate with home. A good point for camping would be Sanibal Island, and if an A tent were pitched on the beach no inconvenience would be experienced from insects. Deer are plentiful on the island, superior oysters exist in some of the lagoons, beach birds can be found in great numbers. Jacob Summerlin has an extemporized hotel near the dock, where sportsmen can board and obtain a good meal. At the dock they can enjoy the best sheepsheading in the United States, and if they seek larger game they can indulge in the capture of fish ranging from 50 to 300 pounds. If disposed to try camp life in Estero Bay or at Gorden's Pass, parties can engage a small sloop at Punta Rassa to remove them and their effects. Gorden's Pass is about twenty-eight miles south of Punta Rassa, and furnishes a fine field for fishing, ducking, beach bird shooting and bear and deer hunting. In this section bears are very plentiful, and if sportsmen hanker after a hug they may be accommodated. From Gorden's Pass inside channels can be followed to Galleran's Bay, and from this bay to Cape Sable the coast line is very shallow, and among the islands unrivaled sport can be obtained. In the fall of '81 a correspondent contributed a series of eight letters to the *American Field*, of Chicago, descriptive of the southwest coast of Florida, and parties who propose visiting this section should receive the numbers.

Whitehall boats can be purchased on reasonable terms at Jones' boat yard in Jacksonville. Batteaux will be built to order in Cedar Keys at about $15 each. They can be ordered through J. Ira Gore of Cedar Keys. Small sloops of four to six tons burthen, suitable for cruising on the Southwest Coast can be chartered at Cedar Keys at from $5 to $6 per day. At St. Augustine and Titusville suitable boats can be secured on reasonable terms. Parties who wish boats built to suit their views should communicate with Mr. Chappell, boat builder, Jacksonville. He built two cruising boats for me, and I can recommend him and his work. If persons ship boats by schooner to Jacksonville they can consign them to the care of John Clark, Esq.

During the winter months the climate of Florida cannot be equaled by any portion of the Union; rain seldom falls and storms are very infrequent. The health of the State is remarkable, the late census showing that the mortality is only 10.6 per thousand—less than that of any State east of the Rocky Mountains. The bugbear, malaria, merely exists in the brains of those who wish to deflect travel from Florida.

During the winter months insect pests are not troublesome. Snakes need not be feared, for, in all my wanderings in the State, I have met with but one rattler.

To those who are seeking health and recreation, and can appreciate a superior winter climate, enjoy good hunting, excellent shooting, and unsurpassed fishing, we will say, from actual experience, indulge in a boat cruise in the Land of Flowers.

On arrival in Jacksonville, sportsmen should receive the statement of steamboat and railroad runners *cum grano salis*, and consult some person who has no axe to grind, and who is familiar with the sporting resources of the State. By inquiry of Pitman of the "Sportsman's Companion," or Mr. Campbell of the St. James, Mr. Foster of the St. Marks, Mr. Lee of the Duval, or Mr. Davis of the Everett House, gentlemen will be furnished the names of those who will cheerfully give reliable information, and who will smooth the way for the uninitiated.

Natural History.

GROUSE ON MARTHA'S VINEYARD.

A correspondent of FOREST AND STREAM inquires in a recent number about the pinnated grouse on the island of Martha's Vineyard.

Fifty years ago, while on a hunting and fishing tour, I landed on that island, then owned by the Bowdoin family, and was told that the grouse were there in considerable numbers, but that they were protected, and that shooting was not allowed except by special permission from the owners. Martha's Vineyard was then mostly covered with thickets of brush which afforded a refuge for the grouse, and it is said that these birds had been protected there from early times. These "heathcocks," as they were called, occurred in New England and the Middle States, as far South, at least, as Virginia. An early work called "A Perfect Description of Virginia," (London, 1649) mentions among the birds of that plantation "the heathcock." In the early part of the century an act was passed by the General Court of the century an act was passed by the General Court of Massachusetts to protect certain animals of the chase, among them, "the heath-hen," which was written by the clerk "heathen," and was supposed by many to refer to the Indians, some of whom lingered within the State; and comment was evoked on the supposed brutality of the Yankees, which classed the red men with the beasts, and rendered it necessary to give them like protection from extermination.

In still earlier times these birds were so abundant in New England, that the story goes that apprentices made it an article of their contract with their masters, that they should

not be obliged to eat "heath-hen" more than twice a week—preferring, probably, pork and beans.

I have heard that the last of the stock of pinnated grouse on the mainland of Massachusetts was killed about 1830, near Northampton by a well-known sportsman of Boston.

Forty years ago these grouse were as plenty, as cheap, and as little esteemed in Illinois as in the early days of New England. I have bought them in Chicago at six cents each, and have been invited by farmers to come out and kill the "chickens" that were destroying the wheat. "We will keep you," they said, "free gratis as long as you will stay." I have killed grouse on ground which is now in the heart of Chicago, covered with blocks of stores; but one would have to go now 100 miles west of the city to make a decent bag, and at the present rate of destruction of these birds in Illinois, they may perhaps be found on Martha's Vineyard after they have disappeared from the Prairie State. S. C. C.

THE BOSTON ANTI-SPARROW CRUSADE

WASHINGTON, D. C., Nov. 24, 1882.

Editor Forest and Stream:

I beg you to give the wide publicity of FOREST AND STREAM to the inclosed correspondence between an old Bostonian and Mr. Wilson Flagg. These letters ought to be read and acted upon in every part of the United States. It is now several years since I undertook the apparently thankless task of leading the move against the sparrows, and time has shown the soundness of the position I have maintained. Since the death of Dr. T. M. Brewer, the only person of any consequence whom I have known to defend the sparrows is Mr. Henry Bergh, who once poured out the vials of his unnecessary wrath in a most amusing stream of personal vilification. But having already once castigated that gentleman, and having no desire to punish him twice for the same offense, of which he may perhaps have already repented, I submit the correspondence without further remark.

ELLIOTT COUES.

The letter below, writes Mr. Flagg, in the Boston *Transcript*, of Nov. 18, was sent me a short time since, and, deeply sympathizing with the regrets of my correspondent, I forward it with my reply:

BOSTON, Nov. 6, 1882.—*Mr. Flagg:* My Dear Sir—The rapid increase in numbers of the abominable English sparrows, and the consequent banishment of our own sweet-singing and insect-eating birds, is a source of endless sorrow to me, and I write to you to ask you to arrange some plan by which we may be relieved of our foreign pests. In the days of my childhood Boston Common and Boston gardens were musical with birds, who were unceasingly useful in destroying the ever increasing swarms of insects. Suddenly some wise Democrat (Mayor Smith, I believe) introduced a colony of gray squirrels upon the Common. As there were no nut trees to provide food for the animals, they feasted upon birds' eggs until there were not enough birds left to keep the insects from making sad havoc with the trees. Then some unwise persons, who knew nothing of the habits of different kinds of birds, introduced the seed-eating foreign sparrow to remedy the mischief done. Behold our trees disfigured with numberless "bird houses" and swarming with sparrows, whose noisy quarreling is heard from sunrise to sunset. And the city fathers pay large sums every year to men who destroy cocoons and caterpillars, tar the trees, etc.

But the mischief does not end here, for our foreign pests have extended their habitations to the country all about Boston, many miles north, south and west, driving off our native birds, as I can testify by my own observation. The farmers say they are destructive to grain. The Spaniards have a saying to this effect—"Beware of the devil, the priests and the sparrows." Hoping you will not scorn my petition, Yours Respectfully—OLD RESIDENT.

In reply to my correspondent, I would say that if the sparrows could be destroyed by curses they would have perished long ago. The introduction of the Norway rats was less of a public misfortune, because they did but take the place of the American black rats; they were only the substitution of a foreign nuisance for a native one not the less offensive. The house sparrows are now the constant subject of complaint from all parts of the country, and I believe if any practicable method should be devised for their extermination it would be universally adopted.

In Europe the sparrows are as great a nuisance as they are in this country; but their numbers are kept down by petty gunners and trappers, who sell them in the market. In that country they are neither protected by the game laws, nor are they generally provided with boxes, and as they move in flocks, they are easily taken in considerable numbers at a time.

But our case is very different from that of the inhabitants of Europe. The sparrows, being indigenous in that country, have not caused the extermination of other valuable and interesting species. They have not been the cause of those regrets which the lovers of nature in this country have suffered from witnessing the banishment of their former musical friends of the feathered race from the garden and the wayside. Formerly the few bird houses that were put up in our towns and villages were occupied by wrens, bluebirds, martins and swallows, whose melodious notes awoke us from our sleep in the morning with glad sounds that made every sunrise seem an opening paradise. At the same time, the two vireos and the linnets were vocal in the tall, over-arching elms in our pleasure grounds and our roadsides.

Now all the bird houses have been monopolized by the sparrows. The bluebirds, the wrens, swallows and martins are strangers in our land which offers them no homes, and the vireos have gone into voluntary exile because they could not endure the presence of the sparrows. They have done as we should do if our village was suddenly overwhelmed by legions of Hottentots whom we could not expel. A few of our familiar birds still remain with us. The robin and the oriole, being larger birds and different feeders, do not come into conflict with the sparrows. The same may be said of our little ground-builders, the song-sparrow and the vesper-bird, the latter being outside of the usurped domain.

All is now changed. Instead of the delightful anthem of morn which came into our windows with the balmy breezes of June and inspired every heart with gladness, we hear the discordant chirping and yawping and chattering of hundreds of sparrows, without an intermingled sound that is musical. If a solitary vireo still lingering in some beneficent elm that stands a little off from this pandemonium should utter a few cheerful notes, they are drowned in the horrible discord of the English sparrows. As well might we listen to a sweet parlor singer at her harpsichord while a rattling hailstorm is beating against the windows.

How long, O Catiline! shall we allow these monsters to abuse our patience? Some immediate action must be commenced for their universal extermination. As a preliminary step in this truly righteous crusade, a society must be formed, having its headquarters in Boston, with branches extending over the whole continent. Let those persons in this city who are interested in the work call a meeting forthwith and organize, for the work should begin this coming winter. I should be rejoiced to engage actively in this enterprise were it not for my physical incapacity. Younger men and especially women to whom we look for the initiation of all works of beneficence, must begin the work. In behalf of the enterprise I offer the following hints that may serve as outlines for the constitution of the society:

1. This association shall be called a society for the extermination of the English sparrows and the protection of our native birds.

2. The officers shall be a president, vice-presidents, a secretary and treasurer, and directors.

3. Persons of both sexes shall be equally eligible to the offices of the society.

4. The admission fee shall be $1.

5. Meetings shall be held monthly in such places as may be designated by the secretary, until a permanent place of meeting has been obtained.

6. The duty of the directors shall be to take measures for the immediate organization of branch societies in all parts of the country, and to devise means that may be prudently used for the destruction of the sparrows and for the repeal of all laws which have been enacted for their protection.

WILSON FLAGG.

DEATH OF MR. WILLIS'S QUAIL.

Editor Forest and Stream:

My quail are all dead but two young ones. The old ones died Saturday and yesterday, and I send them, together with one of the young ones, hoping that an examination will enable you to find the cause of the trouble. The birds were all well and growing finely until I brought the plants into the conservatory, where I raised the quail. None of those that died were sick over twenty-four hours. The old cock bird was a wild one that I bought last fall, and the hen was of a brood hatched under a bantam a year ago last spring. My success, notwithstanding the disastrous result of my first experiment, encourages me to try again. JOHN J. WILLIS.

WESTFIELD, New Jersey, November 27.

[Three of these birds, the old cock and hen and a young male, were sent us for examination, and we give below a statement of their disease. The birds appeared to be in good condition, were by no means emaciated, and their crops and gizzards were filled with food. Death resulted from some acute disease which had but a brief course. Following is the result of our examination:

No. 1. *Ortyx virginianus*, adult male.—Received Nov. 27. Autopsy same day. The organs of the specimen presented a normal appearance, except as to the alimentary canal, which was the seat of a more or less intense inflammation throughout its whole length. This inflammation was most marked throughout the small intestines, or from the end of the duodenum to the beginning of the colon. The mucous and sub-mucous tissues were deeply injected, and upon the serous membrane covering the intestine an effusion of lymph had taken place, and some slight adhesions had formed. At various points along the ileum were numerous small hard fæcal masses which appeared to be adherent to the mucous membrane. Death undoubtedly resulted from this inflammation, which was probably due to the ingestion of improper food.

No. 2. *Ortyx virginianus, juv.*, male.—Condition precisely the same as in the preceding, except that the inflammation was less acute.

No. 3. *Ortyx virginianus*, adult female.—A much smaller and less sturdy bird than the adult male. The inflammation in this specimen extended over a larger tract than in No. 1, the duodenum being deeply injected for its whole length, as well as the ileum. In each specimen the colon was filled with dark fæcal matter.

In all three, death appeared to have resulted from the same cause, as above stated. The violent inflammation of the bowels which, unhappily, terminated the existence of our friend's pets, was, no doubt, caused by something which they ate from the plants, which had just been moved back into his conservatory. Whether this was the fruit, or leaves, of some one of the plants, or some poison which had been used to destroy insects, we could not tell without a detailed examination and analysis of the partially digested food contained in the organs.

We are glad to be assured that Mr. Willis intends to continue his efforts to rear Bob White in confinement, and hope for those now remaining alive a happier fate than that of their relatives.]

THE DOINGS OF KEEP.

FOR the benefit of those who are interested in the cute doings and wonderful knowledge possessed by some dogs, I relate the following of Keep, in his prime a finely proportioned and beautiful field spaniel, valuable as an aid to his master among the grouse and woodcock, also as a retriever, bringing all birds, by whosoever shot, to his master's feet. But alas! he was rewarded but too well for his many brilliant achievements, and at eight years of age is able with great difficulty to mount a chair at command, and in proportion much resembles a twenty-pound 'coon.

Once, in his young and frisky days, Keep accompanied his master and friend C. to a neighboring pond, whither they went to catch pickerel through the ice. "Tip-ups" were set, and business began. Two strangers were observed at the same spot near the opposite shore. They used a twig set nearly perpendicular in the ice with a red flag at the tip. When the flag was bent low it gave evidence of a hooked fish. As fast as the fish were thrown out Keep was on hand to "hook" them over again, carrying them all, as fast as caught, to his master. Later in the day one of the strangers saw the dog pull down one of their twigs and scamper away. Saying nothing he awaited results. His companion on observing the flag down ran with great speed to be first to pull out the fish, but found nothing on the hook but a lively bait. His partner came up and told his story, and they both laughed heartily and the dog laughed too (don't dogs sometimes laugh). They finally concluded that they would have to buy the dog or go home ushless, but the fish were returned to them.

The next day was warmer, and friend C., with the bucket of minnows, followed by the dog, proceeded to bait the hooks. The ice was covered here and there with shallow puddles, making it difficult walking in gum boots, and friend C. sat down and the bait spread itself out likewise. Keep watched C. pick up the minnows for a few minutes, when he proceeded to help him in this way: He would place his paw on a fish, take it up gently in his mouth and carry it to C., who would return it to the bucket. Most of them were retrieved in this manner without being injured. Before returning from this trip the dog found, and brought to his master, a pocketbook which had been lost.

On Keep's first visit to the seaside he was sent into the water to retrieve a wounded gull. He swam straight for the gull until the bird presented its bill, when he payed out and swam in circles just out of reach to avoid any further payments on his property. This was kept up for some minutes, but the bill was always in the way. Finally he made a rush with mouth wide open, and shut on to the gull's head, and in this way tugged her to shore. His first introduction to a crab was very amusing to the bystanders. He was nosing over one, when his nose received an embrace that was anything but loving. He tried to claw it off, but it was no go. Finally, throwing up his head, the crab was tossed some ten feet in the air, and when he alighted Keep had his foot on him (he was very careful to put it in the right place) and cleaned his crabship of claws in about a minute, and then left him in disgust.

Once upon a time an acquaintance and trader visited the dog's master, and stated that a man had offered to trade paper stock at eighteen cents for a horse he had. Thinking the above rather too high a figure for the stock, he requested his friend to find out what it was selling for. So the master, followed by the dog, started to interview a man whose son was in the business. The man stated that stock was selling for considerably less, and he had a letter from his son to that effect, but it had been mislaid. Master and dog returned to the store. The acquaintance, observing something in the dog's mouth, says, "Keep, what have you?" removing a letter and reading, "Paper stock quoted at ten." It proved to be the letter from the man's son. It is needless to say that there was no trade, and that this was a very curious coincidence.

One day Keep came into the store with a very proud look in his face and something in his mouth. He carried it for some twenty minutes before anyone was curious enough to find out what it was. It proved to be a one dollar greenback, wet and dirty. The dog seems to know the value of a dollar, and the market well knows the worth of his dog. There are many more curious incidents that might be related of this dog, but I have already drawn this out longer than I intended, but there is no inflation about it if I do sign myself GAS.

TRAMP DOGS IN CENTRAL PARK.—Tom Donohue, the night watchman in Central Park, is an old man-of-war's gunner. Among his many duties is that of shooting the tramp dogs, the vagrant cats, the rats that suck eggs and kill chickens, and the screech owls and night hawks. The killing of the deer by the tramp dogs last week was keenly felt by Superintendent Conklin, and Tom Donohue's blood was roused when he heard of it. The watchman was found by a *Sun* reporter on Saturday night oiling and burnishing up his rifle. In a corner of the armory cellar lay the bodies of three tramp dogs, two cats, and one fat screech owl. The dogs, although dead, were frightful enough. One especially, a big, lank brute, was the ideal tramp dog. Ferocity, treachery, and cunning were marked in his face. "Yes," said Tom Donohue, "those tramp dogs infest the park at times, and enough trouble they give me. 'Cute? Well, I should say so. did you ever know anything, man or beast, that lived by its wits, that wasn't 'cute? It's many years since I first got at them. At that time I carried only a stout stick. One night I went on my rounds, and fancied I heard the sharp yells of dogs attacking something. I dodged around the trees and bushes, and found a pack of them attacking the yak. When I came up they ran away. I continued my rounds. Again I heard the dogs. I went back and found they had the yak down, and were tearing him. One big dog attacked me, but I killed him with my stick. The yak was so badly torn that it had to be killed. Superintendent Conklin got me this rifle, and many a dog have I killed since. A few summers ago we lost several swans. Night after night I watched, but could get no trace of what killed them. One night I climbed a tree and stayed there two hours, when I saw a dog stealthily approach the border of the lake. The beast seemed to be watching as if to discover danger. I did not stir, and at length it gave a sharp bark, and half a dozen dogs came up. Five of them jumped into the water and swam toward the island where the swans and ducks were. One remained on shore as a guard. When the dogs had nearly reached the island I sighted the guard on shore and shot him. You never heard such a howling in your like. The dogs in the water knew I had them. I shot three of them, and since then the swans have not been touched.

Game Bag and Gun.

THE TOLLESTON TEST CASE.

TESTING THE INDIANA NON-EXPORT LAW.

[From our Regular Chicago Correspondent.]

NOT for many years have the local sportsmen and gun clubs been so violently agitated over anything as they are at present over the war between the Tolleston Gun Club of Chicago and the natives of Tolleston, Lake county, Ind. Your correspondent has taken especial pains to investigate the causes and effect, with the future course of both sides, and desires that the FOREST AND STREAM shall present a clear and impartial statement of this trouble, which seems to create much interest, even among outsiders, who do not know the butt of a gun from the muzzle. The rash statements afloat on all sides and freely ventured in gun stores and at club houses about this matter were not to be taken for a moment. Your correspondent therefore went direct to fountain heads on both sides and he can say that the facts render the aspect of the case very much different from that usually accepted.

It has been universally believed that the war was a personal one, full of vituperation, bitterness, and with smouldering hate and malice for foundation on both sides. This is not true. With the exception of a few ignorant pot-hunters, who resented interference when they tried to roam at their own sweet will over the grounds belonging to the club, and were consequently arrested and fined for trespass, the feeling on the part of the natives and club members is of a very pleasant nature, while at the same time both sides are holding out firmly for alleged rights. A great many more of the generally accepted statements are wrong. As the affair is likely to be of national importance, and in its legal bearings to be of interest to sportsmen everywhere, I send a rather full statement of the case. None of the local alleged sporting journals have had enterprise enough to publish anything about the trouble.

The Tolleston Gun Club was formed in 1874 and incorporated. Lands to the extent of sixty acres to start in with were selected in Lake county, Ind., near the town of Tolleston on the Little Calumet River. A tidy club house was built and with each succeeding year improvements were made and more land leased and purchased until finally at the commencement of the past season the club had 2,300 acres which they own outright. The club is composed of

about sixty members, most of them the best citizens of Chicago. Among them are Judge Knickerbocker, judge of the Cook county court; F. A. Howe, of the Grand Trunk Railway, and president of the club; L. Z. Leiter, C. D. Peacock, J. S. Norton, C. C. Mueller, Alex. Sample, Abner Price, S. H. Turrill, C. D. Partridge, G. S. Alexander and many other merchants, Board of Trade men, railway officials and professional men. It is, with the exception of the Puckaway Club, the "touiest" gun club of the city. It originated in the year named from a social club. A general acquaintance with the members would preclude all idea of anything ungentlemanly emanating from the club. They are honorable, just and upright men. At the same time when anyone is mistaken as to what constitutes strict justice they are apt to make mistakes unawares.

This is about what the club did. They started in by buying absolutely nothing from the native farmers thereabouts, except provisions for their house. This was the first cause of complaint by the Tolleston people, and they seemed to be actuated by a pecuniary feeling in this. There are only a few farmers living right close to the club grounds, probably not a dozen in all. They are inveterate pot-hunters, and they tried to hunt on the club grounds. Several of them were arrested. This aroused the partisan feeling throughout the vicinity. The club had fenced their grounds in with a wire fence, this was broken down by unknown parties and parts of it carried off. There is no doubt that the natives were imposed upon by game keepers and club-house attendants when members of the club were away. With the exception of the few hot-headed pot-hunters spoken of, however, the farmers seemed to keep their temper admirably.

The troubles have been brewing for about two years. Only lately have matters culminated. One day, about two months ago, trespass suits against the more fractious of the natives were brought by the club before Judge Tuley, of this city, and the next thing was for the natives to bring counter trespass suits against the club before courts of Lake county. These suits have been continued from term to term until no one rightly knows where they are or how any of the cases stand. Thus matters were until last week, when news was received in the city that set the boys wild. It was to the effect that the natives had caused the arrest of over a dozen of the members of the club for shipping dead game out of the State of Indiana contrary to the laws of the State. The daily papers teemed with alleged accounts of the matter, but none were correct. The FOREST AND STREAM correspondent invaded Judge Knickerbocker's chambers in the Court Buildings yesterday and asked him to state carefully and exactly, with unpartisan features, briefly what the trouble now was, and the latest features of the case.

Said he: "It has been stated in the papers that the Tolleston Club had secured the passage of a very unfair game law in Indiana by the Legislature. This is untrue. Indiana has long had a law prohibiting the shooting of game within premises not common. We owned certain property, which had been purchased and improved at an expense of about $60,000. Certain parties were in the habit of bringing hunting clubs from various parts of the country to shoot on our premises, and under the laws of Indiana we had them arrested. There was no difficulty with the residents of Tolleston. Another person with whom we had a difference was a man calling himself 'Spork.' He was in the habit of shooting on the premises of the club and then selling his game in the Chicago market. We never objected to a man killing game on our grounds, to be eaten or used by himself and family; it was when they shipped to market that we refused to stand it. 'Spork' was arrested in the usual civil manner, not by a special of ours, as has been said, and he was fined. The club has no special policemen, and all the arrests have been made in a regular way, on a warrant sworn out and served by a proper officer.

"As to the stories of the arrest, I will tell the FOREST AND STREAM all about that, though I have refused to give any particulars to any paper before because I considered the matter too ridiculous, and that it would always be misunderstood. There were no arrests as stated.

"About one month ago F. A. Howe, C. D. Peacock, J. S. Norton, C. C. Mueller, Alex. Sample and Messrs. Spencer and Fisher were served with writs for shipping game out of the State of Indiana. It seems another idea has got out that the natives of Tolleston, to retaliate, have caused the passage of a law in the Indiana State Legislature, making it a finable offense to ship dead game out of the State. This is an old law of the State, and the natives had nothing to do with its passage. There are a few other States that have this queer law. But to go back to our cases. Recognizances were given, and the writs made returnable last Wednesday. The men all appeared, and took a change of venue to Valparaiso, in another county. It is our purpose to see if it is illegal to carry our game home with us, and in order to attain this object we will carry the case to the Supreme Court of the United States, if necessary. In case the courts decide against us, we will abide by the decision, and won't bring our game home. There are already two State decisions adverse to the Indiana statute, one being rendered in Kansas, in 1876, and the other, I think, in Wisconsin. There are several States, however, where the statutory enactments prohibiting the shipment of game out of the State have been upheld and enforced. I do not believe it is constitutional. This is about all there is of the case. In the meantime we go on in our even tenored way, and the matter is treated with disdain and ridicule; so you can ask any respectable farmer about our club grounds if I am not right."

Of the other minor sporting news there is plenty. Nimrods are flying around, loading shells, getting out dog permits, and studying railway guides. The town, in the vicinity of the gun stores and sportsmen's resorts, seemed bare Saturday night, so many of the boys were out after heavy bags. Quail shooting has commenced about this vicinity, and hunters claim there are plenty of the little edible birds flying about loose. The hunting now consists of ducks, geese, and quail.

The boys are wondering if any of the Michigan deer will come down this winter, when the cold snaps set in, and kindly loaf around the Mak-Saw-Ba Club ground. Last season three deer were killed within two miles of that clubhouse, and, as a consequence, the boys are hungry for more. It is a most unusual thing, however. That noble triumvirate of Nimrods, Haskell, Wiggins, and Whitney, brought back 200 ducks from their late trip to English Lake.

By the way, your valuable paper will be enabled to announce, through the medium of a private letter to your correspondent, that the long wished for hotel for hunters at Lake Senachwine is now finished, and was handsomely opened by a big "blow out" Saturday night. For some time Chicago and other sportsmen have fished and hunted at Lake Senachwine, Putnam county, Ill. It is one of the finest game resorts in the country. It is also the largest lake in the State. One bad feature has been the lack of accommodation for sportsmen. Now Robert Challoner, long known to gunners, has built a neat hotel. It is styled the Undercliff, is a delightfully situated and carefully arranged building, of wood, three stories high, with verandas overlooking the lake. On the second and third floors are twenty-five large and airy sleeping apartments. Special care has been taken to provide for ladies and children. There will be boats, decoys, fishing tackle and attendants for patrons. During the summer a floating bath house will be available. The house was opened by a party from Chicago, Peoria, Henry, Geneseo, and other points, and from all accounts they must have had an old-fashioned "house warming."

CHICAGO, Nov. 21.

THE LAND OF PINE AND LARCH.

I HAVE rambled about the woods and marshes some, keeping my eyes open in the meanwhile, and I give you the result of my observations. Ducks are not nearly so plentiful this fall as they were last year. We usually have a heavy flight of teal about the middle of September, but this year I only saw a few straggling flocks. During the first two weeks of August I flushed many woodcock, but they disappeared all of a sudden, I suppose on account of the excessive drouth. This season is the driest we ever had. To-day I saw farmers plowing land that is often too wet to till in June, and on the 10th inst. the dust on the roads blew in clouds everywhere. We have had but one heavy rain in six weeks. Very few yellow-legs visited us this fall.

I have seen a few snipe, but have been over no good ground. Ruffed grouse are more plentiful around here than they have been for years. My brother has been out five times—four afternoons and one whole day. He shoots over a small cocker. His scores were 6, 11, 4, 2, 3—a pretty good showing, I think.

I was the victim of an odd gunning accident on the 19th ult. I saw some bluejays gathering acorns near the barn, and took a gun and some dust shot cartridges and went out, thinking to get some practice in easy wing shooting. My first shot proved to be my last, for the breech unlocked, the base of the shell was blown to atoms, and I was not quite sure whether a torpedo factory had exploded near me or some one had hit me on the ear with a can of nitro-glycerine. I was partially deaf for a few minutes, but was unhurt.

My guns were all burned in August, '80, and I purchased this one in July '81. It is a single barrel snap action, of what make perhaps I had better not say, still I cannot forbear quoting a few words from the circular of the firm that manufactures it. Here they are "in substance": "The hammer is so arranged in connection with the locking bolt, that it cannot strike the firing pin, unless the bolt is in place, thus making it the safest gun in use." Now, I have no hesitation in writing D. L. opposite that statement; that is I view it in a "different light." "Don't tie to a vain thing," says one of your correspondents, and he is right. Let every one "read, mark and inwardly digest" that little piece of advice, for there are many things to which sportsmen should not "tie." I neither believe in the "forty rod shotgun," nor the "sportsman's Arcadia," and I do not believe that there is any man in the world who can make a gun that no other maker can equal, yet I suppose there are thirty different "makes" advertised as "the best in the world." I am not uncharitable enough to say that those who claim that a certain make of gun excels any other wilfully mis-state. If my life depended on one single rifle shot, I would choose the old military Snider-Enfield. Do I believe it to be the best rifle in the world? Hardly, yet it is so to me, for I have shot with it, ate by it, slept by it, and almost sworn by it, and I understand all its peculiarities. That, in the opinion of your humble servant is the reason there are so many "best guns"; they are endeared to their builders and owners through "long association."

Saturday, November 18, was a cold day with a chilly northeast wind that appeared to penetrate to the very marrow. As I squared away about 10 A. M. for a two hour's drive, the wagon rumbled over the frozen ground with a noise akin to thunder. The horses shook their heads and bit at each other, as if they enjoyed the change of temperature but indifferently, and like many human beings under similar circumstances, were determined to take it out of the world in general and the first thing they met in particular. Cold and cheerless as the day was, it is to me as important a date as the 30th of July to the "Derryman," or the Hegira to the devout worshiper of Allah. I reached home about noon; I had a business engagement which necessitated a start about sundown, and in the meantime I could think of nothing to do. There I was with a piece of "broken day" on my hands, just the thing I had long been wishing for. I made a charge on the ammunition drawer, but all was chaos (the boys had been serenading a newly married couple the evening before). "What's the matter?" said mother, a moment later, as she caught the sound of a few "words of blame." "Matter? I want to have a grouse hunt, and those confounded boys have emptied all the shells, and to mend the matter, ne'er a wad can I find."

How quickly a mother will try to "pour oil on the troubled waters!" In about three minutes she had gone through the pockets of the surplus clothing of those boys, and her search was rewarded by about fifteen wads. Wouldn't some of you laugh to see the loading those shells got. Over the powder I rammed a section of a newspaper, then put down a wad, and confined the shot with more newspaper. The shells loaded, I called Frank, and taking my shaky twelve-bore single breech-loader, was off for the woods. Frank is a liver and white cocker of not the purest breeding; and though he wouldn't take a prize at a bench show, he will find birds if they are around, and is a good all-round dog to boot. "He said, damme, get a good dog and you have a friend." Who perpetrated the above quotation I have forgotten, but I endorse the sentiment. I have heard long sermons about the intelligence and affection of the horse. I have read of the Arab steed who died while bearing his wounded master in his teeth away from the bold, bad Turkish soldiers. Now, I have handled horses since I could walk. I love them. I waste money on them. I am willing to concede them intelligence (not so much as the dog), but if they have any great amount of affection, they have succeeded in concealing it from me up to date, and remember, I have handled scores of them. But I never bestowed any affection on a dog, even the meanest cur, but it was returned tenfold.

I started in high spirits. Once in the woods, the chilly wind was felt no longer, the sun shone through the naked tops of the trees, and no better day for hunting could be desired. I tramped two miles through good cover, shooting only a chickaree, and I was ashamed to let the dog see that I did that. I saw no grouse. "The weather is dry and cold," I soliloquized, "and I will find them in the valleys of streams, if I find them all," and I bent my steps to the nearest stream. Coming to a small glade, the dog showed unmistakable signs of game about. His tail lashed back and forth till it almost lost its individuality like a buzz saw, and the occasional whimper he gave told as plainly as words could that the trail was fresh. I followed closely with gun cocked. Without a note of warning, an old cock burst from a brush heap, and rose straight up through the bare branches of a dead fir. One second the old twelve followed him on his upward flight, till the sight was on the base of the neck, then he fell completely riddled.

I slipped in a fresh cartridge, picked up my bird and walked on, soliloquizing: "What a fine thing it is to be cool and proof against buck fever." Just then a hare went skurrying by me, and I forgot to shoot. A still, small voice seemed to whisper "It is good to be proof against buck fever." Passing on I saw three pine grosbeaks, and thinking to secure one for mounting, I fired at the male with dust-shot, and missed. He settled and I fired again, blowing him all to pieces, and with a sort of wish-I-hadn't-done-it feeling, I resumed my tramp.

Every inch of the ground awakened some old memory. Right here Brun, Leonard and I once shot three grouse, I getting two of them. Over in those gray birches, on the right, Harve Knight and I harried the grouse the day I made my first wing shot at a woodcock, and just over the brook there Esbrow Chase once wiped my eye beautifully, after I had fired one barrel of my little Manton and the other had missed fire. But while I was day-dreaming Frank was employed to more purpose, for soon a little bark "brought me to," and a grouse rose and sailed away from under my nose, while I looked foolishly on, and again the still smaller voice seemed to say, "O! no, you're never troubled with buck fever." It was a pretty chance for a shot, my blood was up, and I marked bird by sound. I heard him drop in a bunch of alders near the road. Taking my station in the middle of the road, I commanded Frank to "seek him out." "Quit, quit, quit, whirr-r-cluck! que-e-e-et, que-e-e-et," and he came straight for me, then swerved and attempted to cross in front. An instant the gun followed his flight till he shoved his bill over the muzzle, then I pulled and he dropped as if interviewed by a thunderbolt, with his head and two inches of his neck riddled—the cleanest shot I ever made. This was glory enough for one day, so I started for home. I never before killed two flying grouse straight. On no previous grouse hunt did I kill all my birds flying, and I never felt more at ease with myself and the world than on the eve after my first grouse hunt in '82. L. I. FLOWER.

CAMBRIDGE, N. B., November 17.

LARGE GAME IN SOUTH AFRICA.

[Extracts from a letter of a settler in the Transvaal to a FOREST AND STREAM correspondent in Nova Scotia.]

WE, Beck and myself, had a first class hunting trip this year. We started with twenty Kaffirs, wagon and pack ox. Left the wagon three days' journey from this place, and then walked four days into the fly (*tsetse*) country, taking the pack ox and men to carry the beef out. We killed five giraffes, two lions, buffalo gnu, koodoos, zebra, hartbeest, wild boar, and different kinds of antelope; in all, sixty-five head in ten days. We were unlucky in not seeing either black or white rhinoceros, although the spoor was plentiful.

When we arrived in the game country, we made camp. Our mode of hunting is to take one man each and start at sunrise in different directions. When game is found, if it be a troop, we fire and follow on as fast as possible, get another shot, run on again, never looking at the dead or wounded until satisfied, then come back and get the dead and finish the wounded ones.

One day I had four Kaffirs with me and killed three giraffes out of a troop of seven. Kaffirs are very poor shots as a rule. Out of the three giraffes killed, we found only one bullet which had been fired from a Kaffir's rifle, and that animal I had wounded previously.

It is very hard work hunting on foot, but with a few days' exercise one gets into such condition that every muscle appears to develop; and although tired when night comes, the next morning you feel fresh as possible with a rousing appetite.

Lions were swarming; the Kaffirs saw two, three or four almost daily. I saw only one, and killed him; he has a good skin and splendid mane; he appeared to be an old one and was very fat. He got our wind when coming on him and trotted away, so we ran after him, knowing that he would stand, look back, and give us an opportunity for a shot. They go very leisurely. He stood at about 100 yards, and unfortunately, my man, who carried my Martini rifle, fired past my ear just as I pulled the trigger of my express rifle. I missed, and of course the Kaffir did the same. However, we ran on after the lion, and he soon gave us another chance. I fired and brought him on his haunches. When wounded they stand and roar continuously, and you invariably get a good shot next time. I ran to within about seventy yards and put an express hollow bullet into his ribs, when he fell on his side. I then went close up and put a bullet through his head.

Two of the Kaffirs were one day following the spoor of a troop of buffalo, and came upon two buffalo which had been quite recently killed by lions. The men followed on and shot a large buffalo, which began to bellow. One of the Kaffirs took another direction, he says by accident, but the fact is he was afraid of the buffalo. However, the other—an old hunter—was about to give the buffalo a finishing shot, when a lion came bounding out, caught the buffalo by the nose, threw him and stood on him. The man then fired at the lion, but missed. The lion then went away; the hunter went up and cut off the buffalo's tail, and was looking about where to cut next when he again saw the lion approaching; he fired at him and the lion ran off. The man then came to camp for assistance, but it was too near sundown to follow a spoor.

I had three men with me that day, and we followed a wounded giraffe so long that we lost our way. The men were determined to find camp, so we walked for three hours after sundown, and by chance came near to where the buffalo killed by the lion lay, and to hear the lions feeding, fighting and roaring was well worth a long walk and a sleep out. The men would go no further, but made half a dozen large fires, and we slept in the center. We had had no water since the forenoon and nothing to eat since before

sunrise. It is impossible to describe the row that the brutes made over the buffalo carcass. It was beyond description, terrible.

So long as you can make a fire—and there is always plenty of wood—you need have no fear of lions or hyenas. The latter are strange animals. They come around your camp nightly, hundreds of them, howling and laughing, which to a stranger is very alarming. They are fierce looking and come within a few yards, but are great cowards. The wild dogs can drive them off from a carcass, although the dogs are much the smaller.

Through the carelessness of two of my men the pack ox strayed from camp and was killed by lions. I made the men pay £8, the value of the ox. We intended to kill it upon getting home, as it would die from the bite of the *tsetse* fly. Two dogs which we took with us are dead already; they were bitten about three weeks ago.

Both Mr. Beck and I enjoyed the trip immensely. He used an express rifle, which originally cost £55, bought by him for £25; I also used an express weighing twelve pounds; cost me £30; original price £50. It is too heavy for hunting with on foot. Martini is better, being lighter, and costs only £5—that is, the military rifle—and I prefer it to the sporting Martini, as it is much stronger and not easily damaged by a fall. W. S. S.

Sadie, Lydenberg Gold Fields, South Africa, July, 1882.

A PIKE COUNTY DEER HUNT.

FOR the interest and benefit of our sporting brethren who would like to enjoy a week's hunting, these lines may come appropriate, and I will gladly give all further information and advice if some of the readers of FOREST AND STREAM wish to go where the writer and party spent a week of good sport, combined with pleasure and comfort.

Our party consisted of five—Nic E., and his brother Adam, and cousin and uncle K., besides myself, all of us most green in deer hunting. Leaving New York Saturday, Nov. 11, on the 5:40 P. M. train, we took the Erie to Lackawaxen, from there the branch to Hawley, where we expected to find Mr. Herrman Frank, who was to be captain of our little band. We arrived there at 11 P. M. Unable to be one of the party Mr. Frank gave us all information in regard to our hunt. He recommended a good and experienced guide, Ross Huff Tatton, and advised to try Pike county. He directed us to a comfortable and well-kept farmhouse (Mr. Roberts's) right in the center of our hunting grounds. Mr. Roberts, a clever and generous host, and his son Sam, a most obliging and true hunter, made us feel at home as soon as we entered their house.

Monday we started bright and early, Ross Huff taking in his charge the hounds and doing the driving, while Sam placed us on our different runways. We started several deer that day, but none came to shot except one to Uncle K. The dogs drove a fawn close to him; firing both barrels he missed it. Of course he blamed his breech-loader (it was a new one and never shot out before) but if that was the cause, or if he had the buck fever, we will leave undisputed, suffice it, that he was the only lucky one who saw and fired at a deer that day.

We made another drive and started two more deer, but they went to the river where the dogs lost their scent. The first day ended with a blank, but we were not discouraged, enjoying the exhilarating air and beautiful scenery. Tuesday morning found us early astir. Sam Roberts and Huff were going to make a large drive, and try to run the deer to the brook (Blooming Grove). It was an overcast and gloomy day. They started several deer, but unlucky for us they would not take to the brook, but ran to the Blooming Grove Park. It was getting late and began to rain, so we struck out for home; on our way home we intended to make a short drive about the same place where we had stood Monday, Huff seeing tracks of a large buck there. We were hardly placed when black clouds darkened the firmament, the rain coming down in torrents, the wind blew and the old pine trees shook and trembled; it was blowing now a perfect hurricane, and we were drenched through and through in less than no time. Of course this settled our day, and we arrived at our home cold and looking like drowned cats. Our hunting thermometer fell down very near to the freezing point, but as soon as we had our clothes changed and were sitting around the bright and cheerful wood fire we felt better, and after eating dinner all was forgotten. We gathered around the blazing pine knots listening to and telling deer and bear stories until it was time to go to bed.

Wednesday we started again full of hope and ambition. We had seen plenty of tracks the day before, and the storm spoiling our last drive, we decided to try the brook once more. Luck seemed to be against us, though the hounds started a large buck and several other deer, but somehow the dogs lost track, or got mixed in the hackmatacks, and all the deer they started would run the wrong way. Sam Roberts was coming through a ridge with the hounds, when up jumped three deer, a buck, doe and fawn, all laying close to each other. We secured the fawn and the doe. Fully satisfied with our good luck, we gave up hunting for that day. After dressing and hanging the deer to some trees, as it was too far and late to get them out of the woods, we returned home a happy and pleased party.

Thursday morning we were all on the alert; we intended to drive a different direction, and the dogs soon raced a big doe towards our stands. They were running up a ridge, and she was coming direct to where I stood, but as she came up the hill she winded me, and turned back in the ravine, running with lightning speed past Nic E. about 200 yards, but he was only armed with a shotgun. The dogs soon started some deer again, and I saw a fawn shoot through the bushes like a bullet. I let go both barrels and wounded her, but not hard enough, as she fairly flew away, in the same direction as the doe. Our guide, Huff, hearing the shots, started on a run to the water, where he expected she would go; and the dogs were driving another buck also direct to the brook. Nobody was placed on the brook but a country lad, and as he saw the deer coming right for him, being too eager he did not wait, but fired seventy-five yards before she struck the water, where otherwise if he waited she would have run within five feet of him. Huff came up just in time to see our country friend shoot and the deer escape over the hills. This ended our days' hunt. The young fellow had to hear some strong sentiments, but it was no use crying over spilt milk.

Friday was a nasty, disagreeable day; it rained and snowed, regular slush, and confined us to the house. We passed the time at target practice with a rifle, while our guides went in search of some hounds which we lost the previous day. Saturday opened bright and cheerful; it had turned cold during the night. It was a grand sight to see the country so changed in one night from fall colors to mid-winter. The old pines looked like blooming peach trees; the snow, sticking close to their branches, gave them a beautiful appearance. This was to be our last day, as we had to take the 5 P. M. train in to Hawley. We concluded to drive once more the same hill we had driven Thursday. We saw a great many tracks, some leading for half a mile in the open road, but somehow the storm must have driven the game from the hill, as we did not start one. We went on to the Hawley road, where we expected Roberts, Sr., with the wagon. Here we had time to make a short drive in the forks. We took position on the lower fork road, and left the hounds to go in at the Blooming Grove road. They started a buck in the forks, and we heard the music of the chase going and coming. The deer was playing hide and seek with them until the barking died away, and no buck came to us. We drove to Hawley, where we arrived at half-past two; left Hawley at 5:40 P. M.; arrived in New York about 10 o'clock, well pleased and satisfied with our deer hunt. F. B.

New York City.

MINNESOTA WHISPERS.

HAVING just partaken, with the hearty relish born of a tramp in the dear old woods, of a genuine sportsman's supper consisting in part of juicy venison steak, "partridge" pie, broiled squirrels and delicious tea, I am at peace with myself, and in the mood for a chat with the brethren of the FOREST AND STREAM family.

If I only had time to write out some of my hunting experiences, I believe the result would be, that another year I should have the company I have so much longed for this fall.

Upon the whole, the game season in this locality has been remarkably good, and for some birds of game the season is now at its best. During October ducks were unusually abundant. I believe a good shot could have averaged from twenty-five to fifty per day. I know that often I would shoot as many in an hour as I could back-load in. Duck shooting, however, is nearly over for this fall, as the smaller sloughs are now frozen over.

Partridges, as they are invariably called by the natives, are fairly plenty. I went into the iron-wood thicket near my shanty one afternoon last week, and killed seven in less than an hour. Gray and black squirrels are more numerous than the "oldest inhabitant" ever knew of their being before in this section of the State. I left my house at two o'clock this afternoon, went a mile to an oak ridge, and killed twelve, seven grays and five blacks. A gentleman told me that in another part of the woods he counted fourteen in two trees.

I made a statement in the FOREST AND STREAM last fall concerning the weight of squirrels, which one gentleman called in question, so in the presence of three reliable persons I weighed the twelve killed to-day. They tipped the beam at exactly sixteen pounds and six ounces.

Who would like a pair of the blacks mounted? As this is the open season for deer, rifles are cracking on every hillside and ringing in every valley. Already quite a large number have been killed, though the deadliest work will not be done until there comes a good tracking snow. It seems too bad that the deer are being so rapidly exterminated. No attention is paid to the law, and in a few years a deer will be a great rarity in Minnesota, as in New England. If I wasn't a clergyman in good and regular standing I would say, confound pot-hunters.

And now I would like to give a hint, which is also an invitation to "gentlemen sportsmen" who have means to gratify their love of sporting.

I know of no locality so favorable for club grounds as this. There is almost every variety of game, many beautiful lakes abounding with fish, pleasant scenery, healthy climate; and as the Little Falls & Dakota R. R. (a branch of the Northern Pacific) is now completed, one can come within two miles of this point by rail. I believe every man in town would cordially welcome a non-resident sportsman's club, and render all possible assistance.

If the right man would only come here and open a hotel (there is a good building within five rods of the lake which can be purchased or rented) where lovers of the rod and gun could be accommodated, he would be sure of a liberal patronage. At present there is no hotel in town. The only axe I have to grind in this is that I want others to have just as good a time and chance as I have myself; and I want good company. J. FRANK LOCKE.

Pillsbury, Minn., Nov. 16.

MONTANA BIG GAME.

A FEW days ago about four inches of snow fell in this county, and all the hunters turned out for deer hunting; the "old-timer," with his 16lb. gun, white hat and light-colored (ragged) clothes; the gay young tenderfoot, with little .44-Winchester, black fur hat, dark clothing, fancy knife, leggings, etc., and large amount of baggage. A party of five from Iowa hunted two weeks, killed ten deer, and thought deer rather scarce; while three old-timers killed twenty-eight in two days. The temptation was too strong; I went out and killed eleven in two half-days. Three were very large blacktail bucks, that dressed from 210 to 265lbs. All the meat is saved at this season and shipped to Eastern cities. Many signs of large cinnamon bear were seen, but only one captured; that one weighed dressed 640lbs. Black tail deer are very plenty here this season; probably 800 have been sent to market from this locality this fall. I know that one party of two men last year killed 600 deer on Powder River, 175 miles up the stream; of course, only the hides were saved. Deer are very thick there yet; 300 were killed by three men on the Cabin Creek this summer for their hides. Of course this is all wrong, and regretted very much by hunters generally; but in this country it cannot be stopped at present. We have an excellent law for the preservation of game, but it cannot be enforced. The main buffalo herd is southeast of us eighty miles; but scattering bands of ten to fifty are found in all directions, giving sport and meat to new-comers and settlers. We meet occasionally a lightly built whitetail deer on the prairies here and in Dakota that are not the timber whitetail, nor the Virginia deer. They run like an antelope, are very shy and undersized, and different in every respect from either the "longtail," or blacktail, mule, or red deer. We call it a "prairie deer;" what do you call it?

Antelope are now in bands of 50 to 300, but unless a hunter "gets the drop on" a band, he does not hunt them much; 600 antelope skins were brought in by one party, the result of two men's work in that line in one year. Pinnated grouse are quite plenty, but seldom hunted. The long range rifle question is coming up again among Western hunters. We have all kinds of guns here. I bought an old Peabody-Martini .45-70 gun last fall, army style; and can beat any Sharps 90 grain gun here with it for long distance, and bets are freely offered to that effect; but for penetration, a 40-90 would beat it. The cut is peculiar, being fourteen creases with a gain twist. The cut is what we call the coffee mill cut. With such a gun I challenge the world on long distance, accuracy, and penetration. We want a gun that will send a bullet through a bear or buffalo, through bones and all, and cut a large hole—that's the plain English of it. A .40 caliber is rather small, and we don't like explosive bullets. We like a buck horn rear sight with a long open front sight, and a man that can't kill a prairie hen off-hand with this sight at 200 yards is not much of a shot; but shooting at a target and shooting at game on the jump are entirely different things. H. S.

Glendive, Montana Territory, Nov. 22, 1882.

[The deer are probably Virginia deer. We have hunted over all the country referred to by our correspondent, and have noticed a great variation in the size of the Virginia deer; but there is no difference other than that of size.]

CARE FOR THE QUAIL.

Editor Forest and Stream:

"Now's the day, now's the hour" when the tender (selfish) feelings of every true sportsman ought to be directed toward preserving the scattered remains of our once numerous family of quails. It would require but little trouble (that little ought to be a pleasure) for any person who has a covey on his place to make a shelter for them before the snow storms come, and keep it supplied with food, and then when a heavy snow comes and their food is covered up, they would go at once for the shelter and remain as long as they were supplied.

Nearly every bird that escapes the gun could be saved from the one great winter enemy, the hawk, by simply driving four stakes in the ground, about two feet high and ten feet apart, with poles across, then covering it heavily with brush.

When the ground is covered with snow they must run around for food, while the hawks sit watching as anxiously for their dinner; so the quail has his choice between being gobbled up or starving to death. A hawk can see a quail on the snow something less than a mile off, and if a quail appears in the open fields, as he is often forced to do to get the seeds from the tops of the weeds, his doom is sealed if a hawk sees him, and when a hawk once finds a flock he stays there till the supply of meat gives out.

A great many people mean to take care of the birds, but the trouble is they think there may be but little snow and then there will be no need of building a protection; but a deep snow storm falls upon them suddenly; then they think of the birds and sally out with a stock of grain, but it's probably too late, they may starve before the food is found. But the great thing is a thorough protection from the hawks, and now is the time to do it. The protection should be open on all sides. DIDYMUS.

QUAIL IN VIRGINIA.

THE Virginia partridge (*Ortyx virginianus*) is very scarce north of James River, from the Blue Ridge Mountains down to the counties lying on Chesapeake Bay. I hear they are abundant south of James River, in the country between Petersburg and Norfolk. Suffolk, in Nansemond county, on the Norfolk & Western Railroad, is a good point from which to radiate. Deer are plentiful also in the region round about Suffolk. The country between Fredericksburg and Richmond and between Alexandria and Lynchburg is barren of birds. Every year the coveys are scarcer and smaller, and the cause is not far to seek. The freedman kills the old birds during the nesting season, and then in autumn the city sportsman goes out with his ten-bore breech-loader and slaughters them with an eye single to a big bag, and with no thought of the future.

Every huntsman in Virginia believes that the partridge raises two broods a season, if undisturbed, and when disturbed the hen keeps on laying and hatching till frost, trying to raise a family. Nothing is more common in Eastern Virginia than to see a half-grown brood with a brood full-grown under the care of the same cock and hen. Perhaps in colder latitudes, where the season is shorter, they rear only one brood.

Virginia, November, 1882.

NOTES FROM OHIO.—I have just returned from a two weeks' hunting trip in this State. Spent a few days first near Deshler (on the B. & O. R. R.), hunting deer; found them plenty but hard to get at in the "black swamp" on account of the thick brush and grass; got only two in four days' hunting. Went to St. Mary's Reservoir for one day's duck shooting; bagged twenty-two, mostly mallards. Then stopped at Ada, Hardin county, on main line of P. F. W. & C. R. R., for quail and ruffed grouse shooting. Found them very plenty, often "getting up" five or six "bevies" of quail on the borders of one field; made fine bags every day. For any one who enjoys quail shooting this is the place to go. As I know that locality thoroughly, I would be pleased to give any information to parties wishing to go there. Nov. 15, I shot three woodcock, and at the time there was two inches of snow on the ground. I have never found them so late in Ohio. Have others? I also got a curiosity in the shape of a fox squirrel, with the belly and inside of legs coal black.—J. W. R.

NOTES FROM WISCONSIN.—Deer are so plenty along the line of the Chippewa Falls & Northern Railway that a locomotive recently ran into six of them, one being thrown some distance by the pilot. Entanglement with the wire fences along the line has in several instances afforded hunters "sure shots." H. F. Conklin shot a white swan at Rock Lake, Jefferson county, which measured seven feet and four inches from tip to tip of its wings, was four feet eight inches in height, and weighed sixteen and one-half pounds. W. R. Smith, in Chetek, has a collection of hundreds of stone and copper implements, embracing cooking utensils, pipes, arrowheads, etc., all gathered from Indian mounds near his home. Willard, Jr., in Depere, has probably the finest and largest collection of State birds stuffed and preserved. He has nearly 450 specimens and about 200 species.

WEIGHT OF MALLARDS.—Cleveland, O., Nov. 12.—Shot seventy ducks last Monday, one of which, a mallard drake, weighed over three and one-half pounds.—MEHIT.

THE BOSTON DEER GONE.—Boston, Mass., Nov. 24.—Owing to repeated failures to obtain an appropriation for a new fence for the deer park on the Common, the Committee on Public Grounds have decided to get rid of the deer, which have given the public much amusement since 1864. Councilman Eddy took two deer; Councilman Barry sent two to friends in New Hampshire; two were sold and sent to Central Park, New York; two were bought by Lowell gentlemen, and three were exchanged for swans. There now remain only three, and they will be disposed of as soon as possible. The rickety fence will come down. A small part of the park will be reserved for hotbeds, but most of the space will be thrown open to the public. It cost $300 a year to keep the deer. Recently three of them escaped owing to the rotten fence. One of them ran down Boylston street to the Providence depot, where he cleared a street car at a leap. He was killed. Another got as far as Brookline, and, in gamboling on some cliffs, fell over a precipice, broke its legs, and was killed. The third one ran down Charles street to Beacon, and jumped the sea wall into the Charles River. He was captured and returned to his quarters.

THE "AIR SPACE" IN RIFLES.—Philadelphia, Nov. 25.—In considering the statement made by me last week, that "a normal bullet can be fired from a rifle with safety even if it be many inches distant from its powder charge," I request readers to remember that I am speaking of rifles, and that I am by no means discussing the effect of things other than bullets—such as snow, ice, sand, snakes, rags, etc.—on the barrel of a rifled arm. I assert, as a thing that goes without saying, that wet sand, *e. g.*, will burst a rifle nearly every time. My experiments are as yet incomplete and unfabulated. I dare not assert of the shotgun, as I do of the rifle, that an "air space" will not harm the gun.—W. McK. H.

SIDE HUNTS.—The valuation of game adopted by the Gulf City Gun Club, Mobile, Ala., for their annual hunt, held Nov. 19 and 20, was as follows: Bear 300, wildcat 150; deer—buck 125, doe 100; fox 100, rabbit 13, squirrel 7, goose, 75; turkey—gobbler 60, hen 20; chicken hawk 25, owl 20, sparrow hawk 10, woodcock 20, quail 7, wild pigeon 10, Wilson's snipe 5, plover 5, papabot 10, dove 4, robin 1, lark 1, rail 1, poule d'eau 1, king rail 2, gallinule 2; ducks—canvas-back 25, black mallard 20, mallard 10, chick cock 8, pintail 8, widgeon 8, redhead 8, teal 5, all other ducks 5.

MASSACHUSETTS.—Westfield, Nov. 22.—For some reason woodcock have not paid us their annual visit this year, and there were very few to the manor horn. But to make up for this loss quail and ruffed grouse are more plentiful than for years. Where do they come from? 'Coon hunters are very successful this fall, that article being in abundance near by town. We are very anxious to get hold of a good 'coon dog, but all we have tried so far are found wanting.—G. A. S.

FLORIDA GAME.—Sanford, Orange County, Nov. 20.—The outlook for quail this season is most propitious, as their last breeding season was the most favorable one they have had for some years. One of my neighbors told me he had already shot 300 birds this season. Snipe are very plentiful, and I get some almost every day I go out. St Johns is full of ducks, and it looks as if we should have a good year for all kinds of game.—TRUMP.

KENTUCKY.—North Middletown, Nov. 18.—Partridges are in Bourbon county comparatively scarce, but reports come in from the mountain counties that partridges, ruffed grouse and wild turkeys are very abundant. Will start on a trip to mountains about Dec. 2; when we return shall report again.—LITTLE SANDY.

CANADA.—Quebec, Nov. 18.—We have had a very mild fall, and our birds left because they are accustomed to do so, for they were not driven away, as usual, by severe weather.—G.

THE PURDEY GUNS.—A valuable acquisition to a sportsman's outfit is one of the "new rebounding hammerless guns" manufactured by James Purdey & Son, 287 and 289 Oxford street, London. This gun takes its name from the internal hammers or strikers rebounding to full cock on opening the gun. It is provided with a very simple, but none the less effective, safety catch, which precludes all danger of a premature discharge. The blow struck by the hammers is very powerful, thereby doing away with the possibility of a misfire unless the cap is defective. The excellence of the guns manufactured by Messrs. Purdey & Son, both in shooting qualities and appearance, is so well known that it is needless to eulogize them here. All who use their guns heartily indorse them, and during the past season they have not had one complaint. The sole right to manufacture their guns in this country is for sale, subject to certain conditions.

PUBLISHER'S DEPARTMENT.

IMPORTANT. Shelton's monthly Issue to sportsmen.—*Adv.*

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

FUR QUOTATIONS.—Mr. Ramsey Macnaughtan, with his usual enterprise and ability, has devised and copyrighted a price list that is wonderfully complete and comprehensive. It is entirely new and original, and besides prices on each grade contains valuable practical suggestions. Any one sending reasonable proof by letter or business card that they are in the fur trade can secure one from Mr. Macnaughtan, 3 Howard street, New York.—*Adv.*

ADVICE TO HUNTERS.—Don't look into a gun to see why it didn't go off; the gun was only waiting to see the white of your eye. Don't blow into a gun; the man who blows into a gun has for his epitaph, "He died as the fool did'n." If your comrade carries his gun with the muzzle pointed at your pericardium, hit him in the back of the neck with the butt of your gun. If it breaks his neck don't feel bad for he will make a better looking corpse than you would with your viscera blown into tatters. Don't let your imagination make the top of your comrade's head look like a grizzly bear and fire at him; such mistakes have occurred in this State four times already this fall; fatal every time. Finally, don't go in the woods at all, for nine out of ten of you don't know enough to handle a gun anyway, and your nerves are too sensitive to endure a run of buck fever without results fatal to yourselves or your companions.—*Northwestern Mining Journal.*

We call the attention of our readers to the advertisement of Pool's Signal Service Barometer in another column. It combines with an excellent thermometer, a storm-glass or weather indicator, of surprising accuracy, rendering it an article of great value to the farmer, and to all others who feel an interest in the important question, "What will the weather be to-morrow?" Beware of worthless imitations. None genuine without the trade mark and signature of J. A. Pool on the back of each instrument. See advertisement. Parties sending money to J. A. Pool or the Oswego Thermometer Works may rely on their getting goods promptly in return. A representative of the Detroit *Free Press* recently visited the above works, and was astonished at their magnitude and completeness. No larger or more thoroughly organized establishment of this kind exists in this country or the world. About 350 persons are employed in the works, and the demand for Pool's Thermometers and Barometers is constantly increasing. Their popularity is well earned, for no instruments are better made or more serviceable.—*Adv.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of next week.*

FISH IN SEASON IN DECEMBER.

FRESH WATER.

Rainbow trout, *Salmo iridea.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (New York pickerel), *Esox lucius.*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca flavitilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, ½ species.
War-mouth, *Chœnobryttus gulosus.*
Crappie (Strawberry bass. etc.), *Pomoxys sicciferianus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Smelt, *Osmerus mordax.*
Drum, *Pogonias chromis.*
Red bass, etc., *Sciænops ocellatus.*
Tomcod, *Microgadus tomcodus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of next week.

But angling is not alone a health-retaining and a health-giving pastime. It is a medicine to the mind as well as to the body; and unlike too many pleasures of life, it scatters no seeds from which the nettle of remorse may grow to sting the conscience or drive sunshine from the heart. Like the unclouded friendships of youth, it leaves only joyous memories. Peter did not weep because he took fish with not or angle, but because he did what it has become a proverb no angler can do and have "luck," and if Uncle Toby's hasty speech had been as free from guile as an angler's heart while plying his vocation, no angel's tear need to have fallen to blot out the record. Blessed pastime, whose day never ends, but whose sun casts a perpetual radiance upon the "simple wise man" who, regularly as the return of "the time of the singing of birds," sayeth to himself, "I go a-fishing."—*George Dawson, "Pleasures of Angling."*

WINTER TALKS ON SUMMER PASTIMES.

III.—ABOUT GRAYLING.

Hide me, ye forests, in your coolest bow'rs,
Where flows the murmuring brook, inviting dreams,
Where bordering hazel overhangs the streams.
Gay.

IT so happens that no one of the local brotherhood, except myself, ever fished for grayling. All have frequently resolved to do so, but none of them have yet found leisure to put their resolve into execution. As the next best thing, they require of me an annual recital of my visits to grayling waters. I am nothing loth, of course. On the contrary, it is a great pleasure, only less enjoyable than the reality itself. My "talk" this year was on this wise:

"A few years ago the Au Sable was the most famous and best stocked grayling river in Northern Michigan. When I became acquainted with it, the fish were very abundant. In an hour's casting at almost any point, a sufficient number could be taken to surfeit any reasonable angler for a day. But, unfortunately, all anglers are not reasonable. While making ready for a few days' sojourn on the river, a party came in with a barrel of fish they had taken, and which they proposed to carry home with them. They may have had a thousand or more, and to secure that number of sizable fish they had probably killed four times as many. With the utmost care the whole lot would doubtless be nauseatingly stale before they reached their destination. The purpose of the party was well enough; for it is always commendable to remember the loved ones at home; but I never felt that I greatly complimented a friend by presenting him with a mess of stale fish; and, except under very favorable circumstances, all fish become stale, however carefully packed, that can only be eaten a week, more or less, after they are taken. Neither grayling, nor trout, nor salmon, are in full flavor if they have been so much as twenty-four hours out of water. Many an honest angler has lost caste with his friends because the promise to the ear has been broken to the palate. His praises were based upon their flavor when freshly caught; their judgment upon their flavor when eaten. The original flavor of salmon remains longer than that of either trout or grayling. But even salmon greatly deteriorate in two or three days, however carefully packed. Whenever I bring any of my salmon catch home with me, I see to it that they are kept constantly encased in fresh ice and that they are not exposed to anything above a frigid temperature until they are passed over into the hands of the cook. In this way I have sometimes enabled my friends to get a fair, if not a perfect idea, of the exquisite salmon flavor.

"Since I first visited the Au Sable it has fallen off in both the number and weight of its fish. But it still affords good sport to those who do not engage in the pastime simply to see how many fish they can kill. 'Catching to count' is a species of vandalism in which no honest angler will engage. Those who do, whatever they may call themselves, have the 'low down' spirit of the pot-hunter, although they may not have his dollar-and-cent cupidity.

"I remember a great many years ago, hearing one of a party of four boasting that they had, in two days, taken twenty-two hundred trout from the waters of 'Stony Clove,' in the Catskills, and I once saw a then famous judge 'scooping up' trout from the same waters with a bed-tick he had either bought, borrowed or stolen from one of the neighbors. No marvel that that once prolific stream is now comparatively barren. Scores upon scores of other streams have been similarly depleted in this State and elsewhere. But I am happy to know that this unsportsmanlike habit of 'catching to count' is now deemed 'more honored in the breach than in the observance'—thanks to the admonitions of the public press and the better education of the present generation of anglers.

"On my first visit to the Au Sable I took all the fish I wished within a mile from camp. On my recent visit it took me a whole afternoon, casting over the same ground, to catch enough for supper and breakfast. I was told they were plenty as ever fifteen or twenty miles down stream, but I didn't care to make the journey. I preferred to work for what I caught, having long since ceased to find my highest pleasure in angling where neither skill nor patience is required to fill my creel."

"In what," I was asked, "do grayling, in their haunts and habits, differ from trout?"

"Their haunts are the same, in every material quality. That is, the Au Sable has every feature of a trout stream, in the clearness, flow and temperature of its water, and in its ripples, eddies and pools. To simply look at it, any expert would pronounce it as promising a trout stream as he ever saw. When I began to cast, I expected a rise from a trout rather than from a grayling; but often as I have fished the river I have never yet so much as seen a trout."

"How do you account for their absence?" was the next query.

"I have been frequently asked that question, but I have never been able to answer it, and the answer is all the more puzzling from the fact that the earlier settlers have a tradition (and some assume to speak from personal knowledge) that there was once trout in the river, and that even now there are both trout and grayling in other waters not far off. If the tradition is truthful in regard to this river, what has become of the trout? Have the grayling destroyed them? If so, how did it happen, after having dwelt together in unity since the creation, in these latter days 'the one has been taken and the other left?' I know that trout have disappeared from a great many streams because of the changed temperature or diminished supply of the water, caused by the artificial drainage of swamps, the absorption or diversion of springs and the denudation of forests. But no such causes have operated here. With isolated exceptions—few and far between—the swamps and springs and forests remain as they were when 'the morning stars sang together' If trout ever were in the river I can conceive of no reason why they should not be there still, and if in waters where the two fish are still found the trout are rapidly disappearing (as is alleged) the mystery is all the more inexplicable. I wish some one better acquainted with grayling and grayling waters than I am would essay to solve this problem.

"So much for the haunts of the grayling. Now a word about their habits. I find them in just such spots as I would look for trout in the early season—on the riffs, at the foot of rapids, under old logs and in all kinds of shady places, but not often in deep pools. And they are like trout also in the manner in which they take the fly, except that I thought they did not come up as far out of the water as trout sometimes do when they 'rise;' but they take the fly as sharply, shoot off as rapidly and fight as gamely. They make a more stout resistance at the outset than trout of the same weight, chiefly because of the great dimensions of their dorsal fin, which gives them a powerful lever when they shoot across the current, as they usually do when struck. I do not think, however, they have the trout's 'staying' qualities, but they are all game, and afford the angler quite as much sport as trout in any waters.

"There is one thing about the grayling especially worth mentioning—the peculiar thyme-like aroma they emit when taken. The ancient Greeks recognized this fragrant odor in the fish. 'Hence its generic name *Thymallus*, which is derived from *Thumallus*, the Greek term for thyme.' [Halleck's Gazetteer, p. 335.] I had never heard of this peculiarity, and for a time I fancied myself moving through a forest-garden of sweet smelling herbs. None of this aroma is perceptible after cooking—except to a very lively imagination. In point of flavor, the grayling is the peer of the trout. Indeed, neither in its haunts, its habits, its gamy qualities or its flavor, is it at all inferior to that favorite fish. If not as handsome when landed it is even more beautiful in the water. In reeling one in, with the sun at a proper angle, its great dorsal fin, with its blended body-hues of olive, brown, rose, blue, green and pink, reveal all the dazzling colors of the kaleidoscope. I am afraid I sometimes unnecessarily protracted my 'play' to enjoy the exquisite picture."

"You speak," said one of the coterie, "of the Au Sable as having the flow of an ordinary trout stream. The popular idea is that the whole of Michigan, except its extreme northern portion, is practically a uniform plane, with no high hills and no mountain brooks nor swift flowing waters, such as we have in our own State."

"And this popular idea is not far wrong. There are no real mountains in Michigan. Nevertheless, the topography of the center of the lower peninsula is such that many of the streams move with considerable velocity. The current of the Au Sable, for instance, flows from one to four miles an hour, and its water is as pure and as transparent as any mountain stream I ever saw. But when I have said this I have said about all that can be said in its favor. It has very few beautiful scenic features. Its banks are generally low and uninviting. There are not, so far as I traversed it, many pleasant camping places directly on its borders. On my last visit I floated several miles before I found a spot where I was willing to pitch my tent, and when I landed an incident occurred that made me wish myself a hundred miles away. It was this: A party of ladies and gentlemen had just broken camp as we landed, and were awaiting their wagons to take them to the village. While thus waiting, the ladies amused themselves in gathering wild flowers, and in their rambles they had encountered a huge massassaugua, whose glittering eyes and warning rattle had sent them flying and screaming back to camp. Although diligent search was made for the reptile, he remained undiscovered. The incident was followed by the pleasant assurance from my guide, that 'although a good many 'saugas were round, they very seldom bit anyone; or, if they did, a quart of whisky, swallowed at once, was a sure cure.' As I hadn't the whisky I didn't hanker after the bite. My sleep in the woods, with nothing but a few hemlock boughs between my body and mother earth, is usually sound and refreshing. But upon this occasion I was terribly nervous, and more than once awoke with the fancy that every hair on my head was a massassauga, and the rustling of the leaves the seductive music of their blood-curdling rattle. Fond as I was of fishing, before morning I had resolved that I wouldn't spend another such night for all the grayling in the Au Sable. But 'how use doth breed a habit in a man!' With the dawn my nervousness took flight, and through all the subsequent nights I spent upon the river, I 'slept the sleep of unconscious innocence.' Still, the knowledge that rattlers are occasionally seen has made me less anxious than I might otherwise be to go after grayling.

"It is one of the glories of the 'North Woods' that they are infested by no venomous reptiles; and during all the years I have visited salmon rivers, I have never seen nor heard of anything of kin to the rattlesnake family. I know of some splendid trout, bass and muscalonge waters north west from Ottawa which I have hesitated about visiting because of their bad reputation in this respect. But even this will not restrain me through another summer, if my health is spared."

"When are grayling in season?" I was asked.

"The grayling is a spring spawner, and is in season anywhere from July to mid-winter. They are, perhaps, in fullest life and flavor in September and October, and thus furnish sport to the angler after it is wrong to take trout or salmon. In Michigan there is no more delightful month in the whole year than October. As a rule, it is an unbroken Indian summer, and as, late in the month, deer are in good flesh and are almost as plenty in the woods as grayling are

in the water, a combination of the two makes the Au Sable region a very paradise to the sportsman. I may add, also, that there are lakes near by quite as well stocked with bass as the river is with grayling. A region where bass, grayling and deer are all 'in season' at once, and all equally abundant, should have a potent drawing power for all who take delight in the use of rod and rifle."

"Please take us with you the next time you go for grayling," was the expressed wish of all present—not excepting my old friend from St. Lawrence, who had never before indicated any interest in any fish but his beloved bass. I more than half suspected, however, that his desire to accompany me had its moving cause in my casual intimation that there were inviting bass lakes in the neighborhood of this famous grayling river. G. D.

BROOK TROUT AND RAINBOW TROUT.

THE following, from the Bulletin of the United States Fish Commission, are replies by Mr. Livingston Stone, to questions of Herr von Behr, concerning:

I.—BROOK TROUT (*Salvelinus fontinalis*), and

II.—CALIFORNIA TROUT (*Salmo iridea*).

1.—We always hear now that *Salmo fontinalis* is rather a *Salvelinus* (and there is no doubt about it), but don't you have our *Trutta fario?* You use the words *Salmo fontinalis* and brook trout as synonymous, while formerly we thought brook trout to be our *Trutta fario!*

A. It is true that the New England brook trout, sometimes called the American brook trout and commonly known by the name of *Salmo fontinalis*, is properly a Salvelinus (*Salvelinus fontinalis*), but the *Trutta fario* of Great Britain and the continent of Europe does not exist and has never existed in America. The common brook trout (*Salvelinus fontinalis*) of New England and other States of the Atlantic slope is not the common brook trout of Europe (*Trutta fario*).

My following questions are meant about *Salmo fontinalis* (*Salvelinus*):

2.—How heavy do they get?

A.—The *Salvelinus fontinalis* or common brook trout of the Atlantic slope varies very much in size and weight. Those found in high altitudes in the very small and usually cold rivulets that form the headwaters of the streams are the smallest, and often are of such diminutive size that they will not average over two or three ounces each. The larger and somewhat warmer brooks lower down, that are formed by the confluence of these little rivulets, furnish the next larger size of *fontinalis*, and so on till we come to the streams emptying into the ocean or the great lakes, where we find the largest of the species.

Brook trout were thought to attain the weight of nine or ten pounds until the famous ten-pound trout caught by Mr. George Shepard Page in the Rangeley Lakes was declared to be *Salmo oquassa*,* since which time the reputed maximum weight of *fontinalis* has had to fall a little, though I still think it possible for *fontinalis* to attain a weight, under the most favorable circumstances, of seven or eight pounds; but Atlantic brook trout of three or four pounds are now geit'ng extremely rare even in tidal streams, and in the brooks farther in the interior a pound or three-quarters of a pound is considered a good weight for *fontinalis*.

3.—Are they living in the same water with *Trutta fario* or *Salmo iridea?*

A.—*Salvelinus fontinalis* has never been found naturally living together with *Trutta fario* or *Salmo iridea*. But since the introduction by human agency of *fontinalis* in Great Britain, *fontinalis* has occupied the same waters with *Trutta fario*, and since the California brook trout have been brought to the Atlantic slope these two latter varieties (*Salvelinus fontinalis et Salmo iridea*) have lived together in the same waters.

4.—What time are *Salmo fontinalis* caught by angling?

A.—*Salvelinus fontinalis* can be caught by angling in the latitude of New York city from about the 1st of April to about the 1st of October, though I believe the close season begins somewhat before October 1. Before about the 1st of April the water is usually so cold that the trout do not feel much like biting, and after the 1st of October the spawning season is so near that they do not care then much about bait or any food. As one goes farther north the season for angling begins later and ends earlier. Trout are not found much south of the latitude of New York city, except at high levels.

5.—With what fly or bait?

A.—Trout fishing in this country is done mostly with artificial flies. The different variety of flies used are innumerable. Those which are considered the most effective, taking the season through, are perhaps the "Professor," "Montreal," "Jennie Lind," "Coachman," Black Gnat," and "Cowdung." When bait is used the common angle worm is the favorite lure for trout, but grasshoppers, various flies and insects, and particularly the grub worm, are used at different seasons and in various localities with good results. Salmon spawn also makes a good bait when it can be procured.

6.—Do they spawn also in lakes like other *Salvelinus*, or only in rivulets like *Trutta fario?* What months?

A.—Atlantic coast trout, like *Trutta fario*, spawn almost exclusively in brooks and rivulets; and manifest a strong impulse to ascend the streams to a considerable distance. When, however, they cannot do better, they will, like other charrs, spawn on the shores of lakes, always seeking either a springy spot or a clean gravelly one, or both. Their spawning months vary very much, probably according to the temperature of the water. At the Cold Spring trout ponds, at Charlestown, N. H., the trout almost invariably begin to spawn the second week in October, and end before Christmas. Farther north in ordinary brooks they spawn earlier. Farther south they spawn somewhat later, and in ponds or streams which are fed by springs large enough to keep the water of very even temperature through the cold months, the trout spawn from the 1st of November till some time in April.

7.—Are they thought good for pond culture?

A.—In America, *Salvelinus fontinalis* takes the first rank as a fish to be cultivated in ponds, provided the ponds are fed by springs or cold running water. Ponds not possessing these qualities are unsuitable for brook trout.

8.—There seem to be different kinds of *Salmo fontinalis* in United States, for when some time ago I received a box of eggs, which were first cabled as *lake trout*, but afterwards declared by you to be *brook trout* (*Salmo fontinalis*), you especially remarked that these *Salmo fontinalis* eggs were of a special excellent variety, and my German breeders observe that these eggs are so very large that they indeed had believed them to be lake trout eggs.

A.—There is, properly speaking, but one kind of *Salvelinus fontinalis*, but they vary very much in quality. For example, the small fish of the small, high rivulets, though very sweet and delicious when cooked, are not nearly as handsome and plump and tempting in looks as the trout lower down, say in the Cape Cod and Long Island streams. Neither do they ever grow as large, neither are their eggs as large. As to the eggs of the largest breed of brook trout I think I may venture the assertion that they are fully twice as large as those of the eggs of the fish of mountain rivulets.

9.—Of what State and lake were these? So I dare say you have different kinds of *Salmo fontinalis*. Is this the case? I bought, for some years, eggs of Mr. Annin and of the Charlestown Cold Spring trout ponds. Were these probably of the same kind as those you presented to me a short time ago?

A.—The eggs sent to Germany, and first by mistake called lake trout, were true "*fontinalis*." They were from Mr. Clarke's ponds in Michigan. They were eggs of the same variety of fish (*Salvelinus fontinalis*) as those received from Mr. Annin and from the Cold Spring trout ponds at Charlestown, N. H.; but Mr. Clarke's eggs were from exceptionally fine fish.

10.—You observed that you had a *Salmo iridea* hatching-house in one of your Eastern States. Do the *Salmo iridea* spawn there at the same time as in California—in the spring? Which months are the spawning time in California (McCloud River), and which in the Eastern States hatching-houses?

A.—In the McCloud River they spawn from about the middle of January to the middle of May; but so varied in elevation, latitude and temperature is the State of California that *iridea*, I have been informed, is spawning somewhere in the State every month in the year.

It is unquestionably true that the spawning season of *Salmo iridea* depends on the climate, that expression being understood to include all climatic influences of every kind.

Salmo iridea spawns in the McCloud River, as has been mentioned, from the middle of January to the middle of May. In the eastern hatching-houses the same fish spawns in March, April and May.

11.—Does the *Salmo iridea* keep, in *ponds*, its stronger appetite and greater vitality they speak so much of in California?

I read in the small book "Fish Hatching, Fish Catching," that they are more vigorous in every way than the Eastern trout, but are not as handsome, have no carmine specks, but will live well in captivity and grow rapidly.

A.—*Salmo iridea* retains its capacity for eating voraciously when confined in ponds, and when confined seems to keep up its well-deserved reputation for having a hardy and vigorous organization, though I should hardly want to admit that *iridea* possesses any greater vitality than *fontinalis*. I agree entirely with your quotation from "Fish Hatching and Fish Catching," that they are more vigorous in every way than the Eastern trout, but are not as handsome, have no carmine specks, but will live well in captivity and grow rapidly, except that I should want to substitute the word "hardy" for "vigorous." It does not seem to me that the California brook trout are more vigorous than the Atlantic brook trout, but they are undoubtedly more hardy.

12.—Mr. Von dem Borne desires me to ask the following question:

What kind of places do those four above-mentioned fishes select for spawning; running or still water, on plants, on stones, on gravelly or sandy or muddy bottom; in deep or shallow water?

A.—In reply to Herr Borne's inquiry, allow me to say that *Salvelinus fontinalis* and *Salmo iridea* always seek clear, running water and a gravelly bed where they may deposit their eggs.

13.—Is there only one California trout, or is the trout of McCloud River the true rainbow trout, and has California another mountain trout?

A.—There is but one California trout which has been introduced into the Atlantic States, and, indeed, but one that has been much cultivated. This is *Salmo iridea*, or the "rainbow trout," or the "California mountain trout," or "Mc Cloud River trout," these three names last given being synonymous. Whenever anyone hears anything about *Salmo iridea*, or "rainbow trout," or California mountain trout," or "McCloud River trout," he may know that the same fish is always meant under all these different names. California has several other mountain trout, but they are not yet much generally known or much cultivated.

14.—Which one do you intend to send us?

A.—Consequently the California trout which Professor Baird intends to send to Germany is the fish (*Salmo iridea*) just mentioned.

15.—What month does it spawn? Californian *Salmo quinnat* spawns at home much earlier than our *Salmo salar*, but I might suppose that this entirely depends on the climate, because the California salmon which our Mr. Schuester raised in his tanks up to spawning time did not spawn in the California time, but in our *Salmo salar* time (November) or very near so.

A.—This question has already been answered under 10, which see.

*The assertion that Mr. Page's large trout was a "blue-back," *S. oquassa*, is new to us. We would ask Mr. Stone who has so decided?—EDS. F. AND S.

A TROUT POISONING CASE.

LAST week a most important case, involving the ownership of trout in a stream, was decided in the Supreme Court of Livingston county, N. Y. The stream is owned or leased by several persons and is the celebrated Caledonia Creek.

On trial the following facts were brought out: James Annin, Jr., is the lessee of half a mile or more of Spring Creek, in the village of Caledonia. He derives his rights from a lease made by the father of the defendant. At the head of the stream are two mills and a dam, the gates of which separate the water in the mill pond from that of the creek. During the summer months the water in the pond becomes stagnant and the weeds give forth disagreeable odors. On the 31st of August, 1880, the gates of the dam were opened to let out the water for the purpose of killing the weeds. This was accomplished, but the water, loaded with vegetable impurities, lime and sulphur, mixing with the waters of Spring Creek, killed large quantities of trout therein and did similar damage to the trout in the ponds of the State hatchery house at Mumford, three-quarters of a mile down stream. Mr. Annin brought suit against McKay for a thousand dollars damages, alleging in his complaint that McKay opened his gates with full knowledge as to what the results would be. The answer is a general denial of the allegations in the complaint, and also denies that Annin had any ownership in the trout. When plaintiff rested, defendant's attorneys moved for a non-suit on the grounds that fish in a flowing stream, never having been in actual possession, could not be subject of property, and that as Annin did not own the fish he could not recover. Geo. W. Sill, for plaintiff, combatted this claim, and the court denied the motion.

The case was tried before a jury, which gave a verdict for Mr. Annin of $130 and costs.

FISHING NEAR NEW YORK.

AS a supplement to the account of our "bassing" clubs," given in a recent number, we print the following concerning the local fishing near New York in November and December, from the N. Y. *Sun* of Nov. 23. It is mainly correct and bears the marks of a Philadelphian in the use of the word "dipsey." It says:

The extent and number of local fishing grounds, and the variety of species of fish caught thereon, make the waters near New York city bonanzas for the anglers, who work these grounds daily from the early spring, when trouting begins, till the late fall, when the striped bass run up the rivers and salt estuaries, only stopping when winter covers the waters with an icy film. In truth, old bassers are even now crying for a norther to chill the East and Hudson rivers, saying truthfully that the big bass won't come up until we have a freezer. But it is an ill wind that bodes no good, for the atmospheric conditions now prevailing, acting as a barrier to the run of bass, give to the general salt-water fisherman halcyon days among the blackfish and flounders.

The sheepshead is the first of the salt-water game fish to leave its summer haunts on the mussel beds and sunken wrecks, full of barnacles, upon which it delights to feed. Where they go in the winter months is a much discussed question among angling naturalists, some of whom assert that "the heads" emigrate to deep water outside, while others insist that these fish go South in the winter and come North again in the early summer. This theory, however, is weakened by the naive query of an old practical angler:

"Did you ever catch a 'head' in Florida that weighed more than ten or twelve pounds? You didn't, eh! Well, then, do you mean to say that the big fellows, fifteen pounders, that we catch in the North go down South every winter and grow small before they come back again?"

The weakfish keenly feels the nip of the early frost, and leaves, presumably for the Gulf Stream, in the warm waters of which he passes the winter months, thus incidentally recalling the theory of an angling writer that, as fish have their lungs placed on the outside of their bodies, they are perforce more sensitive of changes of temperature than other animals. The sea bass quickly follow the weakfish, and are followed in turn by the kingfish and the bluefish, and to-day all that is left for the angler in the adjacent salt waters are the striped bass, lafayettes or goodies, fall flounders, tomcods, bergalls or cunners, and a few straggling snappers or young bluefish. Of fresh-water fishes the black bass are still taking the lure in deep water, and the pike and pickerel seize with avidity the skittering and trolling bait. But it is the intention in this article to deal with the salt-water fishes only, and of these the striped bass in the North and the rockfish in the South claim precedence by right of size and gaminess.

From the fact that female bass filled with spawn are caught with nets in the deep holes in the Upper Hudson during the winter, many anglers incline to the belief that striped bass spawn in fresh water, but their habits in this respect are not yet accurately defined, at least so far as relates to the striped bass of running waters, for we find the latter very plentiful in their spring runs above tidewater, especially in the rivers of Pennsylvania, where they breast the strong rapids to reach the spring waters of the tumbling tributaries of the Delaware and Susquehanna, and where they take a gaudy, artificial fly and afford sport hardly inferior to that of salmon fishing. Striped bass of twenty pounds or more have been caught in nets nearly a hundred miles above tidewater in the above named streams, when resting in pools hardly three feet deep at the foot of the rapids. Genio C. Scott, in his "Fishing in American Waters," says this fish spawns in both fresh and brackish waters, but never in the sea. Be that as it may, anglers well know that the great run of big bass begins usually in the latter part of September and continues far into the month of December, the numbers and length of the migrations being dependent upon the early or late advent of frost. In this fall's rush of fish there is hardly a tideway of our local waters which has not its biting denizens.

We note only the accessible grounds for a day's fishing, for the enjoyment of which the fisherman needs only an early breakfast, being able to reach home again in the early twilight hours. First comes Long Island Sound, which is truly an angler's paradise. Narrowing from Fort Schuyler, it divides into three contracted but deep channels, flowing around Riker's and North and South Brother islands, and then spreading out once more until it merges into the East River with its Hell Gate, Little Hell Gate and Brown's Kills, each literally strewed with rocks and ledges. At the mouth of the Little Gate lies the Sunken Meadow, and around this and through the channelways are the best trolling grounds. For still fishing from boats, the following localities are considered excellent grounds:

Jamaica Bay—The Block House wreck, Canarsie, the Neversink wreck, Canarsie, Mud Channel, Rockaway, the railroad bridge.

Newark Bay—At the Lighthouse, the Central Railroad bridge.

Communipaw Bay—Old Tom and the Three Brothers, the Sunken Marshes.

New York Bay—South side of Governor's Island, the Kill von Kull, Fresh Kill Creek, the Great Salt Kills, John Tobin's Point, Coney Island, the Iron Pier, the Broken Point.

North River—The Split Rock, opposite 123d street, off the Elysian Fields, Piers 1 and 2.

East River—Pier 3 and 5.

Harlem River—Kingsbridge, High Bridge, and McComb's Dam.

The blackfish of New York, or the tautog of the New England States, grows to the weight of eighteen pounds, but those caught in the adjacent bays run from half a pound to six pounds. These fish spawn early in June, and are now in full feed, biting very freely at fiddlers and clam bait. They are not considered by anglers of a scientific turn game fish. This opinion, we think, is not sound. Let the angler strike any fish, from the

plucky pound barb or kingfish to the three-pounder salt water bass, in the tremendous rush of an incoming or outgoing tide, in water twenty to thirty feet deep, where a pound dipsey or lead must of necessity be used to keep the line in trim, with the bait near the bottom, and he must discard the rod and trust to the hand-liner's methods—hand over hand, with stubbornness of muscle. Now, let him reverse this method, take a light rod of seven or eight ounces, eight feet long, with line as light as good service will permit, and a nine-foot single-gut leader, and drop the half-ounce dipsey into the slack of the ebb or flood, and he will find that a five-pound blackfish will call for more of skill and tact than would a 200 or 300-pound shark on a canal-boat's towline.

There is an old saying among the fishermen of the East River and the Sound that blackfish begin to run when the willows commence to turn green, but the fact is patent that blackfish are in their best condition when the leaves of the willow are yellow. Below are mentioned a few of the best grounds for blackfish, which are also good for the run of small fish, such as lafayettes, small sea bass, with an occasional fair-sized tomcod and a stray snapper. The reader will bear in mind that all the places noted are excellent grounds for midsummer fishing, when large sea bass, sheepshead, porgies, blackfish, and others can be caught in goodly numbers, particularly in Jamaica Bay on the Block House and Neversink wrecks. The following are the favorite grounds for local fishers:

Jamaica Bay—Broad channel, and the grounds named for striped bass.

Gravesend Bay—The Stone Pile.

Rockaway Beach—The wreck of the Black Warrior.

Prince's Bay—Pleasant View and Gifford's.

Sandy Hook—The railroad and government piers.

New York Bay—The Monument abreast of Sandy Hook, and Fort Wadsworth in the Narrows.

Sheepshead Bay—Near the bar.

Flounders may be caught as early as March; in fact, all through the winter, if the angler elects to stand the temperature. The month of April, however, is the best for the spring fish, and October and November for the fall run. Here is a bit of advice for flounder anglers: Take along in your boat a pair of oyster tongs, and rake up the mud with them, and the flukes will be sure to bite. In default of the tongs, anchor a few feet behind an oyster boat, on the beds, and your total catch will be large, and so will be the fish. The best spots for flounders are in Flushing Bay and Jamaica Bay, although these fish bite freely in season on all muddy bottoms, unlike the blackfish, which prefer the sandy bed of a tideway.

Tomcods are now in full biting trim. These fish hardly exceed half a pound in weight, and give little sport, although they are considered a good pan fish. Bergals, which are now feeding freely, are looked upon as a pest, particularly on blackfish grounds, where they are active in taking the lure intended for larger fish.

For neighboring salt-water fishing such as we have described, the proper tackle and baits are as follows:

Rods.—An ordinary joined natural bamboo, such as can be bought for $2 to $5; its weight from ten to fourteen ounces, and is eight or nine feet long.

Reels.—A multiplyer brass, costing $3, and holding 300 feet of line, which should be a No. 9 Cuttyhunk of that length.

Hooks.—The Abbey & Imbrie Sproat hook of various sizes; for striped bass use Nos. 2 to 3; for blackfish, flounders, and such fish, use the 2 size. Tie the hooks on double gut spoods, using also double gut leaders.

Baits.—For striped bass, the shedder crab, shrimp, sandworms and squid; for blackfish, fiddlers and skimmer clam. The latter bait will be found killing for all kinds of small salt-water fish, excepting the snapper or young bluefish, for which the spearing seems to be the most seductive lure; but if you have not that, killies or mummychugs will be found a good substitute.

The list of grounds will show where the above named fish were biting freely up to last night:

In the tideways of Hell Gate—Striped bass; turn of the tides; squid and sand worms.

About the Sunken Meadow—Flood tide; striped bass and blackfish; bait, shedder crabs and sand worms.

Varians' Creek—Panfish; tide runaing up; sand worms.

Bowery Bay—Blackfish, flounders, dogfish; same tide and bait.

Flushing Bay—Striped bass, panfish; same bait and tide.

Arnold's Point—Blackfish, same bait; first of flood.

Westchester Creek—Striped bass; flood tide; shedder crab.

College Point and West Farms Creek—Panfish, bass; same bait and tides.

Pelham—Blackfish, bass, panfish; flood tide, clams, worms.

THE TARPUM.—I have seen lately in the New York *Herald* articles on bass angling and the bass clubs, also the subject treated in the FOREST AND STREAM. From these articles one might infer that the striped bass are leaving our coast to such an extent that there will be no sport in this line in the near future. Now, why do not some of these able anglers who have caught their sixty-pounders, and many others who are willing to try their skill on some of that weight or over, try the tarpum of Florida waters? They can be hooked to a certainty; the next thing is to bring them to gaff, and no person who goes after them need fear he will not find them; they are very plenty in some rivers there. I have seen schools of them which I should judge had fifty tarpum of from 75 to 150 pounds. I have often been fast to them, but with improper tackle to undertake the capture of them. I only once tried to catch them. I then fitted a strong troll line to a float, and thought I might play him that way (having no bass tackle), but I lost my fish at the first leap from the water, breaking my line. I should like to see a good-sized tarpum captured with rod and reel.—A. B. D.

NEW YORK.—Medina, Orleans County, Nov. 23.—Pickerel fishing at the Cove has been excellent the latter part of summer and fall. The Cove is situated ten and one-half miles southeast of this place, on Oak Orchard Creek; there are properly three coves where the creek has widened out to small lakes or ponds. The water is quite deep, making an excellent place for pickerel and other fish to breed and live in. Several parties from here have been up there this fall, and have had more than usual good luck, bringing home from ten to twenty fine pickerel, weighing from two and a half to four pounds each, and in one or two instances even more. It is with feelings of much pleasure and longings to be there that I hear the veterans tell of their grand sport.—SAL NITER.

ANGLERS' TOURNAMENT ECHOES.

THE casting has made an impression upon the world of anglers on the British islands, and the reverberations from across the water have just reached our shores. As a rule they do not discredit these records, as they have former ones, for the character of the committee in charge and the number of spectators, as well as the jealousy of the rival contestants, forbade the suspicion of an exaggeration of the distances. The fact that our records exceed theirs bothers the English anglers, and before we finish this article we propose to tell our transatlantic cousins just how and why we can do it. The two papers which have given most attention to the tournament are the *Fishing Gazette* and the *Field*, and both have full and fair accounts, the latter by its American correspondent, Mr. Franklin Satterthwaite. The *Field* editorially says:

> We do not usually concern ourselves much with what are called casting tournaments, because they are, as a rule, held under such conditions and circumstances as to be of little or no practical value or test in actual fishing. There are many persons, however, in this country who may be interested in the question, and therefore we publish the above report, as it is common enough to hear warm discussions as to the length of casts. Not long ago we heard a very angry one between two chance acquaintances, one of whom averred that he had cast twenty-seven yards (which was perfectly true, for we saw and measured it), and another gentleman who declared that he had cast twenty-six yards on one occasion, and he would be chained into unbreakable chips if anyone else could cast more; and the contention waxed high. This tournament shows, at least, that it is possible to cast thirty yards with a single-handed rod. Thirty-eight yards and two feet is a very good salmon cast; we have seen it cast before, however, and measured it; but it falls far short of Pat Hearns' famous feats, wherein he threw forty-two yards for a wager. But tournament feats are not to be put into competition with fishing casting; it is altogether a different thing.
>
> Some time ago we heard of a competition at which the line was cast upon a large sheet of canvas, thus avoiding one of the most serious drawbacks to long casting in actual practice, viz.: the friction of the line in drawing it out of the water, with all the weight of the water to weigh it down behind; the thing was insufficient as a test of anything. Here we have a platform run out into a lake, raised 3ft. above the lake, which practically adds quite 2ft. to the length of the rod. Of course, the ground behind was perfectly level, (at the least) and quite devoid of straws and tufts of grass, or bushes of any sort, and no doubt the fly lit and rested without much check, and even with perfect safety. Then, too, in most tournament affairs, both rod and line are picked out, and specially adapted to one another for long casting, and for nothing else. All these things are not in actual fishing. For example, the twenty-seven yard cast we measured was with the rod, line, etc., being then fished with on the Old Barge at Winchester, the bank not a foot above the water, with high water meadow grass behind, and a rising bank. The least touch of the grass, of course, was fatal. There are no comparisons in the test of anything. Here we have a platform run out into a lake, raised 3ft. above the lake, which practically adds quite 2ft. to the length of the rod. Of course, the ground behind was perfectly level, (at the least) and quite devoid of straws and tufts of grass, or bushes of any sort, and no doubt the fly lit and rested without much check, and even with perfect safety. Then, too, in most tournament affairs, both rod and line are picked out, and specially adapted to one another for long casting, and for nothing else. All these things are not in actual fishing. For example, the twenty-seven yard cast we measured was with the rod, line, etc., being then fished with on the Old Barge at Winchester, the bank not a foot above the water, with high water meadow grass behind, and a rising bank. The least touch of the grass, of course, was fatal. There are no comparisons in the test of anything. It is no doubt a good thing to be able to make your rod do its best, and to make long casts when wanted; but it is one thing to make a long cast, and it is another to fish it. We have more than once known men who, to show their power of casting, more often than not would over-fish their cast, and then when their fish rose bungled him. For all these reasons, and for the further one that we dislike anything like the introduction of competition into the art of angling, as destructive to the spirit of it, we are not inclined to attach any much importance to tournaments of this sort.

We do not agree with the able writer in the *Field* that such contests are of no value. As a school for beginners what can be finer? And the old angler can compare his style with that of others. The platform being three feet high might have added a little to the length of the cast, but not two feet to the rod. Next year the platform will not be over a foot high, and it would not have been higher this year except for the benefit of the bass casters, some of whom cast underhanded. The *Fishing Gazette* says:

> It will be acknowledged by all who know anything about fly-casting that some of the casts at this tournament were simply marvellous. In the "light rod" contest, for instant, Mr. H. W. Rawes made, in beautiful style, the extraordinary cast of twenty-seven yards, one foot, with a ten-foot split-bamboo rod weighing only four and a half ounces. For our part we doubted that such a cast could be made with a rod was simply an impossibility, but the strict conditions under w. ich the casting took place, the elaborate arrangements for accurate measurement, and the jealous scrutiny of the casting by the rival competitors make it impossible for any one who has indeed the examination of the distances cast by other anglers in this contest gives the last man of the seven credit for over twenty yards, and that with a rod of only four and a quarter ounces!
>
> Mr. Silk, who was present at the tournaments, tells us that the measurements were made from the spot on which the competitor stood to the spot where his end fly fell on the water, and there can be no question whatever about the strict accuracy of the measurements given; this independent testimony from an unprejudiced Englishman ought to silence all cavilling as to the measurements. To our mind this wondrous casting with such feather weights as four-and-a-half ounce rods is by far the most interesting feature in the tournament. Mr. Silk says the casting lines used were of braided silk, waterproofed, and this confirmation of our impression that lines of this description are, on the whole, by far the best that can be used by the fly-fisher.

Until recently we have always looked with disfavor on the glued-up split cane rods, although we must say our experience of them had been confined to English made rods of this description.

But in the face of such extraordinary results obtained by their means, as we have referred to above, we confess that our views respecting them are totally changed, and we feel certain that will be the case with most English fly-fishers, making full allowance for the fact that the casts were made from a platform three feet above the water, and undoubtedly this was an immense advantage as compared with casting done on a level with the water, still the fact that such rods will send a line out to such a distance places their casting merits beyond cavil. We may mention that we have recently received from Messrs. William Mills & Son, fishing tackle makers, of 7 Warren street, New York, a superb hexagonal Leonard rod, made to our requirements regards weight and length, but it is a stiff three-ounce salmon rod, weighing ten ounces. As a piece of workmanship it is simply perfection; every joint is made of six strips of cane, so beautifully put together that even with a magnifying glass it is impossible to see how the edges are joined.

The cast made with a single-handed fly rod by Mr. R. C. Leonard covered twenty-eight yards one foot, with an eleven and half-foot rod, weighing ten ounces. This cast, considering that it was from an elevation of a yard above the water, with in front and behind, is far, far, much in advance of the twenty-three yard cast, made on the ground (and not over water) with a ten-foot rod, at our first *Fishing Gazette* Tournament.

The bait casting with one ounce and two and a half ounce weights was not extraordinary, and will not compare with the casts made in this style at Hendon.

An Englishman, Mr. H. Prichard, is credited with the longest cast made with a single-handed rod at the tournament. With a ten-foot rod and a 5½ inch reel and line, he sent his fly some thirty-two yards from the platform. His style of delivery is peculiar, as will be seen from the FOREST AND STREAM description of it; but peculiar or not, it must be wonderfully effective.

Some anglers, in criticising these interesting fly and bait casting tournaments pretend to decry the merits of long casts. They say that a man may by practice be able to make a long cast and yet be a very poor angler. In our opinion this is a wrong view to take of the matter. The perfect angling must have all, and no sensible man would claim that a long cast is the best cast, or proves the angler who makes it to be a clever angler. At the same time we repeat that a man who can manage a long line delicately and well will generally be able to use a shorter one effectively. On small streams a long cast is rarely necessary, on broad streams it is often of immense value. Then again, as tests of the relative value of different styles of casting and different makes of rods, these tournaments are unquestionably useful.

The editor of the *Fishing Gazette* is on the right trail. The reason that the Americans cast further than the English is not that they are better anglers, but that they have better tools. We have never seen an Englsh made split-bamboo rod; but from what is said of them by the English papers, they must be inferior ones. If the editor of the *Gazette* will go through the large fishing tackle establishments in America, he will find no rods but what are as beautifully put together as those he describes. A fine rod that showed its joining would not be allowed to leave the shop of any maker with a reputation to win or to sustain. Few Englishmen care to pay the prices for rods that we do; and at the same time they will, as a rule, pay more for guns. Take as a sample of our meaning an Englishman and an American, each fond of both shooting and fishing and each with a fair portion of worldly goods to enable him to gratify his tastes. The Englishman would not hesitate to spend $400 or $500 for a fine gun, but would think one-tenth that sum too much for a superior rod. The American would take the rod and a $15 reel, with a $5 line, making the outfit come to about $75, and would then say, "I think a $100 gun will kill all I can find to shoot at." Just as the English excel in high priced guns so do we in fine rods, and this is the reason that we can get more work from the rods.

We do not think that the limit of casting with a single-handed rod has yet been reached, and we shall not be surprised to see the record beaten each year, until 100 feet are cast. We believe that long casting is the only way to test not only rods, but anglers. It is just as desirable to cast far, as it is to cast delicately, and a long cast must have some delicacy, for its force is spent. The man who can cast eighty feet can fish more water than he whose limit is sixty. Who has not seen trout rise beyond reach?

English anglers are very thorough. Their waters have been fished so long that unless a fly is deftly cast it might as well not be thrown at all. The trout become educated, as on some Long Island streams, and are shy. In this country, on the contrary, we have so many new and unfished waters that the trout are green and will take anything; and this tends to make careless anglers. Take a hundred anglers at random from each country and the chances are that the English would have a larger proportion of first class ones; but they cannot equal our experts in casting because they have not the tools.

RANGE OF THE SAWFISH.—Dr. John Wilkins took a sawfish (*Pristis antiquorum*) in his pond near Eastville, Va., last month, which measured sixteen feet over saw and all. This is farther north on our coast than the fish has been recorded before.

Fishculture.

FISHCULTURE IN MINNESOTA.

DR. R. O. SWEENEY, of the Minnesota Commission, has been interviewed by a reporter of the St. Paul and Minneapolis *Pioneer Press* who reports that the hobby of the commissioner at present is carp, which he thinks the best breeding fish for the ponds and streams around St. Paul. He says that at present he is expecting a carload of carp in response to the applications of the residents of Minnesota, Dakota and Montana, which have been forwarded to the United States Fish Commissioner within the past two years. How soon the car will be in St. Paul he does not know, but it is expected every day. Any official notification that has been sent to him has either been mislaid or lost. He will, he expects, take charge of the carp when they arrive and distribute them over the State, as they may be allotted by the United States Commissioner on the applications made to him. The remaining fish—if there are any—will be placed in the hatchery and kept there for distribution.

Mr. Sweeney says that he received 300 carp some time ago from Prof. Baird, but upon his advice had kept them in the hatchery for breeding purposes. There they had grown well and had bred well, but the commissioners did not know to what extent as they did not like to disturb them in the pond, and to find out just what the result was would necessitate the drawing off of the pond or the use of nets, as the fish would not bite. He believes that within a short time there will be plenty of carp at the hatchery to distribute throughout the States.

The specifications for a hatchery will afford scientific information for extensive breeders, and will also show the owners of ponds how to manage the beds and keep the carp well. The usual requirements are two or three ponds, one lower than the other, for the purpose of drawing off the water. These plans will be embodied in the annual report of the commissioners. To the farmers who have good ponds Mr. Sweeney says they can get along without the drawing off process by feeding the fish it some especial spot on the shore each day. This will draw the fish there with perfect regularity, and they can then be selected and drawn out with a hand net. This process will keep the house supplied very regularly.

"Will it pay to raise the carp" is a question often asked. It is believed that it will, as the rapidity of their growth places them much in advance of other fish. The fish market to-day requires a large number of all kinds of fish, and these always bring from eight to ten cents per pound, and the carp is a very good table fish. There have been 150 carp distributed within the past two years in Minnesota by the commission. What the result of this distribution is, is not known to us, as no reports have been made; but it is declared by Mr. Sweeney that those who have received fish from the State should report progress at once so that the facts in the matter can be placed in the annual report, that the ideas suggested by the experimenters may be practically tested by the commission.

Of other fish in the State, it can be said that 1,500,000 have been distributed during the past two years. These embrace the brook trout, whitefish, wall-eyed pike, German carp and the California brook trout, known as the rainbow trout. These have each good qualities and seem to be flourishing. The most satisfactory reports, however, are on the brook trout, which has been placed in almost all the smaller streams both north and south of St. Paul. The reports, however, give no very definite figures except that the fishing is better in every locality. The brook trout is the easiest raised and lives and propagates where no other fish will. In fact it is said that any stream that is warm enough for other fish is too warm for the brook trout. The pickerel is an enemy of the young trout, but the older fish can either battle with or is too quick for the pickerel and is therefore not disturbed. At Peterson, Filmore county, there is a man named Hazelrud, who makes a specialty of raising trout; and he has found it quite a profitable business, as he lets the catching out to sportsmen, whom he charges $1 per pound for all they catch. The brook trout is worth in the St. Paul market from forty to fifty cents.

The California salmon are progressing well, it is believed, but the numbers raised are not known positively. The salmon have a way of biting when they please, and they don't seem to feel like it in Minnesota streams. Some 150 of these fish are reported caught each season, and they are seen in large droves in the various lakes and rivers. Some of the salmon escaped from a hatchery in some way and have found a lodging place in the Mississippi. During the past season a few have been caught near Stahlman's brewery. The whitefish, which is the favorite food fish throughout the country, has been placed in a number of rivers and is doing well. The next shipment expected will be whitefish and they will be placed in the Mississippi, Minnesota, and St. Croix rivers. Whitefish which have left the hatchery have been caught which have measured over two feet long. Besides their size they are good breeders, giving 30,000 to 60,000 spawn per year. White Bear, Minnetonka and the lakes from Clearwater north, have had a very good supply of this fish. The black bass, croppies

and wall-eyed pike seem to be increasing in numbers. The pickerel at the same time is also increasing and destroys large numbers of other fish. Two pickerel pets were one time kept at the hatchery until they became three feet long. Those fellows were very lively, and used to catch the swallows as they passed over the water, fairly jumping out to seize their prey. This closes the interview with the commissioner, but his annual report will contain statistics on fish that will fairly dazzle and delight the people of the State.

A SUMMARY OF RECENT PROGRESS IN OUR KNOWLEDGE OF THE CULTURE, GROWTH AND ANATOMY OF THE OYSTER.

BY JOHN A. RYDER.

BEING engaged in the preparation of a monograph on this important mollusk, in which it is the purpose of the writer to discuss, as exhaustively as may be in his power, the oyster in its anatomical, embryological, physiological and economical aspects, from time to time, in the course of the investigation, new facts come to light, some of which it may not be amiss to publish, so as to call the attention of those who may be willing to contribute facts or material in aid of my work. I shall also call attention to what is being done abroad; as it may interest American oystermen to know that the host of French, German and Dutch investigators are not idle, and that if the many confused and even inaccurate statements of the older observers are not always very creditable to science, the present generation of workers in biological investigation are on the alert provided with capacity, appliances and knowledge, such as was never before known. "But," says your man of business, "of what good is this kind of knowledge? I am a practical man and do not need to know anything of the vagaries of naturalists or men of science." Very well, sir, you are one of the sort who are reaping the benefits, ay, even many of the comforts of existence which owe their being to unrewarded empirical investigation into the phenomena of nature. Such practical men belong to the middle ages intellectually. These are the persons who to-day fill the positions of trustees of colleges and other institutions of learning to the detriment of scientific progress in this country. They cannot see the utility of scientific investigation, unless it be for the immediate advantage of the private or public bursary. Happily our government is not so short-sighted, and we may feel a just pride in the efforts now making in the direction of fish and shellfishculture, and the scientific and practical results already attained. Nothing is truer than the statement that, the results of the tedious experimental and unrewarded labors of the laboratory investigators enter most largely into making the practical industries of the times practicable. After fifty years more have elapsed this will be the case with oyster-culture, we may be certain. The achievement of this result will and can only be by scientific methods, the voices of acres of so-called practical men to the contrary notwithstanding.

During the year past three different species of edible oysters have been investigated or experimented upon. Of these, I may say, all have had a fair share of attention paid them, and one species has given such promising results at the hands of Mr. Bouchon Brandely, as to lead us to expect much of similar future efforts with other species in the same direction. Mr. Brandely worked upon the Portuguese species or *Ostrea angulata*, as it is known to systematic writers. I will give a brief abstract of his experiments carried out last summer essentially as reported from the Comptes Rendus, of the French Academy of Sciences, in the Annals and Magazine of Natural History for October, 1882. He says: "Twenty or twenty-five years ago the Portuguese oysters, indigenous to the Tagus, did not exist on the coasts of France. A damaged vessel discharged its cargo into the Gironde, upon the old Banc de Richard. Here they have since so multiplied that they cover an extent of from twenty-five to thirty kilometers, a vast bed which will soon be limited only by the banks of the river.

"*Ostrea edulis* is undoubtedly hermaphrodite according to the showing of Lacaze-Duthiers, Coste, Davaine, Möbius, Eyton and Hart. Is it a self-fertilizing hermaphrodite? With respect to this, nothing has yet been demonstrated; considering that the genital gland rarely presents the two sexes at the same degree of maturity, it is probable that it does not fecundate itself.

"The Portuguese oyster is, on the other hand, incontestably unisexual. Like the American oyster, as shown by Brooks, its ova and milt are expelled from the shell. Neither ova nor embryos are ever found in its mantle. The young of the common oyster cannot live outside of the shell. According to M. Berthelot's investigations the fluids in the mantle cavity of *O. edulis* contain albumen in a notable proportion, upon which the young are supposed to be nourished. M. Brandely found that the young of *O. edulis*, whether in the form of white or gray spat, could not be developed in sea-water external to the parent; the white embryos died in three days, the beat after twelve or fifteen days after their removal from the parent, although within reach of collectors. These facts he thinks, preclude the possibility of the crossing of the species. With respect to this point, however, our author made direct experiments, or attempts to hybridize the two species, which gave only negative results. Mixtures of the eggs of *O. edulis* with the milt of *O. angulata* and *vice versa*, never resulted in fertilization, although the experiments were repeated at different times for the last two years.

M. Brandely succeeded in artificially fertilizing the eggs *O. angulata*. The vital properties of both elements were retained for two to three hours. The embryos began to swim at Verdon in seven hours. The shell was formed on the sixth to the seventh day. The temperature of the water was 22 deg. C. (equal to about seventy-one deg. Fahr.) The artificial fecundation presented no difficulties. Four times out of five, if good sperm is used, mobile embryos will be produced. The spawning takes place in *O. angulata* for several weeks and gradually.

"An enclosure about thirty or thirty-five feet square was prepared at Verdon, into which the animated products of successive fecundations were poured. The sea water was permitted to enter this space through a bed of fine sand, and to pass out in the same way. This enabled the experimenter to retain the artificially spawned embryos within the enclosure.

"After a month of repeated experiments our endeavors were crowned with success. We had the satisfaction of finding some brood fixed on each of the tiles placed in our experimental 'clear.' This is so much the more remarkable as until last week, [this appears to have been in July] no spat had yet attached itself to the numerous collectors immersed on the oyster beds of the Gironde, that is to say in the very center of the clear."

These experiments are of the highest interest and may be of great practical value, especially the means resorted to in order to prevent the escape and loss of the embryos from the clear or pond. I can confirm M. Brandely's statements as to the distinctness of the sexes in *O. angulata*, having learned this fact from sections of the animals of that species. My firm belief is also that *O. edulis* will yet be found to be practically unisexual. Sections of *O. edulis* never show the hermaphrodite character of the reproductive organs, at least in such material as I have investigated.

The following remarkable statement, taken from Gegenbaur's "Elements of Comparative Anatomy," deserves a passing notice. On page 380 he says: "In the oysters we find an intermediate step toward a separation of the sexes, inasmuch as these organs are not active at the same time in the same individual; but the male and female organs alternately so." This quotation tacitly admits the unisexuality of the European oyster, to which it evidently refers. The last part of the remark, however, is founded upon the slenderest kind of evidence; in fact, upon no evidence except a surmise, as such an alternate activity of the two parts is improbable; besides, it is not possible to demonstrate such an alternation of sexual activity in the same individual. As everyone knows, the soft parts of an oyster cannot be examined without opening the shell, which necessarily makes the needed second observation to confirm this alleged alternation of sexual activity a physical impossibility.

I regard Davaine's observations upon the histology of the reproductive organs as of little value, being made before the introduction of improved methods of investigation. His figures of the finer structural details of these organs have apparently been made from crushed fragments. Even Lacaze-Duthier's figures of the reproductive organs do not give a very correct idea of the ducts and their actual relations to the subjacent somewhat tubular follicles with a generally vertical direction to the plane of the surface. Besides, no anatomist, to my knowledge, has very definitely located the organs of Bojanus or quasi-renal apparatus of the animal, or indicated the apparently close relation of this paired organ to the openings of the generative ducts. It is true these structures are very rudimentary, but seem to be present in a slightly developed condition, in somewhat the same relation to the great adductor as in *Pecten*, only that they lie close against the mantle at either insertion of the muscle, and on its ventral side. Their extent is sometimes marked by brownish tissue in their vicinity. Lastly, we may note the grossly inaccurate and scarcely diagrammatic figures copied from T. Williams in Broun's "Classen und Ordnungen des Thierreichs," III. Malacozoa, Plate xxx, Figs. 8 and 9, introduced to show the structure of the gills, which they most signally fail to show.

An important embryological contribution to the life history of *Ostrea edulis* has been published during the past year by Dr. R. Horst, of Utrecht, which the writer has had the pleasure of translating from the Dutch original. He does not agree with Dr. Brooks's interpretation of the gastrula stage of the oyster, and seems to think that what the latter regarded as the primitive mouth of the animal must be regarded as the shell-gland, from which the primitive shell of the larva is secreted. In defense of his position he cites the labors of Hatschek and Lankester upon other forms of bivalve embryos as confirmatory. Balfour throws doubt upon a similar interpretation of the gastrula of *Anodon* by Rabl. Horst also discusses the origin of the nervous system, pointing out the mode in which the supræsophageal and pario-splanchnic ganglia probably originate as thickenings of the epiblast or skin layer. The genesis of the gills and mantle is, however, not very fully discussed. He was unable to get embroys except from old oysters which contained brood in the mantle. He was not successful in keeping the young alive which had been removed from the mother oyster. He does not appear to think it possible to impregnate the eggs of this species artificially. In conclusion he states that he found that sea-anemones or actiniæ, which are very commonly found on oyster beds, destroy large numbers of fry. He also failed to find the segmental or renal organs in any of his embryos.

A different report on the possibilities of the culture of *O. edulis* reaches us from England, as already noticed in these columns. A Mr. Littlewood is said to have exhibited spat five months old bred from artificially impregnated eggs, at the recent Edinburgh Fisheries Exhibition.

Meanwhile five American investigators have been engaged in the investigation of the feasibility of rearing *Ostrea virginica* from its eggs. Of these, Dr. Brooks, Lieut. Francis Winslow, and Henry J. Rice, have not yet, so far as I am aware, published anything upon what they have done. Col. Marshall McDonald and the writer were engaged during a part of the months of July and August with the investigation in the U. S. Fish Commission Station at St. Jerome's Creek, Md. The most remarkable result which Colonel McDonald and myself obtained, with an apparatus devised by the former, was the apparent fixation of the fry to the sides of the glass hatching vessels within 24 hours after spawning, when kept in a temperature of 73 to 80 deg. Fahr., that they would develope a larval shell in this short space of time, but were surprised to find the young apparently fixed in such numbers to the sides of the vessels. How they were attached we failed to learn—whether by means of a byssus or not could not be certainly determined. They were found fixed so firmly, however, that they could only be removed by force, such as scraping the clean dead oyster-shells upon which they had lodged in the apparatus. Holding the shells upon which the fry had caught under a strong stream of water from a faucet failed to dislodge them. Our conclusion was, in view of the foregoing facts, that these young embryos had voluntarily attached themselves. It was noticed that this young fry had a disposition to lie upon the side, with the border of the rudimentary mantle projecting out over the border of the shell. Many were noticed in other positions, but I am inclined to believe that these were not normal, as will appear further on. The projecting border of the mantle, as it appeared to the writer, is probably the organ by which the adhesion of the embryo is effected—in fact, we will learn further on that this flatwise position of the fry is assumed at the time of fixation. Unfortunately for us, our endeavors to repeat our first successful experiment, which had given us such a remarkable result, invariably ended in failure, although we had taken the precaution to vary again and again the character of the apparatus to meet what were supposed to be unfavorable and fatal conditions. Several other forms of apparatus were used, which worked so satisfactorily that it was finally thought best to discontinue their use, including the air-blast playing upon the surface of the water in the hatching vessels, upon which I had largely built my hopes last year.

The fixed embryos or fry alluded to above did not grow any during the three days which we were permitted to observe them, both in a continuous current and and in a closed circulation of water. Putrescence or the development of deleterious organisms did not, I believe, interfere with our experiments. At all events, they remained of about the same size as the eggs with which we started, although food was already perceptible in the stomach rotating under the impulse of the cilia which lined the gastric cavity. They had the power to retract the velum and mantle, but not wholly. The pallial and velar muscles were therefore developed as well as the adductor, which could be seen to actuate the valves. That these embryos were developed from the eggs put into our apparatus there cannot be the slightest doubt, since the sea water used was first carefully filtered through a large, coarse mass of cotton wool to remove impurities and small, hurtful organisms, and no additional water from the open bay was afterward introduced.

The deflected border of the mantle in this fry seems to me an important fact in its bearing upon the manner in which the fixation of the young animal is accomplished. Though it is true there was as yet no umbo developed upon the shells of these larvæ such as may be seen when the larval shell measures from an eighteenth to a nineteenth of an inch in diameter, but the hinge line was straight as if the shell at this point was truncated. In the last stage of development of the larval shell, which I shall call the umbo stage, this truncation disappears, the umbos projecting somewhat past the level of the hinge, which is still approximately straight and without teeth, contrary to the statement of Lacaze-Duthiers. Immediately following the umbo stage the larval shell is converted into the spat, the valves of the spat growing from the borders of the fry shell. Or, rather, speaking more correctly, the calcareous deposits which are laid down by the young developing bivalve project past the free edges of the valves of the fry more and more, and immediately thereupon exhibit a prismatic arrangement of the shelly substance wholly different from that seen in the fry which is laminar, homogeneous and not prismatic. The fry shell is perfectly symmetrical and very convex, up to the time when it is converted into that of the spat, which is at once developed in an unsymmetrical manner, but at first tends to simulate the rounded outline of the fry, except at the hinge, where no lateral growth of shelly matter takes place. As growth of the spat goes on, and in fact from the very first, the hinge of the fry shell is inclined slightly upward, the fixation evidently having taken place at its edge.

This I regard as the most important step which I have made in developing the history of the shell, and it is probable that in it we have the clue to the manner in which the young oyster becomes fixed to stationary objects. It is important to note that the whole of the lower surface of the under valve of the young oyster is at first firmly attached by an organic cement. So firm is this substance, that the young shell can rarely be removed from its attachment without breaking the lower valve. The substance which effects this attachment is without doubt the organic matrix of the shell; viz., the so-called conchioline of the external horny covering or periostracum. The lower valve of the spat when growing on a flat surface may continue to adhere until it is nearly two inches across before its edge, together with that of the upper one, begins to bend upward and become free. This attachment is effected very early, as I have met with it in spat a little over an eighteith of inch in diameter. When it is twice this size it is scarcely possible to remove the young oyster entire from its attachment without first breaking loose with it a little disk of the object on which it rests. When the lower valve of the fry shell is examined under the microscope it is found that a faint groove runs around its border where it is continned into that of the spat, which is more pronounced than on the upper. This would appear to indicate most conclusively the means by which the final fixation is effected; viz., by means of a deposit of conchioline from the mantle border upon which the animal continued to deposit layers of calcic carbonate. This does not, it may be remarked, dispose of the possible existence of a byssus, but, as already remarked, our failure to find such a structure with special adaptations of the microscope, in the apparently attached fry in our aquaria now renders its existence somewhat doubtful.

The further development of the spat shell is interesting, in that the deposit of lime is continued mainly from the free borders of the valves and not from the hinge margin, where a marked interruption of shell development in a lateral direction is to be noted. In fact the valves of the spat are at first truncated on a line with the hinge of the fry shell and as the lines of growth are continued outwards the are developed which remind one of the lateral hinge processes in *Pecten* or the scallop. The hinge border of the spat is at first somewhat bent upwards in conformity with the slightly upward inclination of the hinge end of the fry shell. It results also from this that the hinge border of the newly fixed fry is at first free. To sum up, we find that the fry of the oyster is first permanently fixed by a pallial secretion probably conchioline, at the border of its valves, with the hinge end inclined upwards and the free border of the valves in fixed contact with some foreign object. That the hinge end of the spat is free for some time and that the whole of the rest of the under valve is cemented fast with conchioline.

Sections of the soft parts of spat from a sixteenth to a quarter of an inch in diameter, show that the intestine and stomach are arranged pretty much as in the adult. The main difference being that the intestinal folds are not so pronounced and the liver follicles comprise the bulk of the body-mass. Of the gills, however, are relatively very few as compared with their vast number in the adult, showing that extensive developement of this organ goes on during postembryonic life. No reproductive organs were indicated in this stage. Food was noticed in the stomach and intestines and consisted mainly of tests of diatoms, and slimy plasma of organic origin mixed with particles of dirt.

The pedal muscle first noticed by the distinguished conchologist, W. H. Dall, I have dissected out in hardened specimens. It is attached to the valves near the hinge and its insertion is sometimes indicated in *Ostrea virginica* by a small purplish scar. It passes down obliquely into the soft parts just behind the palps towards what answers to the pedal portion of other mollusks. As one proceeds backwards and downwards it is lost, probably in the soft tissue of the body-mass on the ventral side where it probably meets its fellow of the opposite side. I have never seen any evidence of it in sections, which I have, however, not yet prepared with that object in view.

Recent investigations of green oysters have served to confirm my original interpretation of the cause of the color, viz., a tincture of the blood cells either derived from green vegetable food or possibly by an effect of certain food upon the secretions of liver which have changed in color. The greened blood cells I find upon making sections line the heart and have accumulated in some cases in the interstices of the muscular trabeculæ of the ventricle, and sometimes even packed down behind the auriculo-ventricular valves so as to impede their action. These cells apparently lost their amœboid disposition to a great extent. This amœbal character of the blood-cell of the oyster is very striking, and may continue to exhibit itself in the living blood-corpuscles for four hours after their removal from the animal. The cysts filled with green cells are simply points in the pallial vessels which have been distended by these abnormal accumulations. The greenish cells and blood corpuscles are of about the same size, or about 1-3,000th of an inch in diameter. They are evidently not parasitic, as they never seem to present anything like an appearance of commencing fission.

During the past season I have found after opening the animal carefully, that it is easy to remove the ova and milt from the female and male by stroking the generative ducts towards their outlet when the products can be picked up with a pipette or "medicine dropper" and transfersed to water free from extraneous matters of every kind. I have also found that when the milky mass is dropped into water the character of the cloud of particles produced in the water at once determines the sex of the individual from which the spawn has been obtained. If the animal be a male the cloud produced upon stirring breaks up into wisps and streaks, which resemble the cirrus clouds or mare's tails of meteorologists. If the specimen be a female the spawn when dropped into the water immediately breaks up into a distinctly granular cloud. These differences are so marked that any person may be taught to recognize them in a few minutes. The new method of removing the ova and milt from the reproductive organs insures greater success in impregnation. Ninety per cent of the eggs may be fertilized by the new method; a result scarcely possible with the usual plan of chopping up the reproductive organs. This method, together with the mode of discriminating the saxes without the use of a microscope, puts us in a fair way to realize some part of a scheme of artificial propagation.

In conclusion, I have the most remarkable fact of all to discuss, viz., the total atrophy or wasting away of the reproductive organs at the completion of the spawning season. Examining sections through the body-mass of spawn-spent oysters taken in August last, I find that the whole of the connective tissue subjacent to the mantle, and between the latter and the liver, has disappeared, together with all traces of the reproductive organs, ducts and all. At the first bend of the intestine there is still some of the connective tissue remaining, but even here and in the mantle it has changed its character entirely, and become very spongy and areolar, instead of solid, and composed of large vesicular cells, such as are met with when the animal is in a better condition of flesh. In fact, it appears as if this mesenchymal or connective tissue substance had been used up and converted into reproductive bodies—generative products—in the case of the spawn-spent and extremely emaciated individuals. In sections from indi-

viduals in various conditions from that in which the rudimentary network of generative tubules has just appeared in the connective tissue, on up to those in which the reproductive tissues are enormously developed in bulk and proportion to the mass of the remaining structures, there is a perfect gradation from their complete absence to their full development. This would appear to be very strong evidence in support of the theory that the reproductive follicles or tubules are developed anew each season directly from the specialization of certain strings or strands of connective tissue cells.

Many animals manifest a periodic development of the glandular portions of the reproductive organs, but I know of no form in which there is any such presumptive evidence that those organs are annually regenerated and finally altogether aborted as seems to be the case with the oyster. Together with the changes here described, the most remarkable changes in the solidity and consistence of the animal take place. The shrinkage of a spawn-spent oyster in alcohol or a chromic acid solution is excessive, and will, when complete, reduce the animal to one-tenth of its bulk while alive. This shrinkage is due to abstraction of the water with which the loose, spongy tissue of the exhausted animal is distended. A so-called "fat" oyster on the other hand, will suffer no such excessive diminution in bulk when placed in alcohol or other hardening fluid. In consequence of this variable development of the reproductive organs as well as that of the connective tissue of the body-mass, the amount of solid protoplasmic material contained in the same animal at different times must vary between wide limits. And inasmuch as the nutritive and reproductive functions of animals are notoriously interdependent, it follows in consequence of the enormous fertility of the oyster that a vast amount of stored material in the shape of connective tissue must be annually converted into germs and annually replaced by nutritive processes. Plentitude or dearth of food are also to be considered, but it now becomes a little easier to understand the physiological interdependence of the reproductive function and the so-called fattening process.

The widespread belief in "fat" and "poor" oysters is simply a widespread delusion, if it be maintained that fleshy oysters owe their rotundity to a deposit of oleaginous or fatty matter. Far from denying that there is absolutely no fatty matter in these mollusks, I do most emphatically deny that the winter plumpness of the animal is due to such a cause but rather to large accumulations of protoplasmic matter of a soft, slimy consistency, identical with the more substantial parts of the higher animals. This popular error in regard to the true cause of the plumpness or leanness of the oyster, as the case may be, is only another illustration of the very many erroneous ideas of the intensely practical multitude who decry scientific methods, which are after all only very rigorously exact common sense methods under another name.

GROWTH OF CARP IN TEXAS.—The following letter to Prof. Baird is from the Bulletin of the United States Fish Commissioners: Savoy, Texas, April 24.—My carp which you sent me the 10th day of January last are doing well. Some of them are eight inches long. The shortest one that I received was one and a half inches long then and is four inches long to-day. They grow like China pigs, when fed with plenty of buttermilk. I feed them on the scraps from the table. They love good biscuit the best. They eat meat, bread, salad, or worms, and everything I give them. They are perfectly gentle and come at the rattle of a sheep's bell to be fed. I feed them as I would feed chickens, and intend to feed them every day. I have plenty of water for thousands of them. I would not take one hundred dollars for what you sent me. I can make them weigh five or six pounds this summer by feeding them well.—SAMUEL JOHNSON.

CARP IN KENTUCKY.—The transportation car of the U. S. Fish Commission recently arrived at Louisville with 12,400 young leather carp. They were consigned to Mr. William Griffith, President of the Board of Kentucky Fish Commissioners, and were distributed throughout the State.

The Kennel.

FIXTURES.

BENCH SHOWS.

March, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent, Detroit, Mich.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Puech Show Derby, for English setters whelped on or after March 1, 1883, close December 1, 1882. Chas. Lincoln, Superintendent. C. B. Elbin, Secretary Western Pennsylvania Poultry Society, Allegheny City, Pa.

FIELD TRIALS.

November 29—Field Trials of the Robins' Island Club, at Robins' Island, Long Island.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

EASTERN FIELD TRIALS.

THE DOGS AND THEIR WORK.

HIGH POINT, N. C., Nov. 25, 1882.

AS we stated last week, the heat between Peg and Countess was unfinished, and, owing to the rain and sleet, very unsatisfactory. On Sunday an effort was made to induce the owners to consent to leave the matter entirely to the judges and to have them designate the winner. Mr. Stokes and Mr. Leach expressed themselves as perfectly satisfied with this arrangement, but Dr. Rowe would not consent, and the stake was accordingly run out on Monday, as follows:

PEG AND COUNTESS.—On Saturday afternoon, at the conclusion of the heat between Don and Dashing Rover, which concluded the second series, Countess having a bye, Peg and Countess were at once put down. Starting off, a bird flushed close to Peg, but, owing to the rain and sleet, it was hard to decide whether or not a dog was to blame for flushes. Working up the hill, a bevy was flushed by the spectators and marked down in the pines, and following them up, both dogs challenged, and Countess, who was urged on by Mr. Leach, got too close, and scored a flush, pointing just as the bird rose. She then went on and flushed another one; then Peg flushed one, and Countess followed suit, and Peg immediately put up another one. Then Peg got a good point, which Countess backed; and it was now Dr. Rowe's turn, which he improved by missing. Then we turned back toward the teams, and a nice bevy was flushed by one of the spectators and marked down in the pines. Working toward them, Peg ran into and flushed another bevy and dropped to wing. Following them up, one flushed in front of Dr. Rowe, and Peg soon put up another one, and the rest of them then got up. It was now raining quite fast, and considerable sleet was falling, making it very disagreeable, as well as spoiling the scent, and the dogs were ordered up and we started for the hotel.

On Monday morning there was a heavy white frost; the sky was partially clouded, and there was a light, bracing breeze from the northwest. It was a morning to gladden the heart of the fox hunter, and gave promise of a splendid day for sport after the frost should disappear. Leaving the hotel about eight o'clock, we drove about three miles east to the grounds we left Saturday night. Peg and Countess were put down at 8:45 in a field of sedge to finish their heat. Considerable ground was beat without a find, as owing to the frost the birds had not moved; but finally in some sedge along a cornfield, both dogs ran into a large bevy and flushed them. Following them up, a single bird flushed near Leach, and he cut loose at it, but the bird kept on. Peg then flushed one, and moving on a few steps, she put up another one, when several more flushed. Countess now made a gallant effort, and succeeded in getting in a very neat flush; but Leach was evidently chagrined that she had put up but one, while Peg had raised several, and he gave her a taste of the whip. This put her upon her mettle, and in a trice she had two more going, and a minute later she added to her score another flush. Leach expressed his satisfaction, and the dogs were sent on to find another bevy. They soon disappeared in the pines and sedge, and when found, both were, for a change, pointing a large bevy, which flushed as we came up. The judges gave Peg a point and Countess a back, but we thought that the honors should have been equally divided. Working on after them, Countess challenged and commenced roading, but the birds were wild, and two or three flushed before she located them. Meantime Peg was staunchly pointing, and Countess was brought up to back, which she failed to do, but went ahead when Peg moved on, and roaded running birds very nicely, but failed to locate them. Countess swung ahead and struck them, making a beautiful point which Peg failed to back, and went ahead, followed by Countess. Both dogs went by a brace of birds, which flushed behind them. Working on Peg half pointed, and then roaded a single bird, but got too close and the bird got up, and a minute later she repeated the performance. Leach now urged Countess to make an effort, and she responded by putting up a large bevy. This was a better flush than Peg had yet shown, and Leach's countenance was overspread with a winning smile. The judge scored a flush against Countess on the bevy, and the same to Peg on the single. Dr. Rowe kicked against this, as the bird was partially down wind, but the decision stood, which was more than could be said of the dog. This bevy went down in posted land, and we swung back into the pines, when Peg flushed a bird that she should have pointed. She then half pointed, and commenced roading. Meantime Countess, to the left, and out of sight of the judges, dropped very prettily on point a few seconds before the bird rose, but of course got no credit for it. Peg roaded out her bird very well, indeed, but it got up wild before she had established her point. The judges consulted and decided the heat in favor of Peg. Down one hour and thirty-five minutes; altogether 2½ hours. This heat was simply indescribable, and afforded a vast deal of amusement to those who witnessed it. The quaint complaints and remarks of the handlers, together with the comments of the spectators, kept the crowd in a roar most of the time. Col. Leach, at the close of the heat, brought down the house by offering the brace for sale, stating that his price—four dollars and a half—although seemingly rather steep, was none too high for Field Trial dogs of their quality.

DON AND PEG.—This was the deciding heat, and after a rest of twenty minutes, during which time permission had been obtained to hunt the ground where the last bevy settled, we left our horses, and the dogs were cast off and worked toward them. Don, with his head high in the air, went straight to them and pinned them in grand style. Peg, working ahead, scored a flush. Following them up, Don again made a capital point to a portion of the bevy, and Peg was brought up to back, which she refused to do, and went ahead, and half pointed, but soon moved on and earned another flush. They were then ordered up, and the heat awarded to Don, who was declared the winner of the Members' Stake. Down, fifteen minutes. Dr. Rowe again took exception to the ruling of the judges, claiming that Peg should receive credit for her point as well as penalty for her flush, but the judges failed to coincide with this view. This was the deciding heat of this interesting event.

Don, the winner, owned by Mr. Chas. P. Stokes, of Richmond, Va., is a black and tan dog with some white. He is seven-eighths Gordon and one-eighth Irish. He is of medium size and well put together, fairly fast and a very light and easy mover and just the dog for a sportsman. We give a capital likeness of him from a sketch by the well-known artist, Mr. J. M. Tracy, which was taken at High Point.

Following is the summary:

First Series.

Peg beat Buckalew.
Plantagenet and Dashing Monarch failed to appear.
Brock beat Bessie.
Dashing Rover beat Marchioness Peg who failed to appear.
Daisy Laverock and Tick withdrawn.
Don beat Dolly.
Countess beat Billy Flint.

Second Series.

Peg beat Brock.
Don beat Dashing Rover,
Countess a bye.

Third Series.

Peg beat Countess.
Don a bye.

Fourth Series.

Don beat Peg and wins cup, also the Challenge cup.

THE ALL-AGED STAKE.

Immediately upon the conclusion of the running for the Members' Stake, the first brace in the All-Aged Stake were ordered down. As there was a special prize for the best pointer they were drawn to run together and were called first. Sensation Jr. and Don were both sick, and withdrawn; the six others were drawn to run as follows:

MONARCH. H. E. Hamilton, New York.—Liver and white ticked pointer dog, 4 years (Ranger-Queen),

against

CROXTETH. A. E. Godefroy, Guymard, N. Y.—Liver and white pointer dog, 4½ years (Young Bang-Jane).

RAB. Elliott Smith, New York.—Lemon and white pointer dog, 3 years (Rush-Romp),

against

BRAVO. Geo. N. Appold, Baltimore, Md.—Lemon and white pointer dog, 2½ years (Bragg-Kate).

LADY DUFFERIN. John G. Heckscher, New York.—Lemon and white pointer bitch, 4½ years (Duke-Fan),

against

LALLA ROOKH. Luke W. White, Bridgeport, Conn.—Lemon and white pointer bitch, 11 months (Sensation's Son-White's Grace).

Judge Smith having a pointer entered, Mr. J. Otto Donner was appointed to act as third judge while the pointers were running; Mr. Smith to judge the setters, and also in the final heats, unless his entry should remain in. Monarch and Croxteth were put down at 11 o'clock in the sedge, when Don and Peg were taken up. Monarch is a good looking dog of fair speed, but seems inclined to hunt with his head rather low. He is not near so stylish a dog on game as Croxteth, but is undoubtedly a fair performer. He was handled by Mr. J. M. White, of Chester, N. C. Croxteth has appeared so often in public that he needs no description. He is handled by Phil. Thurtle. Both dogs started off well, and ranged over the field in good style. After a short spin they were taken back toward the pines. Crossing a gully, a single bird flushed close by Croxteth and his handler, but the dog was not to blame. Working in among the pines, Monarch flushed a single bird, and at once stopped to wing. Croxteth, down by a gully, also flushed one. Monarch swung into the pines, and as he did not come to call he was followed and found on a staunch point. Croxteth came up, but did not see him and took point beyond him. Then both moved on and Croxteth pointed grandly, Monarch backing him in good style. Thurtle flushed the bird to order and killed; Croxteth, sent to retrieve, pointed another one, which was flushed to order, but this unfortunately could not be scored in his favor, as the other dog was kept in for him to retrieve. He then retrieved his bird in good form. This was all a very pretty piece of work and was greatly admired. Moving on Croxteth again pointed and roaded very nicely, but the bird was down wind and he got a trifle too close and the bird flushed. Monarch then half pointed and slowly roaded his bird, meantime Croxteth swung round and made a magnificent point and held the bird until Monarch came up and half pointed, when the bird got up. They were now ordered up and the heat was awarded to Croxteth. Down thirty-one minutes. This was a capital heat and greatly enjoyed by all who witnessed it.

RAB AND BRAVO.—This brace were at once put down in the pines and sedge. Rab is a very good-looking animal, rather above the medium size, a good mover, and fairly fast. He appears to have a good nose, and did some very good work. He was handled by Luke White, of Bridgeport, Conn. Bravo is a very handsome dog, of medium size; he is quite fast and moves very well, although not quite so graceful and stylish as Rab. He was handled by Mr. J. M. Whaite, of Chester, N. C. Both started well, Bravo at a rattling gait, while Rab, although not so fast, appeared to have a good share of hunting sense, and swung round the most likely places in a very knowing way. Beating through the field without result, we went to lunch, which was near by. On the way an "ole har" was started, and quite a number of the spectators, with wild yells, gave chase; the frightened hare ran straight for a little darkey who was curled up under the fence, close to the teams. We watched the result with absorbing interest, fully expecting that puss would pass into his wide-open mouth for safety, but just as she reached him his jaws closed with a vicious snap, and he made a grab for his intended victim, but alas, he made a muff of it, and all that remained of his fond dreams of savory stew, was a gray streak along the fence, and the impression of his finger nails on the butt of the fence rail. After lunch a long turn was taken, but no birds were found, although several bevies were known to frequent the locality. Then we swung back to the pines. The bevy had got together, and Rab pointed them in good style. After looking for them he slowly and stealthily drew on a few yards and located them in a decided way that assured us that there could be no mistake. Bravo half backed him and was dropped by order. White flushed to order, but failed to kill. Following them up, Bravo challenged and dropped to order. Rab went on and scored a flush. Rab then pointed at the edge of a thicket, Bravo came up and half backed him, but soon moved on. The bird was flushed to order and missed by both handlers. Rab then pointed false, Bravo stopping, but not backing him. Moving on, we flushed a bevy that settled in a briar patch, where Bravo half pointed, and Rab backed until Bravo dropped, when he moved on. Bravo then went on and flushed the bird which Whaite killed, Bravo retrieving well. They were then ordered up and the heat awarded to Rab. Down altogether one hour and thirty-five minutes.

MR. CHAS. P. STOKES'S BLACK, WHITE AND TAN SETTER DOG "DON."

LADY DUFFERIN AND LALLA ROOKH were at once put down. Both of these dogs are well known to our readers, cuts of them having recently appeared in FOREST AND STREAM, the former July 29, 1882, and the latter August 31, 1882. Lady is nearly five years old and has never been hunted until within the past few weeks. She is very stylish and speedy, but appeared to be afraid that she would do something wrong. She is gamy on point, and with plenty of work will undoubtedly turn out a capital one. She was handled by T. Predmore, Forked River, N. J. Rookh, as she is called, is an especial favorite of ours, and we were more than pleased with her performance. She is not yet a year old, but so well did she behave that all united in pronouncing her a perfect prodigy. She was handled by Luke White, Bridgeport, Conn., who owns her. They were started at the edge of the pines at two o'clock, and Rookh at once challenged, but the bird got up wild, before she had time to locate it, and several more then rose some distance ahead. Working on, Rookh whirled nearly round on a very gamy point, to a single bird, the Lady backing her in good style, White flushing the bird to order. This was a beautiful piece of work. Lady then pointed where birds had been, Rookh backing in faultless style. Then working down the branch, we flushed a bevy that settled in the edge of some woods, where Rookh dropped flat, and held her point for some time, while Lady was called up to back, but she could not see her well, and was dropped by order. Predmore flushed the bird to order, and killed, Rookh retrieving in good style. They were then ordered up and the heat awarded to Lalla Rookh. Down thirty-five minutes. This ended the first series.

CROXTETH AND RAB.—This brace, the first of the second series, were at once ordered down, and worked in the woods, when a bird flushed near Rab, and soon another one got up. Croxteth half pointed where birds had been, and Rab backed him nicely. Then swinging back, Rab made a beautiful point, which Croxteth backed in magnificent style, and they were held for some time while Mr. Tracy sketched them, the judges giving them credit for the work, expecting that birds would run from the noise of the crowd. This proved to be the case. Then a long tramp was taken without finding birds. Rab finally struck a beautiful attitude, and Croxteth was called up to back, but before he saw him he also pointed. Moving on in some pines, Croxteth dropped just as a brace of birds were in front of him. Rab then pointed, Croxteth backing him. Then both roaded, but the bird had gone. Croxteth swung down to the brook and false pointed. Moving on, he again pointed, but at once moved on and flushed a young bird that flew only a few yards, and soon another one did the same. The spectators then put up a nice bevy, which were followed across a brook, where Croxteth pointed grandly. Rab, coming up, flushed a bird, and soon after another one got up almost under Croxteth, who remained steady. Working out the thicket, one flushed near the dogs, but we could not see if they were to blame. Then swinging back, Rab flushed a bird in very thick weeds. Croxteth here made a beautiful crouching point to a brace of birds. White missing the last one, Croxteth was a little unsteady to shot, but at once dropped to order. Then on a knoll, Croxteth pointed in good style and roaded nicely, Rab backing him. Moving on, Rab doubled on a beautiful point, Croxteth backing him, but not quite so steadily as he should. Rab moved a little and the bird got up under his nose, and he made a grab for it, but at once dropped to order. Croxteth then got a good point, Thurtle flushing the bird to order. Rab then pointed, and Croxteth backed. It was now Croxteth's turn, and he made a stylish point in some weeds, and Thurtle flushed and killed the bird to order, Rab retrieving it very nicely. The judges consulted some time, and awarded the heat to Croxteth. Down two hours and eleven minutes. This was a rattling good heat, and both dogs were warmly praised. This ended the second series.

CROXTETH AND LALLA ROOKH.—This heat would decide the pointer prize and all were eager to see the contest, expecting to witness an exhibition worth the seeing and they were not disappointed. Rookh started at speed and Croxteth jumped into a magnificent point, which Rookh backed in good style. Moving on Rookh challenged and roaded and Croxteth the same. It was nearly dark and they were now ordered up to go down in the morning.

Tuesday morning gave promise of a good day. There were some clouds with a light, but cool, northerly breeze. Leaving the hotel at half past eight, the dogs were put down a short distance east of the town and worked through some woods to an open field beyond, where Rookh scored first by making a grand point to a bevy that were scattered all around feeding, Croxteth backing her nicely. White, ordered to flush, went ahead of her, when both dogs turned back and Croxteth made an elegant point, which was instantly honored by Rookh. The bevy was then flushed all around them. Following them into the woods Rookh pointed and Croxteth backed her, but nothing was found. Moving on Croxteth pointed in a crouching attitude that was one of the most singular that we have ever seen. Rookh, not to be outdone, copied his position almost exactly. This was warmly praised by all, and Mr. Tracy at once transferred the wonderful picture to his portfolio, and we shall reproduce it next week, with the assurance that it is no fancy sketch, but a faithful representation of the dogs and their positions. Moving on Rookh flushed a single bird in the dry leaves. Croxteth then swung down to the brook and pointed, Rookh backing nicely, the bird flushing as we came up. Both then challenged once or twice, but made nothing of it. The judges now consulted and ordered them up and awarded the heat to Croxteth. Down altogether forty minutes. This gave the pointer prize to Croxteth.

THE SETTERS.

The setters were then called for, Mr. Smith, who had withdrawn Rab, resuming his duties as third judge. They were drawn to run in the following order:

TOM. Major George R. Watkins, Brooklyn, N. Y.—Orange and white setter dog, 4 years (Royal Duke-Bessie),
against
DON PEDRO. Dr. Henry J. Aten, Brooklyn N. Y.—Orange and white English setter dog, 2½ years (Ranger II.-White's Daisy).

SHADOW. Luther Adams, Boston, Mass.—Black, white and tan English setter bitch, 2½ years (Lincoln-Daisy Dean),
against
LINCOLN II. John C. Higgins, Delaware City, Del.—Lemon and white English setter dog, August 28, 1879 (Lincoln-Petrel).

LONDON. H. Bailey Harrison, Tilsonburg, Ont.—Blue belton English setter dog, 2¼ years (Paris-Lill),
against
DAISY LAVERACK. Jas. H. Goodsell, New York.—Lemon and white English setter bitch, 3¼ years (Thunder-Peeress).

GLADSOME. J. W. Foster, Leesburg, Va.—Blue belton English setter dog, 19 months (Gladstone-Leila),
against
BESSIE. J. Otto Donner, New York.—Orange and white English setter bitch, 3½ years (Ranger II.-Mallard's Belle

LORNA. Dr. Wm. Jarvis, Claremont, N. H.—Red Irish setter bitch, 4¼ years (Elcho-Rose).
against
RACKET. James H. Goodsell, New York.—Black, white and tan English setter dog, Sept. 26, 1878 (Rattler-Leda).

CHIEF. Max Wenzel, Hoboken, N. J.—Red Irish setter dog, 3 years (Berkley-Duck),
against

MR. H. BAILEY HARRISON'S BLUE BELTON ENGLISH SETTER DOG "LONDON."

DASHING ROVER. T. F. Taylor, Richmond Va.—Black, white and tan English setter dog, 3 years (Dash II.-Norma).

BROCK. Geo. T. Leach, New York.—Red Irish setter bitch, 3½ years (Count Bosco-My Duchess).
against
SMUT II. T. M. Aldrich, Providence, R. I.—Black English setter bitch, 3 years (Trim-Smut).

FOREMAN. Wm. Tallman, Worcester, Mass.—Black, white and tan English setter dog, 2 years (Dashing Monarch-Fairy II.),
against
BUCKALEW. W. A. Coster, Flatbush, N. Y.—Orange and white English setter dog, 3 years (Druid-Heller's Ruby).

PLANTAGENET. Jas. H. Goodsell, New York.—Lemon belton English setter dog, 2½ years (Dashing Monarch-Petrel),
against
PRINCE HAL. Dr. S. Fleet Speir, Brooklyn, N. Y.—Orange and white English setter dog, 3 years (St. Elmo-Maida).

ELCHO III. Adolph Nelson, Brooklyn, N. Y.—Red Irish setter dog, 4 years (Elcho-Rose).
against
DOC B. Robert Betty, New York.—Lemon and white English setter dog (Jersey Duke-Topsy).

DIANA II. Charles Heath, Newark, N. J.—Black and white English setter bitch, 3 years (Dash III.-Diana),
against
TRINKET. T. F. Taylor, Richmond, Va.—Black, white and tan English setter bitch, 3 years (Crack-Diana).

MAIDA. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black and white English setter bitch, 5 years (Dick-Clio),
against
LUNA MAY. A. H. Moore, Philadelphia, Pa.—Lemon belton English setter bitch, 3 years (Paris-Pearl).

RALEIGH. A. H. Moore, Philadelphia, Pa.—Red Irish setter dog, 4 years (Elcho-Rose),
against
BESSIE. Luther Adams, Boston, Mass.—Black and white English setter bitch, 2½ years (Dash III.-Countess II.).

POLLUX. Edward E. Harly, Boston, Mass.—Black and white English setter dog, 2½ years (Dash III.-Hardy's Diana. A bye.

TOM AND DON PEDRO.—This brace were ordered down at 9:25. Tom, handled by E. S. Wanmaker, of Elmwood, N. C., ran last year at Robins's Island, and although not placed, he won honor and fame by his wonderful speed, good nose, and stylish way of going. He was suffering with a badly cut foot, but he gamely ran a good race, although he did not exhibit the speed that he otherwise would. Don, handled by Mr. D. Hemion, of Cool Spring, N. C., is also a capital moving dog, with a good turn of speed. He is of good size and a very good-looking animal. When the word was given, both started off at a good gait over a knoll, where Tom half-pointed and Don backed him fairly well. Nothing was found, and the dogs were worked over the fields quite a while, and nothing was done except that Don pointed a hare, Tom refusing to back him. Then, near a branch, Tom found a nice bevy, which he pointed in good style. They were in thick weeds, and Don, moving in, flushed them. Following them up, Tom again pointed them, and Don backed rather indifferently. The birds were running and Tom roaded them, but was not quite cautious enough and flushed one. Don then moved on, and two got up near him, just as Tom made a nice point to the rest of the bevy, which Don then backed. Wanmaker flushed to order and killed one with each barrel very neatly. Tom retrieved one nicely; Don, sent for the other, failed to find it. They were then ordered up and the heat awarded to Tom. Down forty-eight minutes.

SHADOW AND LINCOLN II. were at once put down, and worked toward the bevy, which settled in some woods. Shadow ran last year at Grand Junction, in good form, and gave promise of making a very fine performer. Although she was beaten in her second heat, she showed some capital work, and is a very nice animal. She was handled by Capt. McMurdo, of Shadwell, Va. Lincoln II., handled by Mr. Robert Brown, of Amherst Court House, Va., is a very good looking animal of good style and speed, and ran a very good heat. Working the last bevy, Lincoln pointed false in the corner of a stubble field. Then in the woods, Shadow made a beautiful crouching point. Lincoln coming up, dropped on a nice point, but soon moved on, and catching sight of Shadow, half backed her, and remained quiet to order. Mr. Brown, who was shooting for both, flushed the bird to order, but there was a red bush in the way, and of course he missed. Shadow then swung round and pointed, but soon moved on and roaded up to her bird, which she located in grand style, Lincoln backing her nicely. Brown nailed this bird in faultless style, and Shadow retrieved it in good form. This was very good work all round. Shadow then moved on, and dropped on point as though shot. Lincoln, coming up, also dropped on point. They were then ordered up, and the heat was awarded to Shadow. Down fifteen minutes. This was a short heat, but a very good one.

LONDON AND DAISY LAVERACK were at once put down in the woods. Both have been described in these columns. London has greatly improved since we last saw him. A few months ago he was entirely untrained and very headstrong, so much so in fact, that it was thought impossible to make anything of him, but his performances here were nearly faultless, and reflect great credit upon his handler. He is a very stylish dog and has considerable speed, he also possesses a good nose and is very staunch. We give an excellent likeness of him from a sketch by Harry Tallman. He was handled by Wm. Tallman, of Worcester, Mass. Daisy Laverack is a very sweet little thing, and ran a good heat, although she showed a lack of work. She was handled by E. J. Martin, of Wilmington, Del. Casting them off, London soon pointed, but the bird flushed wild a long distance ahead. Daisy then dropped on point, but soon moved on and scored a flush, when she turned and backed London who was standing quiet. Moving on, a bird was flushed by the judges, and as it flew over Daisy she chased it, but came back to order. Then in a thicket Daisy sat down on point to a single and London, brought up to back, caught sight of her just as he had placed one fore foot upon a stone, when he instantly froze in as magnificent an attitude as we ever saw. While feasting our eyes upon the wonderful picture, we felt amply repaid for our long journey, and will warrant that all who were fortunate enough to witness this performance will long retain a vivid recollection of the beautiful scene. Martin flushed the bird to order and killed, Daisy retrieving nicely. Then working on, Daisy pointed and roaded, and London, coming up, did the same, but the birds had gone. A little further on Daisy dropped on point where a lark had flushed. Then on some distance, she dropped on a false point, and soon repeated the performance. Then London, in elegant style, pointed a large bevy in some corn. Daisy, refusing to back, went on and flushed them. This ended the heat, which was awarded to London. Down fifty minutes.

GLADSOME AND BESSIE were at once ordered down. Gladsome is a fine looking animal of good size. He is quite speedy, and if nothing befalls him he will be able to make it exceedingly warm for anything he may meet, as he appears to have a good nose, is staunch and has good judgment. He was handled by Mr. W. T. Mitchell, of Lynch's Station, Va. Donner's Bessie ran in the Members' Stake, and is well known to our readers. She was handled by her owner. They were worked round the bevy to get the wind, and Glad found them, making a beautiful point. Bessie coming up also pointed in good style. Flushing them to order, they flew back and one or two settled in some pines, and the rest along a brook. Swinging into the pines Bessie half pointed, and roaded a short distance, when Glad coming up also roaded, but got too close and scored a flush, and was not quite steady to wing, but dropped to order. Then while crossing the brook, Bessie caught the scent of a single bird, and dropped in the water on point; this was very pretty. Mr. Donner flushed to order, and missed. Glad then half pointed, but nothing was found, and he scored a false point as his handler had claimed a point. Moving on up the brook, Gladsome challenged but moved too close, and scored a flush, he then swung out in the sedge, and whirled on a capital point to a single bird, which was flushed to order, and killed by Mitchell, and retrieved by Glad in good form. Bessie, coming up, pointed on the edge of the bank, and two or three birds got up near her, but she held her point staunchly until called away, when two more got up close to her. She then moved on a little, and again pointed, Glad backing her. Mr. Donner, to order, flushed the bird, and killed it very neatly. Bessie retrieving it in good style. This was first-class work. Working on, Bessie made a nice point just as they were to escape penalty for a flush, as the bird rose a second later. Then over a fence Glad pointed in capital style. Bessie brought up to back failed to do so and went around him. They were then ordered up and the heat awarded to Gladsome. Down one hour and thirty-five minutes. It was now nearly noon, and we went to lunch at the house of Mr. D. P. White, who has extended many courtesies to the club, and was one of the first to offer his grounds for their use. He has a beautiful place, which is known as the Farm. It is in a high state of cultivation and is one of the best farms that we have seen in the South. The birds appear to be aware of this, as we found more here than in any other locality, and they were larger than any other that we found, reminding us of the full-fed birds of Long Island and New Jersey. After lunch we turned into a large stubble field south of the house, and

LORNA AND RACKET were cast off. Lorna is a very good moving animal, of fair speed and style, and appears to have a good nose; she has excellent judgment and works to the gun very nicely. She was handled by Mr. D. Hemion, of Cool Spring, N. C. Racket is a good sized dog with a fair amount of speed; he ranges well and moves very nicely. Ranging across the field Lorna made a very stylish point to a large bevy. Racket was between her and the birds, but did not appear to mind them. Lorna then drew quite a distance with her head in the air and located her birds in capital style, Racket backing her in good style. This was very well done by Lorna. The birds were ordered flushed, and each handler killed a bird and each dog retrieved very well. Following the birds Racket challenged, but got too close and scored a flush and dropped to wing. The judges consulted and ordered them up and awarded the heat to Lorna. Down fourteen minutes. This was rather a short heat, but the judges stated that Lorna showed plainly that she was much the better dog and they thought it useless to continue the heat. Mr. Martin took exceptions to the decision and withdrew all of his dogs from the trials.

CHIEF AND DASHING ROVER were then called, and after a short wait for Chief they were put down in the sedge at 1:20. Chief has run before in the Eastern Field Trials, and Rover

ran in the Members' Stake. Chief was handled by Mr. J. T. Miller, of Montauk, N.J., and Rover by Tallman. Working through the sedge into some corn, Chief made a nice point which Rover refused to back, but as Chief drew on and again pointed Rover backed him very well. The birds were flushed to order and nearly missed by both handlers. This was good work for the dogs, and as birds were none too plenty the guns were fairly entitled to the praise they received. Moving on, Rover scored a flush, while Chief pointed, but soon moved on and also flushed. Rover then flushed one in the weeds, and Chief, swinging into some pines, pointed nicely. Rover, called up, half pointed and half backed. The bird was flushed to order and killed, Chief retrieving very well. They were now ordered up and the heat was awarded to Chief. Down fourteen minutes.

BROCK AND SMUT II. were now called for, but Smut was absent, and Brock was declared the winner of the heat. We were getting through the work much faster than had been expected, and the next brace in order not being on hand, Raleigh and Adams's Bessie were put down. Their work will be found in its proper order.

FOREMAN AND BUCKALEW were not put down until after two other brace had run, and it was twenty-two minutes past three when they were cast off at the edge of some woods. Foreman, whose likeness we published a short time since, is a capital moving dog with a good turn of speed. He had done no work for more than a week, and was rank and not under good control. He did not do himself justice, as he is a capital dog when he settles to his work. He was handled by his owner, Wm. Tallman. Buckalew, who ran in the Members' Stake, was handled by Theodore Predmore, of Forked River, N. J. Working through the woods out into a stubble field, Foreman pointed, and Buck., refusing to back, went in and stole the point, which proved to be false. Then, through some woods into a cornfield, Foreman pointed and Tallman flushed and killed to order. Foreman, sent to retrieve, failed to find the bird, which was only winged and had run. Buck. then swung over a knoll and pointed, Foreman backing him nicely. Predmore flushed the bird to order and missed; Foreman then pointed and Buck. backed him, but after roading a while very nicely, Foreman failed to find; Buck. then made a good point under a treetop, from which the bird was flushed after some trouble to find it. Then turning into the woods, Buck. challenged, but moving on, he scored a flush; Foreman then dropped on a nice point, the bird flushing when we came up; he then swung ahead, and when found was on point; three birds flushed as his handler came up, and the judges coming up, several more got up. Then Buck. pointed false, Foreman backing him nicely. A little further on Foreman dropped on a beautiful point, which Buck. refused to honor, but crowded in ahead and flushed the bird. Foreman soon nailed another one, Buck. backing him nicely. Tallman flushed to order and winged the bird, which fell in a thicket, and Foreman, sent to retrieve, did not find it as it fell among a bevy which he flushed. Foreman then pointed at the edge of some sprouts and Buck. backed him, but the birds had run and nothing was found. They were then ordered up and the heat was awarded to Foreman. Down one hour and eighteen minutes. Just before the close of this heat Col. Leach luckily discovered that one barrel of Tallman's gun was filled with mud, which would undoubtedly have caused a serious accident had the gun been fired while in this condition.

SUMMARY.

POINTERS.

First Series.

Croxteth beat Monarch.
Rab beat Bravo.
Lalla Rookh beat Lady Dufferin.

Second Series.

Croxteth beat Rab.
Lalla Rookh a bye.

Third Series.

Croxteth beat Lalla Rookh and wins the pointer prize.

SETTERS.

First Series.

Tom beat Don Pedro.
Shadow beat Lincoln II.
London beat Daisy Laverack.
Gladsome beat Donner's Bessie.
Lorna beat Racket.
Chief beat Dashing Rover.
Brock beat Smut II.—withdrawn.
Foreman beat Buckalew.
Prince Hal beat Plantagenet—withdrawn.
Doc. B. beat Echo II.
Trinket beat Diana II.
Maida beat Luna May.
Raleigh beat Adams's Bessie.
Pollux a bye.

Second Series.

Tom beat Shadow.
London beat Gladsome.
Lorna beat Chief.
Brock beat Foreman.
Prince Hal beat Doc. B.
Trinket beat Maida.
Raleigh beat Pollux.

Third Series.

London beat Tom.
Lorna beat Brock.
Trinket beat Prince Hal.
Raleigh a bye.

Fourth Series.

London beat Croxteth.
Raleigh beat Lorna.
Trinket a bye.

Fifth Series.

Trinket beat Raleigh.
London a bye.

Sixth Series.

London beat Trinket and won first prize, $250.

Seventh Series.

Gladsome beat Tom.

Eighth Series.

Croxteth beat Gladsome and wins second prize, $150. Gladsome and Lalla Rookh divide third, $100.

At a meeting of the club, on Friday evening, Mr. W. A. Coster was appointed to act as judge in place of Judge Kinney, who was obliged to return home. The club then unanimously voted that Mr. W. T. Mitchell, of Lynch's Station, Va., be hereafter debarred from participation in any contests of the Eastern Field Trials Club, and the secretary was instructed to notify him of this action at once. Following is a copy of the secretary's notification:

HIGH POINT, N. C., Nov. 24, 1882.

At a meeting of the Eastern Field Trials Club, held at 8 P. M., the following resolution was unanimously adopted, viz.:

First—That W. T. Mitchell, by reason of his conduct during the running of the All-Aged Stake, be hereafter debarred from participation in any contests of the Eastern Field Trials Club.

Second—That the club return to the owners of such puppies as are entered for the present Derby the amount of their entries, unless some handler other than Mr. Mitchell work them through the present meeting.

Third—That the substance of this resolution be communicated in writing to Mr. Mitchell and his employers, and to the latter by telegraph.

Fourth—That this resolution take effect immediately.

(Signed) W. A. COSTER, Secretary E. F. T. Club.

THE DERBY.

[Special Dispatch to Forest and Stream.]

HIGH POINT, N. C., Nov. 27, 1882.

The dogs in the Derby Stakes were drawn to run as follows:

DASHING MASCOTTE. Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter bitch, August 6 (Dr. Syntax-Neilson's Rose),

against

SIR JOHN. J. Otto Donner, New York.—Orange and white English setter dog, January (Ranger II.-Mallard's Belle).

PEBBLE. Prof. H. J. Rice, Brooklyn, New York.—Blue belton English setter bitch, Sept. 14 (Count Noser-Maple).

against

BYRON. Wm. Mahone, Jr., Petersburg, Va.—Red Irish setter dog, Aug. 11 (D'Jonce-Jane).

DASHING THEO. Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter dog, August 6 (Dr. Syntax-Neilson's Rose),

against

LADIE FAYNE. Dr. S. Fleet Speir, Brooklyn, N. Y.—Blue belton English setter bitch, August 30 (Emperor Fred-Wanda.

TICK. George W. Post, Brooklyn, N. Y.—Liver and white dog, May (Bob-Dido),

against

COLONEL NOBLE. Chas. Antoine, New York.—Black, white and tan English setter dog, July 18 (Count Noble-Nellie).

ROY. Edward E. Hardy, Boston, Mass.—White, with black head English setter dog, June 9 (Pindee-Flora),

against

ST. ELMO IV. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black, white and tan English setter dog, April 20 (St. Elmo-Clio).

COUNTESS MAY II. Luther Adams, Boston, Mass.—Black, and white English setter bitch, April 12. (Drake-Countess May),

against

DARKNESS. E. S. Wanmaker, Elmwood, N. C.—Black bitch, June 15 (Chipps-Nettie).

LORNA DOONE. Spencer M. Nash, New York.—Orange belton English setter bitch, June 4 (Royal-Madge),

against

MEG. Charles J. Stewart, Jamaica, N. Y.—Red Irish setter bitch, July (Chief-Beesey).

ELSA. Edward E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 6 (Drake-Countess May),

against

SEFTON. A. E. Godeffroy, Guymard, N. Y.—Liver and white dog, May 12 (Croxteth-Vinnie).

ISABELLA II. Wm. H. Thayer, Bristol, R. I.—Blue, gray and tan English setter bitch, May 31 (Schuyler-Isabella),

against

LALLA ROOKH. Luke W. White, Bridgeport, Conn.—Lemon and white bitch, December (Sensation's Son-Grace).

The running began Saturday morning at 9 o'clock. Birds were scarce and the work was slow. Following is summary of the running:

First Series.

Sir John beat Dashing Mascotte—withdrawn.
Byron beat Pebble—withdrawn.
Dashing Theo beat Lady Fayne.
Tick beat Colonel Noble.
St. Elmo IV. beat Roy.
Darkness beat Countess May II.
Meg beat Lorna Doone—withdrawn.
Sefton beat Elsa.
Lalla Rookh beat Isabella II.

Second Series.

Byron beat Sir John.
Tick beat St. Elmo IV.
Darkness beat Meg.
Lalla Rookh beat Sefton.

Third Series.

Tick beat Byron.
Darkness beat Lalla Rookh.

Fourth Series.

Darkness beat Tick and won first prize.

It was then agreed by the handlers that the judges should be requested to award the remaining prizes without further running. Accordingly, the second prize was awarded to Tick, and the third was divided between Lalla Rookh and Byron. The prize offered by Mr. Heckscher to be awarded to the dog showing the best natural ability was given to Sefton. The trials were concluded at three o'clock.

Full details of the running, with pictures of the winners, will appear next week.

FORCE IN TRAINING.—*Editor Forest and Stream:* "Breaker" comes down on force in retrieving and hopes the day is not far distant when twisting the poor animal's nose or spiking him will be entirely done away with. But then he does not mean entirely, for later on he says, "Of course in some parts of their education it is necessary to use force, especially when teaching them to drop to shot or wing." I would like "Breaker" to inform us what kind of force he applies to that part of their education. Nose-twisting is as ancient as it is brutal, and few trainers use it at the present day. The old-fashioned spike collar was unnecessarily severe, but the late invention, which has an automatic spring to loosen the collar the instant the cord is slacked, and causes it to remain loose until pulled by the trainer, is a humane instrument, and far preferable to the whip or any other appliance. The dog is not unnecessarily punished if the trainer understands his business and controls his temper. "Breaker" tell us how he teaches a dog of from three to five years old to retrieve without force? Also which is easier for the man whose time is very precious, but who wants a broken dog and cannot afford to pay from $50 to $150 to have it broken—to spend two or three months teaching a young puppy to retrieve in play and earnest, or to wait until the pup is ten months or a year old and then teach him by means of automatic spike collar in from three days to three weeks? Obedience needs no punishment, but where the dog refuses to obey you must use—FORCE.

NATIONAL FIELD TRIALS.—Memphis, Nov. 24, 1882.—*Editor Forest and Stream:* We went over a portion of our field trials grounds at Grand Junction last Wednesday, and found birds very plentiful. We did not have time to get over half the grounds, and did not closely hunt what we did go over. We found twenty-four large coveys, and think we will find as many more on the other part of the grounds, which we will draw next Thursday. We will locate the coveys and throw wheat where we find them, which will enable us to find them without much loss of time during the trials. The trials will be the best ever held in America, from present indications.—D. BRYSON, Sec'y N. A. K. Club.

WESTERN PENNSYLVANIA POULTRY SOCIETY.—Pittsburgh, Pa., Nov. 24, 1882.—*Editor Forest and Stream:* At a meeting of the Executive Committee or Directors of the Western Pennsylvania Poultry Society, held here last night, the following action was taken regarding the English Bench Show Derby class at the coming Bench Show to be held here in April. The time of closing the nominations to the Derby was extended to February 1, and all puppies whelped on or since the 1st day of January, 1882, are made eligible to compete. The object of the English Bench Show Derby is to encourage the exhibit of fine bred puppies and to make it an object for breeders to do so by giving them a double chance to win, as perfecting the entry in the Derby gives the exhibitor the right without additional charge to enter in the regular class in the show as well as in the Derby. The Derby nomination closes, as I have stated, February the 1st, and the dollar must accompany the nomination, which amount goes into a common fund in addition to ten dollars from the Society, which will be divided into 1st, 2d, and 3d prizes in proportion of 50, 30 and 20 per cent. of said purse. A confirmation fee of $2 will be required on or before the close of entries to regular classes, which will entitle the entry to compete in appropriate class in the show if the exhibitor should so desire and make the entry. From present indications the Derby will be a large class and the show large and interesting. Mr. Chas. Lincoln has been engaged as superintendent.—OBSERVER.

OTTAWA BENCH SHOW.—*Editor Forest and Stream:* The Dominion of Canada Kennel Club has fixed its show to take place during the last week of March next, and have appointed me as their superintendent. I take great pleasure in recommending this show to all owners and breeders of good dogs. The directors are of the highest class of gentlemen in Canada, and as all of them are taking a working interest in the show, there is no doubt of it being a good one. They extend a cordial invitation to all American breeders, and have also sent a special circular to England inviting the exhibitors there to send their dogs, so that the show may be made a representative one of the best dogs in the world, as it is open to all. The show will take place during the session of the Dominion Parliament, which will give those wishing to dispose of good dogs a rare opportunity for the sale of them, as great interest is taken in the show by many members. The Marquis of Lorne and the Princess Louise will return in time to be present at the show, and it is hoped that her Royal Highness will place on exhibition some of her favorites. The special prize list will be a very valuable one; the regular prize list will be ready before the close of the year. The judges will probably be announced next week. Any information wished for will receive prompt attention by addressing me at Detroit, Mich., until 1st of January.—CHAS. LINCOLN.

KENNEL DESTROYED BY FIRE.—Midland Park, N. J. Nov. 21.—*Editor Forest and Stream:* I lost yesterday, by fire, my entire kennel, including a litter of pups out of my Gordon bitch Nellie F. (Auburn's Duke-Nellie F., winner second prize W. K. C. Bench Show, 1879). It appears that the slat door of the kennel was shut and locked, but the small half-door through which the dogs have access was open, and the children must have entered the kennel by this opening, lighted a match, and accidentally set fire to the building. They were too frightened to run in the house and give the alarm, and before the fire was discovered it had made such headway, and the flames were so fierce, that nothing could be saved. The cries of the dogs were heart-rending. Twice we attempted to reach the dogs, but the smoke and flames drove us back. I never again want to see such a sight.—H. J. CHAUNCEY.

KENNEL MANAGEMENT.

FOR WORMS IN PUPPIES.—Give upon an empty stomach two grains of finely powdered areca nut for each pound of weight, and follow in two to four hours with a dose of castor oil.

E. N.—"Canker" is such an indefinite term, we must ask you to give the symptoms before we can undertake to recommend any treatment. What is often called canker is a disease of the middle ear.

J. T. McM.—Dogs are liable to colic; it is due to constipation, flatulency, cold or indigestible food; an unusual supply of bones may cause it. Laudanum, 10 drops, to relieve the pain, then empty the bowels by a dose of oil, would be the proper treatment.

F. H. B., Pawtucket, R. I.—Setter dog, six months old; he eats well, but is troubled with worms; he seems to be blind; cannot see after dark at all: sight is not very good in day time. Is it worms that cause blindness? Ans. The blindness may be symptomatic; the symptoms caused by worms are legion; many are reflex from the irritation in the intestinal canal. Santonin, 1 to 2 grains, and castor oil half ounce, given together, make one of the best vermifuges.

SKYE, New York.—1. A Skye pup, seven months old, for the last month has been troubled with running at the eyes. 2. What are the symptoms of dogs when first attacked by worms? Ans. Look out for distemper, keep the eyes free from matter, use wash of borax 5 grains, rose water an ounce, dropped into the eyes twice daily. 2. First symptoms of worms vary very much; you may have vomiting, paralysis, rectal irritation, purging, inordinate appetite, enlarged abdomen, harsh, staring coat, emaciation and more or less febrile disturbance.

W. S. H., Newark.—Valuable English setter is very sick. General symptoms: Loss of appetite, eyes glassy and covered with matter, growls whenever you touch his head. I have been told he has softening of the brain. His age is about 18 months. Ans. Symptoms are those of distemper. Keep clean and warm, feed well on milk and broths, and if necessary for his strength, give alcoholic stimulants. Is he recovers his brain will be hard enough; don't fret about softening; canine pathology has not advanced far enough to recognize it before death.

Diving Decoy Co., Rochester, N. Y.—*Adv.*

Answers to Correspondents.

F.—The address is Birmingham, England.

T. S., Kansas City, Mo.—Brook trout have scales.

L. J. G., New York.—Go to Greenwood Lake for bass, or to Lake Hopatcong for both pickerel and bass.

W. S. K., Princeton, N. J.—It will probably not be too cold for quail shooting about Charlottesville, Va., during the holidays. We cannot advise you of the present supply of birds there.

S. K., Ft. Covington, N. Y.—To keep frogs alive for winter use in fishing, sink a box in running water which does not freeze, leave air space above water and stones to rest on. Let plenty of water through the box.

J. L. M., Baltimore.—1. Will you please tell me how to preserve a jointed bamboo fishing rod through winter to keep from breaking at joints? 2. Where can I purchase a book that will teach a novice in "gunning and fishing," or either alone? Please state price or prices. Ans. 1. If the rod is in a wooden case it can be laid away in a cool, dry place. If in a linen sack do not tie it tightly, do not stand it up because it may become crooked, but lay it on a shelf. The varnish should preserve it. 2. Look over our list of books advertised. The "American Angler's Book," by Thad. Norris, price $5.50, is the best on fishing. For gunning read Frank Forester's the "Young Sportsman's Manual," or Bogardus's "Field, Cover and Trap Shooting."

J. M. W., Penn Yan. N. Y.—I am constructing a fish pond, and am undecided in regard to the species of fish that I can the most successfully propagate. I can keep the water fresh, but it will not be in motion, as the current is quite sluggish. Are German carp grown successfully, or will some other species be more profitable? We have in our lake (Kayuka or Crooked Lake) pickerel, bull-head sunfish, bass, trout, perch, eels, pike, sunfish, etc., etc. Ans. You do not give the summer temperature of the water; if warm then carp are best. You will find a series of articles on their culture by Rudolph Hessel, Superintendent National Carp Ponds, in FOREST AND STREAM of April 20, 28, May 3, 12, 1881. Our files contain the experience of many persons in Northorns as well as Southern States. Also see article on the growth of carp by Fred. Mather, read before the Central Fishcultural Society, and published in FOREST AND STREAM of Jan. 27, 1881.

Rifle and Trap Shooting.

THE ENGLISH REPORT.

THE following is the report of Colonel Sir Henry St. John Halford, K.C.B. to the President of the National Rifle Association, on the recent match between the British and American team, at Creedmoor.

WISTOW HALL, Leicester, October 25, 1882.

To Earl Brownlow, Chairman, National Rifle Association, Pall Mall East, London:

My Lord—In accordance with your instructions, in resolution of the Council passed on December 7, I have the pleasure to report that I proceeded to the United States of America with a team of British Volunteers as follows: Lieut.-Col. Sir Henry Halford, Bart. (captain). Lieut.-Col. Walrond,* Major Pearse, Major Humphry, Captain Godsal, Captain Mellish,* Lieut. Heap, Sergt. Dods, Sergt. Oliver, Corporal Bates, Corporal Caldwell, Corporal Parry, Private Boulter, Private Goodeve, Private M'Vittie, and Mr. Smith (adjutant). These marked with an asterisk formed the reserve. The team was selected by your committee, with myself as chairman.

We sailed from Liverpool on August 26 and reached New York September 3, where we were met in a steamer by the President and officials of the New York Rifle Association, United States, who throughout the whole of our visit treated us with the utmost courtesy and kindness. On the range at Creedmoor every facility for practice was afforded us, and as many targets as we required were placed at our disposal. The 7th Regiment, N. G., S. N. Y., also kindly allowed us the free use of their rooms and lockers in the pavilion on the ranges, and the railway company stopped their trains whenever we wished. During the practice, I observed that many of the rifles used by the American team did not entirely fulfil the terms of any military breechloader, as understood at Wimbledon. Nearly all had a pistol grip, on some the foresight was adjustable for zero, and was too slender for the rough usage of service; the backsight was so wide that it was not supported by the sides of the bed, which was attached to the barrel by screw, so as to permit of its position being shifted while shooting on the back.

I at once called the attention of General Molineux, President of the National Rifle Association, United States, and of Colonel Bodine, Captain of the American team, to these matters, and they summoned a meeting consisting of General Molineux, General Wingate (Executive Officer), Colonel Bodine and Captain Robbin (Adjutant of the the American team), while I was fortunate enough to have the valuable assistance of Col. Walrond and Major Humphry.

It was urged by Col. Bodine that considering the short time before the match it would be impossible for him to get his rifles altered. I therefore waived the objection, so far as the match in hand was concerned, but pointed out that the rifles as they then were would not be admissible at Wimbledon next year. This was accepted as a satisfactory concession.*

The match was shot on the 14th and 15th of September, and resulted in the British team being victorious by 170 points, of which 19 were due to the short ranges and 151 at the long. A gold medal was provided for each man of the winning team, and a bronze one for each "Fortuna" formed the trophy of the match to become the absolute property of the winning team.

After the match, the British team were most hospitably entertained by the 1st Regiment N. G., U. S., in their magnificent armory, where the trophy was presented, and also by the 13th Regiment, which was paraded on Manhattan Beach for my inspection, and a banquet afterwards was given to the teams. On these two occasion only, and during the practice at which, we appeared in uniform.

I attribute our success partly to the superiority of our rifles and ammunition, and partly to the more lengthened experience and training of our men. The dicipline and general behavior of the team was all that could be desired, and I would suggest that the thanks of the Council be accorded to Captain Godsal for his devotion and self-sacrifice in sustaining the honor of the Volunteers of Great Britain. I much regret that Major Waller was prevented, by private engagements, from accompanying the team as Adjutant; but his indefatigable labors at home and all the preliminary arrangements contributed materially to our victory.

For the proposed match of 1883, at Wimbledon, I would suggest the following alterations: 1st. That the wind-gauge on the back sight, while a likely to be adopted for our regular army, be permitted hereafter in all M. B. C. matches at Wimbledon. 2d. That the qualification of military efficiency should date from January 1 of the year in which the match is shot, instead of full twelve months, as at present demanded.

In conclusion, I beg to bear testimony to the extreme kindness and hospitality shown us by every section of American society. From General Hancock and the officers of the United States Army downward, all vied with each other in making us welcome; and I am certain our visit will ever be remembered by us as one of the most pleasant incidents of our lives.

I am, my Lord,

Your obedient servant,

(Signed) H. ST. J. HALFORD,

Lieut.-Col. First Leicester R. V., Captain of British Team.

* Colonel Bodine, in his report to the Directors of the N. R. A., U. S., states that the rifles used by the British team "were much too costly, and in some respects wholly unfit for rough military usage," and that "the rifles were got up for the special purpose of their being shot at." In these matters he was entirely in error; they were similar in every respect, except in accuracy, to our service arm, and if made in quantity by machinery would come to about the same price. Some of them had been in use for six years, and not one of them had been made with any reference to this match.

OLD vs. NEW FRANCE.

THE following correspondence ought to bring a favorable response from the soldiers of the French Republic. They will be assured a rousing good time in addition to their defeat:

HEADQUARTERS LOUISIANA STATE NATIONAL GUARD, }
FIRST MILITARY DISTRICT, }
NEW ORLEANS, Oct. 26, 1882.

Monsieur le Vicomte Paul d'Abzac, Consul General of France, New Orleans:

SIR—The perfecting of the soldier in the use of the rifle, which has engaged and received the attention of the French and other European governments for a long time past, has of late years been pursued with great zeal in this country.

The great skill acquired by amateur American riflemen in the use of the small bore match rifle at long range has led to a series of contests with British riflemen, alternately, in this country and in England. During the present year a match, with military rifles, was shot in New York between English and American professional gunsmen, at distances suited to the military rifle, and a return match has been fixed for next year in England. Those contests have gone a great way in securing greater perfection in the manufacture of the military and the match rifle, while they have, at the same time, stimulated troops to obtain a high degree of skill in their use.

With this introduction, I now come to the motive which actuated me in communicating with you as the representative of the French republic. It is greatly desired by our military riflemen that a team representing the French republic should meet one composed of members of the National Guard of Louisiana here in New Orleans. Strong arguments may, perhaps, be required to bring about such a match and overcome difficulties and obstacles of which we may be, as yet, ignorant, but I feel confident that they can offer some which, I am confident, will be favorably considered by the parent country of the colony of Louisiana.

Our desire is to have the proposed match on the 14th of July next—the fete of the republican day which is celebrated here in New Orleans with, perhaps, greater eclat than anywhere outside the large cities of the French republic itself.

We can and will offer our guests the hospitality of a city which will remind them at every turn of their native home.

The visit of the distinguished representatives of the French nation, Gen. Boulanger and his companions, to this city last year, which was so gratifying to us has, I hope, left him a sufficiently pleasant recollection of our people to justify him in throwing the weight of his influence in favor of carrying out the object of this communication.

The conditions of such a match as propos d and the arranging of the preliminaries therefore will entail, in all probability, considerable correspondence between the proper parties; it is therefore none too soon to have the initiatory steps taken now. I feel confident of your active support in this matter, and beg to thankfully acknowledge it in advance and offer you my most distinguished consideration.

JOHN GLYNN, JR.,
Major General Commanding Louisiana State National Guard.

ADJUTANT GENERAL'S OFFICE, STATE OF LOUISIANA, }
NEW ORLEANS, Oct. 26, 1882. }

It is with great pleasure that I recommend a favorable consideration of this application, which must result in great benefit to both nationalities, besides bringing closer together the ties which unite them.

Respectfully,
G. T. BEAUREGARD,
Adjutant General of Louisiana.

RANGE AND GALLERY.

BOSTON, Mass., Nov. 25.—The riflemen who assembled at the range at Walnut Hill to-day had a very unfavorable day for shooting, the wind blowing from 10 to 11 o'clock throughout the day. Appended are best scores of the day:

Creedmoor Match, 200yds.

W Williams	5545545545—45	J A Carr	4443334445—41
F Dwight	5145554454—45	F Lewis (mil)	4344445444—40
W J Stewart	4545554444—44	L F Wead (mil)	4454453344—40
J A Crobb	5145545441—43	J Rines (mil)	4444444543—40
C G Parks	5445454444—43	C Weston (mil)	4434445342—36
C J Atkins	4545344445—42	A Brownie (mil)	4424344542—36
R Reed	4444444451—41		

WORCESTER, Mass., Nov. 23.—The interest here in rifle shooting continues very good. To-day was an exceptionally fine one, with the wind moderate from 5 to 7 o'clock. The following scores were made at Pine Grove Range:

Creedmoor Match.

John N Morse, Jr	4	4	5	5	5	5	5	5	5	4	4—46
Stedman Clark	4	5	4	5	4	4	5	5	5	5	3—45
John Norman	4	5	5	3	5	5	5	5	5	3	3—45
A L Rice	4	4	5	4	5	4	4	4	4	4	4—42

Massachusetts Match.

C D Eames	10	11	12	12	10	11	12	10	11	10	—109
Stedman Clark	11	10	11	10	11	12	12	11	12	11	—105
C Dusenberry	12	11	8	10	11	11	11	11	9	8	—103
S Burton	11	11	11	11	11	8	12	10	8	9	—102
A L Rice	8	12	10	12	12	6	12	11	9	7	— 99
C A Allen	9	10	10	7	9	11	9	9	10	12	— 96

Ring Target Rest Match.

Stedman Clark	11	11	10	10	12	12	11	12	10	11	—110
A Williams	12	9	10	10	11	10	11	10	9	10	—102

NEWPORT vs. ST. LOUIS RIFLE MATCH.—St. Louis, Nov. 26.—The St. Louis Long-range rifle team, in its match against the Newport, R. I., team yesterday, scored 305. Six men fired 15 shots each, at 800yds., Creedmoor target. The weather was wet and the wind was blowing in gusts. The Newport team, at Newport, scored 307.

ZETTLER'S GALLERY.—New York, Nov. 25.—Teams composed of the Western Union Telegraph Company, shot a match on Massachusetts targets reduced to gallery distance, 10 inches per man, possible 320. Capt. Smith's team—J. B. Smith 106, C. M. Fulton 108, W. B. Smith 96, T. Cussek 89, A. Watson 90, total 481. Capt. Bunce's team—B. F. Bunce 102, W. Richmond 97, J. Coogan 89, M. McDonald 92, M. Sandison 96, total 476.—M. McDONALD, Secretary.

NEWARK, N. J., Nov. 27.—The second match in the tournament will be shot at the Frelinghuysen Rifle Range, 189 Market street. The Board of Directors consider the shooting in the last match excellent, as the clubs have been out of practice during the summer months. Little shooting has been done at short range. The Newark Rifle Association is composed of two distinct bodies, each associations, and all shooting is done under the rules governing the National Rifle Association. The annual election will be held in January. The following scores were made: Frelinghuysen Rifle Club—J. K. Walsh, 49; A. C. Neumann, 48; R. Westerman, 48; G. L. Weigman, 47; Wm. McLeod, 46; G. Zimmer, 46; W. F. Lynn, 45; John Hahn, 45; Wm. Dennis, 42; S. Shackelford, 39. Total, 453. Essex Rifle Club—L. Pahls, 48; Wm. Watts, 48; J. Coppersmith, 48; C. Meisel, 45; Wm. Felts, 45; J. Mayfield, 44; J. Doon, 43; A. Walters, 43; Wm. Butcher, 41; F. Helms, 40. Total, 448. Plymouth Rifle Club—J. Hill, 48; O'Neil, 46; G. Townsend, 46; C. Townsend, 45; Brade, 44; Sommers, 44; Baldwin, 44; Foster, 44; Brower, 42; Leibe, 39. Total, 442. Celluloid Rifle Club—Whitman, 47; Lyons, 46; S. Simmonds, 46; Vreeland, 45; Parberry, 45; Turner, 45; Babbett, 43; Hahn, 42; Coe, 41; Willet, 40. Total, 411. There are now 423 members belonging to the clubs comprising the Newark Rifle Association. Of this number there are about thirty crack shots. The first club was organized in 1879. It will be seen how greatly the taste for rifle shooting has improved in our city within a comparatively short period.

THE TRAP.

A NEW CLEVELAND CLUB.—We have within the last month organized a club, purchased some marsh land for duck and snipe shooting, and have also bought some land for our monthly shoot at balls and pigeons. We had our first shoot to-day at clay pigeons, and this being our first trial good scores were not made. Below is the score. Twenty pigeons, eighteen yards rise:

Harvey	11110	11111	11111	11111—19
Higher	11111	11111	11011	11111—19
Thompson	11111	11111	11111	11110—19
York	11101	11010	11011	11101—15
Ford	11110	11010	11110	11110—16
Smith	11111	11111	11010	00100—14
Cary	11010	01000	10101	11001—10
Rust	10010	00010	01010	01000— 6
Hoggs	00011	00011	00011	11001—10

Ties on 19, miss and out. Harvey 7, Higher 1, Thompson 8; Thompson won first. Ties for second, miss and out. York 8, Ford 2; York won second and Smith third.—GADWALL.

WELLINGTON, Mass., Nov. 24.—The annual tournament of the Raymond Sportsman Club was held at their range at Wellington today. The principal event of the day was the State championship match, which was participated in by the best of the trap shooters. Mr. W. L. Perry succeeded in capturing the medal, with the score of 49 out of a possible 50 birds, missing his 16th bird. Appended are the results of the different events:

Championship Match.

W S Perry	1111111111111101111111111111111111111111111111111—49
A F Cooper	1111110111111010111101111111111111111111101111110—43
C M. Stark	0011010000101111111111111101111101111011111111—41
E W Eager	1111111001100111111111111111011111111111111111—40

First event—Seven birds. C. M. Stark and E. T. Smith divided first money; C. Wilbur and W. L. Perry, second; A. F. Cooper, third; J. B. Valentine, fourth.

Second event—Seven birds. Stark, first; D. Kirkwood, second; Wilbur, third; J. F. Witherell, fourth.

Third event—Perry first, Cooper second, T. S. Hall third, H. H. Francis and Kirkwood fourth.

Fifth event—Five pairs double birds. Wilbur and Hall first, Perry second, H. W. Johnson third, H. W. Eager fourth.

Sixth event—Seven birds. Perry and Stark first, Valentine and W. Ames second, Smith and C. Atwell third, Kirkwood and Johnson fourth.

Seventh event—Seven glass balls (Kirkwood trap). M. D. Gilman and E. Woodbury first, Wilbur second, Perry third, Thompson fourth.

Eighth event—Five birds. Eagor and Stark first, C. A. Holden and Ames second, Perry third.

Ninth event—Five birds. Eagor and Johnson, first; Valentine, Witherell and Silman, second; Smith and Kirkwood third.

Tenth event—Miss-and-out match, between Stark and Eager, was won by the first-named gentleman at the seventh bird.

CLEVELAND GUN CLUB.—The fourth grand annual shooting tournament, under the auspices of the Cleveland Gun Club will be held on their club grounds at Oak Grove House, on Ansel avenue to-day.

Yachting and Canoeing.

THE CANOE KELPIE.

Editor Forest and Stream:

Since reading "Nessmuk's" reply to Gus Sypher, I have often wished that I might some day find myself floating on the same sheet of water with "Nessmuk" aforesaid, that he and I might leisurely paddle along and compare notes. I find myself in sympathy with him on so many points that I seldom read one of his notes without thinking to myself: "Would that there were more such. Long may you wave, O. 'Nessmuk'! and may your shadow never be less."

I wonder if I am the pioneer in canoeing for pleasure on the frequented waters of our land? Is there any among your readers who launched and paddled a canoe before the year 1859, and made in it extended journeys, except where the nature of the region or of the pursuits compelled him so to do? I think that it was in that year that I completed and launched the "Kelpie," a canvas canoe, eleven and a half feet over all, and three feet beam amidships. I do not know of a lighter, fully decked and carried her across many a portage on the New England rivers, and she was well known in the summer and fall of 1860, on the Squam and Winnipesaukee lakes. She was a good seaboat, though without deck or cover, and only eleven inches deep.

There are some grave old fellows holding dignified and responsible positions to-day whose eyes will lighten if they read this article, remembering how easily the little Kelpie swung past the rocks in a rapid or rode the swells of the lakes. The ponderous Professor, familiarly known in those days as "Wodgers," has doubtless told his children how he and I, with the canoe full of duffle, on the Winnipesaukee, got caught in a squall and rounded the southeast point of Black Cat Island with the strong swells breaking "feather white" on the rocks just under our lee, and just when he thought we were likely to go to the demition bow-wows a steamer load of excursionists hove in sight, and he filled and lighted his pipe in order to appear the more unconcerned.

I had no model for that canoe, and I fashioned her after the similitude of a duck as nearly as possible. I have never yet seen a boat that I could drive against a current with equal ease, and in shooting I had the slightest swing of the paddle seal to the right or left of the rocks at will, and I used to enjoy letting her go right at them until just upon the point of collision and then slide smoothly by.

KELPIE.

STEEL FOR YACHT BUILDING.

FOR years past the nature and uses of steel for ship-building requirements has been studied and developed in every imaginable direction.

Mr. B. Mariell, the Chief Surveyor of Lloyd's Registry of British and Foreign Shipping, has long advocated the benefit to be derived by the adaptation of steel plates and frames to ship and yacht building, and Mr. W. Parker, the Chief Engineer of Lloyd's Registry, has striven in a similar manner to prove the superiority of steel boilers, if constructed of properly manufactured material. Foremost among the ship building community to adopt steel for ship building generally, we may draw attention to Messrs. Denny Brothers, of Dumbarton, while among those who have led the pioneers in this direction, should be noticed the names of Messrs. Yarrow, of Poplar, and Messrs. Thornycroft, of Chiswick.

In the early days of the application of steel to yachts and ship work many failures occurred. In some instances the plate has been riveted to the side of a vessel and left in perfectly sound condition over night, which in the morning was found starred and fractured, as if it had been a broken sheet of glass. Plates and frames were often found to be broken by a sudden jar with a hammer or from the effects of punching. In many cases of steel work all holes were drilled, on account of the steel then manufactured being of too brittle a nature to hazard the ordinary method of punching them.

Some time back special instructions were issued from Lloyd's Registry, and rules laid down concerning the methods to be observed and carried out by builders in annealing steel plates and frames.

Since this period vast strides have been made in the manufacture of mild steel for yacht and shipbuilding, with the result that the material for construction for this work may be said to reach a pitch of excellence not to be excelled. The cost of the best mild steel now supplied is very little in excess of the price usually paid for the best ship iron; while the manipulation of the steel for building purposes is now far less than was expected in working iron plates. It must also be borne in mind that a reduction in scantlings is allowed on steel built vessels, which, by effecting a saving in weight, lowers the first cost.

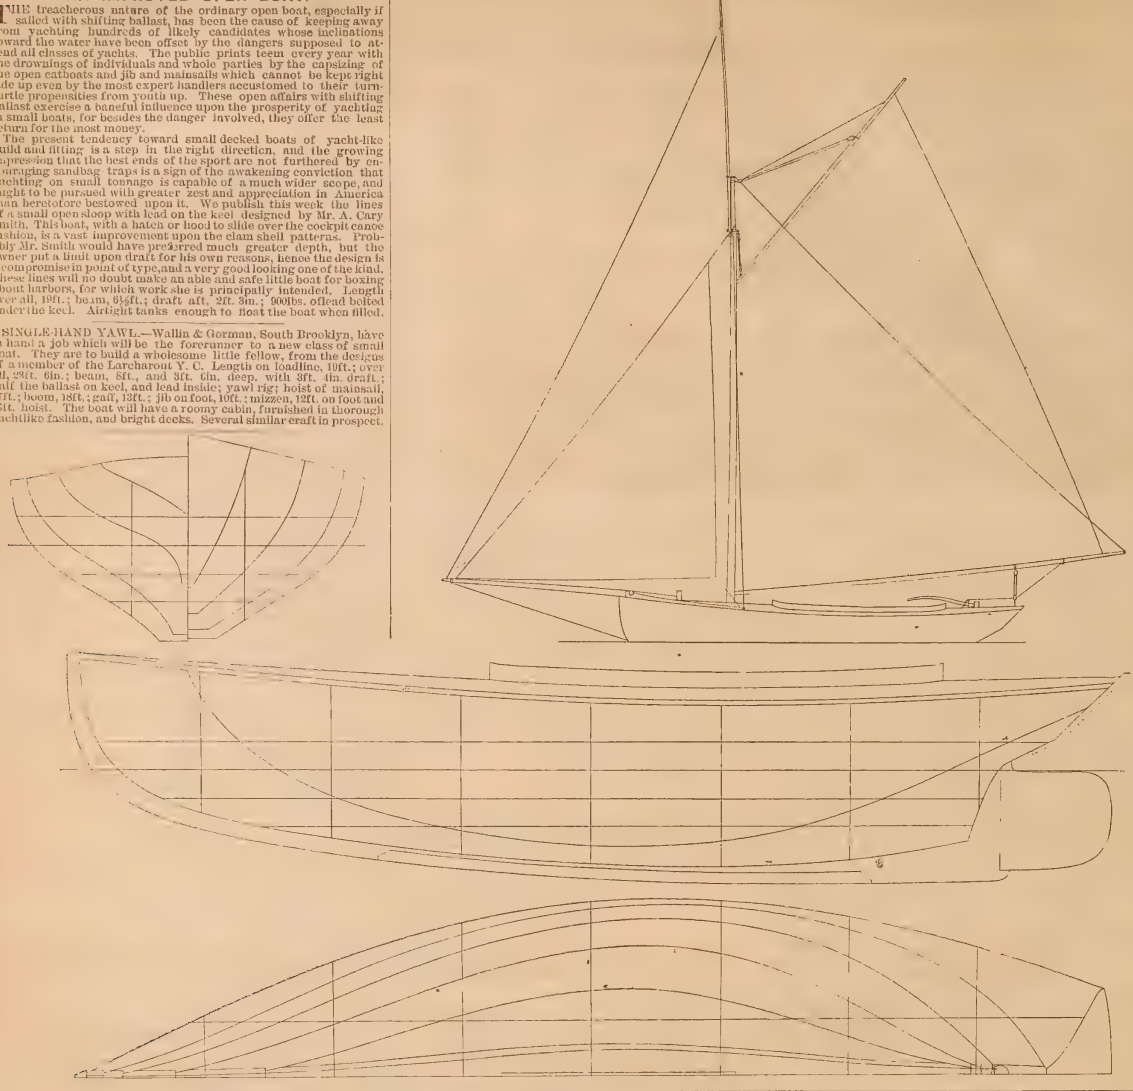
To arrive at a fair idea of the saving in working steel, as compared with iron, it would be well to notice a few leading features of construction in each.

If a vessel is built of iron the plates which are to be attached to the portion of the hull where there is a sharp curve or other irregularity of form, must be planed in a furnace and heated, in some instances to a white heat, to prepare them for the process of being brought to the required shape. A cradle built up of angle iron which has been prepared, often with great trouble, to the moulded shape required, is then brought into use, and on this the iron plate is beaten while red hot until the desired form is obtained. The very sharp curves and twists occur, the fiber of the iron is often completely destroyed, as may frequently be seen in boss plates, counter plates, and knuckle plates of iron-built yachts at our select vessels. Even if the fiber of the iron is not destroyed, the surface of the plate is frequently hacked and damaged by the firing and hammering, and the smooth, even surface which is so particularly essential to speed is entirely spoilt. In other parts of the hull, where moderate curves are met with, the iron plates are bent by adjustable rolls.

In many cases where iron is used the corner holes in the plates must be drilled to avoid fracture in punching, and also the end holes in the frames. The iron rivets used in this class of work must be heated before they are hammered, or they can be beaten up. It will be gathered from the above description that in the building of an iron yacht, a furnace must be kept going to heat plates which require much bending, that cradles are required to form and shape, which must be constructed at a great expenditure of money and labor, that drilling, as to a great extent necessary, and large forges are required with attendants to heat the rivets. On the other hand, in building a steel boat the furnace, rolls, drilling and heating of rivets can be entirely dispensed with, and a great expense in plant and labor thus spared during the building. The excellent quality of steel now manufactured, is such that all the plates may be hammered to any shape when cold; the only fire required may be made up on a large forge, on which the frames must be heated for bending.

The steel frames must be heated, so as to assist the bending process by rendering the thick portion of the web of the angle iron more ductile than would otherwise be the case. In carrying this out it is particularly necessary to observe the fact that the steel should not be heated above blood red, and the fire should be made of coke. The steel rivets supplied for this work are tested so as fully to insure a good watertight joint. In addition to the bending of counter and knuckle plates cold when made of mild steel, rudder trunks, boss plates, and other plates in which a very quick and severe turn is required are annealed to their respective forms in a soft condition. This work is all carried out without destroying in the slightest degree the (we might say) enameled outer surface of the plate. On this account anti-fouling composition, or paint of any kind, may be laid on to be gained in the use of steel as the best means for cleaning and painting bottoms of yachts and other vessels constructed of this material would be less frequent than if built of iron. The highest breaking strain of the best ship iron is supposed to reach 20 tons per square inch, whereas the steel now used will vary as high as 25 tons, and above this in some cases, but the best steel should not do so. Another advantage to be claimed for steel is that it will stand a tolerably severe collision without endangering the vessel, as the ductility of the material is so great that it will give without fracture in the case of a trivial collision with an iron boat—a leak generally results from fracture.

As a final proof of the faith now placed in mild steel, we would conclude these notes by stating that the screw propellers fitted to the swift launches, built by Mr. Yarrow, have blades made from annealed steel plates, as being the best possible material to meet the many strains to which a propeller blade is subjected.—*Yachting Gazette.*



WHAT IS A KNOT.—The length of a nautical mile is defined as one-sixtieth part of that of a degree of agreat circle of the earth. If the earth were a perfect sphere of known dimensions, the length of a nautical mile, according to the above definition, would be a definite quantity. Owing, however, to the earth's compression, and the consequent difference in the lengths of the radii of curvature at different points of its surface, much diversity has arisen in usage and in books of reference in assigning the lengths of a nautical mile. Thus it is variously given as equal to the mean length of a minute of latitude on the meridian, that is, to the length of the meridian corresponding to the radius of curvature of the particular latitude, and the length of a minute of longitude on the equator; the latter definition being probably due to the common use among mariners of Mercator's projection, in which the degrees of the successive parallels of latitude are equal to those on the equator. The office of the United States Coast Survey, in order to remove uncertainty, and to introduce uniformity, have adopted the value which results from considering a nautical mile as equal to the one-sixtieth part of the length of a degree on the great circle of a sphere whose bulk is equal to the surface of the earth. This value, computed on Clark's spheroid, is: One nautical mile=1853·248 metres=6080·27ft., a value which corresponds to the adopted length of the Admiralty knot 6080ft.

NARROW BEAM.—Mr. W. Gage Tweedy, R. A., in a lecture at the Plymouth Institute, Nov. 9, his subject being "Modern Yachts," explained how important it was to have an exact knowledge of what he termed the scientific elements of a yacht, in which he included the displacement, the various "centers" of gravity and buoyance, etc., considerable attention being paid to the latter upon which he then discussed the wave-line theory, and showed how it failed to explain the results of observation, and so became discredited, until it was generalized by Mr. Colin Archer a few years ago, and had now, as the wave form theory, been so established by observation and experiment that it was employed by the most advanced naval architects as the starting point and controlling principle of their designs. Mr. Tweedy spoke of the peculiarities of the mode of measuring yachts for tonnage, and the effect this has had in producing long, narrow, and deep vessels, heavily ballasted by leaden keels—a type which had proved itself infinitely superior in speed, safety, and easy motion in rough water to the broad and shallow type popular in America. The lecturer concluded by stating that as each year advanced new and faster racers would be built, and that it would be a matter largely depending on money as to who should possess the most successful racing yacht.

AN IMPROVED OPEN BOAT.

THE treacherous nature of the ordinary open boat, especially if sailed with shifting ballast, has been the cause of keeping away from yachting hundreds of likely candidates whose inclinations toward the water have been offset by the dangers supposed to attend all classes of yachts. The public prints teem every year with the drownings of individuals and whole parties by the capsizing of the open catboats and jib and mainsails which cannot be kept right side up even by the most expert handlers accustomed to their turn-turtle propensities from youth up. These open affairs with shifting ballast exercise a baneful influence upon the prosperity of yachting in small boats, for besides the danger involved, they offer the least return for the most money.

The present tendency toward small decked boats of yacht-like build and fitting is a step in the right direction, and the growing impression that the best ends of the sport are not furthered by encouraging sandbag traps is a sign of the awakening conviction that yachting on small tonnage is capable of a much wider scope, and ought to be pursued with greater zest and appreciation in America than heretofore bestowed upon it. We publish this week the lines of a small open sloop with lead on the keel designed by Mr. A. Cary Smith. This boat, with a hatch or hood to slide over the cockpit canoe fashion, is a vast improvement upon the clam shell patterns. Probably Mr. Smith would have preferred much greater depth, but the owner put a limit upon draft for his own reasons, hence the design is a compromise in point of type, and a very good looking one of the kind. These lines will no doubt make an able and safe little boat for boxing about harbors, for which work she is principally intended. Length over all, 19ft.; beam, 6½ft.; draft aft, 2ft. 3in.; 900lbs. of lead bolted under the keel. Airtight tanks enough to float the boat when filled.

SINGLE-HAND YAWL.—Wallin & Gorman, South Brooklyn, have in hand a job which will be the forerunner to a new class of small boat. They are to build a wholesome little fellow, from the designs of a member of the Larchmont Y. C. Length on loadline, 19ft.; over all, 28ft. 6in.; beam, 8ft., and 3ft. 6in. deep, with 3ft. 4in. draft.; half the ballast on keel, and lead inside; yawl rig; hoist of mainsail, 17ft.; boom, 18ft.; gaff, 13ft.; jib on foot, 10ft.; mizzen, 12ft. on foot and 16ft. hoist. The boat will have a roomy cabin, furnished in thorough yachtlike fashion, and bright decks. Several similar craft in prospect.

SINGLE HAND YACHTS.

[CONTINUED.]

AT the present day so much prejudice against large displacement has been removed that the way to intelligent modelling seems much clearer and more likely to be followed than a few years ago. The notion hitherto prevailing among most builders and accepted very generally as an irrevocable law of nature that displacement is the measure of resistance, led to the exclusive construction of shoal boats with little ballast, the deeper and abler boat being outlawed altogether by the force of custom until she disappeared from view in America, and with her the incentive to yachting on small tonnage, the legitimate sport being supplanted by various kinds of racing traps and caricatures upon naval architecture. Since the advent of the foreign cutters and the evidence more recently furnished by the Bedouin's sailing, even the most obstinate adherents of the old tenets find themselves obliged to admit that there is something very rotten in the faith of yore. If Bedouin with 105 tons displacement can hold one of our fastest sloops of 60 tons displacement down wind with less area of sail, there must assuredly be a screw loose somewhere, and displacement cannot any longer do duty as bogy against the introduction of safe, roomy and able yachts in defense of fanciful light draft theories. There is nothing new in the discovery the Bedouin has driven home so effectually among yacht builders, for naval science clearly demonstrated many years ago that there was no direct relation between displacement *per se* and resistance, but that the latter was due first, last and all the time to form and to area and quality of friction surface.

But though hundreds of occurrences in practice in our own waters might be cited in support of the deductions of such authorities as Rankin and Froude, their conclusions, backed by numerous delicate experiments, and almost indisputable proofs, were "poon poohed" by ignorant louts barely able to read and write and totally unfit to give an opinion on the subject worth entertaining. We have time and again adduced evidence which would move any intelligent or observant person at least to an investigation and fresh consideration. So far from conceding anything of the kind, those responsible for current opinions kept on prating in the press, dogmatizing in the building yards and gabbling in the club rooms about "lugging so much lead," "bound to be slow in light winds, because so heavy," and the stupid stock libels against any innovation upon the sanctified habits of our grandfathers, so familiar to all who have followed us in this fight to drive new ideas into the popularity their worth entitles them to enjoy. If obdurate to all we could write in these columns, the knights of the old faith fell like feathers before such a crushing demonstration of the fallacy of their creed as Bedouin furnished in the recent Seawanhaka races. At last the average talent cries, "Peccavi; we have been on the wrong track, or such things could never be!" and so we take it the last vestige of the ludicrous ignorance among builders on the cause of resistance has finally disappeared in America. May the ghost of the old fancy rest in peace and rise no more to make a laughing stock of its adherents among men of intelligence.

Large displacement, the very biggest yet essayed, is perfectly compatible with the highest rate of speed when properly shaped in all waters and in all weathers. As light displacement has no virtues of its own, and grew into general use only on the strength of the imaginary connection between feather weight and speed, our first advice to the single hand sailor is to build with all the displacement other circumstances will permit. Great weight means a deal obtained at very little expense in a small yacht. It means business in a sea, it means business in light airs. It steadies the boat on her course, makes steering easy, accomplishes work when light weight would be forced to retire, affords accommodation, and if rightly proportioned can be propelled with less area of sail than a trap of great beam and flat as a pancake with no insides at all and carrying no other ballast than the load of ignorance she represents in her dangerous fashioning.

Our single-hand yacht, to offer the most satisfaction, must first have a liberal allowance of displacement. In the expressive though not classic language of the boat shop, "she must have plenty of guts below water." The next question arising is how to dispose of the amount to the best advantage. Displacement without form is no gain except in room, and may be a detriment in other respects. What form should it take to make small tonnage go the furthest in ministering to the needs of the cruiser? We have in our last issue decided the shoal, wide and also the chubby boat unfit for his purposes. The third general division of type comprises narrow deep boats, and to this class we will now turn our attention.

No precise limits or proportions are here to be laid down, nor is the definition of the third division restricted to extremes, but should be considered as comprising all proportions varying from the customary normal, in other words boats of less beam and greater depth than typical representatives embody. We propose to clip from beam and add to depth and length instead. A limit to this clipping will soon be reached in very small yachts, since a certain amount of beam is absolutely required to furnish floor and berth down below and other physical necessities while cruising. Ideas as to this amount will differ, but whatever they be we would not counsel going an inch more in breadth than demanded by these considerations. The very least floor and the narrowest berth the skipper can fit himself to with reasonable peace of mind is all the liberty to be taken with a dimension from which no good can be expected and which must be estimated a necessary evil to be discountenanced at the peril of loss in ability, weatherliness and speed.

There is an unaccountable veneration for beam in the community, as though breadth was conducive to praiseworthy characteristics, when, as a matter of fact, beam is detrimental to good performance on every count, and is to be indorsed only on the score of wider decks in small boats, a trivial advantage secured at the expense of rig and "go" in rough water. Beam, beyond the amount for the object specified above is of no advantage whatever, but represents just so much bulk wasted. Save it off the sides and add to depth or length, and not only do we reach better results in sailing, but the available stowage below is augmented in a tangible way. Beam is a sly deceiver leaving the mind impressed through the eye with vastness all round, the same vastness turning out all myth for any other object but aimlessly putting your foot in it. With like depth an increase to beam is effected by a fuller turn from the bilge up to rail, and as floor and berths are below the bilge, they profit nothing by the spread. All you have for your trouble is a larger rig, a heavier and more costly structure, and a chubby bounce of a boat, with a little more deck, of no practical value in working ship. With like bulk, however, as the start for the comparison, what you patch on beam has to come off the depth and length. The boat flattens out, her cabin is no longer practicable, and though speed can be retained by falling back upon a big rig, the boat has passed into the type already condemned, and is no longer fit to knock about the coast with satisfaction. The problem we have to solve is one of economy. We are not looking for the largest boat from which the least service can be got, but, on the contrary, for the smallest design offering the greatest capacity for useful duty. Locating bulk where it is not needed is, therefore, an evasion of the task. Any one can give beam by the mile to a plan, but the nut to crack is how to make out as well, or even better, without any extravagance, in other words how best to dispose a given size or amount of bulk. Should the reader turn this over in his mind, let him remember that a just comparison of results must be instituted upon the basis of equal bulks. An addition in any direction by impressing more bulk is a license not permissible in equity. Such a procedure would simply be the building of a larger boat, and no one is likely to dispute a big boat is bigger than a little boat on general principles. The limit to beam is, therefore, best governed by physical considerations of accommodation below, and every inch beyond is a wasteful disposition of bulk which will subserve better ends elsewhere in the boat.

Depth on the other hand is a virtue in every boat well worth cultivating to the utmost. The objection to its free use, apart from the exploded delusion that it is a hindrance to speed, is founded upon rather more substantial reasons in small boats than the abhorrence of narrow beam. Boasting no regular crews it is always advisable to moor in some snug bight where the water is apt to be shoal and deep draft and a high bilge might give trouble at low tides. This is perhaps the only serious drawback which can be urged against small craft of the deep type, but it is really exceptional, for the cases must be very few indeed where some suitable shelter within reasonable distance cannot be found with water enough to float the yacht at all stages of the tide.

In the exceptional cases it resolves itself into a balance between the sacrifice of model to unfortunate surroundings or the trouble of seeking harbor not as convenient as might be wished for the sake of preserving intact the tool which is to administer to our pleasure. Shall the boat be lowered to the level of the waters or the waters selected according to the boat? We fancy no good yachtsman would hesitate long, but would promptly decide to hoof it for miles so his boat accomplish his wishes and meet his expectations when once she fills away. In these small yachts centerboards are out of the question in a cabin small enough as it is. Occasionally it is a handy thing to trice up at a moment's notice or to "cut across lots," but this we deem fully offset in practice by the risks run in twisting, splitting and leaking and tending. Nor is the board at all to be compared to the loaded keel for general service, and its use entails a shoaler, beamier yacht than compatible with foregoing considerations.

A keel is the only solution possible to our problem, and this arrangement involves really less draft than a centerboard yacht in efficient sailing condition. It is the rule for the keel to draw less water when under way than the board, while the reverse is the exception. Keels show to advantage in practice quite as often as the boards, and on the score of draft there is not much choice between the two. Small other points the keel is quite as good, and on some very essential ones in small boat sailing it is decidedly to be preferred, so that moorings should be selected accordingly, as a centerboard is virtually debarred from the design now in hand.

As to depth and length, with a given displacement, the more of the former, the better between decks and the better to windward. The more of the latter the longer the stowage below, the faster down wind and the smaller the rig, speaking always within moderation. A boat too short and deep, or too long and shoal, should be avoided. Of the two, the former is the lesser evil. Depth should always be enough to insure uncapsizability with weight on the keel. A hard and fast line cannot be drawn at any specified ratio, for boats differing in length and depth to some extent have been found equally good on an all round estimate, though each has its particular weather and sea. Some further remarks on model and rig will be taken up next week.

Sportsmen having guns which they wish to have rebored or repaired in any manner, will do well to consult the advertisement of E. H. Madison.—*Adv.*

MR. MIDDLETON'S SINGLE HAND YAWL "KATE."

CANOEING ON THE RICHELIEU RIVER.

BY W. L. ALDEN.

THE Richelieu River extends from Lake Champlain at Rouse's Point to the St. Lawrence at Sorel. It is about 90 miles long, and runs almost due north. Canoes can be sent to Rouse's Point by rail. They must be carted about one quarter of a mile from the station to the shore. A Canadian can be had at the Massachusetts House, who has carried many canoes, and is intelligent and careful. His charge is twenty-five cents. Canoes should be lauched just south of the steamboat dock, but the masts must not be slipped till the railway bridge is passed. Stores and supplies can be bought at Rouse's Point, but are cheaper at St. Johns.

The prevailing wind on the Richelieu is southerly, or south westerly. Six miles below Rouse's Point is a good camping ground, on the southern end of an island. There is a fine sandy beach, but just at the water's edge a villanous clay bottom. Milk and eggs can be had at a farm house near by, on the east shore of the river.

The next good camping ground is six miles lower down, on Isle aux Noix, a large island with a strong fort on the northern end—land on the east side of the island, below the fort. The garrison, consisting of one good-hearted Irishman, will furnish eggs, milk and bread. It should be remarked that below St. Johns palatable bread can be had only in the villages, or at the occasional houses of English farmers. The black bread of the French *habitants* is unpalatable.

St. Johns is twelve miles below Isle aux Noix Camp, on the west bank, abov the bridge, where there are the remains of old earthworks and several large buildings formerly used as barracks, and situated among some beautiful oak trees. The Canadian revenue officer must be seen here. He lives in the largest of the barrack buildings, and is one of the best of good fellows. Every canoeist who has visited St. Johns has cause to remember with pleasure and gratitude this genial gentleman. At St. Johns the rapids begin, and extend with frequent quiet stretches to Chambly, nine miles further north. The first rapids are a little below the bridge, and when passing the bridge the canoeist must keep a sharp lookout or he will run on a collection of half-burnt piles that are just under the surface. These rapids can be run at any season, but ordinarily the water is so low by the 1st of July that the other rapids cannot be run. The state of the water can be ascertained from the revenue officer. If the canoeist attempts the rapids, which are not in the least dangerous, the only trouble with them being the shallowness of the water, he must remember to land just before reaching the Chambly bridge. There is a fall at this place which may possibly be jumped, but which must be carefully surveyed.

There is a canal around the rapids from St. Johns to Chambly, with nine locks, six of which are close together near Chambly. A pass must be procured (price 25c.) at the canal office (should canoeists be charged?), which is not far from the railway bridge. At Chambly bread, milk and other supplies can be got at the grocery on the left bank of the canal, close by the entrances of the last three locks, which open one into the other. After leaving the canal steer for a round fort at the foot of the rapids, where there is a fine camping ground and good fishing.

There is a good camping spot at Belœil, about six miles below Chambly, on the east bank. The next camping ground is on the Isle aux Cerfs, ten miles further down—land on the east side of this island. A fine country seat belonging to Major de Montenac is on the island, and the man in charge of the place will furnish milk. Chambly Mountain, an extinct volcano, a few miles this side of Isle aux Cerfs, is well worth visiting. If the canoeist does not care to walk up the mountain he can get a carriage at St. Hilaire.

At St. Charles and St. Denis, two towns below Isle aux Cerfs, a very fine dinner can be had at the little French inns for 25 cents. At St. Ours lock, about fifteen miles below Isle aux Cerfs, is a dam which the unwary canoeist may possibly sail over unintentionally, and to his great surprise. Keep to the east side of the river in order to avoid the dam. There is a lock between the east shore and an island, which enables boats to pass the dam. The island is a good place to camp. Two miles below the lock is the town of St. Ours, where there is a nice little inn, at which the tourist should make a point of dining. Below this place and Sorel, at the mouth of the river, there is no good camping ground.

From Sorel there are steamboats to Montreal. On Tuesday and Friday nights a steamer leaves for Chambly, making this place at four o'clock A. M. From Chambly it is three-quarters of an hour by rail to Montreal. A carriage can be hired to take the canoeist to St. Johns, from where he can return to Rouse's Point by rail. Canoes can be sent by canal from Sorel to any point on Lake Champlain, or to Albany or New York. If the canoeist intends to send his canoe home through Rouse's Point, either by rail or canal, he must first see the American revenue officer at Rouse's Point, or he may have trouble with the custom houses. If the canoe is a Shadow with hatches that lock, a combination-lock which locks without a key on some particular word will be found useful. The combination can be left with the revenue officer before entering Canada, so that he can unlock the c noe and search it on the way back. There is plenty of firewood along the river; the scenery is pleasant; and the little French towns below Chambly are so out of the way of travel, that they are as foreign as towns in France. I have made three cruises on the Richelieu, and like it so much, that I am always ready to try it again.

SEAWANHAKA YACHT CLUB.—At the regular meeting of the Seawanhaka Yacht Club, November 27, the following named gentlemen were elected: Sidney Chubb, Clarence H. Eagle, Henry S. Hovey and Maunsell Van Rensselaer. Commodore Lee's proposed amendment to the constitution, providing for the election of new members by a board of trustees was adopted. Mr. H. W. Eaton's amendment to the sailing regulations, to the effect that the rule as to non-extension of topsail above truck shall be waived in the case of the fourth class sloops and cutters, was also adopted. The resignation of Mr. A. Cary Smith, the club's measurer, was accepted, the secretary being instructed to draft a proper expression of the club's appreciation of his valuable services.

EDITOR'S TABLE.

THE "CENTURY" AND "ST. NICHOLAS.—We have received from the Century Company, Union Square, New York, the last bound volumes of the *Century* and *St. Nicholas* magazines. These are the leading publications of their kind in the world. In matter and illustrations the *Century* is unequaled, and unapproached by any of the other monthlies. The children of to-day find in *St. Nicholas* a better treasure than was ever bestowed by fairy in the days when there *were* fairies.

THE *Decorator and Furnisher* is a handsome monthly magazine, profusely illustrated, and filled with contributions from competent writers. It is devoted, as its title indicates, to interior house decoration, and furnishing, and is rapidly winning public favor by its straightforward course and independance of illegitimate advertisers. By illegitimate advertisers we mean those who having goods to sell attempt to secure free puffs in the reading columns of a trade paper instead of paying for advertisements. The *Decorator and Furnisher* has started out on a new plan; it deserves all the success it is sure to have.

Brown's Bronchial Troches for Coughs and Colds: "I have used them for more than a dozen years, and think them the best and most convenient relief extant."—*Rev. C. M. Humphrey, Gratz, Ky.*—*Adv.*

Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our establishment in Murcia, Spain, where all the high quality gut is made is the most extensive and perfect factory of this article in the world. The grades named below will run at least 25 per cent. *better than those of any other manufacturers.*

	Per Thousand.		*Per Thousand.*		*Per Thousand.*

The Hunting Sight.

LYMAN'S PATENT COMBINATION GUN SIGHT

Makes a Sporting Rifle perfect. Send for circular containing full description. Address,

WILLIAM LYMAN,
Middlefield, Conn.

Established 1853.

F. BOOSS & BROTHER,

Open the Season of 1882 and 1883 with an Elegant Assortment of
SEALSKIN DOLMANS, ULSTERS, PELISSES and SACQUES,
IN CONNECTION WITH
FUR-LINED GARMENTS
Of Satin Rhadamere, de Lyon, Merveilleux, and the varieties of Damasse and Brocaded Velvet; also Pelerines, Muffs and Collars, Gentlemen's Furs, Sleigh Robes, &c.

All Goods are of Our Own Importation and Manufacture,
And made up in accordance with the well-known reputation of our house for Style, Fit and Quality.
ALL GOODS WARRANTED. WE OFFER EXCEEDINGLY LOW PRICES.
No. 449 BROADWAY,
FOUR DOORS BELOW GRAND STREET.

B. F. NICHOLS & CO.,
BOSTON, MASS.,
Manufacturers of
HEXAGONAL SPLIT BAMBOO FISHING RODS,
REMOVED TO 153 MILK STREET.
We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Massachusetts Charitable Mechanics' Association Fair for our superior goods. Send for catalogue.

The Maynard Rifles and Shot Guns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.

PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.

For **Hunting** and **Target Practice** at all ranges, the **"MAYNARD"** more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world, as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the new attachment for using rim and centre-fire ammunition.

MASS. ARMS COMPANY, Chicopee Falls, Mass.

[ESTABLISHED 1869.]

UNITED STATES CARTRIDGE COMPANY,

LOWELL, MASS.

Our paper shot shells are made with great care upon new and improved machinery, and the paper is subjected to a process that renders the shells waterproof, pliable, and capable of withstanding large charges of powder without bursting, and are reloadable from four to ten times, if desired. They also keep their smooth shape stiff, inside and out. We offer them as equal, if not superior, to any other makes, and warrant them in the full sense of the word.

PAPER AND BRASS SHOT SHELLS.

ROSEWOOD LOADERS, CAP EXTRACTORS AND RECAPPERS.

Rim Fire and Central Fire Cartridges for Pistols and Rifles.

POCKET RELOADING TOOLS FOR ANY CALIBRE. PRIMERS AND BULLETS FOR RELOADING "THE RICE SHELL EXTRACTORS." BENCH CLOSERS, Etc., Etc.

NO GOODS SOLD AT FACTORY BY RETAIL.

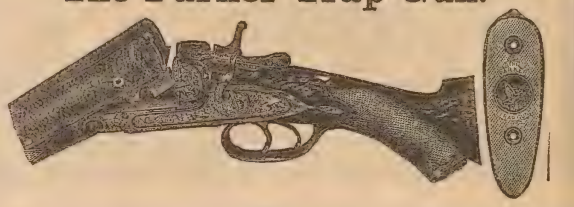
MANUFACTURING JEWELER,



Medals and Badges

A SPECIALTY.

Special designs furnished on application free of charge.

The Parker Trap Gun.

We are now prepared to supply the **Parker "Trap Gun,"** for which we are sole agents. These guns have top lever, extension rib, rebounding locks, large strikers and pistol grip. They are simply superb. The Parker Trap Gun should not be confounded with the regular Parker top lever guns, which, although excellent guns, differ materially from the Trap. Every genuine Parker Trap Gun has the rubber butt plate with a flying pigeon beautifully embossed upon it, as shown in the above cut.

We have a small remnant of Webley's heavy ducking guns, mostly 10-bore, of various qualities, at about half price. Address

P. O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM CLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators. Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free,* to your place, in good order, on receipt of **$1,** or six for **$4. Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It Sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business house in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as one that costs fifty dollars. You can rely on it every time.
Capt. Chas. R. Deane, ship "Vulcan," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and wonderfully cheap at two dollars. Geo. B. Parsons, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, in foretelling the weather. It is a wonderful curiosity and seems to perfection. F. J. Rotharmel, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. Pool, on back of Instrument, as below:

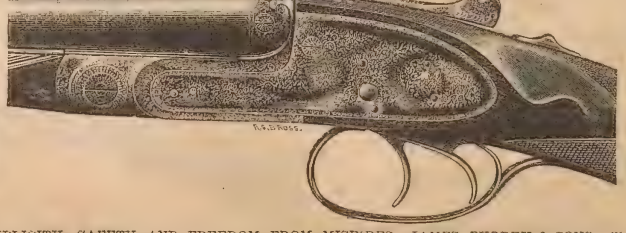
J. A. Pool TRADE MARK.

Every instrument **warranted** *Perfect* and *Reliable.* Size, 9½ inches long, 3¼ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

NOTICE.

JAMES PURDEY & SONS,



OF 287 & 289 (late 314½) OXFORD ST., LONDON,

Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that on January 1st, 1883, they will remove to the new and large manufactory they are now building, and that after that date their address will be

Audley House, South Audley Street, London.

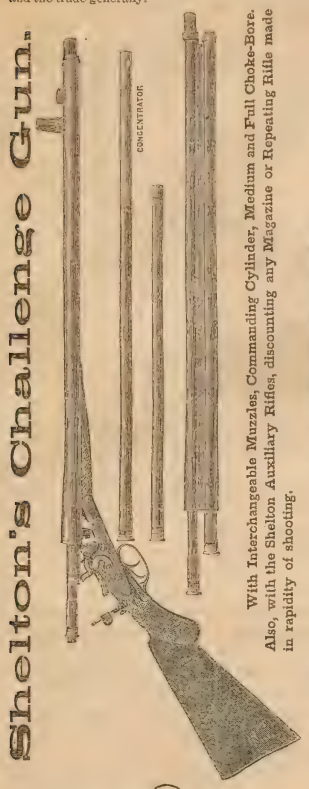
They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN,** which, after the most careful practical trials and severe tests, they confidently reccommend as by far

THE BEST AND

ONLY PERFECT

HAMMERLESS

GUN MADE.



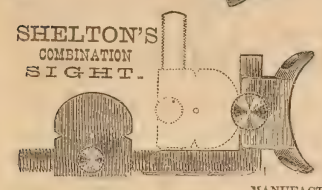
Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of SCHUYLER & DUANE, 189 Broadway, New York, and JOS. C. GBUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States

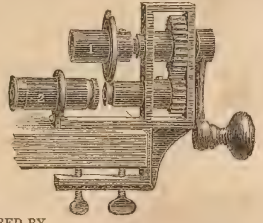
Monthly Issue. To Sportsmen.

Place this advertisement in your scrap book for future reference. Results originating from experience of fifty-five years of both the Gun and Rifle. Endorsed by all sportsmen who have used them and the trade generally.

Shelton's Challenge Gun.



With Interchangeable Muzzles, Commanding Cylinder, Medium and Full Choke-Bore. Also, with the Shelton Auxiliary Rifles, discounting any Magazine or Repeating Rifle made in rapidity of shooting.



SHELTON'S AUXILIARY OR INSERTED RIFLE AND COMBINATION SIGHT TO BREECH-LOADING SHOT GUNS. WITH FOUL PROTECTOR AND GAS CONCENTRATOR. BEST HUNTING ARM IN THE WORLD.

SHELTON'S CARTRIDGE GROOVING MACHINE.

For reducing recoil and giving better penetration and destruction of shot.

SHELTON'S COMBINATION SIGHT.

MANUFACTURED BY

THE SHELTON AUXILIARY RIFLE BARREL COMPANY,

P. O. Box 715, New Haven, Conn. Send Stamp for Circular and Price List.

HOLABIRD SHOOTING SUITS

Of Waterproofed Duck, Irish Fustian and Corduroy.

55 Front St., Rochester, N. Y.

FOR TOWN AND COUNTRY.-1883.

FOREST AND STREAM

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was permanently enlarged to twenty-eight pages. There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of curren achievements and progress in this important work.

The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N. Y.

J. PALMER O'NEIL & CO.,

68 Fifth Avenue, Pittsburgh, Pa.

AGENTS IN THE UNITED STATES FOR THE

Westley Richards Hammerless Gun.

Manufactured by WESTLEY RICHARDS & CO., London, England. (Established 1820.)

INVENTORS AND SOLE OWNERS OF THE ANSON & DEELEY HAMMERLESS LOCK WITH AUTOMATIC SAFETY BOLT.

Making the Safest, Simplest and Most Durable Breech-Loading Gun to-day in Use.

SAFEST, because the triggers are effectually bolted whenever the lever is moved to open or close the gun. SIMPLEST, because the lock contains fewer pieces (only four) than any other gun. MOST DURABLE, because the four parts are very strong, and the swivel and bridle—the weakest parts in the ordinary lock—is entirely dispensed with.

The Anson & Deeley hammerless lock has been subjected to the severest test, having been fired EIGHTY THOUSAND times in a wear and tear trial without cleaning, and without showing any evidence of wear. The Anson & Deeley action is made in its perfection by Westley Richards & Co.

From every quarter unsolicited come testimonials of the excellence of these guns. We quote a few extracts:

"The Westley Richards Hammerless Gun excels any gun that I have ever used."—GEORGE W. BROWN, Conneautville, Pa.

"The action is simply perfect; there is no possibility of accidental discharge."—E. J. CARPENTER, Cincinnati, O.

"The Hammerless Westley Richards works to a charm, and brings the ducks right out of the sky."—CHARLES J. CLARKE, Winnows Point Shooting Club.

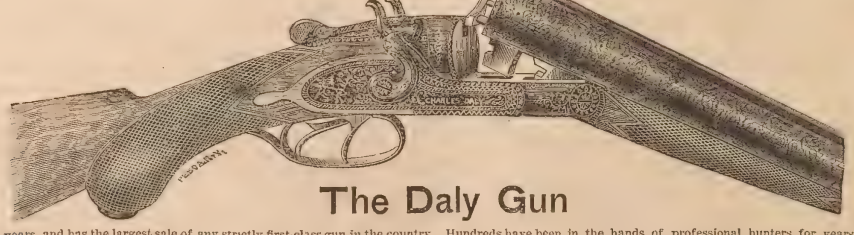
"The little seven-pound Westley Richards Hammerless Gun, purchased from you last summer, has given entire satisfaction. For hard shooting, easy manipulation, and perfect safety, it cannot be excelled. I used but three drams of powder and one ounce of shot throughout the entire season, killing my birds as clean in September as first of October."—ALEX. REYNOLDS, JR., Kittaning, Pa.

"The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun to buy a Westley Richards Hammerless."—PATRICK HENRY, Clarksville, Tenn.

"I find perfect ease in manipulating the gun, and absolute safety secured from accidental discharge by the automatic safety bolt, which never fails to go to safety when the lever is moved to open or close the gun. You know how prejudiced I have been against hammerless guns. Well, I am thoroughly subdued, and I unhesitatingly say it is 'the gun of the future.'"—L. R. STAYTON, Secretary Allegheny County Sportsmen's Association.

"I feel as if I ought to let you know how the 10-bore, 9½lbs., 30in. Westley Richards Hammerless works. At the target with four and a quarter drams of Orange Lightning powder No. 6, and one and a quarter ounces No. 8 shot, I can get over 400 pellets in a 30-inch circle, 40 measured yards, every time, with beautiful distribution and wonderful penetration. With the same charge of powder and one and a quarter ounces No. 5, it is sure death to ducks at fifty yards every time. I made two successive shots at single mallards sitting on the water at 76 and 83 yards, and killed both times, and this with the above light load in paper shells. A mallard flying at 50 yards drops as if struck by lightning. Let me thank you for having furnished me what I have so long been looking for, i. e., a gun that suited me in every way. I've got it now and money cannot buy it."—F. W. COTTLE, Lincoln, Ill.

We have just received a large invoice of these matchless weapons in all grades and gauges, including the smaller bores, 14, 16 and 20-gauge, and can fill all orders promptly, or will import to special order without extra charge. Our stock of Fine Goods is *without exception* the largest in this country. Constantly on hand, bargains in fine second-hand guns with hammers. New catalogue now ready containing illustrations and prices of all new and useful implements.



THE TWO BEST GUNS IN THE WORLD.

Harrington & Richardson Hammerless

Is the highest achievement of American gun enterprise. The workmanship is equal to the finest London Premier guns, and the fitting is closer, every part being made by machinery to a gauge. For close hard shooting nothing in the world can excel them. In every respect equal to imported hammerless guns costing twice the money. They are made on the Anson & Deeley patent, and the work is inspected Mr. Deeley. The rubber butt plate is of the most exquisite design, and all the lines are in the finest taste. Size—12-gauge, 7¼ to 8¼lbs.

e. 1, Laminated steel barrels, outline engraving.....$100 00
2, Damascus barrels, good scroll engraving, selected stocks.....150 00
No. 3, Same as No. 2, but finer in all points.....$200 00
4, Premier quality, every part made with the most scrupulous care, and most exquisite finish, 300 00

The Daly Gun

Has been in the market for ten years, and has the largest sale of any strictly first-class gun in the country. Hundreds have been in the hands of professional hunters for years, and are as sound to-day as when they were bought. C. H. Shelton, manufacturer of auxiliary ride barrels, New Haven, Ct., has shot one over 20,000 times in showing his invention, and it is sound as a dollar and hasn't had one cent of repairs. Here is a sample testimonial:—Jefferson, Texas, Aug. 19, 1882. "The Charles Daly Gun I bought in 1880 is the most perfect gun I ever saw. A microscope cannot detect the slightest flaw in the fitting. I have shot it 2,000 times and the action is as strong and tight as when received. The gun is a beauty and the admiration of all my friends.—WM. T. WARE.

No. 42, **Scott Action,** Damascus barrels, bar rebounding locks, pistol grip, patent fore and extension rib.....10 and 12 g. $80 00
53, Same as No. 42, with Purdy double bolt and horn butt plate.....10 and 12 g. 90 00
55, Same as No. 53, with 3 pin locks and engraved mountings and ornamental rubber butt.....10, 12, 16 and 20 g. 100 00
60, Same style as No. 55, fine laminated steel or Damascus barrels, fine engraving and chequering, first-class workmanship.....10 and 12 g. 130 00
100 **"Diamond Quality."**—The most superbly finished gun in the market, every part of the finest quality and most elegant workmanship, and equal in every respect to the finest London Guns, 10 and 12 g. 200 00

N. M. MUZZY

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO., in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

FITS A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS.

From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 30 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. Ab. MESEROLE, No. 96 John St., New York.

For Sale.

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

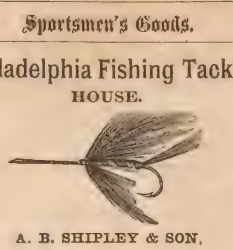
A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, { 30 per cent. less than others. { Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.



In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel-lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

Climax Gun Cleaner.

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free owner's risk.

It is our aim to make sportsmen feel "at home on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

63 PINE STREET, NEW YORK.

Special Notice. Books for the Holidays.

I am prepared to offer the public a choice collection (imported and American editions) of the works of following celebrated authors: Shakspeare, Moore, Byron, Burns, Cooper, Bulwer, Thackeray, Maryatt, De Quincy, Hawthorne, Dickens, &c., &c., in plain and ornamental binding, at prices which defy competition. My Bindery being one of the largest in America, I am enabled to compete successfully in price for binding serials of all descriptions, as well as rebinding old volumes—no charge being made for collection or delivery.

Every description of Children's Gift Books will be on hand during the holidays at wholesale prices.

JOHN BEACHAM, 7 Barclay street, New York.

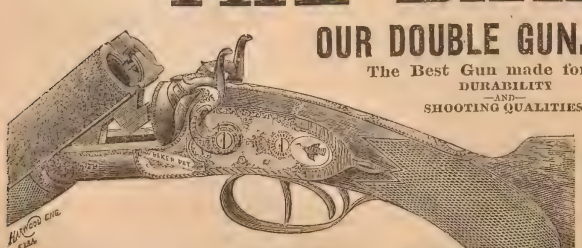
SPORTSMENS TENTS.

Tents of all kinds for Sportsmen, Naturalists and Photographers, also for Camp Meetings. Fancy Tents for families made to order. Awnings of all kinds for Dwellings, Boats, etc.; also Yacht and Boat Sails. Flags and Banners of all kinds made to order. All work done in best manner and at very low figures. **Send for illustrated circular.** Address S. HEMMENWAY, **60 South st.**, Opp. Wall st. Ferry House. **Factory, 39 South st., Cor. Old Slip, N. Y. City.**

JOSEPH GILLOTT'S STEEL PENS

SOLD BY ALL DEALERS THROUGHOUT THE WORLD
GOLD MEDAL PARIS EXPOSITION—1878.

WM. ESTER & CO.,
IMPORTERS OF SKINS
and Manufacturers of
FINE FURS,

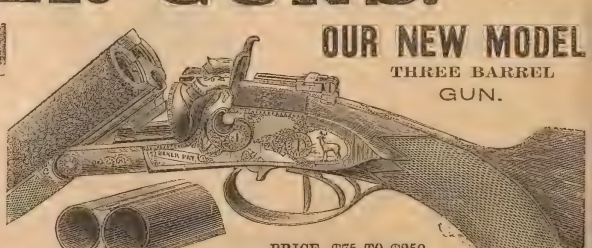


Seal Dolmans, Sacques, Silk Garments, Robes, Gloves, Caps, &c.

4 WEST 14TH STREET,
NEW YORK.

THE BAKER GUNS.

OUR DOUBLE GUN.



The Best Gun made for DURABILITY —AND— SHOOTING QUALITIES.

PRICES, BEST ENGLISH TWIST BARRELS, - $15
DAMASCUS STEEL, - - - $60 to $200

OUR NEW MODEL

THREE BARREL GUN.

PRICE, $75 TO $250.

We can now furnish extreme wide heavy breech 32in. bbls. 10-gauge double barrel guns, 10¼ to 12lbs., without extra charge. Made especially for heavy shooting. We challenge the World on the shooting qualities of these guns

This gun is light and compact, from 9 to 10lbs. weight. The rifle is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 7, 1882.

VOL. XIX.—No. 19. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samsón Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Address all communications,

ANSWERS TO CORRESPONDENTS.

OUR READERS *will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the* FOREST AND STREAM, *but who would presumably be interested in the paper.*

TRAGEDY IN SPORT.

OF course it was bound to come, sooner or later, and it did happen on Thanksgiving Day, when, at a matinee performance in Cincinnati, a variety actor, shooting at an apple on the head of an actress, aimed a trifle too low, and, with a bullet in her forehead, the girl fell forward dead. It was a senseless performance at best, but there was just that element of chance in it which made it interesting to many. It was the hazardous nature of the effort which made it tempting to the thousands who have thronged to see the trick done in every city of the land. They did not admire genuine marksmanship; they had no appreciation of the real difficulties or real ease of the effort; they only knew that there was a possibility of a tragedy, and that was enough to insure a paying audience. The actor was doing the backward shot, using a bit of mirror in which to take his sights, and laying the barrel of the rifle backward over his shoulder, at the trifling distance of thirty feet, it was simply necessary to hold "dead on," and barring accidents the result was a foregone one. But even with the chance of accident reduced to one in a thousand, it was sure to come. The man who pulled the trigger had intelligence to know that, yet with this conviction that the fatal shot was only a matter of time, he went on shooting and hitting, until at last the shot, which he dreaded yet invited, came and a life was yielded up. The explanation that the barrel tipped up a little, owing to the loosening of the holding spring, is immaterial. That is only one possible way of bringing about the escape of the apple and the sending of the bullet into the brain.

The slaughterer was promptly acquitted on the curious ground that he did not intend what he had courted, and the way is clear for some other similar fool to take the chances, take the gate money, and ultimately take the life. The statute book of almost every State in the Union has the clause which makes it a misdemeanor to point a weapon either playfully or wantonly at another person, very properly not making any distinction whatever between loaded and empty weapons. This man, with his deadly stage toy, has been going the country over breaking the law of every State, and yet nobody seems to have made it his official business to check the law-breaker.

The whole matter of legislation touching firearms is in a state of contradiction. The Constitution says that the right of the citizens to bear arms shall not be infringed, and this is very proper, but every effort of the law-maker and the law-enforcer should be directed against any senseless play with so potent a machine of mischief as a weapon may in a second become.

In ten years' acquaintance with Creedmoor and other ranges we do not recall a single instance of a rifleman of prominence indulging in such an idiotic act as the pointing of his rifle at another person. Now and then a half drunken militiaman might be seen in the act, but the man who can really shoot, who knows a gun well enough to use it with effect, knows that it is not a plaything.

The actor who has just committed a homicide may have been a good shot, he may have known how deadly a pastime he was indulging in, but there was the ignorant mob before the footlights to be catered to. It was his business to get their money and he drew them to his show by coming down to their low appreciation of what is attractive, and as they nightly demanded to see how near he could come to enacting a tragedy before them, he met their desires all too fully and did indeed give them a real victim to look upon.

It is manifestly idle to think of punishing the accessories in this case, but if the principals are to go free because there is no specific enactment to cover the case, then one ought to be passed without delay. It is carrying realism on the stage too far when such an event as this happens. Fine marksmanship may be shown in a split card or a well grouped pasteboard target, but if the public insist upon a human target, as in this case, then the cruel senseless demand should not be met.

A NEW BULLET.—To arrest the bounding buck and bring him to the ground insensible and yet unwounded; to prostrate the grizzly bear by an agency against which his brute force is helpless; to secure a coveted ornithological specimen without ruffling its feathers or staining them with blood; these and many like feats are made possible by the newly devised bullet, the freshest fruit of German inventive genius. This marvelous piece of ammunition is composed of a brittle substance containing within a powerful anæsthetic. When the bullet strikes the object aimed at it at once breaks and sets free the anæsthetic, which instantaneously produces in the victim complete insensibility, warranted to continue for twelve hours. The invention is designed by its philanthropic discoverer to bring about an alleviation of the horrors of war; he urges that by the adoption of his device whole battalions and armies may be prostrated on the field of battle, whence they may be borne away in ambulances to prison, to return again, after the recapitulation, to the bosoms of their joyful families. But whether or not our sanguine German friend succeeds in rendering less bloody the frays of nations, he may be assured of the gratitude of grizzly bear hunters, who will henceforth pursue their favorite pastime without risking the integrity of their own scalps. Another invention, which we likewise owe to Germany, is an engine in which gunpowder is substituted for water, and the gases generated by its combustion supply the motive power in place of steam. The principle upon which it works is similar to that of the steam engine. A piston in a hollow cylinder is set in motion and driven to and fro by the ignition of small quantities of gunpowder, first on one side and then on the other.

A HOLIDAY HINT.—In the advertising pages of this journal will be found a very complete directory of dealers in sportsmen's goods. At these establishments will be found a thousand and one articles of beauty and worth, any one of which will prove a most acceptable gift to one with tastes for the recreations of forest and stream.

GAME SEASONS.—We republish for convenience of reference full list of the game and fish seasons originally printed in our issue of July 20. Owing to the pressure upon our space by the very full report of the field trials, we are compelled to defer to our next issue the supplementary table, "Schedule B," which gives the exceptions, local laws, etc.

BARBED WIRE FENCES.

THEY are cheap, effective, and take up almost no room at all, but the men who shoot do not like them. These ordinary barbed wire fences, which have within the past few years so multiplied throughout this country and especially in the West, often cause very serious injury to dogs, which, coming in contact with them, when running at a high rate of speed, may be badly torn. The danger is a new and serious one. It is true that dogs soon learn the danger which is concealed in the almost invisible wires which mark the boundaries of a field, but in acquiring this knowledge they are likely to suffer severely.

A correspondent voices a sentiment, which we believe to be widespread, in the following letter:

> Can you give any information to me and others of your readers as to the liability of those who maintain these fences, for injuries inflicted to man or beast by their means? Surely spring guns or pitfalls are not legal, even as against trespassers. I think it was settled long ago in England that owners of land were liable for civil damages, and also criminally in case of serious damage to the person. I cannot see why the same principle should not apply to these cruel wire fences.
>
> I have known of young colts being disembowled by them in the West; fortunately the colts and the fences belonged to the same person. Only to-day I just managed to save my dogs from dashing upon one of them where destruction would have been certain at the pace they were going. A common moral sense and regard for the property of others ought to have prevented their use. What is the law? It interests everyone to know, and sportsmen especially. D.

It is a difficult matter to answer satisfactorily the inquiries here made. We think, however, that there have been no statutes passed which take cognizance of these barbed wire fences, nor are there, so far as we are aware, any decisions which at all bear upon the point. The fence is the actual property of the landowner; it is erected for the double purpose of confining his own stock and keeping off trespassers. Probably no one has any right to touch it, to lean up against it, or to get over or through it. If the landholder permits individuals to cross his property it is only by courtesy that the privilege is granted. It may very likely be the case that some farmers put up these fences for the especial purpose of keeping off men and dogs.

And we are inclined to think that the law as it stands at present is on their side. The English decisions would certainly seem to point to this conclusion, as any one who will take the trouble to look the matter up will see. In 3 Fisher's Dig. 6165 (title *Nuisance*, I., 7 (c)) this subject is treated very fully. It would occupy too much space to quote at length what is said on this point, but the sum and substance of it is that a man may keep about what he pleases on his own land unless forbidden by statute.

It may certainly be doubted whether a man has a right to hang razor blades among his grape vines to protect them from thieves, or to balance a dynamite cartridge over the door of his chicken house to protect his hen roosts, yet those who consider that a trespasser crosses a fence at his own peril commit themselves to this view.

Whatever the law may now be, it seems clear that these barbed wire fences may do a great deal of damage, and that their use ought to be in some way restricted. A plain wire fence, especially if it has a rail or pole at the top, is quite as efficacious in restraining the vagrant cattle as one formed of these dangerous and yet invisible threads bristling with spikes.

We desire nothing more than that the rights of the farmers should be protected in all possible ways, but these fences are so dangerous to animals of all kinds that it seems that their use should be in some way modified.

At the same time, as things are at present, the barbed fences will stand. Any one can of course begin a suit for damages for injuries inflicted, and have the matter tested in the courts. But we think that the sportsman had better make up his mind to regard these barbed fences as a new factor which has some into the carrying on of a day's shooting, and to protect himself against them by such means as he can best employ, without interfering with the rights of the land owner.

DEATH OF SAMUEL REMINGTON.—Mr. Samuel Remington, president of the firm of E. Remington & Sons, died at his residence in this city last Friday, December 1, aged 65 years. He was the financial manager of the company, and for many years the European agent, in which position he secured for the Remingtons their large foreign contracts, notably those of Egypt and Spain. He was an energetic worker, was possessed of liberal business views, and joined with his brothers in their schemes of philanthropy, among which was the endowment of Syracuse University. Mr Remington leaves a widow, three sons and a daughter.

The Sportsman Tourist.

SOUTH-SOUTHERLY.

ALL the coast in white is covered,
Dark-limbed pines snow burdens bear,
Boulders growing thick with rock-weed,
Hide beneath an icy glare;
Out beyond, the waves are surging,
Dark and slow they move along;
And the sea-breeze lulled and quiet
Waits the coming of the storm.
See the snow-flakes light descending,
Floating down from leaden sky.
Listen! o'er the waves a sound comes.
Ah-ar-luk; the old squaw's cry.
Low and mellow comes an answer
From the flock out in the bay,
And the swift bird hears the greeting,
Turns and throws aloft the spray.
Warm his feathers, cheery-hearted,
What cares he for wintry cold?
Gay companion always welcomed,
Feelings all in singing told.
Ah-ar-luk, as snow is falling,
Clearly sounds o'er all the bay:
And the voices, floating shoreward
Show how little care have they.

—Mark West.

IMPRESSIONS OF FLORIDA.

IF sportsmen who write up their adventures for publication would only make a careful study of Emerson's essay on "The Superlative," we might expect a most happy result. Such flaming head-lines as "The Hunter's Bonanza" and the "Sportsman's Paradise" would disappear from print, and readers would have more faith in sporting literature. The extravagant lines above quoted headed a recent article describing a mountain resort with which I had been familiar from boyhood. I knew that the "shady pools filled with trout; the lofty forest teeming with deer;" and a host of other attractions, existed only in the imagination of the writer. How different is a writer who has recently unburdened himself in these columns upon the subject of Florida. He apostrophizes that delectable region as the "land of tin cans!" Let me bear witness that those simple words give the reader a better idea of Florida than whole volumes he might read.

With feelings akin to those which must have animated the breast of Ponce de Leon, when he pushed on in search of the Fountain of Youth, I turned my steps toward the same land last winter. A recent publication informed me that it was like "a land perpetually breathed upon by the airs of Araby the blest." It also said that "one can live here more cheaply, can enjoy more genuine luxuries, can obtain a greater income from a smaller investment, and can sooner secure a competency than in any other portion of North America." If this were really true, we might expect to find here the center of the earth's population; but, as we do not find it, we may reasonably assume the falsity of the statement without troubling ourselves with proof.

It is not my intention to state what I saw in Florida—I wish rather to tell what I did not see. This State is hailed as a new Eden by two classes of beings very opposite in their natures (I shall not consider that really sensible class who think Florida a nice, warm place to spend the winter, but who regret that they have to pay more for oranges there than in New York). First, then, we have the dreamers of this life; people who, like thermometers, become buoyant on a bright, warm day; people who become enraptured with moss-covered forests; romantic young women, who recline in the warm sunshine, now and then raising their eyes to gaze upon the festooned arches, as the steamer slowly stems the sluggish current of the winding river. Florida is happily suited to these, if they have the money to live at the best hotels and travel on the best steamers.

Secondly, we find a large class of Yankee speculators who are enthusiastic upon the subject of Florida. We meet them at every turn, and find them ever ready with a scheme to make our fortune. Not any for us.

If we regard scenery as a combination of natural views, containing both beauty and variety, we might almost say that Florida is without scenery. Variety is greatly wanting, and, indeed, most views present the monotony of a prairie scene. Take, for instance, the Ocklawaha River. The books tell us there is an ever-changing view, but we found the principal change to be that of the boat's direction. We found no "banks covered with flowers," no "air heavy with fragrance," and, in place of the tropical birds, we saw only buzzards and (worse still) water turkeys. This river is a curiosity worthy to be seen, but it is the most monotonous stream in the world, barring a canal. To see a mile of it is to see it all.

The St. Johns River is not to be compared with Northern rivers in scenery. You travel half a day, and wonder if the banks will ever have their low, monotonous outlines broken. With the exception of the width, the whole lower St. Johns looks alike. To wind through the intricate turnings of the upper St. Johns is like navigating a canal through a New Jersey swamp. Were it not for the occasional clumps of palmettoes one might readily imagine himself on the prairie. Yet the upper St. Johns offers the most interesting trip in the State. Taking the queer little steamer Volusia at Sanford, the sportsman may enjoy something entirely novel in the way of traveling. Few men are so well fitted to navigate this portion of the river as the genial Captain Lund. The man who can be captain, pilot and engineer, and who can boss the hands and keep the passengers in a good humor while the Volusia lies stuck in the mud, is a host indeed. From the deck of the Volusia the tourist will see the first large 'gators he has met with in Florida. Thousands of birds are within sight during the day. Upon arriving at Salt Lake, the terminus of the Volusia's voyage, one may take a rowboat and catch bass by the bushel. I caught one here weighing ten pounds. This also seems a favorite spot for saurians. Their ugly heads pop up by the hundred. I give it as my experience that there is no sport in shooting alligators. They are mostly sluggish in action, and often allow the steamer to pass within a few feet of them. They are easily killed, notwithstanding the stories told to the contrary. I saw large ones killed with a rifle of thirty-two caliber.

The tourist who has gone thus far will do well to cross over to Indian River, eight miles from Salt Lake by wagon. This region offers many attractions, its climate is not surpassed in the State, its fruit is superior to any other region. One may pluck a ripe lemon, and close by he will find fine oysters to use it on. The Indian River affords a sail of ninety miles, with game, fish and camping places in abundance.

There are several strange things which are apt to strike the attention of an observant traveler in Florida. The number of Yankees who have invaded this far-off Southern clime, and who are engaged in pulling it up, seems marvelous. They inform you that you have only to plant seeds and watch them grow into dollars; but they are always willing to part with their bonanzas. In traveling through the country settlements one is constantly making the mental inquiry, What, in the name of heaven, do these people live on? Save the oranges, which seem common to most homes, one sees positively nothing eatable. Of course there are some who by means of industry and money have converted their habitations into something approaching civilization. As has been pointed out by a former correspondent, Florida is not a paradise, but rather a "land of tin cans." The poor man who settles there will find his small capital rapidly disappearing in the necessaries of life, while he is waiting for a revenue from his orange grove.

Readers of these lines may conclude that a trip to Florida will not pay, but it is not my intention to create such an impression. Many places offer sport unsurpassed elsewhere, and if one meets with weather not warm enough to enervate, he may enjoy a pleasant trip. A day's shooting in the bracing air of the North gives one a buoyancy of spirits which can never be known in Florida. Shooting quail under a burning sun, and over panting dogs, is not the best sport to be found. Sycamore.

Baltimore, Maryland.

BIRCH AND PADDLE

IN NEW BRUNSWICK WATERS.—SECOND PAPER.

ONE important fact must not remain unmentioned—a fact that greatly conduced to our enjoyment of Hotel Squatook—we succeeded in overreaching the flies. Among our odds and ends we found some lumps of pitch, and they, melted down with a due proportion of butter, gave us a sable compound, of which a very little was calculated to go a long way. Thereafter we ceased to consider the flies.

On our first morning at Hotel Squatook we betook ourselves immediately after breakfast to the whitefish barrier before mentioned. While fortune and many fine fish were rewarding our endeavors, Sam, sitting on the stakes, threw back his rod carelessly for a fresh cast. It was a slovenly movement, and his leader, touching the water an instant behind him, was straightway seized. The unexpected tug was vigorous; it came at a critical moment, and the languid fisherman was toppled off his uneasy perch. He tried to shout—"Hooked him!"—presumably. We heard a choked yell only and a heavy splash, and presently Sam reappeared struggling to his feet ruefully. I was standing up on those same treacherous stakes engrossed in my occupation. Turning at the noise I caught sight of Sam's eccentric performance, and in order to guffaw more comfortably and more derisively I took a step backward. It was but a single step—alas, how easy the first step in a wrong direction! But the whole dread consequence of this *faux pas* became at once apparent; I sat me down in four feet of Squatook water, effectually quenched. As my heels vanished over the stake-tops Sam beheld and was comforted. Moreover, he succeeded in landing his fish, which went a good twenty-four ounces.

That afternoon we went a few hundred yards down stream, to a spot where, after rushing in white-capped tumult through a gloomy channel, the river broadens fan-like out and breaks over a low fall into a pool of quiet waters. The pool is wide and deep, girdled with a gray confusion of rock. Over the black surface fleecy masses of froth were wheeling sullenly, creamy bubble-clusters eddied awhile and vanished; while here at a dipping bough and there at a jutting trunk a flock of these light waifs would gather and cling. How our hearts leaped at the sight! Behold us soon waist-deep around the margin of the pool, or braced on the very lip of the fall. The surface is lashed in three or four places at once by the struggles of the speckled beauties against the slow inexorable reels. Our excitement is intense but silent. Its only expression is the reel's measured determined click, or its thrilling swift rattle as the taut line cuts the water and the rod bends and bends. A large fish has taken Sam's drop and is being reeled half-spent across the basin. The leader trails behind. There is a shining swirl beside it, a strike, and stung by the check the very monarch of the pool flashes out, then darts like lightning down stream. Now, gallant fisherman, hold thine own! How glorious the strife with two such prizes to win! We forget our own rods, and the contest is keenly watched; more than once his reel is all but empty. For ten minutes the result is doubtful. Then, reluctantly, victory declares itself for the lithe rod and the skillful wrist. At the examination of the spoils this trout was pre-eminent, going two pounds eight ounces. There was but one larger fish captured on the trip, and this honor fell, two days later, to Ranolf's fortunate hand. There are other fishing grounds I know, where a trout of two and a half pounds is not by any means a rarity. In some of the tributaries or neighbors of the Miramichi, as the Sevogle, Renous, or Tabusintac, the hope of catching a four-pounder may reasonably be indulged; though with me, of a truth, to indulge the hope of such a triumph has so far been my nearest approach to the achievement of it. But in the Squatook and the Tolcdi the average of size is unusually high, and there is little of that uncertainty which is so great a drawback in the Miramichi fishing. The Squatook trout are always on hand, provided with lusty and not too fastidious appetites. Then the wildness and freshness of the country. For the most part you are in the very forest primeval. Only here and there has the desecrating lumberman spread his ravages before you. For seven days after leaving Tom Lynch and Griffin on the shores of Mud Lake we met no human being save an Indian trapper on his rounds. The sportsman athirst for "fresh fields and pastures new," if he do but take with him some experience and a good deal of "slitheroo," will surely not repent of having done the Squatook.

During our stay at this place we made a careful survey of the falls, and decided that they were in reality a more awkward obstacle than they appeared. With accurate management a canoe could pass down on the extreme right; by the aid of half a miracle a passage might be achieved on the left, while in the center awaited an array of rocky jaws to demolish our light craft with no shadow of compunction. However, we were confident, little guessing what the malicious fates had in store for us.

Our last night at Hotel Squatook was varied by a gruesome experience. In my sleep a hand was laid upon my arm, and I sat bolt upright in the dark. Groping I perceived that Sam was sitting up also, and had leaned across W. B. to awake me. Grasping my shoulders as if to enforce silence he muttered "Hark!" I heard nothing but a slow wind in the pines. But, presently, my flesh crept, as from up the lake came a long, wavering, terrible howl, half brutal, half human, as of a tortured madman. I shuddered, and with a suppressed groan Sam said "Ugh-h-h! did you ever hear the like of that? It's Cerberus broke loose, and we've got no cakes! I wonder would he eat hard-tack!" But we reached for our guns, and kept vigil then, without waking the others, for more than half an hour. But hearing nothing more of it we were at last reassured and went to sleep. The three whom we had watched over, not inviting them to share in the music of this sweet-voiced being, laughed at our story next day. But before many nights had passed they were converted from their skepticism.

Bidding Hotel Squatook a reluctant farewell, with all things snugly packed in our good canoes, we slipped through the whitefish barrier, sped rapidly down the chating current, and almost before we could rub our eyes were in the angry sluice above the fall. Stranion's canoe, being ahead, made for the easier right hand passage, we following closely. But a sunken tree disturbed his calculations and checked him right in our path. There was no help for it, so Ranolf drove us with all his strength for the left channel, down which we leaped wildly in breathless uncertainty. But the doubt was soon solved. A huge rock was lying in wait at the foot of the leap, covered, luckily for our craft, with an oozy growth of water weeds and mosses. This we just failed to avoid. The canoe rose upon it, paused and turned over, discharging us into the current. Instantly the surface of the pool was diversified with floating paddles, poles, tent-pins, tin kettles, box covers, etc., and Stranion and W. B. were busy capturing all these articles in an eddy below. We got the canoe ashore, righted her, and proceeded to dive for spoons. Our heavy valuables, guns and the like, were lashed to the canoe, and therefore got no worse than a wetting, but our axe had been left loose, and some of our spoons were in the iron pot which, though itself secured, had lost its cover and ceased to be responsible for its contents. The axe we regained, the water here not being more than five or six feet deep, but at mealtimes from this out we dragged a maimed existence, sharing one another's spoons. The meal and rice were a part of our lading, and the tobacco as well. For this last we felt no uneasiness, congratulating ourselves that it was in a waterproof tin. We didn't open it at the time, because there was enough for the day's needs in the other canoe. But the meal was mush, the rice already commencing to swell, and many other articles in a lamentable condition. Henceforth we were to have no porridge, no fritters, only beans, beans, beans and hard biscuit to go with our trout and canned delicacies. And this meant dinner three times a day, instead of the pleasant sequence of breakfast, dinner and tea. We embraced this opportunity to fill up our pipes, and were much cheered with the sight of Ranolf diligently endeavoring to scratch wet matches on his somewhat moist nether garments.

After a brief delay spent in examining our canoe and repairing its damages, which were fortunately slight, we continued our journey down the river. An exciting day it was all through, leaving us well tired out at evening. Taking care now to preserve a safe distance between the canoes, we slipped on swiftly between ever-varying shores. Rounding a sharp turn we would see before us a slope of angry water, with huddled waves and frequent rocks; and at the foot of this slope, some hundred yards ahead, three or four great white "ripples" foaming and roaring in the sun. Then a season of stern restraint, strong checkings, strenuous thrustings, sudden, bold dashes and hair-breadth evasions, a plunge and a cheer, and, drenched from the crest of that last "ripple," we look back on the raging incline behind us. This sort of thing took place not once, nor twice, but many times through that day, and always unexpectedly. When we stopped to rest, or for lunch, the trout were always on hand to receive us, and no one pool was like its predecessor. The whole day afforded us richest variety in scenery, in adventure, and in sport.

Late in the afternoon we reached the second Squatook Lake, called Sugar Loaf Lake from the noble mountain that dominates it and is reflected in its deep, still waters. On three sides the shores of this lake rise gradually and to no great height, mantled with a low, second growth of birch and poplar. But on the northeast towers the mountain from the water's edge, its base in a cedar swamp and muffled with dense woods, its lofty, conical summit that topples toward the lake as though it had received a violent push from behind, veiled and softened with thick blueberry bushes and low shrubbery. Close by and under, thrust up from the deepest lake-bottom, a high rocky island stands a satellite to the mountain. This island is entirely made up of rock-layers, tilted and contorted and rent in every direction, the strata for the most part, indeed, set square on edge, and cedars and birches finding root in the crevices. Here we pitched our tent with difficulty; and our bones were conscious of the rocky foundation even through deep piles of cedar boughs.

On the morrow Sam and Ranolf, indomitable fishermen, devoted themselves to the destruction of the finny tribes of the lake, while Stranion, W. B., and the writer undertook the ascent of Sugar Loaf. We set out, armed to the teeth, remembering that bears abounded in this region. They gave us way, however, and avoided our sight, though their traces were recent and numerous. Indeed, a great part of the ascent we accomplished with comparative ease by following a well-beaten bear-track, which led up to a terrace or plateau near the summit. This terrace, it appeared, was the bears' fruit garden, yielding a rich crop of luscious blueberries, for which Bruin has a marked penchant. We helped ourselves liberally, though with some trepidation, and heard nothing more of it. At length, breathless, torn, dripping, and exhausted, after a three hours' climb we vanquished the height, and threw ourselves prostrate on the narrow, naked level of the summit. Here a delicious wind was blowing freshly, from which, as well as from the wonderful scene spread out below us, we drank in new life. No lack of oxygen up here, and our blood ran redly and vigorously. Knowing we would be thirsty after so difficult a climb, we had taken care to bring flasks of wine and water with us. Close round the mountain's base were lower hills, with lakes and water courses, or "thoroughfares," encircling them; and we could trace our later days' journeyings, looking strangely unfamiliar at this height. Giving our vision a wider sweep, on every side rose mounta ns. There were visible the Laurentian Hills, on the north bank of the St. Lawrence, and in the opposite direction Bald

Mountain and Nictor, on the Tobique, and the double summit of Blue Mountain. To the northeast, far off, Squaw's Cap, on the Restigouche, and the Mountains of Gaspe, on Bay Chaleur; while in the utmost dim distance of the southwest, toward Katahdin, grandest of them all, the well-sung mountain of Maine.

When we got back to camp we found Ranolf had been very successful in his sport, but Sam had been wasting his energies on a pair of loons. He had wasted also an immense deal of powder and shot on these provoking birds, and there they were now, placidly floating, two black specks far out on the bright surface. Even as Sam was detailing his futile efforts their mocking laugh came ringing over the lake, and Sam shook his fist at them.

Next day was hard paddling, as the river between second and third and between third and fourth lakes is almost currentless. Before reaching the upper Toledi Lake we came to the Horton Branch, a famous trout stream, up which we poled six miles to what is called the Big Jam. Here we encamped for a couple of days in the pleasantest quarters imaginable, among tall elms and water ash and poplars, and the fishing below the Jam was all that heart could wish. Almost a virgin pool, its stores seemed inexhaustible. Ranged round the shores at intervals, or out on the masses of flood-battered trunks and timbers, each had all he could do to attend to his own ever-busy reel and gave no thought to his neighbors. We came to be in deadly earnest. But at last, grown suddenly sick of slaughter, we broke the spell and fled away from the spot. A half day's paddling brought us out on upper Toledi Lake. Before reaching this desired haven, however, two charming adventures fell to Stranion's share. We considered them charming, but Stranion seemed to view them in a somewhat different light. It must be remembered that the shores of all these streams are fringed in places with dead trees that have fallen into the channel from the undermining of the banks. We were gliding pleasantly onward with a smooth but rapid current, Stranion ahead, and standing, pole in hand, in the stern of his canoe, while W. B. lay back luxuriously in the bow. As the canoe shot round a sharp turn, immediately before it was seen one of these fallen trees completely across the channel. There was space enough for W. B. in his recumbent position to pass under it by ducking his head, and Stranion resolved upon the dexterous feat of stepping over the obstruction and resuming his place in the canoe. So yet once more was it proved that—

"The best laid schemes o' mice and men
Gang aft a-gley,"

for Stranion indeed got one foot safely over, according to calculation, and it took its place triumphantly in the canoe. But a malicious little projecting branch seized the other by the moccasin, and held on. The canoe wouldn't wait, so Stranion stayed behind with the captive foot, and then dropped into the water. But we rescued him. The next time we approached an obstruction of this kind Stranion profited by his experience and stooped under it. This tree was higher above the water, so the latter method was obviously the most feasible one. But another malicious branch entered into the question. The branch was long, and strong, and sharp. It reached down just at the critical moment when Stranion was bending his manly shoulders beneath it, seized the back of his shirt, and almost dragged him out of the canoe. Failing in this, however, it ripped the shirt open and ploughed a long red furrow down his back. A whole ocean of glycerine and arnica went to the healing of this wound.

On the upper Toledi we found a brisk wind blowing in our favor, so with the aid of our poles we lashed the canoes together, with a space of five or six feet between, after the fashion of a catamaran. Then hoisting sail we sped right on down the lake, without fear or labor. On the lower lake the wind failed us, so we separated and resumed our paddles. It was late in the afternoon, a golden, hazy afternoon, like those of Indian summer, when we drew near the outlet, a place of quiet and exquisite beauty. The lake terminates in a deep cove lying westerly, so at this time of day the sun shone directly down it. The shores were fringed with second growth, of a luxuriance we had not met with elsewhere, and a projecting knoll of dense firs gave strength to the picture, and shut off the actual outlet from the view. A little further back, to our right, a bleak hillside studded with "rampikes" taught us to appreciate this green nook.

Here we overhauled an Indian who had been visiting his traps up the lake. We recognized him as "Old Martin," a well-known haunter of these hunting grounds. Plying his paddle with philosophical deliberation from the stern of the most seedy and dilapidated old canoe we had ever dreamed of, he deigned us no further salutation than a grunt. But the prospect of refreshments, when he saw we were going to camp here for the night, quickly developed his friendliness. We pitched our tent on some clear sward in shelter of the fir-tree knoll, and Martin set up his very rudimentary "lean-to" in convenient proximity. Round the camp fire that night, while a noise of hidden rapids stirred the air, Old Martin forgot the red man's taciturnity. Sam was busy frying tobacco, while the rest of us lounged about in the glow on heaps of hemlock branches, testing the results of his highly original culinary efforts. It will be remembered that when the catastrophe befell us at the Squatook Falls our tobacco was nearly all in a certain tin box which we fondly imagined water-proof. When the little store in Stranion's canoe was exhausted we went to this tin box to replenish our pouches. Alas, the box was just so far waterproof as to admit the water and keep it, so we found a delectable mess. After enduring the lack of the comforting weed for two or three days we became desperate, and now Sam had undertaken to dry this mess, out of which all the good had been well steeped. He squeezed it therefore, and rolled it tenderly, and spread it out in the frying pan over a gentle heat till quite dry. But oh, it was poor stuff! Keeping just a little to fool with till we should regain civilization and "Myrtle Navy," we bestowed the remainder on the

"Poor Indian, whose untutored mind"

led him to accept it gratefully. I feel confident he threw it all away with scorn in the night. He was gone next morning. Probably the tobacco had something to do with it.

Suddenly Sam's proceedings were interrupted by a repetition of that terrible cry which had frozen our blood on the Squatook a few nights back. It was more remote this time, coming apparently from the shores of the upper lake. But the rest of the party, while Sam and I looked at each other significantly, leaped to their feet and drew closer to the fire. Old Martin grunted, "Ugh! Clote Scaurp's dog! Big storm bime-bye!" And he looked somewhat awed, but in no way frightened. He said it would not come near us. It was heard sometimes, in the night, as now, but no man ever saw the dog nowadays. It ranged up and down all round these regions, howling for its master, whom it would never find.* For Clote Scaurp had been struck down in a deep valley north of the St. Lawrence, and a big mountain placed upon him so he couldn't stir and no one could find him.

This started old Martin in the narrative vein, and he found us most attentive listeners. Of Clote Scaurp, a hero somewhat after the fashion of Hiawatha, universally benevolent, and wise, and powerful, he told us many legends; and with the memory of that weird voice in our ears we were ready to give him fullest credence. I will repeat one of the briefest and most striking of these stories, making no attempt to reproduce the quaint language of the speaker. Through all the stories beasts and birds and fishes are represented as speaking our language with man, and holding familiar intercourse with him and with each other under Clote Scaurp's paternal rule. I have mentioned above the supposed fate of Clote Scaurp; but Martin said this was only what his people (the Melicites) were wont to tell. The one thing certain was that Clote Scaurp disappeared, and that earth had been a sorry place for the red man ever since. An old Mohawk lives among the Madawaska Melicites, whose version of Clote Scaurp's departure, as Martin rendered it to us, is a wild and beautiful legend, dimly reminding one of the "Passing of Arthur." This is the drift of it:

After a great many years, the ways of beasts and men grew bad, and Clote Scaurp spoke to them, and talked to them, till at last he was angry and very sorry; and he could endure them no longer. So he came down to the shores of the great lake and there he made a great feast, and all the beasts came and feasted with him. But no men came to the feast, for they had grown altogether bad, and Clote Scaurp talked to the beasts very heavily. And after the feast was done he got into a big canoe, and took his uncle, the Great Turtle, with him, and sailed straight out from shore over the big lake into the setting sun, and the beasts looked after them until they could see them no longer. But Clote Scaurp was singing, and so was the Great Turtle, and the beasts listened to them singing as they sailed away, after they could see them no longer. And at last they could not even hear them; and all the beasts were silent. Then a very strange thing happened. All the beasts who had always spoken our tongue were no more able to understand each other, and they fled apart, each his own way, and have no more met together in council. And Clote Scaurp's dog, his hunting dog, whom Clote Scaurp would not take with him because his ways had been evil with the other beasts, goes wandering up and down the world searching for his master, and often he howls aloud in the night.*

None of us woke next morning till the sun was high up, and the dew all gone in the open places round the camp. The air was sweet with all sorts of wild perfumes, and alive with birds and butterflies. But when we had stretched ourselves and taken a look at the morning, we were puzzled to account for a faint angry buzzing that seemed to come from under our blankets. We thought it wiser not to investigate, however, until breakfast was safely over, the tent struck and most of the packing done. Then, as we threw aside the blankets, out streamed from a deep hole in the ground an indignant host of wild bees who had been made unwilling sluggards, kept from their morning's work by our luxurious slothfulness. But they seemed to bear us no serious grudge, being too delighted over their recovered liberty to pay us the slightest heed. We left them feasting on some sugary remnants of our breakfast, and made no attempt to rifle their little hoard of sweets. I hope the industrious colony has prospered, and not been discovered by Bruin's inquisitive paw.

It was near noon by the time we were fairly afloat on the Toledi River now. This is a larger stream than the Squatook, more violent and rapid, but less obstructed by rocks. The "falls" are less than half a mile from the lake, and many travellers "carry round" by a well-beaten trail through the woods rather than risk the descent. Indeed, the mighty plunging swells, the succession of leaps, the roar and the tumult down between those rocky walls, rendered the prospect by no means enticing when looked at in cold blood. We had surveyed all this the night before, and unanimously resolved to carry round. But a sound night's rest, and the buoyancy of morning in that fresh atmosphere brought more audacious counsels. We were then as unanimous in the resolution to "run it," and we did. It is no use attemping to describe it in detail, or tell how we did it. I only know we all yelled with fierce delight as we darted into the gorge, and I imagine our eyes stuck out, and our hair rose. Our muscles were like steel and we tingled to the finger tips. Then were a few wild moments when every man did his best, without knowing exactly how, for the white surges clashed deafeningly about us, and with shouts and cheers we swept into the big eddy below the fall, drenched but safe. Here was a celebrated trout-hole, but the passion of travel was upon us, and we did not dream of staying. All the rest of the run down to Temiscouata is like a dream. Few rocks, few shoals, a deep channel, and always this tearing current. Chutes we would have stopped to explore in cooler moments, we rushed through now without a pause, and panted for those to come. At four in the afternoon a last mad rapid hurled us out into the expanse of Temiscouata, where a heavy wind was blowing down the lake. This tamed our excitement, and very quickly brought us to our sober senses. We wished to cross directly, which brought the wind on our broadside, a condition of affairs sorely trying to birch bark. The lake here is several miles in width, our canoes were deep laden, and there was running an ugly, heavy, chopping sea. This was the only serious danger we had yet encountered, and required all our energies. Thanks to Stranion and Ranolf, who were steering the canoes at the time, and on whom, therefore, all the responsibility and the heaviest share of the labor devolved, the passage was safely accomplished, but only after a severe struggle of nearly three hours' duration. Then the little French village of Detour du Lac received a party of five well worn out men. From the villagers we obtained refreshments such as we were much in need of, fresh bread, milk and eggs, to say nothing of "bacca." This turned out execrable, but an improvement on Sam's fried article.

Leaving Detour du Lac early in the morning a paddle of eight miles or so over the now unruffled waters brought us to Madawaska River, the outlet. A broad, quiet, quick stream this, and we ran on all day gently and without exertion, delaying at several noted pools long enough to land a few good fish, and stopping now and again to exchange the news (pretty stale with us), the weather or the crops with some battered looking old *habitan*. These French Canadians are always polite, always hospitable, always ready to confound one's notions of French by an incomprehensible volume of *patois*. Unless the traveler is a fluent talker in French and understands the Acadian modifications thereof, it is wise to feign complete ignorance in self defense. This course will be sure to bring out some native who is familiar enough with English for all practical purposes. However, if you get one *habitan* alone you may safely air your French upon him, if you so desire.

About seven we took tea in the old log house at Mud Lake portage, where we had encamped on the first night out from Edmunston. Late as it was we were determined to push on and reach Edmundston that night. About a quarter of a mile above the village a series of rapids commences, terminating in the "Little Falls" spoken of in the beginning of the paper. When we drew near this place it was between ten and eleven, the night was moonlight, but obscured with drifting clouds, and we had to descend the rapid in the gloom to within fifty yards of the falls. It was uncomfortable work, but luckily there were no bad rocks on our side the river, and the water was not too deep for us to use the poles to advantage. So keeping the canoes checked cautiously, and holding ourselves back gingerly, we dropped down to our old camping ground without accident, hauled up the craft in a little cove, pitched tent as best we could in the dark, and soon were sleeping the sleep of the just—once more in Edmundston.

CHARLES G. D. ROBERTS.

FREDERICTON, New Brunswick.

* Governor Gordon got this story in almost the same form from some Indians on the Tobique River. See page 92 of "Wilderness Journeys." C. G. D. R.

A MUNCHAUSEN WHALE STORY.

BY EDWARD MANNING.

THE good steamer Katahdin was bound to Boston. The last bell had been rung, and as the gang-plank was hauled in and the lines cast off, the great wheels began to revolve, and soon she was steaming down the beautiful and placid Penobscot. The city of Bangor gradually passed from view, and walking forward I took a camp stool, and seating myself near the capstan on the hurricane deck I prepared to enjoy the picturesque and beautiful scenery that extends back from the river on either shore until it is lost in the gloom of the distant hills. The throb of the engine, combined with the balmy air, had a peculiarly quieting effect on the nerves, and the inclination to doze was almost irresistible, despite the beautiful and ever-changing views presented to the eye.

While enjoying this delicious sensation and oblivious to all things else, I was aroused by loud talking and laughing, which came from a group of brown and hardy-looking men who were seated near the rail on the starboard side of the steamer. They were apparently sailors, and as they spoke in very loud tones I could not fail to hear their conversation. One of the group was a powerfully built colored man, with hands and feet of immense proportions, and as he was called "Doctor" by his companions, I inferred that he was or had been a ship's cook by profession. He had evidently been telling some improbable sea story. The others were laughing and chaffing him about the "marine" story he had told. Finally one of them, whom the others called "Chips," said "if they would choke their jaw-tackle he'd tell them a whale story as is a whale story—and don't you forget it either, Doctor."

This raised a laugh, and after a brief discussion of Chips's reputation for veracity, he was told to "heave ahead."

"Nearly twenty years ago," said he, "I found myself out to sea on a bluff-bowed old bark that was bound on a whaling voyage. The old hooker looked like a box under sail, and when she was on the wind she'd make as much leeway as an old mud scow. Her spars were rotten to the core, and it was a mystery how they could hold themselves up. The mizzen topmast was in a particularly bad condition. The rats had eaten a big hole into it, near the heel, and when the yards were braced up on the port tack the wind would blow into it and make a ghostlike noise.

"The captain of the old What Cheer (that was her name) was an awful big man, and his face was shaped like the stern of a Dutch man-of-war. But he was a good man, and treated his crew well. The only weakness he had was his love for the old bark. He was very particular with her decks and he kept us washing and holy-stoning them about half of the time until we arrived on the whaling ground.

"I was coming aft one day to relieve the wheel, and just as I was going on the quarter deck I accidentally dropped a quid of tobacco. I don't chew much, and this quid wasn't any bigger than a pea. The Captain happened to be standing on the starboard side of the quarter deck, for'ard, when I dropped it, and he saw it.

"'What do you mean, sir! what do you mean, sir, by soiling my decks with such great chaws of tobacco?' he said, very much excited.

"'It was an accident, sir,' I replied. 'It is only a very small piece. I'll pick it up and throw it over the side, sir.'

"'No, sir; you shall not! It's as large as a cocoanut! Go for'ard and get a shovel and broom.'

"I went for'ard, and after getting a shovel and broom, he made me *sweep* this tiny chew of tobacco into the shovel.

"'Carry it carefully for'ard, sir, and when you get on the t'gallant fork'sl, toss it as far to lu'ard as you can, sir.'

"He was so polite about it I thought I had better accommodate him, and I went on the t'gallant fork'sl, and just as I tossed the shovel the old bark gave a heavy lurch to lu'ard, I let go the shovel, and it went spinning overboard. When I let go of it I threw up my hands and caught hold of the jib sheet. If I hadn't done this I should have followed the shovel. The captain thought I threw the shovel overboard intentionally, and he punished me by keeping me on deck my forenoon watch below for a week.

"Well, at last we reached the Artic. You see, we were after the right whales, and had to go there to find them. We cruised for a long time before we saw a blow, and once or twice the old hooker came near getting ripped in the ice. If this had happened she would have been squashed as flat as a pancake.

"One day, about this time, the lookout in the cro'nest sang out 'land ho!'

"The captain was surprised, for he didn't expect to see land hereabouts. He sent the mate aloft to see what he could make out of it. He hadn't been aloft long when he hailed the deck and reported the land to be a large floating island.

"'What, sir?' replied the captain, astonished.

"'A big floating island, sir!' replied the mate.

"'You're crazy, sir! Who ever heard of a floating island

in the Artic Ocean? Take another look, sir,' angrily said the captain.

"'It's a whale, sir!' sang out the mate in a scared kind of a voice.

"'That's more like it, sir. I smell him now,' said the captain."

"Smelt him?" inquired the Doctor.

"Yes, smelled him," replied Chips. "Don't you know that these old whalers can tell when a whale is around before they can see him? Then how do they do it if they don't smell him? The captain called the mate down from aloft, and the bark was steered for the big whale. When we got within a quarter of a mile of him, the boats were lowered and we pulled toward him. I tell you he was a big fish! His back loomed up like a mountain, and he appeared to be a mile long!"

"Fo' gwacious," exclaimed the Doctor.

"Didn't we feel scared when our boat got near him!" Chips continued. "I'd a given three months pay to be back on the bark. When the boats got near enough, the mate he says to the second mate, 'Mr. Toby, pull your boat ahead, and throw the iron. What are you holding back for?' Then the second mate he says to the mate, 'Mr. Blum, you pull ahead and throw the iron. What are you holding back for?' Then the mate he got red in the face, and he says, 'give way, boys—who's afraid?'

"We were all afraid, and he knew it, but as he didn't dare return to the bark before trying to harpoon the whale, we mustered up courage to pull the boat near enough for him to dart the harpoon. It struck the whale squarely in the back.

"'Stern all!' cried the mate, and I tell you we weren't slow in backing the boat out of his way. The whale was so big it was some time before he knew anything had hit him. But when he did, wasn't he mad! He just gathered himself up and started; and the way he took that boat through the water was awful!

"Now, about half a mile ahead of the whale, there was a great iceberg drifting along. The whale saw it and he steered for it, head on. You see, he was so mad he didn't stop to think, and he just ran his figurehead right into it. He struck it so hard that the 'berg was knocked into little pieces, no bigger than a good sized pumpkin, and it was nine hundred feet high, and thirty-six hundred feet under water!"

"Fo' gwacious!" exclaimed the Doctor.

"He not only smashed the 'berg, Doctor," continued Chips, "but what suited us better, he smashed his own head, for which we felt very much obliged to him; for, I am certain, if he hadn't killed himself, we couldn't have killed him. The bark had followed the boats, and when the captain saw the whale was dead, he just ran her alongside of his carcass, and made her fast.

"Well, Doctor, it took four months to cut in that whale, and we got eight hundred tons of blubber out of him!"

"Say, look hea now, Chips," said the Doctor, "how many tons was dat bark of yourn?"

"Four hundred tons only," replied Chips.

"Den how you put eight hundred tons in her?"

"Why, you see, Doctor, that was blubber. When the oil was tried out it shrank, and only left four hundred tons. That's clear enough. Don't you see it?"

"I 'spects you's right, but 'tain't quite clar."

"Well, anyhow, it filled the bark with oil, and we returned home and were paid off and discharged."

"Now, Chips, you don't 'spects dis nigger to believe dat yarn? I think you is de boss liar of dis crowd."

Ring-a-ding ding, sounded a bell, and a porter came forward, singing out, "Passengers for Bucksport will land from the port side, aft."

WILD RICE.

Editor Forest and Stream:

In the spring of 1880 I received from Canada five bushels of rice with directions for sowing. It came from one of your advertisers, and while he said it was not so good a time to sow it as it would be in the fall, yet he did not doubt that a good deal of it would come up. The rice was sown in the shallow water at the head of Molechunkamunk, one of the Rangeley Lakes, in Maine, near my fishing camp, Birch Lodge, and was also sown in one of the smaller ponds near by.

So far as I could judge, the water and the bottom were both favorable to its growth, but none of it came up. We made careful search many times, but could never find any stalks. Thinking that the spring sowing was unfavorable, I have this fall sent for, and received, ten bushels of this season's growth from the same person, and last month it was sown in several places in the same waters. I shall report results, if any there are, next season.

I have been told that wild rice was sown in Lake Umbagog, the lower of the Rangeley chain of lakes, several years ago, and that it now grows there to a limited extent, but have not been able to verify the statement. There seems to be no reason why wild rice should not grow in Maine, and if it can be once started in the Rangeley waters it will add very much to the attractiveness of the region as furnishing food for ducks and wild geese, and thereby greatly improving the fall shooting. It is to be hoped that others who have experimented with it will accept your invitation to report results in your columns. LAWRENCE.

BOSTON, Nov. 25, 1882.

HUNTING ACCIDENTS.—Detroit, Mich.—The number of casualties has been very large. The first ambition of the settler in the wilderness is to become the possessor of an old army musket; the second, to slay some fur-bearing animal and make himself a cap from the skin. His favorite mode of hunting is to conceal himself in the thick brush beside a runway and there await the passage of deer or turkeys. Enthusiastic young sportsmen who are on the look-out for game of any description catch a glimpse of his fur cap in the bushes. They creep nearer and nearer, trying to make out what manner of animal it is. Soon it moves and the young sportsman instantly fires. If he be troubled with "buck-ague," the settler may fortunately escape, but the newspapers have teemed with accounts of just such killings for the past six weeks, interspersed with obituaries of the gentlemen who go through the thick brush dragging their guns by the muzzle, or step over a log and pull their guns after them.—W.

BREEDING OF QUAIL.—Crockett's Bluff, Ark., Nov. 6.—Flushed a bevy of quail yesterday much too small to shoot. —BYRNE.

Natural History.

THE PINE SISKIN.

Chrysomitris pinus.

BY DR. ELLIOTT COUES.

HERE we have a humble and, in fact, obscure member of the feathered circle, notable chiefly for the lack of any one of those strong points which may commend a bird to public notice or general favor. Diminutive in stature, of simple streaky attire, albeit faced with buff or yellow, lisping in speech and withal oftenest mixed up with such more notable birds as crossbills and purple and goldfinches, the pine siskin is out of the question of possible notoriety. Nevertheless, his individuality is well marked; his history is already a long if not a brilliant one, and I question what one of our birds is better known to ornithologists than this "poor relation" of the gaily-plumed goldfinch.

Like many of his relatives of the finch family, this siskin is a very sociable little creature, so fond of the society of his fellows that the roving flocks can hardly be persuaded to separate even during the breeding and nesting season. Large numbers commonly make choice of the same piece of woods, or encamp for their summer homes within sound of

THE PINE SISKIN.

each other's querulous chirpings, though each pair mind their own affairs with little heed to the general welfare. At all other seasons the flocks are inseparable. You will oftener see a dozen or a hundred of these birds together than find one by himself.

They are restless to the last degree. Even when most assiduously engaged at their repasts they are in continual motion from one seed vessel to another, and often quit one feeding ground for another, however eligible, as if actuated by a sudden incontrollable impulse. Their thin wiry voices are incessantly heard as they move about, now in a lisping, querulous undertone, as if they were soliloquizing, now with a harsher, rattling note, as they take alarm and move off on swift, undulating wing, to another tree or to a patch of dry, rustling herbage, like the uneasy gadabouts they surely are. Yet it is not an unpleasant sight to see a flock of siskins once settled comfortably in some inviting tree where seeds are plentiful, and observe with what address they shell out their food from its husk, how nimbly they creep and flutter about, what striking attitudes they momentarily assume, and how completely absorbed they become in the practical question before them, only stopping now and then to utter a drawling note or two, as it were, with their mouths full, and from sheer force of their loquacious habit. Not that they are at all unhappy, or have anything to complain of, but they never seem to forget that they are "poor critters" after all, as the Widow Bedott would say.

Nevertheless, these forlorn little creatures fare bountifully,

THE AMERICAN GOLDFINCH.

if not sumptuously, a great variety of food to their liking being always accessible. The seeds of all the conifers where so many siskins spend their time—of the alders, birches, buttonwoods, and many other deciduous trees; of plantains, thistles, and an endless array of composite and amentaceous plants, furnish a plentiful and varied repast, to be had in turn as the fancy takes them. You may see a flock of siskins one moment swinging on the globular, slender-stemmed fruit of the buttonwood, as represented in the figure, and the next find them fluttering almost on the ground, in a patch of plantains—occasionally on the ground itself, picking up scattered seeds that have been shaken out of their dry and splitting capsules. Fire into the busy group, if you care to, and, ten to one, the victims of your curiosity will be found so fat that you will have some trouble in preparing them for the cabinet, and their distensible throats so crammed with seeds as to perceptibly set the feathers of the throat awry. We unconsciously associate the word "crop" so closely with fowls and pigeons, that all are not aware how many birds have the swallow tube dilated into a kind of crop, which bulges to one or the other side, for the temporary reception and maceration of seeds hastily plucked, while the gizzard below may be already full. Very many finches possess this peculiar structure of the œsophagus, and this siskin is one of them.

In most parts of the United States the siskin is associable in our minds with fully weather, leafless trees and fields which, having yielded up their crops, are left to the inroads of coarse, arrogant herbage. For the bird, in most places, is a winter visitor, who comes oftenest with the winds that bring us redpolls, crossbills and snowbirds from their homes in higher latitudes. But this species is far from being the very "Northern stranger" that Wilson, who first described it, considered it to be. Further on I shall show how numerously it breeds in many of our States, to say nothing of the vast extent of Alpine country in the West, and even in Mexico, which it inhabits in summer. This strange misconception, originating with Wilson, has been faithfully perpetuated to the present day. Thus, Dr. Brewer states in one place that it extends its irregular migrations into the Central States, as far as Southern Pennsylvania, leaving it inferrible that thus it goes no farther; yet on the next two pages, he quotes his humble servant, and Audubon, too, as authorities for the presence of the bird in South Carolina and Kentucky.

For the Pacific side of the continent Dr. Brewer on one page assigns Northern California as the southern limit, and on the next cites Sumichrast for the fact that the bird is a common resident of Mexican table-lands. Such contradictions are unworthy of their practiced author, though perhaps inseparable from manuscript prepared for the press in the peculiar manner in which these bird biographies appear to have been wrought. The fact is, as stated by the writer I here regretfully criticise, that this bird "breeds throughout the British Provinces, Northern Maine, New Hampshire, Vermont, New York, Michigan, and thence to Washington Territory, in all the evergreen forests;" and that, furthermore, it also breeds in the Alpine regions of Oregon, California, Utah, Nevada, Idaho, Wyoming, Colorado, Arizona, and New and Old Mexico; that some individuals may be found the year through in the places where they live in summer, and that others spread in winter over all the United States in suitable places, unless the extreme South Atlantic and Gulf States are to be excepted.

Its movements, however, are so erratic, that no periodical migration at particular times, nor abundance in any given locality, can be safely counted upon. At all times excepting during the breeding season, the state of the weather seems to have more to do with its movements than the orderly advance of the seasons; and its ultimate local distribution depends still more upon abundance or scarcity of suitable food in this or that spot. The extreme northern dispersion of the species is probably not yet ascertained with precision; but we have advices of its presence in summer from Labrador to the Saskatchewan.

The best account that we possess of the breeding habits and nesting of the pine siskin has been furnished by Dr. C. Hart Merriam, in the interesting article published in FOREST AND STREAM of July 18, 1878, to which the reader is referred.

To the excellent figure of the bird given with this article we add an equally characteristic portrait of the American goldfinch, *Astragalinus tristis*, the siskin's nearest relative in this country.

HOOP SNAKES.

Editor Forest and Stream:

I was greatly interested in the discussion of the hoop snake in your columns during the past summer and fall, and since that discussion was begun I have had opportunities for gathering a few facts that may or may not be new. Let me premise by saying that like most "wonder stories," those told of the hoop snake are not wholly without foundation. There is no doubt some reptile, possibly more than one, that has been made the subject of many slight inaccuracies, until the grand result is the deadly hoop snake. Last summer while strolling in the woods near White River, in company with a very superstitious colored man, I shot a medium-sized snake which he declared to be the rattlesnake's pilot, and gravely informed me that my luck as a sportsman would be bad for the rest of the season, a prediction that has not been verified. The snake's tail had a sharp horny point. On rejoining some friends who had taken a different route, they reported a similar find, and had severed the thorn from the tail, and had it with them, to the great horror of our colored friend, who insisted on hunting alone for the remainder of the day.

A few days after, on the other side of the river, I was hunting in company with a friend who had once lived in Georgia, the ancestral home of the hoop snake. He called my attention to a reptile which he assured me was the original and only genuine "hoop." I killed him, fortunately hitting him with only one shot just back of the head. The motions of his snakeship while in the death agonies were such as to leave no doubt as to which he considered the "business end." Repeated blows with the tail were aimed at the place where the hurt was received. I have no library of reference sufficient to enable me to identify the specimen, but his "descriptive list" is as follows: Specimen not full grown, length thirty-two inches, color on back blue black with metallic luster, on belly brownish, with darker spots, shading off into a rusty color toward the tail, sides mottled with bright red spots about the size and shape of a pine tree shilling, square with irregularly rounded corners, head subconical or heart-shaped, supposed to be characteristic of venomous reptiles, tail with sharp horny spike not fully developed forward, as the specimen was young, but perfectly hard and sharp at point, rows of scales 19. g. 175. This is probably the reptile best entitled to the honors belonging to the name of hoop snake. I do not vouch for his taking his tail in his mouth and rolling like a hoop. That is a mere trifle anyhow and ought not to be insisted on.

SALMON ROE.

JACKSONPORT, Ark., Nov. 29, 1882.

[The specimen killed is undoubtedly *Furancia abacurus*, B. and G., a southwestern species. There are several species of serpents in which the tail ends in a hard point.]

LOOK OUT FOR THEM.—Snowy owls are being shot in Pennsylvania, showing the approach of a cold winter. Two were lately killed near Scranton; one last week was taken to a Bethlehem taxidermist for mounting; while, in New York State, I hear of a number. Will not you request your correspondents that have any come under their observation to make known the facts? Perhaps other Arctic species have shown themselves.—HOMO. [As already noted in these columns, crossbills, pine grosbeaks and snow buntings made their appearance in Massachusetts soon after Nov. 1.]

WHITE DEER.—The West Sullivan, Maine, *Bulletin* of Nov. 25 reports: "On Monday some of our gunners shot a very large deer; he was white, pink ears, and had the largest antlers of any deer which has been shot for years past. This fine specimen should have been preserved, as this herd of 'white deer' will soon be exterminated."

Game Bag and Gun.

WING-SHOOTING WITH THE RIFLE.

QUIT-*quit-quit-whirr-r-r-r!* I am suddenly aroused from my day dream about how neatly I picked that last gray squirrel (that is safely stowed away in my game pocket) in the head. The noble grouse suddenly springs into the air and starts toward the alders, but changing his course, wheels into the open road and takes his line of flight straight away.

Instinctively my thumb draws back the hammer of my little .22 Ballard, it leaps to my shoulder, and through the Lyman sight I instantly catch the bead.

The top of the bead just touches the fleeing bird and I pull. There is a tiny report like the crack of a whip, and—what is the matter with me? Am I ill? I feel the hot blood rushing like a tornado to my brain, my heart is pounding like a sledge hammer against my vest. I reel like a drunken man, for my head whirls like a top. Can I believe my eyes? Yes, there he is in the road, his wings beating the tattoo of death full fifty yards from me. Twenty-five years ago I experienced the same sensation that set my blood on fire to-day. How with lightning-like rapidity I bridge over those long years, and how distinctly I recall the shooting of my first bird on the wing. Since that time I have killed hundreds of flying grouse, and it is many years since I have had the fall of a bird affect me as it has to-day. Shooting them on the wing with a shotgun looked as much of an impossibility to me then as shooting them with a rifle did a few months ago.

Regaining my senses after seeing the grouse in the road, I break out in a tremendous yell of delight (if that will express it) and Jack, my companion (who is two hundred yards away, watching a grove of oaks for gray squirrels), hastens across the field to me and inquires what the trouble is. I explain what I have done, Jack says it was nothing but a chance shot and that I never can do it again. Then with some very vigorous remarks addressed to some imaginary being called Damit (also informing the aforesaid being that the supposition was that he had accidentally shot himself) also looking as though he (Jack) was very much disappointed that such was not the fact, he climbs over the wall and takes a bee-line for the oaks again. [Note.—Jack occasionally shoots his old shotgun, off-hand, when he cannot find a rest for it.]

I have tried a few shots at various times at crows, hawks, etc., on the wing, with a rifle, but never with success until this season. I find that with the Lyman rear sight I can see distinctly and can catch the bead and flying object so quick that it is among the possibilities to kill some game that is on the wing, while for still shots it can't be beat. (This I write for the good of the reader who hunts with a rifle.) I find that I fired seven shots to begin with and missed seven flying bird. The eighth bullet cut feathers from a bluejay nearly overhead, while the tenth shot killed the "hurtling grouse" over which there have been so many wordy battles fought in FOREST AND STREAM. The outcome of it is that I now have wing-shooting with a rifle on the brain, and although I do not expect to kill the cunning, crafty, hurtling grouse with a single bullet, I shall try him if he gives me any such opportunity as the one did that I got. Next spring I intend to give the glass balls and clay pigeons a round, and I expect to smash some of them anyway. I would like very much to hear from the readers of FOREST AND STREAM who are experienced in wing-shooting with a rifle, and any points that are given by them may be acceptable to many of your readers as well as to

IRON RAMROD.

SOMERVILLE, Mass., November 25.

ISSAQUENA—QUEEN OF THE DEER.

ISSAQUENA—"Queen of the Deer"—could once claim that proud distinction, as Indian tradition tells us; but, alas! now they are few and far between. The hunter's rifle is not so much to blame for this as the waters from the Mississippi River. The flood last spring destroyed these pretty animals by the thousand, and the negro with his old musket as many more. My farm was captured by the water on the morning of March 16. I stood upon my gallery and saw hundreds of deer passing through the field making their way, to the levees and the few Indian mounds scattered over the country. Many were shot by my tenants, permitted by me because of the destitute circumstances of many of them, with the waters fast rising around their humble dwellings, their crop prospect destroyed, and with it all hope for credit at the country stores, where they usually draw supplies upon mortgage liens on growing crops. Many were destined to suffer for food, hence the leniency of planters and others in enforcing the game laws. The frightened deer took refuge from the water upon logs and in vacant houses, in fact, anywhere that afforded standing room. Two were killed standing in my gin house on the gin stand, while the upper story was occupied by refugee negroes. Six or eight were driven from the plantation church. Six were killed in an old outhouse, and many were shot while standing on logs. I could count up 150 deer killed here during the high water, which lasted two weeks.

Of course deer are now very scarce in these forests, but there are some left. Two, that occupied a log close to my house, were allowed to remain, and there they stayed until the waters subsided. They would leave the log in the evening and swim to the foliage of young trees, where they would browse, thus sustaining life until the waters went down. We had many interesting and exciting chases after them in boats, the light canoe or dugout being used for this purpose. The dugout is a boat formed from a tree, hollowed out and dressed down to its lightest weight, furnishing a light, easily propelled, swift-running craft. I was in several of these chases, when it was an easy race to capture a deer. Once, R. M. Smith, Jr., "the deer hunter of Issaquena" (whom I will mention again soon), and your correspondent were going from the latter's plantation to the river, escorting a party of refugees and some of their effects in a large skiff. We were traveling the public road *à la* Venice, when I noticed a large doe lying on a floating log, just in advance of our boat, and proposed that we capture her. "Bob was agreeable," so, heading our dugout for the pretty creature, the race began. Seeing us approach, she rose from her reclining position, stood erect, watching us with her large, mournful eyes, until within a few feet of the log—one plunge, and she was off—and now the race was on in earnest. She was making for a cane thicket to our right. A few vigorous strokes of the paddle, and we headed her to open water; a few more strokes, and we were alongside. I made a grasp at her ears, but, fortunately for me, missed; had I succeeded, perhaps a broken arm would have been the result; but I was too excited to consider the consequences. As I failed to catch her, of course she dodged and changed her course. This necessitated our doing the same, and gave her the start, but we soon caught up, and as Bob placed the boat alongside I grasped the deer's tail and held her. Once secured, we towed her to the skiff, where two darkeys tied her and placed her in the skiff. We carried her home; but that night she was killed by a horse. Several others were captured, but would not survive captivity.

Deer are now scarce, bears plentiful, and turkeys are in vast numbers. The water did not trouble the bears or the turkeys; both occupied trees until the waters went down; they are now as plentiful as ever. Few turkeys are killed, but Bruin suffers every time it pleases my friend Smith to go for him. He and several other young men have formed a sporting club, and are provided with bear dogs, tents, and all the paraphernalia that go to make up a complete hunting outfit. They are all young men and in love with the sport; are not hunters for market, having never sold a pound of meat nor a single head of game killed. They were out week before last and, as usual, added another bear skin to their store. Issaquena county affords good sport in bear hunting, and if anyone is inclined to try the sport, a line to R. M. Smith, Jr., to the address at foot of this letter, will secure his attention. It is for sport, not money, that he hunts, and as he is whole-souled, hospitable and generous, readers of the FOREST AND STREAM would enjoy a hunt with him.

Quail shooting is fair. Ducks are now fast filling our lakes and bayous, and shooting them affords fine sport and plenty of it. With good dogs fair bags can be made in the woodcock shooting. We shoot them at night, by torchlight. This is no snipe-hunting story, where you are left to hold the bag.

Steele's Bayou and the many lakes surrounding afford fine black bass fishing at this season of the year. It just "can't be beat." STEELE'S BAYOU.

MAYERSVILLE, Miss.

GUNNING ALONG THE SACRAMENTO.

ALTHOUGH the severely cold winter of the Eastern States will soon send the sportsmen of your section within doors, we of the Pacific slope are hardly in the midst of our best season for small game. The ducks were late in their coming this fall, but at last they are upon us in force, and I do not recollect of having known—during my twenty-eight years' residence in this State—waterfowl more plentiful than at present writing. Throughout the great Sacramento and San Joaquin valleys are the great tule marshes of the State, the favorite and often secure retreat of all the various kinds of ducks and wild geese, snipe, plover, curlew, etc. In some places the sloughs come into close proximity to the timber on the bottomlands, where the quails and rabbits raise their young, so that one may often bring home a miscellaneous bag of game. My own experience of a few days ago will serve to illustrate what is not an unusual experience of sportsmen in this section. Not feeling quite well, and believing that a few hours' tramp in the company of dog and gun would set the machinery of my system to running a little more smoothly, I left my work at 2 P. M. and strolled out of the city in the direction of some sloughs that are seldom devoid of waterfowl.

On my way I had to pass around the outskirts of a strip of young timber, principally sycamores, willows and cottonwoods, and in so doing surprised myself by blundering right into a covey of quails, which immediately took a bee line into the air and settled themselves among the topmost branches of the tallest sycamores. (I stopped one of the towerers, however, before he got there.) Failing to get the birds out I went on, and after emerging from the brush (this was only a mile and a half from a city of 25,000 inhabitants) found another covey out in the short grass. Being between them and their favorite hiding place, and knowing their habits quite well, I fired a shot at once to make them scatter and hide in the grass, which they did. This was very near the edge of a slough along the edge of which was a thin fringe of high tule, or flags, which hid the water from my view, and I did not know that there were ducks there. But there were, and of course they took wing, but did not get out of range before I brought down a couple of fine, plump bluebills with my left barrel, which was loaded with only No. 9 shot. Then I went after the quail, and before they got back to the brush I had bagged six of them. The afternoon was bright and the ducks scarce, so I went to another slough which is lined with springy, boggy banks, where I often found English snipe, and they were there then. Having a fair supply of No. 9 cartridges with me, I went for the long-billed fellows, and by the time the sun had begun to gild with its gorgeous crimson and golden hues the neighboring snow-clad summits of the Sierras, I found I had thirteen big, fat snipe, seven quail, two ducks and a cottontail.

This was pretty good for a short afternoon's hunt, but I was not quite satisfied. I believed there would be a fair flight of ducks in the evening from the marshes that lay a few miles to the west, so I waited by one of the sloughs until the great oak trees cast broad and forbidding shadows over the plains; and then, just as I began to grow chilly and disappointed, the dusky fowls put in an appearance. First came the teals, skimming low above the ground in their swift, erratic flight, and I had to empty a great many shells at the little fellows to get half a dozen of them. Soon the widgeon came along in big flocks, but too high, and occasionally a pair of mallards for a choice place to feed, while above them all I could occasionally hear the rushing noise made by a big body of canvas-backs, but could not get a chance at them, as they knew where they were going, and it was to some place other than shallow sloughs. It soon became too dark to see the teal which I knew must have come within ten or fifteen yards of me, and I set out for town, which I reached in half an hour. My bag counted, when I reached home, four mallards and seven teal, besides the two other ducks, seven quails, thirteen snipes and rabbit before mentioned. I thought that a pretty successful four hours' shoot, within almost gunshot of a city that turns out every week about as many gunners as any place of its size in the Union. This illustrates the variety of sport that is to be had in many parts of this State.

I know you do not favor pigeon-slaughtering as it is often carried on; still, as a matter of news, I will say that there is a big match pending between the O'Neal Gun Club, of Stockton, and the Foresters of this city. The former has among its members several of the best shots in the State, and has recently strengthened its trap-shooting team, by taking in five of the best shots of another Stockton club. The Foresters, many of whom have had no experience at the trap, are the challenged parties, and the proposed stake is $500 a side, the challenge being for fifteen men of the club to shoot as a team. The Sacramento gentlemen fear that their Stockton friends have put a job on them by withholding their challenge until they had got the best shots in their county into their club. So they have replied to the O'Neals that if they will make it a county affair they will meet them. Should the Stockton club agree to this, the Foresters will select Rontier, Chapman and perhaps Ecklon and Riddle of the Folsom Club, Mack of the Roosevelts, and possibly one or two of the several "free lances" that are about. They have already some ten members that are fit to shoot in any company, but could hardly put forth an effective team of fifteen. The match, should it come off, will be a hot and interesting one.

Every once in a while we meet an Eastern sportsman out here. Last spring the writer had a jolly two days' hunt with S. A. Tucker, of the Parker gun house, and Harry Comstock, representing the Baker gun. Both are good fellows and first-class gentlemen—men who do not lug "the shop" into their everyday intercourse with people. They are effective agents, however, and did well on this coast. A few weeks ago Comstock dropped down upon us suddenly in all his manly beauty, being on his way home from Oregon on another business trip. Do you know him? Well, they say he looks very much like President Arthur, and that probably accounts for the way people stared at him while here. Next spring we'll have them all here again—Tucker, and his big shoes, cigarette shooting hat, corduroy suit and reindeer's frock, and Comstock with his black coat and shining plug hat—to go out for a goose hunt! TRUANT.

SACRAMENTO, California, Nov. 26.

ONTARIO DEER SHOOTING.

Editor Forest and Stream:

My suggestion that October 1 is late for pleasure parties to enter the Ontario woods seems, according to the *Canadian Sportsman*, to have brought out some criticism, but for all said about "hot water for shaving," and "feather-bed sportsmen," I still affirm that September 15 is better than October 1 to enter the Northern woods for a month's trip. Were I expecting to tarry but two weeks, I should go about September 25, but it has been my practice for a number of years to spend one month out of the twelve among the mountains, lakes, and streams of the North. Among other places, besides the Canadas, I make trips to the pine woods of Northern Michigan, Maine, the Adirondacks, etc. During all my experience the two most enjoyable weeks in every trip I have been the last in September and the first in October. Flies and mosquitoes have never troubled after September 20. I usually leave home so as to arrive well back in the woods about September 19 or 20, and during the last five years the four succeeding weeks have been so free from storms that camping without tents wherever night happened to overtake us was not an unpleasant occurrence.

According to the remarks of my friend across the border, one is led to suppose that it is an enjoyable privilege and heroic act to tramp through or sleep out in a cold November or last of October storm; but I suspect that one of those storms would find him (as it should every sensible man at that season of the year) not so fearless of "soft water" but what his nights would be spent under the friendly shelter of a good log cabin or commodious tent. It has never been, and I hope never will be, my plan to lie to some back settler's house or snug cabin and make that my home for a month. I enjoy the varied experiences of a march through the wilderness to some distant point, but the most exciting and enjoyable trip to me is in canoeing up some strange river, where new and unlooked-for scenery presents itself at every turn. A trip of this kind cannot be taken with cumbersome luggage, tents, etc. There are always long and short portages to overcome, and I have carried a canoe on my back too much to enjoy making three or four trips across a portage for extra baggage. Then there are large lakes to cross, and the last of October or first of November is hardly a safe time for crossing them.

I remember in 1878 following up the west branch of the Penobscot, and while on the return trip at a point below Mount Katahdin we were windbound and could not cross Ambajejus and Pamedomcook lakes for a number of days. It would have been exceedingly rash for experienced guides to have crossed. We had no guides and did not consider our experience equal to the undertaking. This was about Oct. 16. Twenty days before this the lakes were comparatively quiet, and a bark canoe could cross them any day with perfect safety. The nearer the approach of winter the rougher the waters become, and the colder the nights the more blankets must be carried.

I have no doubt but Oct. 1 is well enough for those who go simply for a hunt amid familiar scenes where the "lay of the ground" is known. I do not go to the woods simply to establish myself in some permanent camp and see how many deer I can kill. If there is a place in the wilderness that I have heard and can hear nothing about that is the place I like to seek out. I dearly enjoy the rod and gun, but were it against the law to carry either, the rivers, mountains and lakes would attract me to them every year just the same. At the proper season of the year a person may without risk push ahead into an unknown wilderness and camp when necessary under a hastily constructed brush hut, but late in the season he who goes ahead without knowing where he is to camp it storms arise (unless he is inured to this kind of life by more than ordinary experience) is violating a law of health and tempting Providence.

I am glad to see my critic "go for" all Americans who annually visit Ontario, as he says, "for the almighty dollar's sake," and I trust that his own countrymen will not be passed by on that subject.

"H.'s" last letter enlightens me upon the subject of the exportation of deer, the season for using dogs, etc. He goes on to say that he cannot believe that any hunter can kill twenty-five or thirty deer a week in any part of Ontario; but I know positively that one hunter killed seventy-four deer in ten days last winter, hauled them out and shipped them from Renfrew station, on the Canada Pacific road. I took pains to see the station agent about it, and he told me that he waybilled sixty-five of them in one shipment, the balance of them were sold out about there. Of course this is an extraordinary exception, but it shows that the thing is possible, and, doubtless, is of more frequent occurrence than officers of game protective clubs are aware of. Now, I affirm that there should be a restrictive clause in the Ontario game laws, so that no one man should be allowed to ship more than three, or at the most, five deer at a time from any station at any season of the year. In conclusion, I will say to "H.," whom I honor for his outspoken loyalty

to the office he holds in the game protective association of Ontario, that I hope to continue to visit the Ontario woods commencing with September 18 or 20, and if the laws cannot and ought not to be so modified as to allow pleasure parties to eat venison (if they are so lucky as to capture any in the dense foliage) before Oct. 1, then I must be content with partridge and black bass, for I shall try to respect the law; but if I am compelled to do this, I sincerely hope that I shall not hear on the same trip of any more sixty-five deer shipments.

We "feather-bed sportsmen" will be content to go without deer and pneumonia that our friend of the *Canadian Sportsman* may have both later in the season. B. G. A.

CONNECTICUT, Dec. 1, 1882.

GREAT DEER HUNT AT SANDWICH.

THE South Abington (Mass.) Sportsman's Club numbers among its members many who have distinguished themselves in hunting exploits, both in variety and in the manner in which the game has been killed; but that the picked team sent to Sandwich this fall to sustain the reputation of the club have not eclipsed all previous performances, I leave the reader to judge by the following tale.

After due deliberation in which the club held several secret meetings, the team was selected. First on the list came Matt., a devoted sportsman, whose success in winning first prize in the powder match this summer secured him a place on the team. On being questioned about deer shooting he confessed ignorance, but was allowed to go provided his shells be loaded and examined by a committee before leaving. Next came Chris., the old reliable, in whom everyone felt the most confidence. He was also questioned by the club, and gave several vivid descriptions of fox hunts in which he had participated, but as some one else had invariably shot the fox, he was about to be rejected, when it was suggested that he had better be taken along to play high-low-jack with Matt. It was voted to send Chris. Seth the silent was called and told his little story. He had killed everything from a rabbit to a polar bear, excepting, of course, deer. He, however, made fair promises, and his name was booked without further ceremony. At this point C. F. arose and said he had prepared a paper on deer shooting, which he would read with the club's permission. He was allowed to proceed, and read a very exhaustive and carefully prepared article, entitled "Deer and where to find them." At the conclusion it was voted to send Frank. To this Constable Smith objected, saying that he himself had had more experience in deer shooting than C. F., at the same time producing proofs of his statement. The club after deliberating a few moments decided to send both. Jacob the faithful was next interviewed. He informed the club that he had frequently paid a visit to the deer on Boston Common, and felt confident that he should recognize one in a wild state, and should do his level best to bring home mutton. His name was put down amid cheers.

One day about a week after the aforesaid examination an unusual collection of baggage on a downward-bound Cape train occasioned considerable remark from that much-abused class usually called baggage smashers, and on one end of an iron-bound trunk Seth enlightened the uninitiated with a panoramic description of a deer hunt, while the rest of the deer slayers formed an admiring audience.

Upon their arrival at Sandwich they were mistaken by some of the citizens for a delegation sent from Congress to inquire into the workings of the ship canal company, but a few explanations set that matter right, and all hands repaired to the hotel to make arrangements for a grand hunt the next day. Guides and dogs were engaged, and after supper all turned in to dream of deep-voiced hounds and antlered stags.

Previous to their departure arrangements had been made providing that in case a deer should be killed a telegram should announce the fact to the club. The first day no deer was started, and the party returned to the hotel with colors at half-mast. On the second day the men were all on their stations, when a deer was started. Supposing of course that the game was good as dead, they took one man off his stand and started him for the telegraph office with the message, "Killed a deer;" but now the old adage, "there's many a slip," was verified; for the deer took the opposite course from that which it was naturally supposed he would take, and passed through the line at the point just vacated by the messenger. Deer and dogs were not seen nor heard again that day.

The next day was a blank; so was the next; and so was every day the party remained.

How they all reached home no one knows. Excepting that mysterious telegram nothing was heard of them for two weeks. Finally one evening in came Chris., and was immediately surrounded by an eager crowd of questioners; but all they could get out of him was "Confounded hard luck." You say anything to him now about deer, and he smiles a melancholy smile that speaks louder than words. They all want to try it over again, but the majority of the members think that the quicker and cheaper way is to buy one, have it mounted and set up in the club-room; for as the matter now stands certain members of the club will never see a deer unless something of the Rind is done.

SOUTH ABINGTON, Mass. SASSACUS.

PHILADELPHIA NOTES.

IT is very evident that our people of the gun and dog who expected to find quail in greatly increased numbers this autumn are disappointed. To be sure birds have been found more plentiful this season, but the gain has not been very marked; and should the coming winter be a severe one, as it bids fair to be, and should plenty of snow fall, as will most likely be the case, the quail will again need to be protected and nursed through until another mating season. Bob White has not yet recovered from the blow he received winter before last, and it will be more necessary then that we should diligently watch him this winter, and have his welfare carefully looked after by the several game associations of the country.

Shooting in Delaware during the past month has been good, so to speak, but the birds have been hard to find, feeding close to cover, into which it was almost impossible to follow them, after they were put up. Out of six coveys of birds found by a party of friends, who were shooting in Delaware, five were pointed in the woods, where plenty of feed seems to have kept the quail from seeking the open. Sportsmen will be more apt to catch the birds in the stubbles, now that the weather has turned colder; but then we are having and are likely to have plenty of snow this December, which will "play hob" with the shooting and birds likewise.

Duck shooting never was better than it is now. At Gunpowder (Big and Little), at Bush River, and at Havre de Grace, canvas-backs, redheads and blackheads have been plentiful. Redheads and blackheads were more numerous when the season opened; canvas-backs have shown themselves in greater numbers within the past two weeks. Two or three of the private outfits for ducking at Havre de Grace and neighboring grounds have been offered for sale; two of them sold, I am informed. It will not be long, I trust, before all the non-professional "lay-outs" will be disposed of by their owners. HOMO.

IS AN AIR SPACE DANGEROUS?

IF it is in a man's head I should say not very; if in a rifle, I should say it would be bad for the barrel, even though a correspondent says not in your last issue. I have recently seen a barrel spoiled by a bullet slipping away from the shell to about six (6) inches from the muzzle. I know of three barrels that were spoiled afterward by experiments of the same kind. If your Philadelphia correspondent has a gun that he thinks a good deal of, let him load it and fire it with a bullet six (6) inches from the muzzle. It won't kick much, but he will want a new barrel. The gentleman who experimented could afford to spoil three barrels in three shots, may be your correspondent will be willing to spend some money to prove that an air space is not dangerous.

FORGETFUL.

Is an air space dangerous? Your correspondent says No! but like many other things in this world, it depends entirely upon the circumstances of the case whether or not an air space be dangerous.

Please request the writer to place a tight wad, say one or two sizes larger than the bore of his gun, in the muzzle of his shotgun and fire it off, and then give us his opinion upon the subject of air spaces.

No danger will probably result to him from such an experiment, but he can be assured that his gun will have a most beautiful "bulge" at the seat of the wad, or may perhaps be even burst at that point.

You no doubt will remember the old tompions we used to have for our muskets. They were abolished for the simple reason that if a soldier fired his piece with one in its muzzle, the piece was almost certain to be ruined. I have seen at the arsenal hundreds of guns thus ruined, or by having some other obstruction in the muzzle of the gun, even so simple a thing as an oiled rag to keep out dirt and moisture very often produces the same effect, as also snow, mud, etc., and let it be remembered also that such results follow, whether the cartridge used be ball or blank. We don't know very much about air spaces as yet, though we are trying hard enough to find out as much as possible about them. Of one thing we have, however, learned, which your correspondent seems to ignore, and that is that they are in many cases dangerous. S.

Please allow me to correct an erroneous statement made by a correspondent in your issue of November 23. A small air space between powder-wad and bullet is considered an advantage in long range shooting, because the bullet will certainly upset, no matter how much tin is used in its manufacture, but this space should be very small, say from one-eighth to one-fourth of an inch. A large air space is dangerous. Powder is stronger than steel. I used an air space of nine inches and ruined my long range rifle at the first shot, by bulging the barrel at the point at which the bullet started. The rifle barrel was clean at the time, and the bullet was a "normal" one, which could have been rammed clear through the barrel without using a pressure of more than two pounds. A friend of mine spoiled his long range rifle in the same way. I know it, as I saw the bulge in the bore of his rifle barrel, and he told me how it happened. I have heard of other cases which I believe to be authentic, but cannot vouch for, as I did not examine the guns. I have conversed with several riflemen who have had experience with bulged rifle barrels, and they all agreed that such a rifle would give inners, outers, and misses at one thousand yards in good weather. I have been experimenting over three years with my damaged rifle, and have succeeded in putting twenty-five consecutive shots in a four-inch circle at one hundred yards, making fifteen consecutive bullseyes at eight hundred yards, and thirty-seven out of a possible fifty points at one thousand yards. My experience has convinced me that the gun is totally unfit for target shooting at any distance over eight hundred yards, and not quite accurate at any distance. E. A. LEOPOLD.

NOTES FROM DETROIT.

THANKSGIVING Day was a woeful event for the rabbits. A week of unseasonably cold weather had made the ground solid, and a light fall of snow made the hunting perfect. The early trains out on Thursday morning were loaded with sportsmen, beagles and hounds. At each station a lot of these were left for as much as twenty-five miles out, and it is safe to say that there was not a rabbit within that distance of the city that did not hear the hounds that day. The long-eared fellows are (or were) very plentiful, and everybody came back loaded with game and declaring he never had a better time in his life. All excepting poor James Glenn, Jr., the trap pigeon shooter. In stepping over a large log, he slipped and fell in such a manner as to break a leg.

L. H. Hascall, of Grand Rapids, came down this week and put in three days at the Rouge in a punt, bagging ninety-two ducks and twenty-three snipe.

George Darling and Charley Abbs went to Flat Rock on the early train last Wednesday and returned the same night with 123 ducks.

At Point Mouillee, which is at the mouth of Huron River, the sport has been excellent the past week. W. C. Colburn secured nearly 300, J. W. Jardine got 198 in three days, and William Kimball was contented with 92 to his credit.

At the mouth of Clinton River a party of four Canadians located early this week with three batteries, the fourth man being out in a small boat to pick up the dead and wounded. The killing they have done is said to have amounted to a massacre, the ducks being carried across Lake St. Clair and shipped to Canadian cities. As the marshes upon Clinton River are the favorite shooting grounds of the Mt. Clemens sportsmen, they are in a white heat at the invasion of their preserves, and will ask the Legislature, which convenes this week, to pass a bill prohibiting shooting from a battery. W.

CHICAGO NOTES.

[From our Regular Chicago Correspondent.]

A PARTY of six or eight of our best deer stalkers and hunters left Sunday night for Northern Wisconsin after deer. They were Messrs. James Eldredge, Fred Taylor, Wm. Haskell, John Haskell, Perry Taylor and Charles Gammon. They go via the Chicago & Northwestern road to Peshtigo, and then via sleighs across country to Knockaba Lake, a famous feeding place for deer. It is twenty miles from Peshtigo, and right in the heart of the forest. They will put up at the hunting camp of Hank Groves, of Green Bay, and with Charlie Monger expect to live at least. All reports from that part state that the weather is terribly cold, but the outfit of the boys will save them. They take along knit hoods, woolen shirts, heavy hunting coats, horse hide overcoats, heavy pants, "shoe packs" and warm stockings, underwear and mitts of lamb's wool. Their hunting equipment is of the best, and what with torch hunting, stalking and the hounds, if the party don't bring back plenty of deer say their names are "mud." They will also fish through the ice in the lake for pickerel, bass and perch. They stay about two weeks.

The hunting season about here has nearly played out. There are no ducks, only a few quail, and some rabbit shooting. Abe Kleinman returned from Lake Senachwine Saturday, where he had been for about six weeks. He averaged fifty ducks a day. Tydston, Chapin and Gore returned last week from their grand hunt in the heart of the Indian Territory. Their slaughtered game has been coming in refrigerator cars for days. Your correspondent will send you soon the best practical hunting resorts in this vicinity and what game can be had at each and how to reach them. The FOREST AND STREAM is "catching on" immensely here lately among our sportsmen. It is indorsed as *the* paper.

CHICAGO, Dec. 1.

"AMERICANS IN CANADIAN WATERS."

Editor Forest and Stream:

With your kind permission I would like to reply to an article entitled "Americans in Canadian Waters," which appeared in the FOREST AND STREAM of November 23, bearing the signature of "The Old Doctor." We also are aware of the high esteem given among Canadian sportsmen to this journal. I am therefore desirous of referring to what has been said on this subject, as in this issue there appears an editorial article which is scarcely what Canadian sportsmen and subscribers north of 45 degrees have reason to expect. Is the signature "The Old Doctor" a misnomer? If not, we are glad of an opportunity of showing how sincerely we venerate old age; hoary hairs demand our respect, but we find it difficult in this case to call up the proper feelings with which we should regard this august correspondent. But it is a relief to know there is at least one opening left for our pent-up veneration of old age to find a legitimate outlet, and that is that there never has come under our limited Canadian experience a more strikingly beautiful illustration of that ancient fable "The Dog in the Manger." He cries out in his injured innocence, "We violated no law." Perhaps he violated no statute of the country, but the strongest rules governing good society are those unwritten, but universally adopted by every one desirous of being recognized as worthy to be a member of it. There is no sportsman deserving of the name who does not consider it as much his duty to avoid interference with the sport of others as to secure his own; even if they have not the unspeakable and unparalleled privilege of being members of the great republic. All due allowance must be made for those who have been denied this noble birthright, but it is sad if their miserable fate cannot be alleviated by a little sport, without some such favored mortals as our American friends ruining it by anchoring their yacht on the feeding grounds of the game, and directly in the usual line of flight. As a natural consequence there was nothing left for us but to pack up, return to Montreal, and wait the departure of the steam yacht.

It has been said, "Sundry individuals have been greatly perturbed in spirit." If the word "sundry" includes every sportsman who visited the grounds before the desired departure, then the expression is quite correct, but not by any means sufficiently strong. I am willing to acknowledge freely and frankly that the shooting was done in a perfectly lawful manner; but when it is understood that the yacht was anchored on the feeding grounds (of which I must be allowed to judge, having visited these grounds for years, and being interested in a club house in connection with them), thus diverting the direction of flight, our feelings and disappointment can be appreciated. Each boat was provided with an attendant, whose supposed duties of picking up dead ducks were substituted by continued and apparently intentional efforts to interfere as much as possible with the shooting of the Canadians. Were this the first and only instance of such procedure it might be considered an accidental combination of circumstances, but this course having been indulged in on previous occasions, prevents any such construction being plausible. For the item which appeared in the *Witness* I do not assume any responsibility; probably the writer was as ignorant of the true facts as was the author of the editorial remarks on "The Old Doctor's" letter. In this epistle our "perturbed spirits" were soothed by being gratuitously informed "the shooting was fair for the country." We are overwhelmed with gratitude that anything among us was found worthy of commendation from so high and reliable a source. What could have induced those accustomed to make such infinitely superior bags in "Currituck Sound and Chesapeake Bay" to abandon those favorable spots and content themselves with such inferior sport; it is hard to comprehend, unless they found an "offset" in the gratification of spoiling what has hitherto been quite good enough for us.

The polite inhabitants mistook, it seems, these sportsmen "for a party of theologians." We have known and experienced a good deal of the native politeness of our "habitants" but scarcely credited that it could be stretched so far as to clothe these invaders with a cloak of theology, truly we shall in future deem it equal to any emergency, however incredible or improbable. The remarks in this part of the letter begin to get vague. After much deliberation and a great waste of consideration I fail to discover whether it is a weak attempt at sarcasm or an inflated piece of egotism. If it is an effort at wit it is a most ludicrous and lamentable failure.

Talking of D's, it is not well to indulge in initials, for these unfortunate letters stand for many words in the English language, some of them not very desirable.

We considered ourselves fortunate in having a "Doctor of Divinity" with us, who is an American, a perfect gentleman,

and a capital shot, although of the last qualification he had on this occasion not much opportunity of showing his skill. We should have expected that his cloth would have protected him from the remarks which good taste would have omitted, but which are but a proof of what I am saying. We would advise our friends of the yacht on coming north again to provide themselves in this respect, as it might improve their manners and tone down their intrusiveness. In regard to anonymous letters, I know nothing of the existence of any such, but, if they have been sent and received, it is another evidence that I am not alone in my indignation in this matter. I have written but one letter on this subject, this one, over my own signature. In conclusion I beg to inform those interested that I am the proprietor of the so-called "sunken punt," eighteen feet of which appears above water, five feet of which length is over three feet high, above water.

Having given you the facts of the case from a Canadian point of view, we leave it to your readers to decide whether "The Old Doctor" is "entitled to the decent respect and consideration" which he claims. ROBERT BLACKWOOD.

MONTREAL, Nov. 30, 1882.

KILLING GAME FOR PROFIT.—Detroit, Mich., Nov. 24.—*Editor Forest and Stream:* It is to be presumed that your correspondent, Mr. Frank N. Beebe, is blissfully ignorant of facts in attributing so large a proportion of the credit due for the protection of game in this State to the efforts of the "Michigan Sportsman's Association." If not, why are prominent members of this association tolerated in making merchandise of deer and other game? If, as this gentleman properly defined a true sportsman to be anything but a butcher, why are these men who slaughter deer by the hundreds not brought to book for this flagrant infringement of the code? I could mention conspicuous examples for the satisfaction of anyone who doubts the assertion. It is no part of a sportsman to kill game for profit, and it is a notorious fact that there are men in this State who have no higher idea of the magnificent preserve than that of a stamping and camping ground for their clique to forage over "for all the delicacies of the season," as announced from time to time on their bills of fare. If there is any practice more indefensible than this outside of the association, I should like to know it. During this season one firm have displayed over a hundred deer at their restaurant, presumably slaughtered by a party headed by their own dexterous shots; and they all live in Michigan. It is well known they make a business of shooting all they can, and they don't scruple to ship game outside of the State, contrary to law in such cases made and provided. Doubtless they hold with your correspondent that Northern Michigan is the best place for deer they ever saw? Complaints are made in the local papers of the hordes of outsiders who come to slay game, and the local pot-hunters are celebrated for their rapacity, when the fact is patent that there is too much indiscriminate shooting allowed.—CHAS. W. RICHARDSON.

ST. JACKSON AND THE DOG.

Editor Forest and Stream:

At your request, and for the enlightenment of would-be sportsmen, I send you herewith a detailed account of the expense incurred by our old friend T. G. on his late two days' expedition to the hills back of Stamford, Conn. I do this with the fond hope and confident expectation that you will make such use of the same as will tend to restrain the youth of the land, and all others likely to be similarly afflicted, from a too lavish expenditure when in pursuit of game. These are the

EXPENSES:

One pair waterproof boots for boy	$8 00
One pair sporting pants for boy	6 00
One double lined extra fine corduroy coat with thirty-two pockets, for self	18 00
One large leather bag for extra clothing, consisting in part of extra pants, dickey, boots and hat	3 50
Three pounds Curtis & Harvey's extra powder	3 75
Twelve pounds shot, at 12cts	1 44
One box extra waterproof caps	1 25
Two boxes Eley's pink edge wads	62
Railroad and steamboat fares for boy and self to Stamford, Conn., and return including coach hire to 42d st. and back	13 40
Board at farm house, two days, boy and self	5 00
Tip to baggage master for care of dogs in baggage car both ways	2 00
Two bottles lubricant for self	2 50
One bottle St. Jackson's Oil for limbering up dog	50
One pair woodcock	1 25
Three quail (Washington Market prices)	60
Total	67 81

Inasmuch as they killed no birds or game of any kind, have nothing to place on the other side of the account.

With regard to the use of St. Jackson's Oil for overworked dogs, my old friend has to say that its effect is instantaneous, in point of fact marvelous. On his return home his well-known red setter dog Sport was badly used up, so stiff and otherwise generally done-up was his condition, that it awakened in the breast of our old friend the keenest emotions of pity and sorrow. The thought suggested itself to him that possibly an application of St. Jackson's Oil might do the dog good, and he was confirmed in that opinion by the fact that he had derived great benefit from the use of something very like the said oil (in color) in his own case on more than one occasion after a long tramp.

Acting upon this idea he at once proceeded to the application of the oil to what would be known geographically as the southern end or hemisphere, so to speak, of the dog, rubbing it in well. My old friend reaffirms his statement that its effect was instantaneous and marvelous. The dog sat for a moment on its haunches on the terrace surrounding the house, bearing upon his face that subdued and self-satisfied air that any keen observer must have noticed in the animal when half sitting and half standing over a briar bush. Then, as our friend expresses it, he "lit out" over a four-foot fence in front of his house "going west" in a bee-line for Tottenville, at a fearful pace, earning for himself the enviable reputation of being the fastest dog in America, at least when under the influence of St. Jackson's oil. About this there is no doubt, if the statement of our old friend is to be believed, and you know his reputation for truth and veracity upon such subjects. He says that he employed a trusty person to follow the dog, and from the report made to him by this person he finds that during the night and before the effects of this one application had worn off it is susceptible of proof that the dog went so far that it took him until the afternoon of the fifth day to get back. In justice to the dog it should be said that had not Richmond county been an island he might have gone further.

In making up the memorandum of expenditures I have been very particular, and have endeavored to give an exact detail of the cost of the trip. I cannot now call to mind anything that has been omitted, except a small quantity of salt-hay to be used as litter for the dog, but I believe that was furnished (gratis) by an old friend from Germany, "Kraus," of Clifton.

Respectfully submitted, H. T. M., Expert Accountant.

GIFFORD'S, Staten Island, Nov. 22.

Any person sending their address to R. H. Fooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

Forest and Stream Schedule "A."

OPEN SEASONS—GAME AND FISH.

Showing the season in which it is permitted to kill each kind of Game and Fish, in every State, Territory and Province, where such a season is prescribed by law. Compiled from original authorities and published by the FOREST AND STREAM, 39 Park Row, New York, July 20, 1882.

General Provisions.

It is unlawful: To kill, have in possession, transport or sell game birds, animals and fish, save only in the open season for each given below; to net or snare game birds or animals; to take or kill game fishes by any other means than angling; to shoot waterfowl at night, or with any other than shoulder-guns; to hunt rabbits with ferrets; to enter inclosed land for shooting without consent of owner; to kill except for scientific purpose insectivorous or song birds at any time, or to rob nests of wild birds (except birds of prey).

Laws forbidding *export* of game obtain in Colorado, Connecticut, Dakota, Indiana, Michigan, Minnesota, Missouri, Nebraska, New York, North Carolina, Wisconsin, Ontario, Wyoming. Discriminations against *non-residents* obtain in Delaware, Iowa, Missouri, New Brunswick, New Jersey, North Carolina, Nova Scotia, Quebec, Tennessee. See Schedule "B."

Sea and River Fishing.

"Subtle. Has he bit? Has he bit!
Face. And swallowed too, my Subtle. I have given him line and now he plays i'faith.
Sub. And shall we twitch him?
Face. Through both the gills."

"*Face.* If I can strike a fine hook into him now.
The Temple-church, there have I cast my angle
Well, pray for me. I'll about it.
Sub. What more gudgeons!"

—*Ben Jonson, "The Alchemist."*

WINTER TALKS ON SUMMER PASTIMES.

IV.—A MEMORY.

How beautiful this night! the balmiest sigh
Which vernal zephyrs breathe in evening's ear
Were discord to the speaking quietude
That wraps this moveless scene. —*Shelley.*

THE casual presence of two or three out-of-town veterans of the craft gave a retrospective cast to the conversation at a recent re-union of the local brotherhood. With one of our guests I had tabernacled for twenty years in the wilderness. No man was ever more companionable or had more of the characteristics of true nobility. In physique he was robust as an athlete, but in thought and feeling he was as impressive as a child and as gentle as a woman. He was, withal, as moderate in his sports as he was temperate in his habits. In seeking his own pleasure he never forgot the pleasure of others, nor did he ever envy others the "luck" he sometimes failed to enjoy himself. Indeed, I have known him to slip away from a promising "spring hole" which was his own by right of possession, that a less expert angler might fish undisturbed and be happy. He is some years my senior, and although still as buoyant in spirit as when he would "set the table in a roar" by the unceasing flow of his inimitable humor, he bears, on body and brow, the ear-marks of weariness, if not of decay. When I meet him he always reminds me of my fancy picture of grand old "Kit North"—that princely king of the inimitable "Noctes Ambrosianæ." He is like him in his tastes, in his enthusiasm and in his irrepressible love of the gentle pastime which constituted the rarest pleasure of his youth and the chief joy of his green old age. He is like him also in that he finds unalloyed delight in re-traversing, in imagination, the quiet places, where in his prime and later manhood, he was wont to go a-fishing.

And another of our guests was cast from the same mold. He had, for thirty years, without a single intermission, regularly visited the North Woods. He knew every foot of that tangled wilderness; had fished in every accessible brook, river and lake, and had never been known to do aught that did not become an angler and a man. In all my long association with him, in town and forest, around the home-hearth and the camp-fire, I never but once saw him out of humor. The single exception was when a conceited cockney—who had more of the spirit of the vandal than of the gentle angler—happened along where we were in camp and challenged him to a day's fishing to "count." Although proverbially hospitable and never more happy than when entertaining casual guests, he made his contempt for his challenger so unmistakable that the fellow was glad to "vamose the ranch" at the earliest possible moment. If all other honorable anglers were equally emphatic in their denunciation of this vile habit, our trout streams would not be so soon depleted.

After all were comfortably seated around the open fire-place, and our venerable guests and all of us were well down to the middle of our first cigar, the oldest and most honored of the circle said:

"Well, this is comfortable. This crackling wood fire, this fragrant Havana (only it should be a pipe), and these friendly and familiar faces have knocked thirty years of time into oblivion and dropped me down into the cosy precincts of a bark shanty at the foot of Big Tupper. Some of you younger gentlemen were then still in your swaddling clothes, but you and you and you [naming three of us] were there or thereabouts years before and for many years thereafter. Providence has dealt kindly with all of us. My own cruse has never been without oil, and I never took physic enough to nauseate a cat. In the beautifully expressive language of Scripture, my 'lines have been cast in pleasant places,' I never had an ailment a week's fishing wouldn't cure, and I never envied prince, potentate or president so long as I could find the time (and I always did) and had the opportunity to make a 'cast.' I think I am and have been as sympathetic as most men. ["Hear, hear," all around the circle.] I know I have lost many a night's sleep on hearing of the misfortune of some friend who deserved a better fate. I know, too, that I would rather toss a dollar to a beggar than exchange salutations with a king, and I have had both experiences. Indeed, my sympathies have uniformly been with 'the under dog in the fight,' no matter which was the aggressor. But my heart has always been stirred to its deepest depths when I have met a good fellow who was so insensible to his own happiness, so absorbed in his acquisition of wealth, and so inappreciative of the example of the holy apostles as never to have cultivated a taste for the angle. ["Hear, hear," and a gentle ripple of applause.] Why, what is life? and what is the prime object of living? In one respect 'life is a vapor'; but it is something more. It embodies all the elements of an active verb—to be, to do, to suffer (as little as possible) and to enjoy (all you can). That is a condensed epitome of life, as I understand it. And what is the object of living? Simply to do good and be happy. The one is dependent upon the other. They are inseparable and indivisible; and 'what God has joined together let no man put asunder.' I know that an old Scotch philosopher—and no class of philosophers blend more hard sense with their incomprehensible metaphysics—has said that the root of all happiness lies in 'a clear conscience and open bowels.' So far as that aphorism goes it is incontestably sound and profoundly sensible. But there is a link missing. I insist that however clear and clean one may keep his conscience, and however regularly the complicated machinery of his 'fearfully and wonderfully made' system may do its office, it is impossible that he should ever be qualified for the highest good or reach the highest possible pinnacle of earthly felicity, unless he has the contemplative mind, the gentle spirit, the poetic taste, the quiet habit and the sturdy common sense of the man who loves to go a-fishing. ["Bravo!" "Well put," with approving smiles and affirmative head-nods from all of us.]

Now, you see, I know what I am talking about. I was ten years old before I killed a trout. If my early education had not been neglected I would have begun fishing at five. The loss of those five years have always been a source of regret to me, and I more than once questioned my father's kindness because, with all his own love for, and appreciation of, the sport, 'he kept his only son, myself, at home' during these five years, while he himself made his weekly excursions to the trout streams in our immediate neighborhood. I am told that during those five lost years I was delicate, morose, flippant and querulous. No wonder. My inherited angling blood was in rebellion against the cruel restraint imposed upon me. But with a *carte blanche* at ten to fish when and where I pleased, the whole mental and moral structure of my being was changed; and I became ductile, obedient and happy; and I have been fairly good and very happy ever since, but never so happy as when I have had a 'lodge in some vast wilderness,' through which course melodious trout brooks or roaring salmon rivers." [Applause.]

When fresh cigars were lit and the blazing fire replenished, our venerable friend was reminded that he had not yet told us about the pleasant time he had in his bark shanty at the foot of Big Tupper thirty years ago.

"Thank you for the reminder. Well, you see, no matter how fond one becomes of the woods in general, or how happy he may be wherever there are plenty fish and pleasant scenery, he will get a special fondness for some special spot, and will never deem his outing complete without paying it a visit. I always had several such pet places, and Cole's Point, at the foot of Big Tupper, was one of them. I came to like the spot not alone because of its pleasant surroundings—although that counted for something—but also because, within easy distance, there were some of the best casting places, during the early season, to be found anywhere in the woods, notably the Point itself, Peter's Rock and Lothrop's chopping. My acquaintance with these localities began nearly forty years ago, when the regular visitors to those waters could be counted upon your two thumbs and eight fingers, and when you could float fifty miles without meeting a white man or encountering a house. There are now, I am told, a hundred places of entertainment within the boundaries of the grand old forest where we used to pitch our tents without fear of molestation from cockney anglers or 'Murray's fools.' As I was saying, Cole's Point was one of my favorite resorts. The occasion to which my memory drifted just now was only distinguished from many another because of two or three incidents which rendered it especially memorable. I was accompanied by two of the most companionable fellows I ever met. They were born anglers, and carried with them all the scholarly tastes and joyousness of spirit characteristic of the old masters of the art. Dull care never obtruded his ugly visage within the precincts of their tabernacle. Although they were masters of all the sciences, and had earned all the titles at the disposal of all the schools, they were as free from guile and ostentation as a true angler is from cruelty or conceit. While we were in camp the moon was at her full, so that the nights were as luminous as the early gloaming, and as serene and beautiful as the placid waters of the great lake which stretched out illimitably before us. As we sat in rapt ecstacy outside our primitive camp looking up and out upon the unclouded sky, the silvery sheen of the quiet waters and the rugged bluffs which loomed up in the clear moonlight like giant warders at the portals of the lake, no sound broke upon the ear save the low ripple of the tiny rapids just below us, and the occasional whistle of some belated wood-bird who had missed his mate. You know I have been a world-wide wanderer. There is not a historic painting, nor a chronicled statue, nor a noted palace, from the Hudson to the Bosphorus, that I have not seen. I have slept upon an Alpine glacier, have sat in wonderment and awe beneath the ponderous dome of St. Peters, have looked down from the belfry of St. Paul's, have traversed the Rhine, have bowed my head at the entrance of the Golden Gate, have wandered through the 'garden of the gods,' and taken in all the exquisite beauty and majestic grandeur of the Yosemite Valley, but my soul was never so thrilled as during these never-to-be-forgotten nights of ecstacy and beauty at the foot of Big Tupper, when superadded to what I saw and felt, my two companions made the dense solitude vocal with 'the concord of sweet sounds,' breathed from cornet and flute, played with a sweetness and harmony which proved them as much the masters of those instruments as they were of Greek and belle-lettres and of rod and reel. Much that I have seen and enjoyed is forgotten, but this memory of thirty years ago remains as fresh and vivid as any pleasurable emotion that has come to me within the past fortnight. Oh, no; as our respected chronicler of the pleasures of our favorite pastime has said, 'it is not all of fishing to fish,' and he who thinks so has not yet learned the first letter in the alphabet of the true angler. [Ripples of applause.]

"Did some one ask me what sport we had? In those days it required more skill to keep from 'striking' than to get a 'rise.' If we only went to fish, we need not then to have penetrated into the heart of the forest to get what we went for. But fishing was but an incident, then as always. The freedom, the rest, the recuperation, the ten thousand delights which come to mind and heart from mountain and river and lake and forest, infinitely more than the mere act of taking fish, constituted and still constitute the chief charm of these summer rambles. As my friend here has said before me, among the multitude of blessings vouchsafed me by a kind Providence, I count my passion for this delightful pastime as chief. If not a better, I am sure I have been a happier man, because, during all my long life, I have found pleasure in the woods and loved to go a-fishing." ["So say we, all of us," and a hearty hand-shake all round followed the rehearsal of this pleasant memory. It was the preface to many another like recital, which held the merry-hearted coterie together far into the "wee, sma' hours ayont the twal," and which I may make "of record" before "reeling up" these rambling "Talks on Summer Pastimes."] G. D.

BLACK BASS IN SALT WATER.—We have on our coast a salt water fish, *Centropristis atrarius*, which is called sea bass, black bass, etc., in different sections. Our heading does not refer to them but to the fresh water black bass, *Micropterus*, which has lived in salt water. We quote from the report in the London *Fishing Gazette* of November 18, a part of Mr. Silk's record of transporting this fish to England. He says: "After getting over the Great Bank and reaching cooler water, I tried the experiment of putting black bass in salt water. They did not seem to mind it in the least, and after being in for twenty-four hours, they went back into fresh water as if they had never been subjected to any such experiment."

MY FIRST TROUT.

IT was many years ago—I will not say how many—only that I was a boy of thirteen. It was in Maine, too, that State paradisiac in the eyes of good Izaak Walton's disciples, as well as a charming one to the lover of fine scenery. If I mention Lincoln county, I wonder if there will be any reader of FOREST AND STREAM whose memories will go back to some one of those beautiful streams which tumble into river or bay, and from whose amber pools he has lured many a beautiful trout, and, perhaps, single out the very "mill brook" I have in mind between Sheepscot and Damariscotta rivers.

Those were schoolboy days, and with two or three companions, I was accustomed to trudge a three mile walk in the summer and autumn months to the academy. I say trudge, but not because it was wearisome, for lively boys we were, and could enter without a thought of being tired into whatever play was going on during the hour, or half hour, we arrived before school, but simply because we walked and rarely had the favor of a ride. It was not a dreary road either—sufficiently up hill and down—mostly through the woods. And what does a country boy like better than the woods? What sights are more beautiful to him than the shady vistas, and what sounds more inspiring and homelike than the twittering of birds, chattering of squirrels, drumming of partridges and babbling of brooks? Sometimes his most delightful holiday is when he receives *carte blanche* for a tramp in the woods, and with a knife in one pocket for the spruce gum, and a piece of twine and a fish hook in another for a chub, or possible trout, he is off following the rough track of some winter road, or tracing the course of an unexplored brook.

It was in one of these morning walks to school that I dallied at the mill brook and caught that first trout. It happened that particular morning that my companions were detained, and I was alone. When the brook was reached I knew that I was early and had time to bait the chubs a little. But how should it be done? I had not brought along the twine and fish hook, nor had I any bait, without trespassing upon my dinner of buttered biscuit, and as to the latter, knowing nothing then of good Izaak's devices, I doubt whether it would ever have occurred to me to commit the trespass. The tape string of my dinner bag suggested a line and a bent pin provided the hook, while for bait I turned over the stones till I found a worm, which chanced to be one of the great white ones with black heads which farmers so commonly find in their potato hills. With this primitive apparatus I was speedily enjoying myself, prone on the planks of the bridge, trying to jerk out the chubs, which found the tempting morsel too large for their mouths. Suddenly the crowd of chubs darted away in every direction, and in their place was one large fish eight or ten inches long. It was apparition like, so suddenly was he there. Would he take the bait? I was in a tremor of hope and expectation. No; he was away, after a moment of poising in the water, as suddenly as he had come, and I was left in disappointment to try to toll back my chubs. But no; again. Before the chubs could gather, the apparition had returned, seized the bait, and with a vigor of arm sufficient for a greater feat was shot out, I know not how, far upon the roadside. It was a case of "reflex action" which would have delighted Dr. Carpenter.

That was my first trout. I had never seen one before, but as I hastily got my hands upon it and saw its golden sides and vermilion spots, I needed no one to tell me what it was. And the triumph, the exultation of that moment I need not describe. The feeling has not been surpassed any time these later years when a far larger trout has taken my fly and made my rod buckle and thrill through a protracted play in larger waters. It was triumph enough for once, and forthwith I hastened on and begged of the farmer's wife at the first house to keep it for me till I returned after school, when I had the pleasure of bearing my trophy home and with it two more of the same sort and size caught with the same tape string and pin hook. MONATIQUOT.

A LECTURE ON FISHES.

AT the American Museum of Natural History, in New York city, there are weekly lectures on subjects of interest to students in zoology. Last Saturday Prof. Albert S. Bickmore spoke upon the physiological construction, habits and peculiarities of fishes, and we give the following resumé of his remarks:

"One of the essential characteristics of fishes," said the Professor, "is that they are tail animals." A fish propels itself through the water by a lateral movement of its vertebræ. Large and strong muscles run along each side of a fish's backbone, and it is the contraction and relaxation of these muscles that moves the tail from right to left and enables the fish to swim. These muscles, which extend along the vertebræ, constitute the principal part of the meat of an ordinary fish. The varieties of fish are so numerous that it has been found very difficult to thoroughly classify them. There are so many of the characteristics of different fishes that intertwine and clash with one another that in some respects no satisfactory classification of fishes has yet been arrived at. Prof. Agassiz proposed a classification of fishes according to their scales, but unfortunately somebody caught a fish near the Canary Islands that had two kinds of scales—one kind on the back and another kind on the underside. The word pakeichthyes is used to describe a class of ancient fishes, to which the sharks and the rays belong.

The Professor exhibited specimens of sharks, sharks' jaws, and sharks' teeth, and caused magnified pictures of various kinds of sharks and other fishes to be reflected on the screen. He illustrated and described the hammer-head, thrashing, and basking sharks, and the common shark or dogfish. An interior view of the head of a fish was given on the screen, showing the great profusion of nerves which give to a fish's nose an extraordinary sensitiveness of feeling. "A fish can feel his way with his nose as well as a blind man can with his fingers," remarked the lecturer. The simplest form of vertebrate was illustrated in a fish about the shape and size of the blade of a penknife. Such fishes, Prof. Bickmore explained, were found in the sand on the shores of North Carolina and along the Mediterranean Sea. By means of the magnified picture exhibited, the muscles, nerves, and internal organs of these tiny fish could be discerned. It was seen that they possessed a mouth and a heart with a complete system of pulsation.

Sharks, as a rule, have round bodies, while rays are sharks with the bodies flattened or compressed. Pointing with his stick to a large illustration of a shark on the screen, the Professor desired his auditors to note that the mouth was away down underneath the head instead of at

the anterior of the head as in most fishes. The most marked characteristic of sharks is their voracity. They will eat anything that comes in their way, and their jaws are provided with numerous sets of teeth, so that as soon as one set are torn out or rendered worthless another set takes their place. The lecturer held up to view the jaws of a good-sized shark, and explained that the teeth were set in a tough but very durable cartilage. The teeth of most sharks will come out very easily. The size to which sharks grow can be judged by their teeth. In the jaws exhibited by Professor Bickmore the teeth were about as large as a man's thumb nail, but the Professor showed a large tooth which he said must have belonged to a shark thirty or fifty feet long. The tooth was about six inches long, and was found in a phosphate bed in South Carolina. The teeth of some sharks, particularly the man-eaters, are sharp and pointed like spikes, while the teeth of another class of sharks are set into the jaws flat, like paving stones. In a spare hour on board ship a sailor will take as much satisfaction in sharpening a shark hook as a barber does in strapping a razor. After a shark is captured and hauled aboard the vessels the sailors cut it up into as many small pieces as possible before throwing it overboard. Sharks are as tenacious of life as cats, and it is necessary to cut them all to pieces in order to kill them. On one occasion some sailors caught a good-sized shark, and after getting it on deck, dispatched it, as they thought. They cut out one entire side of its mouth and threw the mangled carcase back into the water. A little while afterward they caught the same shark, apparently as full of life and mischief as ever.

The shape and peculiarities of the thrashing shark were shown and described. This fish has a tough and ugly looking tail longer than the body, with which it thrashes and disables its enemies. It is a formidable and relentless adversary of the whale, and hunts the leviathan of the deep in company with the swordfish. "These fish travel in packs like wolves," said the Professor. When a whale is attacked the swordfish go down under it, and by pricking and cutting it in the belly they force the monster to rise to the surface of the water. Then the thrashing sharks raise their tails and lash the whale across the back. The swordfish and the sharks keep up their combined assaults until their mammoth but, as against them, powerless adversary is dead. The only part of a whale that is eaten by the thrashing sharks is the tongue. It is not known that the swordfish eat any part of a whale. They appear to join with the thrashing sharks in assaulting whales only out of pure viciousness. "With all of their voracity," the lecturer said, "the sharks are entitled to the credit of caring for one another. Young sharks are watched and protected by the older ones." Prof. Bickmore next took up the rays or skates, and pointed out the principal characteristics of those fishes. Some rays, he said, have regular electric batteries which could produce currents of electricity from their body of sufficient power to knock a man down.

One of the most curious varieties of fish is the lungfish, which can live either in or out of water, and which frequently creeps upon the shore in search of food in the form of reptiles or small animals. This fish has both gills and lungs—when in the water it breathes with its gills and when out of water it breathes with its lungs. It is provided with four anterior limbs, which aid it in its movements on shore. At present this variety of fish is found only in Australia. A few specimens of sturgeon were illustrated and briefly described, and the lecturer called attention to the fact that the polypterus of the Nile and the garpike of North America belonged to the same class of fishes. The garpike, he said, had descended without a break from similar fishes which were abundant during the most ancient times. The presence of fishes like the garpike in the water to-day, it is claimed, completely overturns the theory of a total annihilation of animate objects on the earth at any period. Either there must have been a pair of garpikes in Noah's ark, or, according to science, there was no Noah's ark.

ANGLERS' TOURNAMENT ECHOES.

A CORRESPONDENT of the London *Fishing Gazette*, writes in that journal as follows:

SIR—Surely the method of casting a fly, described at page 548 of the *Fishing Gazette*, as used by Mr. Rawes, is simply that taught, in perhaps slightly different words, by many English writers, notably Stuart Gordon, by the hyer, and by Mr. Francis, in his fine book on angling. It is certainly the method I have always used, learnt from these books. The slight wrist turn is what they recommend to prevent whipping off the fly; but they call it giving a long narrow horseshoe or pear-shaped sweep, and the not allowing the rod to go back more than about thirty degrees is simply to prevent catching your fly in the grass behind. This plan of casting is especially suited to a stiff American cane rod, and I notice that most Hampshire fishers who use what I call whippy English rods, do not throw their fly in this way, but more or less roll out their line in the way ascribed to Mr. Prichard in the American contest. Allowing the line to extend itself to its full length behind is, I think, the main point to be attended to in the former plan of casting, which I venture to call the proper one, but which cannot, I think, be ever used in perfection with a whippy rod. I use an excessively stiff American rod, 10 feet 9 inches, and in casting, the line is sent straight out till it is nearly over the spot where I wish it to fall, and then the last yard or so of the collar falls gently on the water, followed by the fly, for I will not pretend to say the fly falls first, for I don't believe such a thing ever happens, except where it is blown out by a strong wind, as in blow-line fishing. It is a pity that in the American contest the standing place was raised above the water—for this, of course, exaggerates at least, I should think, four or five yards. After all these trials are rather unsatisfactory, and cannot, I think, serve any useful purpose. The least alteration in the strength and direction of the wind and the amount of moisture held by the line are continually varying quantities.

NEW YORK, Dec. 14.—*Editor Forest and Stream:* In view of the fact that the elevation of the platform from which the casting was done has been commented on across the water and given as a reason for the long casts made, I hope that the next casting match will take place on the level of the water, or, at most, an elevation of six inches. For one, I do not at all agree with the editor of the London *Field*, quoted in FOREST AND STREAM of November 30, that an elevation of three feet practically added two feet to the length of the rod. I do not think it gave any advantage at all, for certainly a man could not cast as far from a house-top as he can from the level of the water. The elevation does not add to the length of the rod because it gives no more power to the rod. If the rod is made longer it has more spring power, up to a certain point, and that point may be said to have its limit where its added weight becomes too great for human muscle. It is barely possible that an elevation of three feet might have added six inches to the cast, but if it had been ten feet high it would have taken three or more feet from the length of it. This can be demonstrated by letting a man cast from an elevation of sixty feet, when his flies will drop at his feet. To avoid all future discussion on this point, next year let us have two platforms, one for the bass casting and a low one for the fly-fishers. HARLEM MERE.

BROOKLYN, Dec. 1.—*Editor Forest and Stream:* In regard to Mr. Wood's challenge to anyone to show him how any person may derive an advantage in retrieving a line at a tournament by the use of the automatic reel, I wish to say: When the rules require a line to be retrieved after each cast, and a man has had a fortunate puff of wind which has sent his line out farther than he can recover it and get it behind him for another cast, he can then take up twenty feet of it in a wink, while the line is in the air, if he uses one of those reels. This he can do and no man can see it unless he stands beside him and keeps his eye on the reel. Therefore the committee did well to abolish the rule requiring the line to be retrieved, which was a useless, old fogy regulation at best, or they would have been obliged to bar the use of the automatic reel. I do not care to claim the ten dollars which Mr. Wood offers to anyone who shows how an advantage can be secured in this way, but having shown him how it is, will suggest that he may apply the money to some charitable object which his kindly heart may select.

CLACK REEL.

NATIONAL ROD AND REEL ASSOCIATION.

THIS young association has taken a strong hold upon the angling fraternity, and anglers are asking why they never thought of having one before. Every angler in the land should connect himself with it, for only by a large society can anything be done in the way of promoting the objects for which the association was formed.

The time is ripe for such a society, and in years to come it will be the boast of many an angler that he was one of the original members. The constitution will be a simple one, and all memberships sent in now will date from the new year. This rule was made so that no one could forget when his fees were due.

The gentlemen composing the committee of arrangements at the late Anglers' Tournament have issued the following circular:

The undersigned would respectfully call your attention to the fact that at the close of the late FOREST AND STREAM Anglers' Tournament, held in this city, a permanent association with the above title was formed.

We believe that by means of a national organization a powerful influence can be exerted in all matters which affect our common interests as anglers.

The objects of the association are:

First—The preservation of game fish by every possible means for those whose delight it is to take them with rod and reel.

Second - The cultivation of that fraternal feeling which always exists among the lovers of our gentle sport.

Third—The holding of an annual tournament to compare excellence in the use of rod and reel.

You are cordially invited to join.

The membership fee has been fixed at $3 per annum. Life membership $25.

Communications may be addressed to the secretary.

Respectfully yours,

FRANCIS ENDICOTT,
President Richmond Co. (N. Y.) Game and Fish Protective Association, Chairman.
JAMES BENKARD,
President South Side Sportsmen's Club of Long Island.
WALTER M. BRACKETT,
Vice-President Massachusetts Fish and Game Protective Society, Boston.
EUGENE G. BLACKFORD, N. Y. Fish Commissioner.
S. M. BLATCHFORD, Squibnocket Club, New York.
MARTIN B. BROWN, Wawayanda Club, New York.
HENRY F. CROSBY, Willowemoc Club, New York.
DR. A. FERBER, New York.
JAMES GEDDES, Onondaga Fishing Club, Syracuse.
DR. J. A. HENSHALL,
Author of "The Book of the Black Bass," Cynthiana, Ky.
FRED. MATHER,
Fishery Editor FOREST AND STREAM, New York.
PROF. ALFRED M. MAYER,
Stevens Institute of Technology, Hoboken, N. J.
BARNET PHILLIPS,
Secretary American Fisheultural Association, New York.
JAMES L. VALLOTTON,
President Pasque Island Club, New York.
GEO. W. VAN SICLEN, Willowemoc Club, New York.
Committee of Arrangements of Anglers' Tournament.

There will be a meeting of the association on Thursday, December 14, at the Astor House, New York city, at 4 P. M., to adopt a constitution and by-laws, and to transact such other business as may be brought before the meeting.

(Signed)

FRANCIS ENDICOTT, President,
FRED. MATHER, Secretary, 39 Park Row,
LOCKE W. WINCHESTER, Treasurer.

CAMP BENKARD.—The Adjutant General of the Army has received from Lieutenant General Sheridan a highly interesting report of the explorations made by him of parts of the Territories of Wyoming, Idaho and Montana during August and September of the present year. He was accompanied on this trip by General Sacket, Inspector General of the Army, several officers of his staff, General Anson Stager, Mr. R. W. Bishop and John McCullough, the actor. General Sheridan describes his trip minutely. He left headquarters in Chicago on the 1st of August and proceeded by way of Fort Washakie to the open country. The command marched up the Wind River, and taking the south fork of that river discovered a new pass, which had hitherto been used only by Indians, and which was named Lincoln Pass, after the Secretary of War. General Sheridan says this is by far the best pass he has ever seen over the continental divide. Next they found themselves in the valley of the Gros Ventre River, where they went into camp, which they named Camp Benkard, in honor of Mr. James Benkard, the president of the South Side Sportsman's Club of Long Island. The general goes on to describe his trip with great detail, and gives many interesting incidents of the marches through the valley of the Snake River, and thence onward to the Yellowstone.

THE LONDON FISHERIES EXHIBITION.—The work of gathering material for one of the most complete exhibits of fishery products ever made is now going on. Professor G. Brown Goode, who had charge of the American exhibit at Berlin in 1880, will have the care of our display at London. This is a guarantee of care in the selection and arrangement of the display. The great collection of the Smithsonian Institution and of the National Museum will be sent, together with much new material illustrating our fisheries and their products. A depot for a stowage of articles sent from, or near New York, has been established by Mr. E. G. Blackford at Fulton Market, where he will receive all articles and attend to their shipment. Those who intend exhibiting should apply for space soon.

SOME LARGE FISH.—Last week there were on the slabs of Mr. E. G. Blackford, Fulton Market, New York, three fish of large size. One of them was a tautog (blackfish of New York), which came from Cape Cod, and weighed thirteen pounds. We believe that sixteen pounds is the largest specimen of this fish on record. A muskinonje of thirty-four pounds attracted much attention, although much short of the weights that this fish has attained. A "whitefish" (*Coregonus*) from the lakes, which weighed thirteen pounds, was the largest one we ever saw, and we do not recall the capture of a larger one.

THE EGGS OF EELS.—Those who are interested in the manner in which eels reproduce their young may now look for their eggs, which will be found in two long ovaries on each side of the fish, and can readily be seen with a magnifying glass of low power. The eels are now going to the sea to breed, and their "fall run" will soon be over. Great numbers are being taken about New York. The question whether all eels must go to the sea to breed is still an open one. That those near salt water do so is an established fact.

SALMON IN MASSACHUSETTS.—Three fine salmon, weighing from seven to nine pounds, were received by Mr. Blackford lately. They were taken in fykes near North Truro, Mass., outside of Cape Cod. This is an unusual time of year to take salmon and shows that some of them are not so far at sea now as is generally supposed. The probability is that these fish were bred in either the Connecticut, the Merrimac, or the Penobscot river, and have not journeyed far from their homes.

Fisheulture.

PLANTS FOR CARP PONDS.

IF young carp fish, three or four inches in length, be placed in a lake or brook in March, in September following they will be grown to the length of from ten to fourteen inches and will weigh sometimes from one to one and a half pounds. It requires three years to bring a trout up to one pound. Such is the wonderful growth of this new food-fish now being introduced into our lakes and brooks for propagation. These fish subsist mainly upon vegetable food, but will not refuse a worm or insect when opportunity offers. "They grow in any kind of water," but we must beware of waters tinged too strongly with turpentines or products of coal distillation. They grow faster with good, natural and abundant food, in nice, pure water. Too much feeding injures the water by the souring of the remaining surplus. The natural food of this fish is the products of various water plants, some of which I will now proceed to describe:

1. The Great *Caladium esculentum*.—This plant grows luxuriantly in water twelve inches deep, or on the banks hard by. It has esculent roots, filled with farinaceous and amylaceous matter, and is in some places used as human food, hence the specific name. The plant is well suited to lakes; also as fish shelter as well as food. Planted in the margin of the lake, six to twelve inches deep in water, it will throw up continuously, three to four feet above the surface, immensely large leaves, sometimes two or three feet wide and three or four feet long, giving the shores or banks quite a sub-tropical appearance in the size and splendor of its foliage.

2. *Nymphæa odorata*.—This charming water plant grows in from a few inches of water to four feet deep, and yields an abundance of farinaceous matter in its stems, leaves and roots. [See Case's "Botanical Index," page 98.] it grows luxuriantly in water, and its leaves, one foot broad, lie flat upon the water, affording shade to the finny tribes beneath. Its curling stems make a safe lodgment for the eggs of the carp, and its pure white flowers which dot the lake over, filling the valley with fragrance, ripen seeds which are full of nutrition.

3. *Nuphar advena*.—Calhoun, of the *Southern Stock Journal*, is mistaken as to the species (Luteum) of our Nuphar. The yellow flowers of this species have the odor of brandy, and leaves both floating and erect. This is the American species. The Luteum is the European, and the seed contain a large quantity of farinaceous matter, and some species are used for food in other countries. When planted in a lake or aquarium it makes a more vigorous growth than any other variety of aquatic plant, consequently it contributs more toward purifying the water by the large amount of oxygen supplied it, and carbon absorbed from it, which is so important to pure water and healthy animal life in confinement. [See Case's "Botanical Index," page 8.] We fear that its rapid growth renders it too uncontrollable in small ponds, but such luxuriance of development well suits it to large lakes, where the amateur will experience much pleasure in watching its triumphant progress over the waters.

4. *Nelumbium luteum*.—There is a strange grandeur and an exquisite beauty about this plant which excite the admiration of all romantic lovers of flowers, a sweet loveliness about them which create a desire to possess and cultivate some of them. All water lilies are lovely, but this one is gorgeous. The flowers are a light canary color, varying from white to pink, and often five inches in diameter, and exquisitely fragrant. The seed receptacle, like the flowers standing out of the water, is a flat, circular surface, and constitutes the base of an inverted cone, which is perforated with holes for the accommodation of the nuts. These are the water chinquepins. "The root contains a large percentage of mucilaginous and farinaceous matter, and is said to be one of the best known native vegetables for food." [See Botanical Index, page 77.] "The tubers are farinaceous and edible." [See Gray's Manual of Botany, page 56.] We are apprehensive, also, that the plant would not suit small lakes on account of its rapid growth. It might till them up with roots; but give it the great lakes of Texas, and we vouch for its success and its sublime developments in yielding food and shelter.

5. *Nasturtium officinalis*, or Cress.—This is a favorite fish salad for the table of the cyprinæ. They devour it greedily. "They are particularly fond of water cresses and other juicy plants." [See Dr. Hessel in *American Agriculturist* where he teaches us that carp fish can hear.] Plant the cress hard by the edge of the lake, and it will send its limbs far out in the water.

6. *Zizania aquatica*, or Water Rice.—This grass produces many slender, linear seeds, which are farinaceous and well suited to water. When alone in flourishes. It grows in shallow water, which is always found around well constructed ponds. "The luxuriant water oat should be planted in every pond devoted to carp culture. These plants yield great quantities of seed, of which the fish are extravagantly fond." [See Calhoun, in the *Southern Stock Journal*, Vol. 6, No. 21, in which he calls it *Zizania aquatica*, or Water Oat], which shows, at least, that he was striking at the same thing.

7. *Typha latafolia*, or Water Mace.—This is a grand marsh or aquatic herb with nerved, linear, sissile leaves. The flowers and fruit are elevated on a dense cylindrical spike, terminating the stem, at least six feet above the roots, but sometimes ten feet. It will grow in water perhaps six feet deep. Its small nutlets fall into its native water and germinate in the mud at the bottom. All seeds during the process of germination are sweet and nutritious. It gives a peculiar aspect to lakes that is both rare and pleasant. The adornment of our artificial lakes should receive some attention. When we visit some of

our natural lakes we find them almost filled and surrounded with strange and beautiful forms of vegetable life, which accompaniments render these places a great deal more attractive. The very wildness which these curious children of nature are capable of superadding to a pure and placid lake surrounded by echoing shores and reverberating hills, mingle with the charms and pleasures of such places and sweeten and hallow such impressions of the beautiful and picturesque upon those seeking the innocent enjoyments of life. We should add these native ornaments and rare water plants to our convenient lakes and make them the most delightful of the home scenes and associations.

8. *Pancratium rotatum.*—In the evening and morning, and when the clouds are over the sun, this plant unfolds its snow-white imperial flowers, all arrayed in royal robes, and bearing a white, delicate crown about two feet above the water or marsh. It is well styled "wild crown imperial."

9. *Saururus cernuus.*—This is rather a delicate plant among the aquatic plants. Its graceful, small white plume, which bends gracefully to the side opposite to the wind, and presents quite a military appearance among the lake plants for a little fellow.

10. *Sagittaria hastata.*—The foliage of this plant has a very rich appearance. The leaves, as the name indicates, are in the form of arrow or spear heads, but on a large scale, and are quite peculiar in their surface markings. Grows two feet high.

11. *Sarracenia purpurea,* or Flava.—The leaves of this plant are pitcher shaped and are usually half filled with water. The flower is a large nodding, something between the form of a side-saddle and a Dutch pillion; an indescribable curiosity to the uninitiated.

12. *Iris lacustris.*—This has sword-shaped and grass-like leaves, and large showy flowers of all the rainbow colors—hence the name.

13. *Pontederia cordata.*—This is a strong water plant, and grows in shallow water. Through its collection of heart-shaped leaves it throws up occasionally a stem or scape, terminated by a beautiful spike of violet-blue flowers. The heart-shaped leaves and pretty flowers do not stand far above the water's surface.

14. *Acorus calamus*—Calamus Flag.—Its creeping roots, which are pungent and aromatic, send up sword-like leaves and stems. A valuable addition to lake plants on account of its usefulness as a domestic medicine, and a pleasant and aromatic carminative.

I am perfectly familiar with all the above plants and have transplanted them to my own fish lakes, and know well that they are useful as described in the foregoing article.

F. L. YOAKUM.

PALESTINE, Texas.

CARP IN MISSOURI.—The Commissioners of Fisheries of Missouri have undertaken the culture of carp on a large scale in Forest Park, in the city of St. Louis. They have been fortunate in securing the services of Mr. George Eckardt, Jr., who came to this country more than a year ago, and he will lay out the ponds and superintend the work. Mr. Eckardt's long experience in Germany, where his father has one of the most extensive carp farms in the world, makes him peculiarly fitted to attend to this branch of fisheulture, and the Commissioners of Missouri have done a wise thing in availing themselves of his experience.

CARP DISTRIBUTION.—The United States Fish Commission has sent a lot of young carp to Mr. E. G. Blackford, of the New York Fish Commission, for distribution in this and the adjoining States. The fish-distributing car of the United States Fish Commission has been distributing carp through Minnesota. Some 16,000 young fish are carried at one time. The loss of fish is small, hardly worth counting, being less than one fish to the thousand. Illinois is to be fully stocked with German carp.

The Kennel.

FIXTURES.

BENCH SHOWS.

March, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent, Detroit, Mich.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. C. B. Ebbs, Secretary Western Pennsylvania Poultry Society, Allegheny City, Pa.

December 14–16, 1882.—First Bench Show of Dogs, Southern Massachusetts Poultry Association, New Bedford. Wm. Penn Shepard, Secretary, Fall River, Mass.

FIELD TRIALS.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

EASTERN FIELD TRIALS.

WE give herewith the continuation of the report from our last issue, completing the record of the Eastern Field Trials.

ALL-AGED STAKES.

PLANTAGENET AND PRINCE HAL.—Plantagenet having been withdrawn, the heat was given to Prince Hal.

ELCHO III. AND DOC B. were at once put down, but nothing was done, except that Doc flushed a single bird, and at the expiration of eighteen minutes they were taken up for the night. Elcho III. is a capital moving dog, with considerable speed, but he did not get down to his work in anything like good form. Doc is also a good moving dog, although not so fast as Elcho. This day was capital in all respects. The weather was delightful, birds were plenty, and more heats were decided than has ever been done before at a trial in one day. Most of the work was done on the model farm, and the birds were plenty enough for all purposes.

Wednesday morning there was a light frost; the air was bracing, but not very cool; there was a slight breeze from the east, and every indication of a beautiful day. We left the hotel about half-past eight. Owing to mistaken directions, Elcho III. and Doc B. were not on hand, and Maida and Luna May were put down instead. At the finish of their heat the other brace was cast off at 9:58, in a field of sedge, and worked down a brook. Then beating out a large field of weeds, Doc swung toward us and challenged, and the spectators flushed a bevy behind him, which were marked down in the thicket where London made his magnificent back. Following them up, Elcho flushed two in rapid succession, Doc doing the same a minute later. Then Elcho again flushed, and, working out in the open, he flushed another one. Then Doc pointed, but not very staunch, and Elcho backed him indifferently. Miller, to order, put up the bird, which he missed. Then working on in the weeds, Elcho scored another flush, and they were ordered up and the heat was awarded to Doc B. Down altogether forty-nine minutes.

DIANA II. AND TRINKET were put down at 2:23 on Tuesday afternoon at the finish of the heat between Raleigh and Bessie. Both showed fair speed, but not enough style. Trinket is a little thing, but she displayed remarkable good hunting qualities, and with a year two more of experience, will undoubtly make a hard one to beat. They were cast off in some weeds, which were drawn blank. Then moving on in some pines, a bird was flushed, but it was so thick that we could not see whether it was dogs or handler. Trinket then pointed nicely, roading up to her bird in good form, Diana backing her indifferently. Mitchell flushed the bird to order, but had no shell in his gun. Trinket then flushed a single bird, as she went up a bank. Then Diana flushed very nicely, Trinket backing her in good form. While trying to put up the bird Trinket was a little unsteady, but dropped to order, the point proved to be a hare. Then moving on, Trinket pointed close in the stubble, and then challenged in some corn, and Mitchell flushed a single bird, when a large bevy rose between Trinket and the judges. Following them up, Diana scored a flush, when several more got up wild. Moving on, Trinket made a capital point. Mitchell flushed the bird to order, but missed it. Meantime, Diana pointed, but when the judges got there the bird had gone. She soon pointed again, Trinket backing her nicely, but no bird was found and she scored a false point. They were ordered up and the heat was awarded to Trinket. Down forty-five minutes.

MAIDA AND LUNA MAY were put down at 8:45 on Wednesday morning, just east of the village. Maida appeared to be in her usual good form. Luna May ran at Robin's Island two years ago. She is very graceful in her movements and a merry worker. Maida challenged near a ditch and roaded out in grand style a large bevy, which she located nicely. Haight walked toward her when they flushed ahead of her and settled in some woods, where Luna struck them first and dropped on point. Maida, brought up to back, did not see her, but made a very graceful point a few yards to her right. This was very pretty. Haight ordered to flush, did so, and missed, when the rest of the bevy got up. Working toward them, Maida challenged, but moved on to order, and scored a flush. She then pointed very nicely. Luna, brought up to back, failed to do so, but stood near Haight and looked at her. The bird was flushed to order, and killed by Haight. Moving on, Maida struck a beautiful attitude, just as a bird flushed in front of her. She soon ran into another one, and Luna followed suit. Then we beat through some woods into a sedge field, where Maida challenged and then made a false point, which was handsomely backed by Luna. Moving on, Luna dropped very prettily to a large bevy, which was flushed by her handler coming up. Crossing a brook, several birds were flushed by the handlers and dogs, who were close together. Swinging back, Luna scored a flush, and dropped to wing, but soon moved on, when several more got up wild. She then pointed false. Maida then made one of her stylish points on a single bird, which was flushed to order but not shot at. They were then ordered up and the heat awarded to Maida. Down one hour and three minutes.

RALEIGH AND ADAM'S BESSIE.—This heat was run on Tuesday afternoon. Both are field trial winners, and much interest was manifested as to the result. Raleigh has improved since we saw him, and ran a very good race. Bessie has still the gamy way of going that pleased all who saw her last year. She has a wonderful nose, and is rather inclined to dwell on old scent. This is often of great advantage in every day work, especially when birds are scarce, but at a field trial it is often the case that dogs like Bessie are beaten by animals who have a less sensitive nose. Raleigh was handled by Mr. E. S. Wanmaker, and Bessie by Captain McMurdo. They were put down in a corn field and swung round a knoll, when Bessie pointed a hare. Raleigh swung out and challenged, but moved a little when the Captain whistled for Bessie, and the bird was flushed, but for this he was not to blame. Working in, Raleigh made a point, and Bessie coming up also pointed, both soon moving and catching sight of him, backed in good style. Nothing was found, and Raleigh scored a false point. A little further on Raleigh pointed a bevy, Bessie backing him nicely. Wanmaker flushed to order, and killed two at one shot, Raleigh retrieving one of them well, and Bessie the other, which was only winged, in first class style. A few yards further Raleigh pointed a hare, Bessie backing him very finely. Bessie then pointed and Raleigh backed. Moving on, Bessie swung into a thicket, and pointed in capital style, Raleigh backing her, but nothing was found, and she scored a false point, although a bird was flushed close by soon after by the spectators. Then both got a good point on a bevy, which flushed as the judges came up. Both dogs then moved on and again pointed, but soon went on. Bessie then pointed false, Raleigh backing her nicely. While the judges were consulting both dogs swung out and pointed the birds, Bessie locating them in good style a few seconds before Raleigh, but before this was done, the judges had awarded the heat to Raleigh. Down thirty-eight minutes.

Pollux having a bye, this finished the first series. Following is the summary:

First Series.

Tom beat Don Pedro.
Shadow beat Lincoln II.
London beat Daisy Laverack.
Gladsome beat Donner's Bessie.
Lorna beat Rackett.
Chief beat Dashing Rover.
Brock beat Smut II. (withdrawn).
Foreman beat Buckalew.
Prince Hal beat Plantagenet (withdrawn).
Doc B beat Elcho III.
Trinket beat Diana II.
Maida beat Luna May.
Raleigh beat Adam's Bessie.
Pollux a bye.

Second Series.

TOM AND SHADOW.—This brace was put down at 10:34 on Wednesday, in an old field. Tom was still suffering from his sore foot, but gamely started off at a clipping pace. They were swung round to get the wind of some birds that had been marked down, when Shadow caught a little scent and dropped on point, but soon moved on. Tom then ran into and flushed one, and Shadow dropped on her haunches just as another one got up in front of her. She then took a few steps and pointed in good style, Tom backing nicely. Shadow soon moved a little and scored another flush. She was more cautious now, and soon pointed another one very nicely, and Tom came up and took point alongside her. The bird was flushed to order by Wanamaker and killed, Tom retrieving it. Moving on, Tom went a little too fast and put up a bird; he then pointed in capital style, Shadow dropping as soon as she saw him. Wanamaker flushed the birds to order and killed one, when a large bevy rose partly behind Tom. Shadow retrieved the bird very well. This was a very good piece of work for Tom, as the birds were down wind. He moved on and again pointed, but the birds had run, and he soon moved on and swung for them, when Shadow dropped on point and Tom stopped to order and at once pointed. No bird was found, however, and we moved on, but the point was good, for when the spectators came up a bird was flushed near the place. A little further on Tom made a very gamy point to a single bird, which Wanamaker flushed to order, but did not shoot at. They were then ordered up, and the heat was awarded to Tom. Down twenty-five minutes.

LONDON AND GLADSOME were at once cast off in a field of weedy sedge. Beating through this London swung into some pines and pointed a single bird, which flushed as Glad came up, but it was so thick that we could not see if either were to blame. Glad then pointed, and London backed him in good style. Mitchell to order flushed and winged the bird, which Glad failed to find; then turning back, to find birds that had been missed, Glad pointed in a thicket, and soon a bird flushed near him, but we could not see either him or London and could not tell which was to blame. Moving on Glad challenged, but working too close he scored a flush and dropped to wing. Then moving on he pointed false. We then made quite a circle without finding birds, except a bevy which was flushed by the spectators, but they settled in posted land and we turned back, when both dogs pointed in some thick weeds, but the bevy flushed wild as we came up. Following them in some woods London made a capital point, which Glad backed in good style. Tallman flushed the bird to order and killed it. London, sent to retrieve, ran into another bird, which got up; he then brought his bird, but not in his usual good style. Then Glad made a good point, and London, brought up to back, caught the scent before he saw him and whirled half round on a magnificent point just ahead of him, but the birds had run and both dogs roaded a short distance, and then swung out for them, when Glad at speed ran into and flushed one, which Mitchell killed. This was wrong, as it made Glad unsteady, and he went on and retrieved it without orders. Glad shortly after pointed nicely, but nothing was found and he soon moved on. Then London whirled and made one of his stylish points just as a bird was flushed by Mitchell close to him, but he stood staunch, and Tallman, to order, put up another one in front of him. This was very good. Then London again got a beautiful point, Glad half backing and half pointing. Tallman, to order, flushed the bird, which was shot at. Glad then made a point, but was not quite right. Mitchell flushed and killed the bird, which Glad retrieved. While the judges were consulting London swung out a short distance and pointed, but he did not need this, as the judges ordered them up and awarded him the heat. Down one hour and twenty-six minutes. This was a very interesting heat, and Gladsome, had he been steady, would have stood a fair chance of winning it, as he showed some grand work. His handler, Mr. Mitchell, found fault with the decision and made some remarks in the heat of the moment that he afterward apologized for, and the matter was overlooked. We then went to lunch, which was spread in the yard at the Model Farm.

LORNA AND CHIEF.—After lunch this brace was put down in the stubble south of the house, and worked through into a cornfield, where a single bird was flushed by the judges; and while waiting for the dogs to come back and find the rest of the bevy, which was supposed to be there, the spectators flushed a bevy a short distance in the rear, which went into a thicket; then a large bevy got up in front of us. Following the first bevy, Chief found first and pointed nicely a single bird, which was flushed to order, London backing him in good style. Chief then challenged, but got too close and scored a flush; he then made a good point; Miller, to order, flushing the bird, which he killed, and Chief retrieved it very well. Lorna now took her turn and pointed one, but Hemion failed to bring it to bag. Lorna then flushed one, and soon after another got up close to her. She then pointed very stylishly, and Chief refused to back and went on and stole the point. Miller flushed the bird to order and missed it, when Chief took two or three jumps after it, but at once dropped to order. The judges then compared notes, and awarded the heat to Lorna. Down forty minutes.

BROCK AND FOREMAN.—The result of this heat was quite a surprise, as Foreman is known to be one of the best performers at the meeting, but he had not been worked for a few days, and was very rank, and not under good control, while Brock, although this was the first term that he had been shot over by his handler, did some first-class work and made no mistakes. They were put down in the sedge near a cornfield, and Foreman swung wide, while Brock went straight to the large bevy, that we had flushed, and pointed them in good style, and Foreman backed him nicely. Bonnell flushed and missed with both barrels, and Tallman winged one, which Foreman retrieved very well. Following after them, Forcman took a long swing along the fence, while Brock went straight to them, and got a good point. Foreman, brought up to back, did not see him, and also pointed. As the handlers came up, a single bird flushed near the dogs, but both remained staunch, and Bonnell, to order, flushed a bird in front of them and winged with the second barrel. Brock retrieving it very carefully. He then swung round on the side hill, and again pointed a single bird, which flushed as his handler came up. They were then ordered up, and the heat was awarded to Brock. Down seventeen minutes.

PRINCE HAL AND DOC B. were then put down in a field of sedge. Hal is of good size, and although not a fast dog, he moves very well and showed excellent field qualities. Working along the side of a knoll, a bird got up by the judges, and soon after the dogs flushed one with Doc a little the nearest. Hal dropped to wing, but Doc kept on. We then beat out some stubble, when Doc flushed a single bird. We then took quite a turn without finding birds; finally both struck scent at about the same time and pointed. Both then roaded up to the bevy and again pointed, Hal in capital style, while Doc was unsteady, and after a few seconds he blinked his birds, and the heat was awarded to Prince Hal. Down forty-five minutes.

TRINKET AND MAIDA.—This heat was another surprise, to us at least, for we had seen Maida both in public and private do such capital work, that we felt sure that she would win, but Trinket let out a link and fairly earned the victory. They were put down at the edge of some woods, and worked toward the bevy that was found by Hal and Doc B. Swinging round the corner of the woods, Maida made one of her graceful points, and Trinket backed her in capital style, but nothing was found, and Maida scored a false point. They were worked along a ditch, where Trinket challenged, but the birds got up wild before she could locate them. Following them across the road, quite an excitement was created by a heifer, a black one, which took a sudden fancy to Dr. Rowe, and with head and tail up she went for him at full speed. It is perhaps needless to say that the Doctor stepped aside from the path, but in doing so he landed in a ditch flat on his back, which was considerably hurt. It was feared that he was seriously injured, and he was assisted to the house, but he soon recovered. The heifer, foiled in her attempt upon him, went for us, but of course we stood firm and escaped all harm. We then followed the birds into some woods, when Maida challenged, but the bird was flushed by the handlers before she had located it. She then swung wide, and made a beautiful point to a single bird, which flushed as we came up. Meantime Trinket got a point, but was a trifle unsteady when the bird was flushed. We then took back, and on a bare piece of ground Trinket made a capital point to a single bird, and Maida backed her grandly. This was a very good piece of work. We then crossed the road, and Trinket pointed a hare in good form. After consultation the judges awarded the heat to Trinket. Down twenty-three minutes.

RALEIGH AND POLLUX were at once put down on stubble, which was drawn blank. Then beating through a cornfield into some tall weeds, Raleigh put up a brace of birds and dropped to wing. When we came up the rest of the bevy flushed. Meantime Pollux, who was a short distance below, half pointed, and then roaded in grand style quite a distance, and was joined by Raleigh who also roaded, but the birds flushed wild a long distance ahead of them. Pollux then went over a fence, and dropped on point to a single bird, that flushed itself before the judges came up, and he got no credit, but they saw the flush that he made soon after. Raleigh soon after swung round and pointed toward us, and Pollux was called up to back. When Waumaker with commendable fairness told the Captain that the dog was facing us, but he could not see Raleigh, and sent Pollux down wind right on to him, and the birds flushed just as he caught sight of Raleigh, and backed, both dogs dropped to wing nicely. Working down wind, Pollux wheeled round and made a capital point facing us. Capt. McMurdo flushed the bird to order and missed it. Raleigh then pointed where a bird had just been flushed, while Pollux ran into one, and was then called up to back, and did so in good style. We then worked through some pines, and crossing a fence Raleigh put up a bevy, which

CROXTETH ON POINT, BACKED BY LALLA ROOKH.

"Moving on Croxteth pointed in a crouching attitude that was one of the most singular that we have ever seen. Rookh, not to be outdone, copied his position almost exactly. This was warmly praised by all, and Mr. Tracy at once transferred the wonderful picture to his portfolio, and we shall produce it next week, with the assurance that it is no fancy sketch, but a faithful representation of the dogs and their positions."—FOREST AND STREAM, *Nov. 30, page 353.*

MR. GEORGE W. POST'S LIVER AND WHITE DOG "TICK."

Winner of Second Prize in the E. F. T. C. Derby.

MR. J. W. FOSTER'S BLACK, WHITE AND TAN DOG "GLADSOME."

Divided Third Prize with Lalla Rookh in E. F. T. C. All-Aged Stakes.

we followed, and he got a point, but soon moved on and roaded up a running bird and located it nicely; Pollux backed him. Wanmaker flushed to order and killed, and Pollux was ordered to retrieve, but he refused, and the heat was awarded to Raleigh. Down an hour and seven minutes. This ended the second series. Following is the summary:

Tom beat Shadow.
London beat Gladsome.
Lorna beat Chief.
Brock beat Foreman.
Prince Hal beat Doc B.
Trinket beat Maida.
Raleigh beat Pollux.

Third Series.

TOM AND LONDON.—This heat was the commencement of the third series and we expected to see some good work, especially from this brace, both of whom had shown up grandly in their previous heats. It was nearly five o'clock when they were put down, and the birds were running to roost, which made it impossible to give them a fair trial, as with few exceptions, birds will not lie to the dog at this time of day. They were cast off in thick woods, where London got too close to a bird and it flushed. Tom was more fortunate, for he got a point to a single, which Wanmaker flushed. Then Tom pointed, London backing him nicely, but no bird was found. Tom soon again pointed false, and a moment later both pointed where birds evidently had been, but they had gone. We then beat up the road that led toward home, without result except that Tom scored a flush on a single bird. They were then taken up for the night.

Thursday morning the weather was delightful, with a fresh breeze from the southeast. Leaving the hotel at half past eight we drove to the ground where the Members' Stake was begun, and cast off the dogs in a field of sedge and pines at a few minutes past nine. Tom's nose was dry and hot, and although he was better of his lameness he still was suffering, but pluckily kept going, although it was evident that he could not smell them. London soon found a nice bevy, which he pointed in elegant style. Tom coming up behind him also pointed, although the judges gave him credit for only a back. Tallman to order flushed a fair bevy and winged one, which London retrieved very carefully. He then went on a few rods and again pointed a running bird, which he roaded out in capital style, finally establishing his point with his head in the air and every hair on him showing that he meant business. Tom, who had backed him while roading, came up and went round him and the bird, but could smell nothing. Tallman to order flushed the bird just in front of his dog. This was a very good piece of work. Tom seemed to realize that he could not smell them, for he made a false point. London backing him, and it seemed to us that he pointed thinking that there might be a bird there and not because he got any scent. Then working into some woods, London made another stylish point, which Tom backed in elegant style. Tallman flushed to order four birds, but did not shoot. Tom then challenged, and two birds flushed near him, and he dropped to wing. Some thought that London flushed these birds, but he was at least twenty feet beyond him, and the birds got up within a few feet of Tom, one of them partly behind him and one between him and the spectators. London then pointed under a fallen tree top, and Tom, coming up on the other side, also pointed in capital style. Wanmaker in going to his dog flushed the bird. London then swung for another tree top, and again pointed, Tallman flushing the bird to order. We then turned back to a pine knoll, where Tom flushed a single bird and at once pointed, but the judges did not see the bird, and scored him a false point instead of a flush. London then flushed a bird just as the judges announced him the winner of the heat. Down altogether an hour and two minutes.

LORNA AND BROCK were at once put down, and worked through a cornfield into some sedge, where Brock challenged and Lorna made a capital point to a nice bevy, Brock backing her in good style. The birds were flushed to order by Hemion, who missed them. Following them over a fence, we left the horses, and when we found the dogs, they were both pointing close together, with half length ahead. This was very pretty, and both were scored a point. We then swung back toward the horses, and Brock got a good point, which Lorna half backed. Bonnell flushed to order and killed a bird, which Lorna retrieved fairly well. A little further on, Brock scored a flush, and then Lorna, down by a gully, ran into a bevy, and two or three got up when she stopped. Brock then came up and flushed the rest of them. This was bad work, as the dogs had the wind, and both should have pointed. Working toward them, two or three flushed wild ahead of Brock, but we did not think him to blame. We then made quite a circle without result, but finally both dogs pointed a bevy, which were flushed and marked down. Working toward them, Lorna pointed, and Brock coming up, also pointed, or backed, we could not see him well enough to determine which, but as the bird got up close to Brock, the judges divided the honors equally. Lorna took a few steps and again pointed a single bird, which Hemion flushed to order and killed. Lorna, ordered to retrieve, ran into a bird which got up, she then retrieved her bird in good form. After consulting, the judges awarded the heat to Lorna. Down fifty-four minutes.

PRINCE HAL AND TRINKET were now ordered down, and Trinket soon got a point on a single bird, which flushed as her handler came up. Then working through the pines, we crossed the road into a stubble which, with some weeds, was drawn blank. We then turned south down a path, when Trinket made a nice point, which Hal backed in splendid style. Trinket then commenced roading, with Hal backing nicely, but as she did not find them quite so soon as we thought she ought, he swung out and located them in grand style. White flushed to order and killed, and Hal retrieved very well, although it took him some time to find the bird. Trinket then half pointed, Hal refusing to back, for which we thought he should not be penalized as Trinket was not rigid. Trinket soon moved on, and the spectators coming up, flushed a bird close by. The judges consulted and, awarded the heat to Trinket. Down forty-four minutes. This finished the third series, as Raleigh had a bye. Following is the summary:

London beat Tom.
Lorna beat Brock.
Trinket beat Prince Hal.
Raleigh a bye.

Fourth Series.

LONDON AND CROXTETH.—As we approached the end each successive heat was watched with absorbing interest. There were now but five left in, four setters and one pointer; each had won three heats, and conclusively shown by their performances that no event could the honors of victory, by any accident or freak of fortune, be unworthily bestowed. Many good ones had dropped out, but there were none left in the race who were undeserving this appellation. Croxteth, who had gallantly won the pointer prize, was now to compete with the setters who had won an equal number of heats. Both he and the handsome London had completely won the hearts of all, and we many times heard the wish expressed that the honors of first place could be equally divided between them. After lunch we went down the road to the creek, and casting off the dogs, worked over the knoll, where Countess and Billy Flint finished their heat. Gaining the top of the knoll, they beat a cornfield, and as they came into the sedge beyond Croxteth dropped to a nice bevy, which was flushed, to order, just in front of him. He was in tall grass, and London could not see him, and had no opportunity to back. This was a grand send off for Croxteth, as the birds were down wind from him. Following the birds, which settled in the woods, London found them first, and pointed in faultless style. Croxteth was brought up to back, but refused, and moved up to London, when he took a step or two and a bird flushed close to them, and then the rest got up. Crossing a gully after them, Croxteth pointed a single bird, London backing him nicely. Thurtle, to order, flushed the bird, which he killed. Croxteth was unsteady to shot, but at once dropped to order. He then retrieved the bird very well. We then swung round, and crossing the road moved on up a branch, and worked over a great deal of ground without result. Finally, as we were climbing a steep bank covered with heavy timber, London challenged at the top, and dropped on point a few seconds before a large bevy rose just in front of him. They were down wind, and this was a very creditable performance. Following them up, Croxteth pointed under a fallen tree top, and London backed him, but nothing was found and the point was scored as false. At the next tree top there was a bird, and Croxteth made one of his grand points, which London instantly honored in his best style, and Thurtle went in and flushed the bird. This was a picture worth going a long distance to see. Then both, some little distance apart, pointed, and Thurtle, to order, flushed four birds in front of Croxteth, when the rest got up wild. Then both pointed where some of the birds had flushed. A little further on London pointed a single bird, Croxteth came up and half backed him, when London moved a step or two and Croxteth went up to him, and the bird flushed close to them. The judges consulted and awarded the heat to London. Down one hour and fifty-eight minutes.

LORNA AND RALEIGH.—This brace was at once put down, and had gone but a short distance when, at nearly the same instant, they struck the scent of a large bevy and pointed it in good style. The birds were flushed to order and marked down in some woods, where we followed them. Raleigh got a little ahead, and stopped to order and half pointed. As we came up a bird was flushed some little distance from him, and his handler claimed a point, but the judges disallowed it. Moving on a few steps, he again pointed, but nothing was found. Then, working up a gully, he made a capital point to a brace of birds, which Wanmaker flushed to order, winging one of them, which Raleigh failed to find, as it ran among other birds. Lorna then got a point, but as Raleigh came up and also pointed, she moved a step, and catching sight of him, backed him nicely. They then reached a few stops, when Lorna made a grand point, which Raleigh instantly honored in capital style. Hemion flushed the bird to order and missed. This was a very pretty piece of work. We then took a long tramp, without finding birds, and as it was getting late, the dogs were ordered up for the night, and we returned to the hotel.

On Friday morning they were again put down close to the village, where a large bevy was found, which flushed wild beyond the dogs and flew toward the village. Swinging round after them both dogs got a point, from which the birds were flushed to order. Lorna then pointed a single bird, and Raleigh backed her nicely. Raleigh then went on to some thick weeds and got a good point on a bird that Lorna was roading. Wanmaker flushed the bird to order, but did not shoot. Raleigh soon nailed another one very nicely, which after some little time was flushed by his handler. The judges then consulted and awarded the heat to Raleigh. Down altogether two hours and eleven minutes. Trinket having a bye this concluded the fourth series. Following is the summary:

Fourth Series.

London beat Croxteth.
Raleigh beat Lorna.
Trinket a bye.

Fifth Series.

RALEIGH AND TRINKET were at once put down on the same birds. Trinket scored first with a gamy point, from which a single bird was flushed to order. Raleigh next made a nice point but nothing was found and it was scored false. Trinket then got in a flush, and shortly after she made a cast up a hill and pointed a bird, Raleigh backing her in good style. Raleigh then made a gamy point on what proved to be some chickens. We then turned back and worked along a ditch, when Trinket ran into some birds and flushed them, but this was down wind and she was not to blame. She then swung up the hill and dropped on point very nicely to a brace of birds, which flushed a few seconds later. The judges then ordered up the dogs and awarded the heat to Trinket. Down twenty-five minutes. This concluded the fifth series, London having a bye. Following is the summary:

Fifth Series.

Trinket beat Raleigh.
London a bye.

Sixth Series.

LONDON AND TRINKET.—This was the deciding heat for first place. London was looked upon by nearly all as a sure winner, for he had steadily improved in the quality of his work all through. Trinket, on the other hand, had not, in her previous heat, done so well as she had been doing, and as she showed signs of coming in season, it was evident that her chances to win were not very bright. They were cast off in the sedge, and worked toward a ditch that was bordered by thick weeds. When London came to the ditch he crossed it, and with the wind on his quarter, he raced up the opposite side quite a distance, and catching the scent from a large bevy, swung his head in their direction, and with shortened stride, located them, and striking a beautiful attitude, with one fore foot raised, he made one of the grandest points of the meeting, which he held staunchly until we came up. Trinket crossed the ditch, and catching sight of him, backed a short time, and then turned into the weeds and commenced roading. Tallman flushed the birds to order, and they settled in a garden at the head of the ditch. Following them up, both dogs were cast off, but London winded them first, and half pointed, he then drew a short distance, and again pointed in superb style. Trinket backing him very nicely. After admiring the beautiful picture awhile, the birds were flushed by Tallman, who killed one, which Trinket retrieved. We then followed the birds into some woods, where Trinket flushed one going down wind, and jumped for it, but at once dropped to order. A little further on, she put up another one and was again unsteady. The judges then ordered them up and awarded the heat to London, announcing him as the winner of first prize. Down, fifteen minutes. Owing to the condition of Trinket, Mr. Mitchell properly withdrew her from further competition. This ended the sixth series. The following is the summary:

London beat Trinket and wins first prize.

As Daisy Laverack had been withdrawn this left only Gladsome, Tom and Croxteth to compete for second place, and they were run in the order named.

GLADSOME AND TOM.—This brace was ordered down in the woods and the scattered birds, where the last heat was finished. Both dogs are too fast when among scattered birds, and these birds had lain for some time within hearing of the noise of the crowd, and when the dogs raced over the dry leaves four were flushed in quick succession, three by Glad and one by Tom. We then crossed the road and worked east through some sedge, when Glad half pointed, and Tom backed him, but nothing was found. Then shaping our course toward Model Farm, Glad made a cast along some woods and challenged, but soon moved on and several birds flushed just in front of him. He then took a few steps and the rest of the bevy got up between him and the spectators, who had taken a short cut. Following up the birds Glad made a false point, and Tom soon followed suit, but a little distance further on he made a nice point to a single bird, which was flushed to order. He then flushed a bird and started after it but turned back to order. Taking a short rest, the dogs were again cast off, when Tom again flushed, and Glad made a capital point. Tom was called up to back, but it was some time before he got there, and the bird was flushed to order. Tom, coming round, made a very stylish point, but it proved to be false. Glad then got a point, but moved on and scored a flush, and soon after he put up another one. This was getting rather tedious, and Tom, thinking it time something was done, picked up a bird that had been killed a day or two before, and brought it in. We then turned back, and Glad got a capital point to a single bird, which Mitchell flushed to order. Glad was a trifle unsteady to wing. We then crossed the creek to a pea patch, just north of the house, where Tom, down wind, ran into three birds, which he took after at his best speed, but he soon came back and the rest of the bevy flushed before him, and he again chased, which put him out of the race, and the heat was awarded to Gladsome. Down two hours and five minutes. We then went to lunch.

GLADSOME AND CROXTETH.—Second money now lay between these two, and they were put down in the stubble north of the house, and worked toward the birds that were flushed by Tom. Croxteth jumped into a ditch, and a bird flushed from the opposite bank, but he did not hear it, and when he clambered out of the ditch he pointed, but the judges did not see the bird, and only scored him a false point. Glad also scored the same, as he also pointed at the same place. After some time in vain for the rest of the birds, we turned north. Glad was the first to find, and he pointed nicely, Croxteth backing him in good style. The birds, three in number, were flushed to order. Croxteth found the next one, but flushed it. Glad then got a nice point on a single bird, Croxteth backing him nicely and Mitchell flushed the bird to order. Croxteth then made a grand point, which Glad honored, but there was no bird there, and Croxteth soon moved on. We then turned south, and Mitchell walked into a large bevy, which was followed. Glad found them first, and pointed a single bird, which Croxteth flushed as he crowded ahead of him to get the scent. Glad then flushed one, and soon after he pointed false, and Croxteth backed him. Moving on, a bird was flushed near the dogs, but it was so thick that we could not see which was to blame. Gladsome then scored another false point, which Croxteth backed in grand style. Moving on, Glad ran into a bird, and a step or two further on he flushed another. Then Hemion, in some weeds he pointed one, and Croxteth backed him. Then Croxteth made a grand point to a single bird, which flushed wild as his handler came up. Glad then pointed, and Croxteth backed him. The bird was flushed to order, but not shot at. Croxteth then pointed and Glad backed him. Croxteth was a trifle unsteady to wing, but dropped to order. While we were standing here the rest of the bevy got up just below us. Following them up, Croxteth pointed where they got up, and roaded out some birds that did not fly, in grand style. Two of them flushed close by him, but he moved on a few steps and located another one, which Thurtle flushed to order and killed. Just as we moved on several more got up all around us. Following them Glad flushed one, and a few steps further on another one. He then pointed, and as Croxteth came up he moved and both roaded in capital style for some distance, but the bird had undoubtedly flushed wild, as it was not found. We then turned back through some pines, where first Glad and then Croxteth scored false points. Then down by a branch, Croxteth challenged, but the bird got up before he had located it. He then swung into the pines and pointed in grand style, Glad backing him, but nothing was found. Glad then made a handsome point to a hare, which Croxteth backed. Glad then made a cast to the bank of the creek, where he pointed a small bevy very nicely, and Croxteth backed him in good style. Mitchell flushed to order and missed. Glad then swung round into a path and pointed false. Croxteth then made a high-headed point to a bevy, and Glad came up and also pointed. Thurtle flushed to order and killed very neatly. Both dogs were steady. Then we turned into the thick pines where a bird was flushed near the dogs, but we could not see which was to blame. Croxteth then made a grand point to a single, which Thurtle flushed to order and Croxteth dropped to wing. Working out to the edge of the woods both dogs were found on point, and each handler claimed the point, but as no bird was found neither insisted upon the justice of his claim. We then swung round by an old mill where Thurtle and his dog flushed a bird. Just then the spectators flushed a bevy, which was followed, and Glad scored a flush in thick weeds, and soon another one got up close to him, and he was unsteady. The judges then consulted and awarded the heat to Croxteth and announced him as winner of second prize. Down nearly three hours. This finished the fourth series. Following is the summary:

Croxteth beat Gladsome and wins second prize.

Quite a discussion now arose as to which dogs were eligible to compete with Gladsome for third prize. Croxteth had beaten only the pointers Monarch, Rab and Lalla Rookh, but under the rule, which some of those present did not comprehend, the withdrawal of Trinket could not deprive the dogs beaten by her from competing for third place if in the opinion of the judges they had a chance to win. Trinket had beaten Diana II., Maida, Prince Hal, and Raleigh, but after the matter was settled the judges decided that none of them was so good as Lalla Rookh, and she and Gladsome were called up to decide which should have third place, but instead of running they announced that they had agreed to divide and the judges thereupon announced that Gladsome and Lalla Rookh were equal winners of third prize. This brought the All-Aged Stake to a conclusion. Following is the summary:

POINTERS.

First Series.

Croxteth beat Monarch.
Rab beat Bravo.
Lalla Rookh beat Lady Dufferin.

Second Series.

Croxteth beat Rab.
Lalla Rookh a bye.

Third Series.

Croxteth beat Lalla Rookh and wins the pointer cup, value $100.

SETTERS.

First Series.

Tom beat Don Pedro.
Shadow beat Lincoln II.
London beat Daisy Laverack.
Gladsome beat Donner's Bessie.
Lorna beat Racket.
Chief beat Dashing Rover.
Brock beat Smut II.—withdrawn.
Foreman beat Buckalew.
Prince Hal beat Plantagenet—withdrawn.
Doc B. beat Eleho III.
Trinket beat Diana II.
Maida beat Luna May.
Raleigh beat Adams's Bessie.
Pollux a bye.

Second Series.

Tom beat Shadow.
London beat Gladsome.
Lorna beat Chief.
Brock beat Foreman.
Prince Hal beat Doc B.
Trinket beat Maida.
Raleigh beat Pollux.

Third Series.

London beat Tom.
Lorna beat Brock.
Trinket beat Prince Hal.
Raleigh a bye.

Fourth Series.

London beat Croxteth.
Lorna beat Raleigh.
Trinket a bye.

Fifth Series.

Trinket beat Raleigh.
London a bye.

Sixth Series.

London beat Trinket and wins first prize, $250.

Seventh Series.

Gladsome beat Tom.
Croxteth a bye.

Eighth Series.

Croxteth beat Gladsome and wins second prize, $150. Gladsome and Lalla Rookh divide third, $100.

THE DERBY.

On Saturday, the 25th, the running for the Derby commenced. Eighteen of the sixty nominations filled and they were drawn to run as follows:

DASHING MASCOTTE. Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter bitch, August 6 (Dr. Syntax-Neilson's Rose),

against

SIR JOHN. J. Otto Donner, New York.—Orange and white English setter dog, January (Ranger II.-Mallard's Belle).

PEBBLE. Prof. H. J. Rice, Brooklyn, New York.—Blue belton English setter bitch, Sept. 14 (Count Noser-Maple).

against

BYRON. Wm. Mahone, Jr., Petersburg, Va.—Red Irish setter dog, Aug. 11 (D'Jonee-Jane).

DASHING THEO. Chas. P. Stokes, Richmond, Va.—Black, white and tan English setter dog, August 6 (Dr. Syntax-Neilson's Rose),

against

LADIE FAYNE. Dr. S. Fleet Speir, Brooklyn, N. Y.—Blue belton English setter bitch, August 30 (Emperor Fred-Wanda.

TICK. George W. Post, Brooklyn, N. Y.—Liver and white dog, May (Bob-Dido),

against

COLONEL NOBLE. Chas. Antoine, New York.—Black, white and tan English setter dog. July 18 (Count Noble-Nellie).

ROY. Edward E. Hardy, Boston, Mass.—White, with black head English setter dog, June 9 (Pindee-Flora),

against

ST. ELMO IV. Dr. S. Fleet Speir, Brooklyn, N. Y.—Black, white and tan English setter dog, April 20 (St. Elmo-Clio).

COUNTESS MAY II. Luther Adams, Boston, Mass.—Black, and white English setter bitch, April 12. (Drake-Countess May),

against

DARKNESS. E. S. Wanmaker, Elmwood, N. C.—Black bitch, June 13 (Chipps-Nettie).

LORNA DOONE. Spencer M. Nash, New York.—Orange belton English setter bitch, June 4 (Royal-Madge),

against

MEG. Charles J. Stewart, Jamaica, N. Y.—Red Irish setter bitch, July (Chief-Beesey).

ELSA. Edward E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 6 (Drake-Countess May),

against

SEFTON. A. E. Godeffroy, Guymard, N. Y.—Liver and white dog, May 13 (Croxteth-Vinnie).

ISABELLA II. Wm. H. Thayer, Bristol, R. I.—Blue, gray and tan English setter bitch, May 31 (Schuyler-Isabella),

against

LALLA ROOKH. Lake W. White, Bridgeport, Conn.—Lemon and white bitch, December (Sensation's Son-Grace).

This was a grand showing for the number of entries and a larger proportion than generally come to the post. Two of these, Dashing Mascotte and Dashing Theo., owing to the expulsion of their handler, Mr. Mitchell, did not run. Pebble and Lady Fayne were withdrawn, and Lorna Doone failed to appear. This left only thirteen in. Both Sir John and Byron won their heats without running, and

TICK AND COLONEL NOBLE were the first brace down. Tick is a wiry-looking dog, without much style, but he has considerable speed and a good nose, and has had a great deal of work. He was handled by John Bunnell, of Forked River, N. J. Colonel Noble is a splendid-looking animal, with quite a turn of speed. He also ranges well, and with more experience will undoubtedly turn out a good one. He was handled by J. T. Miller, of Montvale, N. J. They were ordered down just east of the village, and the field, as well as the woods, was drawn blank, and after a long and fatiguing tramp, during which no birds were found, we reached the Model Farm, where Bunnell walked into a bevy, and before he realized that he was at a field trial he let them have it and killed one, which, by order of the judges, he went and picked up. Following them up, Noble made a capital point, which was well backed by Tick; but no bird was found, and the point was scored as false. Tick then pointed a single bird, which flushed when the judges came up. They were then ordered up, and the heat was awarded to Tick. Down two hours and twenty-five minutes.

ROY AND ST. ELMO IV. were the next brace. Both dogs move very well and show considerable speed and range and are quite stylish. They are very evenly matched in these qualities, and the heat was well contested. Roy was handled by H. G. Corbett, of Shadwell, Va., and St. Elmo by E. H. Haight. They were put down in a weedy field where some birds had been marked. Both started off at a good gait. Roy, going down wind, flushed a bird and at once stopped to wing and remained steady. No more birds were found and we turned south. Roy half pointed in some tall grass near a ditch, but nothing was found. We then drew the large stubble field south of the house, but finding nothing went to lunch.

Starting out after lunch they were again cast off, and the next brace (Countess May II. and Darkness), were also turned down, to assist in finding birds. Darkness half pointed, and May backed her superbly at a distance of seventy-five yards. Meantime St. Elmo found the bevy and pointed them and Roy backed him, both doing their work in a very stylish manner. Haight flushed the birds to order and killed one, both dogs behaving very well. The other brace were then taken up, and Roy and St. Elmo were worked toward the birds, which had settled in some woods. Roy was the first to find, when he made a good point, which was well backed by St. Elmo. Corbett flushed the birds to order, and scored a miss and both dogs dropped to shot. St. Elmo then ran into a bird and dropped to wing. The rest of the bevy then got up all around us. We followed them, and St. Elmo half pointed and then moved a little, and the bird flushed and Haight killed it. Moving on a little further, St. Elmo made a grand point to a single, which was flushed to order. They were then ordered up and the heat was awarded to St. Elmo IV. Down one hour.

COUNTESS MAY II. AND DARKNESS.—This brace had been down a short time during the last heat, but were not under judgment. May is a very pretty animal. She has not much speed and is over cautious, but she will outgrow this, and should her speed increase, she will make a capital performer. Darkness is a fair looking animal of good size. She is quite fast and ranges well, has a good nose and is very stylish when on game. They were put down in some pines, and May soon pointed very nicely and Darkness backed her. Capt. McMurdo, to order, flushed a large bevy and missed them, May refusing to shot, and Darkness remaining steady. Darkness then half pointed and was feeling the air, when a bird flew out of a tree over her. This was a very good performance, and showed that she had a good nose. May backed her nicely, and both were steady to wing. Darkness then roaded out a bird very nicely, and located it in capital style. Wanmaker flushed it to order and missed. They were then ordered up and the heat was awarded to Darkness. Down fifteen minutes. Lorna Doone not being present, the heat was given to Meg.

ELSA AND SEFTON.—This brace were at once put down. Elsa, who was handled by Capt. McMurdo, is a nice moving little animal with good style and first-class nose. She is not so fast as Sefton, who gets over the ground at a great rate. He is a large dog and not yet developed. His style on game is very similar to that of his sire, Croxteth. He moves very well, and if he goes all right will undoubtedly be heard from again. He was handled by Philip Thurtle. Elsa started off with a point where birds had been flushed. She then pointed a single bird, which flushed wild. Sefton then made a cast ahead and made a capital point to a bird which Thurtle flushed to order and missed. Both were steady to wing and shot. Working on in the pines several birds started from the trees and the dogs were ordered out into the open, where the spectators flushed a bevy, which were followed, but were not found. The judges then consulted and ordered the dogs up and awarded the heat to Sefton. Down one hour.

ISABELLA II. AND LALLA ROOKH were then called for. Isabella who was handled by W. Thayer, of Bristol, R. I., is a very much taller dog than in looks and movements. She has not much style, as she hunts with her head low, but she is undoubtedly a very killing dog, among the woodcock and grouse. Lalla Rookh we have described as she ran in the All-Aged Stake. Isabella had the best of it at the start, as she got a good point, and Rookh went ahead and scored a flush. Isabella soon had another one fast, and Rookh backed her to order. Both were steady when the birds were flushed. They were then taken out in the open when both pointed in the sedge, and the birds were flushed to order. A little further on Rookh dropped on a nice point, and was handsomely backed by Isabella. The bird was flushed to order, and both were steady. Moving on, Isabella struck a trail and roaded some distance, and Rookh was called off the trail and brought up to her, but nothing was found and Rookh went back, and taking the scent went straight to the bevy, and pointed them in capital style. They were flushed to order, and the judges awarded the heat to Lolla Rookh. Down, thirty-five minutes. This concluded the first series. Following is the summary:

Sir John beat Dashing Mascotte (withdrawn).
Byron beat Pebble, (withdrawn).
Dashing Theo. and Lady Fayne (both absent).
Tick beat Colonel Noble.
St. Elmo IV. beat Roy.
Darkness beat Countess May.
Meg beat Lorna Doone (absent).
Sefton beat Elsa.
Lalla Rookh beat Isabella II.

Second Series.

SIR JOHN AND BYRON.—This brace were at once put down. Both had won their heats in the first series without running. Sir John is a large dog, not yet fully developed. He moves very well, and shows that he has a capital nose. He gives promise of making an excellent animal when mature. He plainly showed a lack of experience and exhibited a timidity that we thought acquired instead of natural. He was handled by Martin. Byron, handled by H. O. Butterfield, is quite a young dog of great natural ability. He is fairly fast, and appears to have a good nose. They were cast off in some woods and worked toward some birds that had been marked down. Byron was the first to strike scent, when he challenged, but soon moved on, and roaded awhile very nicely, but got too close and flushed the bird. John then made a good point, and the bird was flushed to order. Byron then pointed, but soon moved on and roaded out the bird in capital style, finally locating it very cleverly. Butterfield flushed the bird to order and killed it. John then pointed and Martin also scored a kill. Moving on a few steps both dogs pointed nicely. When the birds were flushed, Byron dropped to wing and John took a step or two back toward his handler. Byron then made a cast up the hill and took a nice point, which John did not back in very good form as he was not still. When ordered to flush, Butterfield failed to find, and the point was scored as false. John then half pointed, and backed out. Martin, walking up, flushed the bird. They were then ordered up and the heat was awarded to Byron. Down twenty-five minutes. This closed the running for the day.

On Monday morning we left the hotel a few minutes past eight, and driving about two miles east,

TICK AND ST. ELMO IV. were cast off in a field of sedge. After working some distance, St. Elmo ran into a hare, and took one or two jumps for it, but at once dropped to order. We then took quite a tramp through fields of sedge and stubble, and then turned into some woods, where St. Elmo made a false point, which was well backed by Tick. We then came to a field of sedge, and while standing still, a large bevy flushed close by us. Following them up, Tick came to a point, and St. Elmo half backed him. Both then roaded a short distance, when Bunnell flushed the bird, which he killed, and Tick retrieved it very well. A little further on, both dogs made a beautiful point. Haight flushed the birds to order and made a very neat double, and each dog retrieved one in the best of style. Tick then pointed, but soon moved on and commenced roading a running bird in capital style. St. Elmo came up, but did not appear to smell them. He finally struck it, however, and also roaded very nicely, but was not quite so steady as Tick. They were then ordered up, and the heat was awarded to Tick. Down forty-three minutes.

DARKNESS AND MEG were then put down in the sedge and swung round to get the wind, and then brought back to where Tick and St. Elmo were taken up. Darkness struck the trail, and half pointed, and Meg half backed her, and was steadied to order. As Wanmaker came up, Darkness moved up and roaded some distance in an elegant manner, when she left it, and casting ahead a few yards, located her bird in magnificent style. Meg was brought up to back, but refused and went in ahead, and nosed around and put up the bird. They were then ordered up and the heat was awarded to Darkness. Down nine minutes.

SEFTON AND LALLA ROOKH.—This brace were at once put down where the other had been taken up. Rookh swung into some sprouts, and pointed, and Sefton backed her in good style. She soon moved on, however, and working round to where the bevy were flushed, she pointed and roaded a short distance, and was ordered on. They were then worked some distance without result, except that Sefton made a grand point in some woods, and Rookh backed her in capital style but nothing was found, and the point was scored as false. We then went some distance without finding birds, although both challenged once or twice, but could make nothing of it. Finally we came to a pea-patch, when Rookh made an elegant point to a bevy which Sefton was roading a short distance below. White did not see her until he got too close, and the birds flushed, when Rookh dropped to wing very nicely. The birds went but a short distance, and Rookh soon had them again, and Sefton backed her in good style. Rookh moved on a step or two as her handler came up, when Sefton went in ahead of her and pointed the bird, which Thurtle flushed and killed, and Sefton retrieved it very well. Sefton then swung out to the edge, and made a nice point to a single bird, which Thurtle flushed to order; Sefton soon had another one, which was flushed and shot at by Thurtle, who had orders to shoot, but not to kill. Sefton at once pinned another one in capital style, and Rookh backed him very nicely. The judges, after consulting awhile, ordered them on again. Sefton swung into the woods and challenged just as several birds flushed between him and his handler, and one also got up near White and his dog. Rookh then made a very stylish point to a brace of birds close to a fence, and Sefton backed her in equal style, but as she moved a step he went ahead, and one of the birds flushed when he pointed. Rookh remained staunch, and the other bird was flushed to order. Sefton then swung out to the edge of the woods, and made a nice point at a brush heap, but the bird had run out into the stubble, and he soon moved on, and roaded it out in capital style, with Rookh backing and moving along beside him. As we followed him, a bird was flushed behind them, and Sefton did not turn his head, but kept straight on the trail of the one he was after, which was flushed before he had fairly located it, and Rookh was a trifle unsteady, but instantly dropped to order. This bit of roading by Sefton was a very commendable piece of work, and as good as any that we saw at the meeting. After consulting, the judges awarded the heat to Lalla Rookh. Down one hour and fifty-five minutes. This was one of the closest heats of the meeting, and we imagine that the superior style of the little beauty pulled her through, for in everything else we thought them very nearly equal. This ended the second series. Following is the summary:

Byron beat Sir John.
Tick beat St. Elmo IV.
Darkness beat Meg.
Lalla Rookh beat Sefton.

Third Series.

BYRON AND TICK.—After lunch this brace was put down, and worked toward the place where the last bevy was flushed. When we arrived there Tick challenged and roaded nicely. Meantime Byron pointed a portion of the birds, and held them for some time, while Tick was roading the rest, which had run further on. Finally Butterfield flushed Byron's bird to order and killed one. Then Byron worked ahead of Tick in the weeds, and a single bird flushed close by him. Both dogs then alternately roaded up to another bird which flushed close by them, and Butterfield killed it very neatly, a long distance away. Then crossing the creek, Tick pointed a single bird, and Byron backed him. The bird was flushed to order by Bunnell, and killed. Byron then scored a false point, while Tick, who was partly behind him, located one in capital style, and Bunnell flushed it to order. We then swung round through some woods, when Tick made a capital point to a bevy, and Byron coming up also pointed in good style. The bevy flushed as the handlers came up, and each killed one. This was very well done all round. We then went into some pines, where Tick pointed a bird that had been killed some time before and Byron backed him. Moving on a short distance Tick made a nice point to a single bird, which Bunnell flushed to order and killed. Tick was just a trifle uneasy when the bird flushed. When sent to retrieve he brought it in good form. They were then ordered up and the heat was awarded to Tick. Down thirty-three minutes. This was a capital heat and Byron, although he has had but little work, showed up in grand form.

DARKNESS AND LALLA ROOKH were then called for, and cast off in a field of sedge. Working up the creek to the road, we crossed and beat down through the cornfield quite a distance without finding birds. We then turned back, when the handlers flushed a bevy, which we followed back down the creek, when both dogs challenged, but nothing was found, and the birds were finally flushed by the judges. We then turned back into some sedge, where Rookh challenged and roaded, but gave it up, and a little further on she repeated the performance. Darkness then cast ahead and made an elegant point to the bevy that Rookh had been trying to find. Rookh, when she came in sight of her, instantly dropped as if shot. Wanmaker flushed the birds to order and killed right and left. They were then ordered up, and the heat was awarded to Darkness. Down an hour and thirteen minutes. It is but fair to Lalla Rookh to say that she had been led around in chain so long that she had lost much of her ambition and scarcely knew what was required of her. This concluded the third series. Following is the summary:

Tick beat Byron.
Darkness beat Lalla Rookh.

Fourth Series.

TICK AND DARKNESS.—This was the deciding heat for first place. They were cast off in the woods and worked toward the place where the last bevy had settled. Tick was the first to find, but ran too close to the bird and it flushed just as he dropped. He then moved on and another one got up close by him. Meantime, Darkness pointed a brace under a fallen tree top, and Wanmaker flushed them to order and missed. Darkness then scored a flush. We then turned back and Tick made a capital point to a single bird, which Bunnell flushed to order. We then crossed a brook to some sedge, where Darkness made a beautiful crouching point, which Tick backed in good style. Wanmaker flushed to order and killed very neatly. Darkness was ordered to retrieve, but Tick evidently thought the order intended for him, and he went for it and brought it in good form. They were now ordered up and the heat was awarded to Darkness, and she was declared the winner of first prize. Down seventeen minutes. This proved to be the last heat of the meeting, for the handlers requested the judges to place the other dogs without further running, and they awarded the second prize to Tick, the third to Lalla Rookh and Byron, and the Heckscher Cup to Sefton, and the Eastern Field Trials of 1882 were over.

A PLEASANT OCCASION.—On Sunday evening, November 26, several of the prominent residents of this vicinity were the guests of the club at dinner and a most enjoyable time was spent in discussing the ample repast set before us and listening to the eloquent speeches of the silver-tongued orator who responded to the toasts. President Donner, in response to "The Eastern Field Trials Club," briefly stated the objects of the association and warmly eulogized the very cordial welcome we had received and proposed "The Town and Citizens of High Point," which was responded to by Mayor Snow, who expressed his pleasure at our visit and extended a hearty invitation to all to come again. "Our Judges" brought Col. Gordon to his feet and with well chosen words he spoke of the healthful benefit accruing from the sports of the field and advocated the more general following of them. "Our Farmer Friends" was eloquently responded to by Mr. A. E. Holton who welcomed the visiting sportsmen with open arms and cordially invited them to repeat the visit. "The Pennsylvania Field Trials Association" was gracefully responded to by its president, Mr. J. Palmer O'Neil. Dr. Rowe ably represented "The Press," and Mr. J. M. Tracy spoke for "The Dogs." Adjourning to the parlor, an hour or two was spent in pleasant converse and when we parted for the night mutual wishes were expressed that next year we might all meet again.

ENGLISH DOGS IN AMERICAN BENCH SHOWS.—The managers of the coming Pittsburg, Pa., and Ottawa, Can., bench shows are making efforts to secure some English entries, and to that end have published a circular of invitation for distribution in Great Britain.

THE NATIONAL FIELD TRIALS.

[By telegraph to the FOREST AND STREAM.]

GRAND JUNCTION, Tenn., Dec. 4, 1882.

The fourth annual meeting of the National American Kennel Club commenced to-day, with a fair attendance. The weather has been threatening with an occasional sprinkling, but not rain enough to stop the running. The work done, has, the most of it, been capital. The birds have been plenty, but the vegetation is rank and the spectators cannot see the work so well as they could last year.

Following is a list of the dogs in the All-Aged Stakes, in the order in which they were drawn:

AMERICAN DAN. Joseph Dew, Columbia, Tenn.—Black, white and tan English setter dog, 18 months (Lincoln-Daisy Dean),

against

DON. J. Heron Crossman, New York city.—Black, white and tan setter dog, 3 years (pedigree not given).

GLADSOME. J. W. Foster, Leesburg, Pa.—Black, white and tan English setter dog, 19 months (Gladstone-Leilla),

against

KING DASH. J. R. Renwicks, Pittsburgh, Pa.—Liver and white English setter dog, 4 years (Belton-Stayton's Floss).

BESS. J. E. Mask, Hickory Valley, Tenn.—Black setter bitch, 3 years (Mask-Vie),

against

CAVALIER. Jas. R. Stinson, Chicago, Ill.—Liver and white pointer dog, 16 months (Little Rudian-Flight).

SUE. P. H. & D. Bryson, Memphis, Tenn.—Black, white and tan English setter bitch, 3 years (Druid-Ruby),

against

BADEN BADEN. Dr. E. S. Carr, Gallatin, Tenn.—Liver and white English setter dog, 22 months (Lincoln-Blaze).

CARRIE. J. W. B. Gates, Memphis, Tenn.—Black, white and tan English setter bitch, 18 months (Count Noble-Peep-o'-Day).

against

GILDEROY. Geo. C. Marsh, Sycamore, Ill.—White and lemon English setter dog, 21 months (Druid-Princess Draco).

PEEP-O'-DAY. D. Bryson, Memphis, Tenn.—Black, white and tan English setter bitch, 3½ years (Gladstone-Clip).

against

PHYLLIS. M. D. Walter, Indianapolis, Ind.—Black, white and tan English setter bitch, 2 years (Rake ———).

STARTLE. D. D. Saunders, Memphis, Tenn.—Black, white and tan English setter dog, 4½ years (Gladstone-Juno),

against

GROUSE. D. C. Plumb, Niagara Falls, N. Y.—Black and tan setter dog, 4 years (ped. not given).

SHOT. J. M. Hunt, Hickory Valley, Tenn.—Lemon and white English setter dog (age and ped. not given),

against

BESSIE LEE. J. H. Kraft, New Albany, Ind.—Black, white and tan English setter bitch, 5 years (Rake-Fanny).

BIZ. J. S. Mackintosh, Pittsburgh, Pa.—Red Irish setter dog, 4 years (Dash-Flora),

against

COUNT NOBLE. D. C. Sanborn, Dowling, Mich.—Black, white and tan English setter dog (Count Wind'em-Nora).

The first eight braces were run to-day with the following results:

American Dan beat Don.
Gladsome beat King Dash.
Bess beat Cavalier.
Sue beat Baden Baden.
Carrie beat Gilderoy.
Peep-o'-Day beat Phyllis.
Startle beat Grouse.
Shot beat Bessie Lee.

[By Telegraph to the Forest and Stream.]

GRAND JUNCTION, Tenn., Tuesday Night, Dec. 12, 1882.

It has been cloudy to-day, with a very strong, dry, south wind—a very bad day for scent. The dogs have done capital work notwithstanding, although birds were hard to find. Only one more heat will decide first place for Sue or Peep-o'-Day. Count Noble beat Biz. This ended first series. In second series American Dan beat Gladsome (withdrawn); Sue beat Bess, Carrie J. beat Startle, Peep-o'-Day beat Shot, Count Noble a bye. In the third series American Dan beat Count Noble, Sue beat Carrie J., Peep-o'-Day a bye. In the fourth series Peep-o'-Day beat American Dan, Sue a bye. This closed the running for the day.

At a meeting of the club on Monday evening the following officers were elected for the ensuing year: President, B. F. Wilson, Pittsburg, Pa.; Vice-Presidents, Col. W. H. Key, Florence, Ala., and J. H. Dew, Columbia, Tenn.; Secretary and Treasurer, D. Bryson, Memphis, Tenn. Executive Committee—P. H. Bryson, Memphis, Tenn.; Theo. Morford, Newton, N. J.; J. M. Taylor, Lexington, Ky.; D. C. Bergunthal, Indianapolis, Ind.; D. C. Sanborn, Dowling, Mich. Board of Appeals—Chas. H. Raymond, New York; Luther Adams, Boston; Anthony Higgins, Delaware City, Del.; Capt. Pat. Henry, Clarksville, Tenn.; Maj. J. W. Renfree, Atlanta, Ga. This evening the Derby entries were drawn to run as follows:

KATE B. Dr. A. F. McKinney, Forest Hill, Tenn.—Black, white and tan English setter bitch, April 18 (Count Noble-Peep-o'-Day),

against

NELLIE BEY. D. C. Sanborn, Dowling, Mich.—Black and white English setter bitch, July 18 (Count Noble-Nellie).

AMERICAN DAN. Jos. H. Dew, Columbia, Tenn.—Black, white and tan English setter dog, April 12 (Lincoln-Daisy Dean),

against

BESS A. J. M. Arant, Hickory Valley, Tenn.—Lemon and white English setter bitch, Aug. 10 (Dashing Lion-Amada).

RICHARD III. F. A. Tremaine, Pittsburgh, Pa.—Black, white and tan English setter dog, April 7 (King Dash-Skip),

against

GATH. Crawford & Wallace, Memphis, Tenn.—Black, white and tan English setter dog, April 18 (Count Noble-Peep-o'-Day).

COUNTESS MOLLIE. John D. Ladd, Martin, Tenn.—White and lemon English setter bitch, July 13 (Count Noble-Spark),

against

PINK B. W. B. Mallory, Memphis, Tenn.—Black and white English setter dog, May 13 (Gladstone-Countess Key).

PRIDE OF MEMPHIS. William Bowles, Jr., Memphis, Tenn.—Black, white and tan English setter dog, Oct. 26 (Victor-Nellie C.),

against

FRANK. D. Ferguson, Milwaukee, Wis.—Black and white ticked English setter dog, June 15, (Carl-Queen),

CARRY J. Wm. B. Gates, Memphis, Tenn.—Black, white and tan English setter bitch, April 18 (Count-Noble Peep'-o-Day),

against

GUS BONDHU. D. C. Sonborn, Dowling, Mich.—Black and white English setter dog, May 11 (Dashing Bondhu-Novel).

[By Telegram to Forest and Stream.]

GRAND JUNCTION, Wednesday, Dec. 6.

Sue beats Peep-o'-Day and wins first prize. Peep-o'-Day beats Carrie J. and wins second prize. American Dan beats Shot. American Dan and Carrie J. divide third.

ROBBIN'S ISLAND CLUB'S FIELD TRIALS.

THE Robbin's Island Club's Field Trials, open only to members, closed with twelve entries. The trials were postponed from November 15, the date first appointed, to November 27, on account of the unusual amount of foliage upon the trees on the island. There was but one stake—the All-Aged Stake. Entrance, $5. First prize, a dog collar suitably engraved; second prize, a dog whip suitably engraved; third prize, a dog whistle suitably engraved. The judges were, Judge C. E. Pratt and H. D. Polhemus, Esq., both of Brooklyn.

The trials were run out under the new rules adopted by the club. Their peculiar features admit of rapidly running out the trials, two series of heats only being called for. The scores are all kept and no "byes" are allowed. They gave good satisfaction and will now be permanently adopted by the club. The drawing took place on Saturday night, November 25, and resulted as follows:

Mr. A. T. Plummer's Fred against Dr. S. Fleet Speir's Romeo.

Mr. A. S. Swan's Brighton against Mr. W. B. Kendall's Montague.

Mr. L. Waterbury's St. Ives against Mr. H. D. Polhemus's Bob.

Dr. S. Fleet Speir's Chancellor against Mr. N. D. Putnam's Berkley.

Mr. W. H. Force's Doctor against Mr. L. H. Bullard's Meg.

Mr. F. E. Taylor's Douglas against Mr. W. B. Dickerman's Gambol.

On Sunday afternoon a snow storm came up, and by Monday morning, although the weather had cleared up, there was three inches of snow on the ground, and a rather unfavorable prospect for a successful running presented itself. The judges and members, however, declared themselves in favor of a start, and at 8 A. M. the first brace was sent out on the east end of the island. Birds were soon found, and from this time to the finish they were very plentiful, so much so that it was not found necessary to leave this part of the island, the entire series of heats being run out on the east end of the island, and but a short period of time elapsed between the finding of birds, either covey or single birds, and at 12:30 P. M. the first series of heats was run through. Refering to their scores, the judges decided that the four highest scores were made by Fred, Romeo, St. Ives and Montague in the order named. This placed the winners among them. All hands now repaired to the club house for lunch, leaving the final awards to be made later in the day. After lunch the judges made the following awards:

First Prize—Fred.
Second Prize—Romeo.
Third Prize—St. Ives.

This decision gave general satisfaction, and expressions of thanks were made to the judges for the very acceptable manner in which they had performed their duties. Mr. Hinman, the superintendent of Robbin's Island, received many compliments from the members for the fine condition in which he had brought out the dogs of the club. Mr. Hinman has a way of keeping his dogs clean and free from vermin, which is pleasant, to say the least; he is an extra good handler of dogs. Fred was the "dark horse," and was skillfully handled by Mr. Plummer. Mr. Taylor's Douglas acquitted himself with great credit. Montague was another good one. For ranging and general field trial qualities, Mr. Waterbury's St. Ives was a well to the front. Mr. Force's Doctor and Mr. Bullard's Meg met with an accident. They happened to strike upon a crippled bird and made chase; neither of them had ever done such a thing before. Of course the well-behaved Romeo did well. Berkley has the speed of a "ghost." Mr. Polhemus's Bob is a level-headed fellow; he makes a splendid back. Chancellor was scored the highest for pace and style. The judges kept the scores of each dog, and found it of great advantage when they came to make the awards. After the trials were finished the members arranged for a general shooting day on Tuesday. The weather was fine and birds were found in great abundance in all parts of the Island. The club have put out little feeding sheds in several localities; they protect the food from the weather and act as a shelter for the birds. The judges are both "veterans," and as such they acknowledged that they had never before seen quail so abundant. They congratulated the club on the success of their first annual field trial, and were gratified to see such a skillful handling of fine dogs by amateurs.

A LOST DOG.—704 East Clinton street, Elmira, N. Y., Nov. 25, 1882.—Coinciding with your views on dog stealing in your issue of Nov. 23, I beg to say my pointer dog, shipped per U. S. Express from Bristol, Bucks county, Pa., Sept. 22 last, to Elmira, arrived here, was put in their office, from which they say he broke loose or out of his box and escaped. They immediately advertised him, offering five dollars reward, which has failed to find him. All kinds of dogs were brought, but not the one wanted. I am inclined to think some person has got him who has an idea of his value. I have refrained from offering a further reward, not desiring to encourage dog stealers, though it hurts me to lose him. I have owned him nearly three years, and we understand one another in the field. Age four years, weight fifty-six pounds, color lemon and white, lemon ears and head, white mark down face and small dot on forehead, large patch on one side and two small ones on other, and one on root of tail; has dew claws.—FRED. W. THORNBER.

NEW BEDFORD BENCH SHOW.—We have received the announcement of the first bench show of dogs to be given by the Southern Massachusetts Poultry Association at New Bedford, December 14, 15 and 16. Entries, which must be sent to Wm. Penn Shepard, secretary, Fall River, Mass., will close December 9. There are 51 classes; entrance fee of $2, to be pooled for first and second prizes, with "highly commended" for third. There are also twenty-one special prizes, in value from $10 to $5.

Answers to Correspondents.

W. L. K., Princeton, N. J.—A correspondent informs us that you will not find good shooting about Charlottesville, Va. Try the vicinity of Lincolnton, N. C.

W. E. S., Brooklyn, N. Y.—Can you furnish me with the full pedigree of the red Irish setter dog Berkley, owned by A. H. Moore, Esq.? Ans. Berkley is by champion Elcho out of champion Lou II. Elcho (5,129, Eng. K. C. S. B.) was bred by J. Oppenheimer, St. Petersburg, Russia, by Oppenheimer's Charley out of his Nell. Charley, by Pat out of Juno; Nell, by Heather out of Nance. Lou II. (5,158, Eng. K. C. S. B.) was bred by A. F. Rifle and Trap Shooting.

RANGE AND GALLERY.

NEWPORT vs. ST. LOUIS.

NEWPORT, R. I., Nov. 25.

Editor Forest and Stream:

The simultaneous rifle match between the Newport, R. I., and St. Louis, Mo., clubs was shot by the former at Paradise Range this afternoon. The wind was exceedingly strong and drove the sand across the range and into the faces of the marksmen, thus interfering with good shooting. The scores made were very good under the circumstances. Conditions: Fifteen shots each, 200yds., team of six, Creedmoor target. The score made is as follows:

William Farrow	4	4	5	5	5	5	4	4	4	5	5	5	5	5—70
W B Knight	4	4	5	5	5	5	3	6	5	5	5	5	4	4—68
G H Burnham	5	4	4	5	4	4	4	4	4	5	5	5	5	5—67
E E Leonard	5	4	4	4	5	4	4	5	4	4	4	4	4	4—64
C S Plummer	4	4	4	4	5	4	4	4	4	4	5	4	5	5—64
W S Bryer	4	4	5	4	5	4	4	4	4	4	4	5	5	4—64—397

ST. LOUIS, Nov. 25.—To-day a team of six men selected from the St. Louis Long Range Rifle Association shot a match of six men at 200yds., off-hand, Creedmoor rules, with the same number of the Newport Rifle Team as per challenge, and as our Newport friends are in practice, and we expected nothing but a beating, there is great credit due to our team in making the creditable score as follows. Capt. Wm. P. Schaaf, coacher:

J M Rattle	4	4	5	5	5	4	3	5	5	3	4	5	5	4—65
P B Leach	5	5	5	5	4	4	5	5	4	4	4	5	5	5—60
W F Rockwell	5	4	5	4	4	4	4	5	5	5	4	4	5	4—67
W F de Cordova	5	4	5	4	4	5	5	4	4	4	3	5	4	3—62
S S Blackwell	5	5	5	4	4	4	3	5	4	4	4	8	5	3—61
G B Smith	5	4	5	4	4	4	5	5	4	4	5	4	4	5—66—325

This team was organized about three months ago. It will be well, however, for some of the so-called champion teams to keep their weather eye open, as the St. Louis Long Range Rifle Team is fast coming to the front. The organization is composed of first-class men. It has shot two matches with the Fort Smith (Ark.) Club, and scored a double victory, and will shoot Newport, R. I., a match of five men, ten shots each, December 9, 1882, which promises the be one of the best matches of this year.

BOSTON, Nov. 30.—There was a good attendance of riflemen at the Walnut Hill range to-day, and, as the weather conditions were in every way favorable to good shooting, some excellent sport was the result. In addition to the usual attendance, 25 members from company K, 1st regiment, Capt. Lovett, were present for their annual shoot; and a large representation was present from company H, 8th regiment, Capt. Foye, to shoot for two medals, silver and leather respectively. Appended are the best scores:

Creedmoor Match.—200 Yds.

O M Jewell	5	5	5	4	5	5	5	4	4	5—47
J S Bennett	4	4	5	5	5	5	5	5	5	5—47
J Merrill	5	5	5	5	5	4	4	5	4	4—46
J M Orcutt	5	5	4	5	4	5	4	5	4	4—45
W Fisher	5	5	4	4	5	4	4	5	5	4—45
A B Archer	4	5	5	4	5	4	5	4	5	4—45
F Wallace	4	5	4	3	5	5	5	5	5	4—45
B Burleigh	4	4	4	5	5	5	3	5	4	4—44
A S Sleeper	5	4	5	5	4	4	4	4	4	4—43
C Weston (mil.)	5	4	4	5	4	4	4	4	4	3—42
C B Edwards	4	4	4	5	4	4	4	4	4	4—41
H W Atkins (mil.)	3	3	4	4	4	5	4	5	4	3—39
J E Irvine	3	4	4	4	3	4	3	3	3	3—36
J D Duncan (mil.)	3	3	4	3	5	4	3	0	4	4—33

Decimal Match.—200 Yds.

O M Jewell	10	8	9	10	10	10	10	5	7	9—88

J M Frye	4	7	7	8	5	8	8	4	7	8—66
G Warren	7	7	4	9	7	4	5	6	8	6—63

DEC. 2.—The shooting shed at Walnut Hill was well filled to-day with shooters who desired to take advantage of the excellent weather conditions that existed. The light was of that soft gray tone so much sought for, and the light 6 o'clock wind gave no trouble. Mr. H. L. Lee made three 49s out of a possible 50 in the Victory match, and in the Rest match Mr. Duffer made an elegant 98 out of a possible 100 and Messrs. Lewis and Frye each 97. The following are the best scores:

Creedmoor Match.

F Dwight	47	L W Arthur	43
J A Cobb	46	I B Thomas (mil)	43
E Burleigh	45	C Western (mil)	43
E B Aiken	45	A J Carter	43
A W Lawrence	44	C A Hudson	43
J Norden	44	C A Hovey	43
W A Locke	43	T J Barker (mil)	42
J B Atkins	43	C A Hart	42

Rest Match.

A Duffer	98	S L Sands	96
S Lewis	97	J B Atkins	96
J N Frye	97	A J Carter	95
A W Lawrence	96	F Foye	93
S Wilder	96	Wm Sampson	93

Decimal Match.

A C Adams	85	E B Akin	80
R Anson	84	W A Locke	79
A Duffer	82	J N Frye	79

NEWSPAPER RIFLEMEN.—Several members of the Boston Press Rifle Association made a flying visit to the Walnut Hill range on Thanksgiving Day forenoon, and eagerly sought for bullseyes. The light at times seemed to blind old "Taurus," who, however, with the aid of nature's snowy white carpet, succeeded amazingly in dodging his would-be persecutors. The ball was opened between two teams in a scrub match—Messrs. H. S. Fisher, J. D. Whitcomb and W. V. Alexander of the *Transcript* vs. W. H. Hathaway of the *Post* and F. E. Rollins and T. F. Keenan of the *Herald*. The former won by a score of 193 to 97. In the individual match, rounds 10, the leading scores were:

F E Rollins	4444435544—43	T F Keenan	4444444443—39
J D Whitcomb	4444544451—42	W H Hathaway	4534533444—37
H S Fisher	4544444444—41	W V Alexander	4434434342—35

GARDNER, Mass., Dec. 1.—There was a large number present at Hackmatack range, Thanksgiving Day. The attraction was the Novelty match, arranged by the Gardner Rifle Club. It was open to all comers, the only condition to enter being that each man who participated should contribute a prize. The prizes were numbered, were drawn by lot, the man having the largest score to draw the first number, so that the man making the best score stood on the same footing as the poorest shot as to the value of the prize received. It was intended to have five strings of seven shots each, but all did not stay through, hence some of the totals are smaller than others. The following is the score, the ring target only being used:

G F Ellsworth	68 68 69 69 70—347	G R Pratt	53 54 54 47 48—256
A Mathews	65 65 66 66 66—328	R Williams	50 49 54 52 51—256
J N Dodge	58 58 69 68 58—300	R P Adams	46 39 43 51 —179
F Nichols	55 60 57 60 60—232	C Merritt	10 18 — 88
C Loveland	52 59 54 62 62—289	F Parker	10 22 15 — 77
H C Kenwood	49 59 63 51 53—275	F Underwood	43 29 — 72
G G Goodale	53 55 59 54 63—284	G H Heywood	57 — 57
F Knowlton	55 59 47 53 56—280		

WORCESTER, Mass., Nov. 30.—There was a very interesting meet at Pine Grove Range to-day. The wind was very trying and the air filled with snow. The following are the records made:

Creedmoor Target.

A L Rice	5	5	4	4	4	4	5	5	4	4—44
A Lyman	4	5	4	5	4	5	4	5	4	4—43

ZETTLER'S GALLERY.—New York, Dec. 2. Teams of Western Union Telegraph operators; Massachusetts targets reduced for gallery distance, five shots per man, possible 60.

Capt. Smith's Team.		Capt. Richmond's Team.	
J B Smith	53	W Richmond	52
B F Bunce	50	W M Smith	52
W Flint	45	M Bren	40
	148		144

NEWARK, N. J.—The November tournament of the association closed last week with the Nameless Club at the target on Monday night and the Domestics on Tuesday. The complete total scores in the tournament are: Frelinghuysen 453, Essex 446, Plymouth 442, Unlisted 441, Warren 437, Nameless 414, Domestic 377, in a possible 550. Teams of 10 men shooting; 10 shots per man.

THE TRAP.

CHICAGO THANKSGIVING MATCHES.

[From a Regular Correspondent.]

THANKSGIVING Day was a "red letter" day among our sportsmen. Turkey, pigeon, glass ball and rifle shoots and private team and club matches were common affairs at all the club houses and grounds. Space cannot be given fully for all, but the following were among the best and most entertaining:

Probably the best shoot of the day was that held by the Pullman and Riverdale Gun Clubs, on the Island Grounds of the Pullman Athletic Association. The first match was for the Pullman gold championship medal by members of that club, 10 birds, 28yds. rise, and J. Gray and E. T. Morrell tied at 9 birds each. Gray won in the shoot off, and wears the badge. G. Banks killed 8 birds and took second prize, a handsome hunting boot, presented by both clubs. Then followed the shoot, same terms, for the Riverdale medal, by members of the latter club. E. T. Martin won at 9 birds. A championship match of teams of four from each club then followed, resulting in a tie of 33 birds each club. The shoot off will be held Christmas Day. In the evening a reception was tendered the clubs by the ladies of Pullman at the Hotel Florence and dancing, refreshments and singing whiled away the time.

The Lake George Sportsmen's Association celebrated the day by a grand ball and turkey shoots at the club house. The supremacy and glass ball medals were both won by Richard A. Tuttle, the president of the association. George G. Kimball won the junior medal. Quite a number were present, and the day's sport was pronounced success-ful by all present.

The Lake Side Rifle Club, of the North Side, had a turkey shoot at their range on Evanston avenue, Thursday, and following scores were made by prize winners out of a possible 00: H. C. Bradley, 52; E. P. Chatfield, 52; W. Wilson, 51; Joseph Tilt, 50; John Cram, 46; E. N. Bangs, 45; John McConnell, 46; M. O. Gehrke, 44; Henry Sheffel, 48; Geo. E. Adams, 43; John Woollatt, 47.

The Dunton Shooting Club held their shoot at Arlington Heights and there was a huge crowd of sportsmen present. The pigeon shoot resulted as follows: W. Flente, 9; W. G. Suddy, 7, taking first and second prizes in the ten bird match. In the twenty bird match E. English killed 16, taking first, and W. J. Childing 14, taking second prize.

There were also shoots at Austin, Grand Crossing, and English Lake.

LYNN, Mass., Nov. 30.—The Lynn Central Club had a large party at their shoot on Thanksgiving Day, but the weather was against good shooting. A strong wind kept the scores down. It also made it impossible to get any birds at the long range, no one being successful until the target was moved up to forty-five yards. In the shoot-off for the medal, Mr. C. F. Morrill, of Boston, was the successful man, with 15 out of the possible 20. Six sweeps at clay pigeons and five at glass were shot off, and with the bird shoot made quite a busy time for the shooters. The following scores were the result of first twenty shot at:

Pigeons.

Webster	19	Caskin	10
Gerrish	16	McFarland	10
Lauder	15	Mortimer	10
Morrill	15	Randall	9
Frost	14	Thompson	9
Barry	13	Parker	9
George	11	Center	8

Glass Balls.

Thompson	16	McFarland	13
Webster	15	Randall	13
Morrill	15	Paine	13

The next shoot was set for December 5.

PROVIDENCE.—*Editor Forest and Stream:* Semi-monthly shoot of the Narragansett Gun Club, Thanksgiving Day. A number of sweepstakes were shot; also the Badge and Club contests. Badge match; 20 balls per man; 18yds. rise:

W H Sheldon	11110	01111	11111	11111—18	
S D Greene, Jr	11111	11111	01111	01110—17	
A W Cary	01111	00111	10111	11001—14	
F O Wehosky	11101	01010	10110	10110—12	
G J Crandall	10011	11000	11100	01110—11	
L Bennett	10111	10101	00100	10000— 9	
J Valentine	00000	10001	01010	01011— 7	

W. H. Sheldon wins the badge.

Cup match; 15 clay pigeons; 15yds. rise:

J Valentine	111111011111111—14	F O Wehosky	010001011111011— 9
S D Greene, Jr	011111101111010—12	G J Crandall	111000101010011— 8
W H Sheldon	101111101111100—11	O A Baker	111100110010110— 8
H L Palmer	111101011111100—11	G W Kelley	000010010101110— 5
Geo Cary	000110010111111—10	P H Baker	110010100000000— 4
W H Wiatman	010100101111110— 9		

J. Valentine wins cup.

WELLINGTON, Mass., Nov. 30.—The Malden Gun Club had its first Thanksgiving match to-day, on its grounds at Wellington. A large attendance was present, and the dozen events indulged in kept all the traps in use at the same time. The snow and sun tended to dazzle the shooters, yet some good scores were made. Appended are the leading events.

First event—Subscription match at five birds—First honors divided by T. C. Fielding and F. T. Noble; second by J. W. Farrington, while A. F. Adams and G. R. Durand evened the third.

Second event—Same; F. T. Noble and T. C. Fielding divided first; A. H. Jones took second and G. R. Durand third.

Third event was an ammunition match at seven birds: A. G. Whitman secured the leading prize, the second was taken by T. C. Fielding, and the third F. Loring carried off.

Fourth event was a team match, Capts. Fielding and Whitman choosing sides. The result: Capt. T. C. Fielding, 4; F. T. Noble, 4; F. Loring, 3; J. W. Farrington, 2; M. Hanford, 2; F. C. Hindley, 2; E. Woodbury, 2—19. Capt. A. G. Whitman, 1; A. H. Jones, 3; J. A. Dill, 4; F. J. Scott, 1; A. F. Adams, 2; G. R. Durand, 4; J. R. Souther, 3—18.

Fifth event was a sweepstake match, and the first prize was looked after by F. T. Noble, while F. Loring and F. J. Scott divided the second, the third and fourth being taken by M. Woodbury and M. Hanford.

STILLWATER vs. VALLEY FALLS—Stillwater, N. Y., Dec. 2.—Match shot at Valley Falls, N. Y., Thanksgiving Day, between Stillwater, N. Y., Gun Club and Valley Falls Gun Club; five men, fifteen balls, eighteen yards. Card's rotary trap.

Stillwater Gun Club.		Valley Falls Club.	
G. Pitsey	110011010010001— 8	Cunningham	111010011001111—10
G Hotaling	110111011111111—13	Haviland	101111011111001—11
B Vanderwar	100101001011101— 8	Akin	001111100110101— 8
G B Whitman	111111111111011—14	Gifford	100001000100101— 5
J Smodell	111101111010101—12	Groesbeck	111011001100011— 9

Won by Stillwater; score 55 to 45.

Coughs and Colds. Those who are suffering from Coughs, Colds, Hoarseness, Sore Throat, &c., should try BROWN'S BRONCHIAL TROCHES. *Sold only in boxes.—Adv.*

MR. R. T. McMULLEN'S SINGLE HAND LUGGER "PROCYON."

Yachting and Canoeing.

SINGLE HAND YACHTS.

[CONTINUED.]

BEFORE continuing the regular course of these articles, a description of some of the single hand yachts known to fame and history, and which have been illustrated in these columns in connection with the subject, will prove of interest and serve as an answer to a number of requests for information concerning them. Mr. McMullen's lugger Procyon, depicted in our cut this week at sea, making the passage from the Thames to Dover, differs in many respects from other boats of her class; and since Mr. McMullen's ardent pursuit of amateur life at sea enables him to speak with weight upon a topic to which he has given so much attention, we cannot do better than draw upon his own words for a description, presuming that his work was done along a stormy coast, taxing boat and man day after day to an extent seldom demanded by our own milder climate. In detailing his adventures, Mr. McMullen writes as follows:

The Procyon was built for me in 1867, and lengthened five feet by the stern in 1870, by Messrs. Holloway, of Whitstable. The sails are by Messrs. Lapthorn, of Gosport. The entire expense was £217, and I have always found them the first to admit that the substantial nature of the work was commensurate with the cost, and supported their high local reputation for honest and finished workmanship. Her length is 38¾ft., extreme breadth 7¾ft., and average depth inside 5ft. Draft, aft 5¼ft., forward 3ft. Her height as she stands on the ground with a 6in. keel is 8ft. 10in. forward and 6ft. 2in. aft. The extra height forward, which answers its purpose completely, is to counteract the effect of placing the mast so near the stem. The height of the "cuddy" is 4ft. from the floor to the deck beams, and its length is 12ft. On each side there is a low bench 8 fed up as a locker, which might be rendered available for sleeping bunks; but I prefer to swing a hammock between the mast and the mainbeam.

The space under the after deck, which is 5ft. long, is protected from the weather by a bulkhead and doors. Fitted up with capacious shelves and leeboards, the stowage here is considerable; even the space under the floor and down to the deadwood being utilized for articles not liable to injury by water. Ballast, all told, a little over two tons.

The height of the mainmast, which is stepped only 18in. from the stem, is 41ft. above the gunwale; its diameter is 6in. (or circumference, on deck 19in., at the sheave in masthead 14in.), and weight, including ironwork and gear, 13¼ cwt. The mizzenmast, in height 16ft. above the gunwale, is stepped just within the transom; thus there is a clear drift of 26ft. between the masts.

Persons viewing her suppose that the mast, being so far forward, must tend to pay her head off when reaching or closehauled; but, the mainsail shooting aft abaft the effort is so much the reverse that she carries a strong weather helm reaching, and if left to herself in a breeze, closehauled, invariably tends to wind, whether the mizzen is set or not.

The mainsail—of No. 5 double, 4ft. canvas split—is a working lug with an upper tack-tackle hooked into an extra cringle above the third reef for peaking the sail, and a lower tack-tackle at the foot of the mast for trimming it. When the lower tack is triced up the sail works clear overhead, enabling one to work forward on deck with safety. The length of the yard is 19ft., the head of the sail 12ft., and the foot 18¾ft.

When dry the weight of this sail with yard is 92 lbs. The storm-sail differs from the mainsail only in size, being 6ft. on the head and 13¾ft. on the foot. The hoist is the same, and its weight with yard 54 cwt. It is necessary to state these particulars to account for the time expended in making or taking in sail, and to account for one's hands getting into such bad condition after every two or three days' rough encounter with the elements.

The riding gear consists of 30 fathoms 5-16 chain, a bass rope of 40 fathoms, and another of 25, besides sundry pieces of manila, to supply deficiencies and for mooring ropes. There are three anchors, 38 lbs., 28 lbs. and 20 lbs., and a grapnel.

Editor Forest and Stream:

Your recent articles respecting small yachts are very interesting, and I have been in hopes that you would also publish the lines of one of the fastest of the English cutters of the most extreme type.

I have owned, at various times, over twenty boats, including some seven or eight flat bottom, which I built myself; the largest 30ft. long, 7½ beam on deck, 5ft. on the bottom; and have made over 100 models from 11c. to 3ft. long, and have experimented with different rigs on the same boats.

In 1883 I bought a Mystic built cabin sloop which was considered dead slow. I sailed in company with another boat for a mile and was beaten fully one-third the distance. I altered the rake of the mast, and tried again and kept up with her. Then I altered it again, getting it nearly plumb and could sail around the other boat with ease.

Here was the same boat, same sails, same ballast and trim, going fully one-third faster with a slight alteration in the rake of the mast, and a model so beautifully rendered one of the fastest in those waters. So a model may be good but the sails must be just in the right position to get what she is worth. M. T.

[Concerning the stepping of spars no rule can be laid down to be observed in all cases. Generally speaking, rake of any amount is not to be commended. It has not been shown to possess special merits for speed, and in mechanical respects is an evil. A useless strain is put upon head stays and partners in a sea, and it renders more difficult the cutting of sails to sit and keep them fitting. It also cuts down sail area on a given hoist, and necessitates heavier spars. The practice of stepping spars plumb or nearly so is now almost universal, except in San Francisco, where the old fashion in this respect is still prevalent. In altering the rake of his spar, our correspondent may have improved speed through some other change brought about by the alteration, though the rake of the spars itself, great or little, may have had nothing to do with it.]

SCHOOLMASTER NEEDED.

Editor Forest and Stream:

Think you had better left that out about Bedouin's spreading ballast to stop her pitching. It makes us laugh up here in Boston where we do all we can to concentrate our ballast. J. W. N.

BOSTON, Nov. 28.

[Our correspondent is welcome to his mirth. He can discover with how much right he indulges therein by consulting an elementary school book on physics which will explain to him what the "moment of inertia" is and how it is increased by lengthening out the ballast and why that will check pitching the same as winging the ballast checks rolling. From common observation he can ascertain that in lightening a boat's ends the tendency to oscillate in a fore and aft plane quickly is increased for reasons too obvious to need explanation here. We are afraid our correspondent draws his erroneous information from the same source which has been telling him that beam is necessary to carry sail, that depth increases resistance, that heavy boats are slow in light winds, that outside weight makes a boat logy and the hundred and one stale stupidities bowed down to and worshipped as "practical" knowledge, until bounced out of court by the work of this journal. We have taken this trouble to answer because J. W. N. claims to speak not only for himself but for others in Boston. The following quotation from a recent interview with Mr. John Harvey is also apropos:

"Philosophically speaking, narrowing the yacht makes her longer, and if at the same time you deepen her the longitudinal moment of inertia is augmented greatly. The increase of the buoyancy in the fore and after ends of the vessel in conjunction with the lowering of the center of gravity also tends to make the vessel more sensitive (vertically), and, consequently, the power which should be propelling is expended, in a greater or less degree, in the pitching and scending motion, to obviate which nothing remains but to lengthen the (longitudinal) radius of gyration—*i. e.*, extend the weights. This practice, of course, makes the yacht slower in her vertical motions; steadier, too, by far, and so deep (comparatively) is the draught of water in the modern yacht that the helm power, or lateral sensitiveness, is not affected sensibly, which cannot be thought strange when we consider that the weight of the craft is an important factor in its product."]

PREFERS A MATE.

Editor Forest and Stream:

I have read with great interest your articles on single handed sailing, and I admire the lines you publish. She would make a capital little boat, very fine in a sea, and light to handle. The only thing I don't like is the single handed part of the business. It may be a weak point in my nature, but when cruising I like to have a kindred spirit to converse with and to exchange ideas with; some one who, like myself, is always down with chronic "boating fever." What a pleasure there is, after the mud hook is let go and all made snug for the night, to loll about on opposite sides of the little cabin, and, pipe in mouth, yarn about things past, present and future. If a man wants a small cruiser he should look around among his friends and get someone to join him in his purchase. The first cost is only half, and the expenses of course are shared equally. The boat would have to be rather larger than the single hander, but the difference in price is not very great. My idea is a boat about 20ft. water line, 6ft. 6in. beam, 4ft. 6in. draft, and about 3ft. freeboard amidships. The cost in England would be about $500 to $600 with iron ballast. Our boats here are rather longer and we generally have a crew of about three amateur hands. Year before last three of us went to the Clyde, Belfast and Kingston, and had a good time. Last year we only went across to Kingston, and spent the rest of our time on the Welsh coast. Nothing of that sort can be done with comfort in a single hander. The continual mental and bodily strain is too great, and besides we have very uncertain weather here, which often makes double work, and it sometimes takes two hands all their time to manage even a small boat. LALOO.

LIVERPOOL, England.

LEAVE IT ALONE.

Editor Forest and Stream:

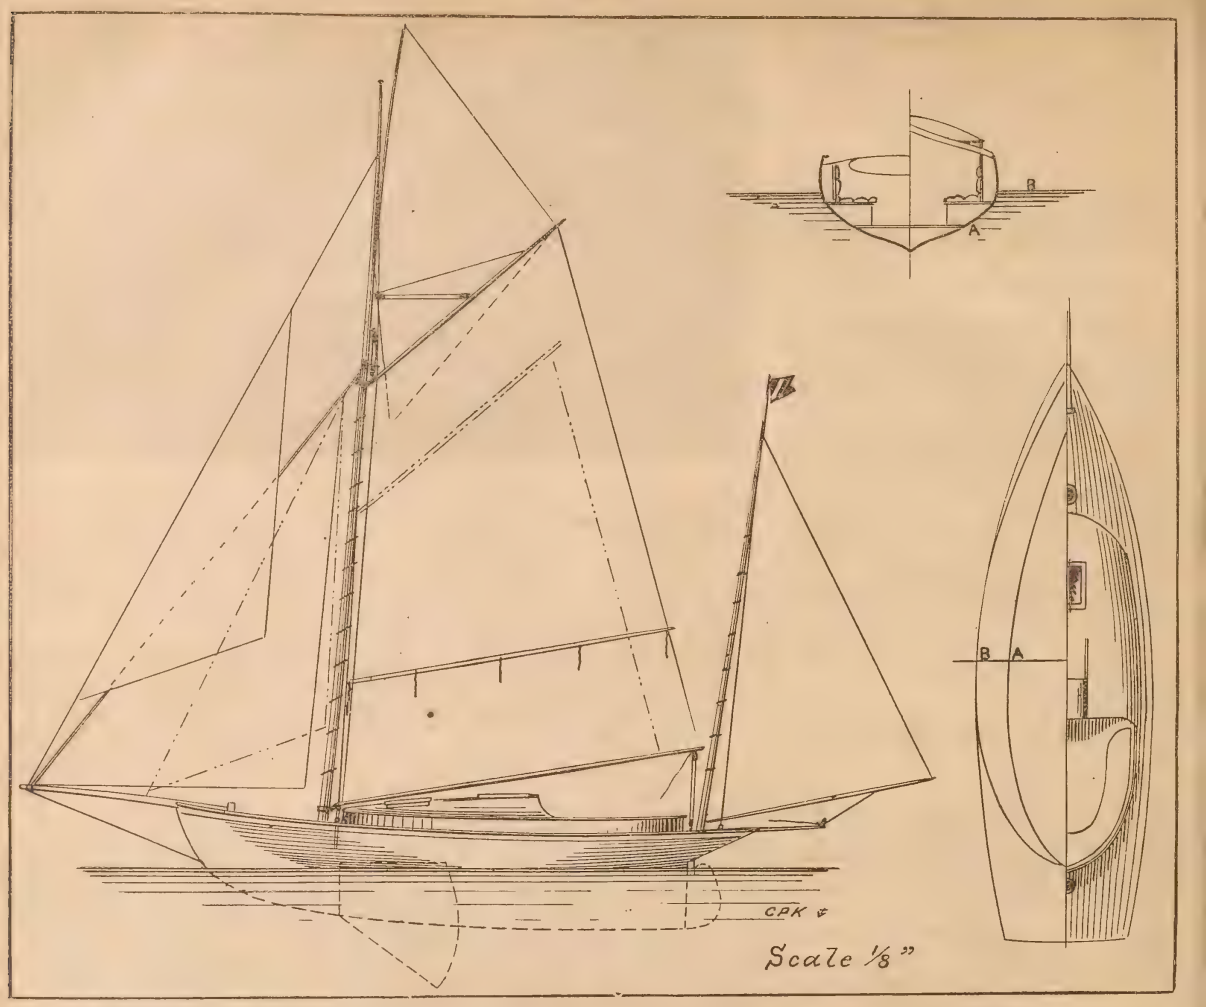
As your journal sets the cue to all others, the rest acting only as ash barrels for the reception of your leavings, permit me to suggest that you continue your crusade in favor of bulk measurement, which seems to me the only system unprejudiced persons can favor. * * *

You have done so much to promote the best interests of yachting that I hope you will not stop your sledge-hammer blows looking to the abolition of length rules. If you start the discussion afresh, we all know the rest of the journals will soon follow your lead, as they have done on all other issues you brought into prominence.

New York, Nov. 28. AN OBSERVER.

[Whist! hush! Say nothing about length measurement. If the boys will rush on to destruction with their eyes wide open, let them heave ahead and repent at their leisure. We have worked harder and more disinterestedly than any man living to bring about the adoption of a rule fair to every style of boat under the sun and showing prejudice to none. Strange as it may seem, in their blindness, our critics have rashly accused us of seeking terms advantageous to the cutter, though the rule we have fathered would exact from the modern representative a much greater allowance than measurement by length. Our conscience is clear. When, some fine day, sailing upon length, a cutter of double the displacement—but, hush! It will be none of our funeral. Let the boys swallow their own dose. "Barkis is willin'!"]

CHICAGO Y. C.



Editor Forest and Stream:

The Chicago Y. C. held its first annual meeting last Friday night, with Com. Griswold in the chair. Reports of the financial standing of the club were read, and it was shown that matters were in a flourishing way. The report of the corresponding secretary showed an increase in membership of forty-two. The election of officers resulted as follows: Commodore, H. F. Griswold; Vice-Commodore, A. J. Fisher; Rear-Commodore, George W. Rogers; Treasurer, F. W. S. Brawley; Secretary, F. M. Blount; Recording Secretary, R. B. Martin; Measurer, F. B. H. Bonter; Time Keeper, Joseph Ruff. Board of Trustees—J. M. Loomis, A. J. Fisher, Jacob Wilhelm, R. H. Bonter and F. Perlbone. Regatta Committee—M. Engart, C. E. Kremer, R. B. Martin, A. A. Munger and Oscar Krause. House Committee—William Keep, Dr. W. W. Blanchard, Harry Duval and F. A. Chaney. Membership Committee—Francis Morgan, *pro.* W. Rogers and L. W. Syer. Surgeon, Dr. W. W. Blanchard; Judge Advocate, C. E. Kremer.

CHICAGO YACHTING.

Editor Forest and Stream:

In reply to a letter in your columns let me say that the Chicago Yacht Club's signal system is far from being "the most perfect," etc., as it was found very defective during the squadron cruise, and is to be revised this winter. The "famed Countess of Dufferin" was so shaken up by her collision with the propellor Cuba last summer, that she will have to be rebuilt. Her owner has decided to do no more cruising with her, but to take out "afternoon parties" only. After spending nearly $20,000 on her, she is slower than ever. As for the small schooner yachts, there is not one here, although there ought to be several. It is reported that the Madeleine may be brought here, but that is only rumor. The new sloop Wasp is to have her mast stepped twenty-three inches further aft, and the only pity is, she can't carry it eighteen inches further. TRUTH.

A SAN FRANCISCO SINGLE-HANDER.

WE publish this week some interesting plans of a single hand yawl for work on San Francisco Bay, designed by Mr. Wm. Brooks, of that city. Though rather larger than the subject of our articles, the yawl is such an exceedingly handy arrangement that no difficulty will be experienced in managing a yacht of 30ft. load line for short runs or bay cruising. The yawl in question was not intended to meet the particular style of yachting we have been giving attention to lately, but for general knocking about with a friend or two, and alone in the event of being brought thereto by circumstances. A sloop 30ft. load line is a very unhandy toy and a very dangerous one at that for a single hand should she be of the customary New York trap model. In fact, without a mate to work ship she would be altogether impracticable and disaster of some kind would speedily overtake the individual rash enough to clear from moorings without sufficient help to see the boat through difficulties. But with the moderate beam extra depth and low bilge and the yawl rig affairs assume a much safer aspect, especially when rigged as the plan before us. By lowering mainsail the yacht is under close reefs at once. The jib is supplied with a boom on the foot, the sheet of which works automatically on a short traveler forward of the mast after the plan of some working sloops in our own waters. Both it and the mizzen aft work themselves and require no attention whatever in beating up. The skipper keeps an eye ahead and tends the helm or wheel, never bothering himself with sheets or luffing out unless to the very worst. Of course with a boom jib some canvas is sacrificed compared to the lug sail, but for general purposes this is a matter of little moment. The loss is more than compensated for by the convenience, and a yacht which as a sloop would be a very clumsy affair becomes at once under ready control of a single person.

Owing to the strong winds blowing in San Francisco, smaller sail areas are in vogue than on our seaboard. Thus in the design of Mr. Brooks we find but 11ft. of bowsprit beyond forward perpendicular, against 14 or 15 in the New York sloop. Similarly the head of the yawl's mainsail is 16ft. against 18 or 19ft. in a sloop. The area of three lower sails in the yawl is 935ft., whereas the area of a sloop's jib and mainsail would be 1,100ft. This difference appears in stronger relief, remembering that the San Francisco yachts are much abler, larger and generally fuller on their length than New York's light weights. It is often supposed that an increase in the number of sails must needs make a rig "more complicated," and call for a larger crew to work ship. Exactly the opposite is, however, the truth, for the very choice a number of sails offers permits an arrangement adapted to varying circumstances. It is only in fine weather that everything is displayed, and on a fair, pleasant day a few strings more to attend to is of no consequence. When it comes down to hard sailing the work begins to tell, and then the skipper of the yawl can prepare himself to meet emergencies as he requires, on the strength of the very number of his sails, while his friend aboard the sloop is in a constant worry with the question, "What next?" and no sooner has he hauled down one reef by hook or by crook, and been driven all over the channel while so doing, than a second edition, and maybe a third, is called for by a freshening blow, and about the time he is fagged out with his labor, the worst is over, and he can undo again what has cost him so much time and risk. With a boom to the jib, the yawl is as handy as a catboat, having nothing to tend but the helm, and for reducing or driving through a squall she offers far greater convenience and safety than any other rig known. It is, therefore, not difficult to understand the popularity the rig has obtained in San Francisco.

Prejudice against such a "blasted British idea" ran as high at one time on the Western coast as it does to-day on the Atlantic, but actual experiment quickly convinced yachtsmen on the Pacific of the excellences and practical advantages of the mizzen, and as soon as a few immaterial alterations in the outline removed the direct charge of aping the British, even the sturdiest patriots fell willing victims to what they are pleased to call the "Americanized yawl," but which in point of principle differs not an iota from its original in foreign waters. The batten reef which Mr. Brooks has adopted is, we believe, an excellent idea for small yachts. It simplifies the labor of reefing to a material degree and saves a great deal of time, which is a matter of importance in critical moments. The halliards are settled away as required, the outer and inner stops or knittles quickly tied around the boom, and the reef is practically accomplished. At your leisure you may snug up with a couple more stops along the batten. The latter is laced to the sail and aids in keeping the canvas flat. Stormsails and reefed mainsail are indicated in the plans by broken lines. The following are the chief dimensions:

Length over all	36ft.
Length on loadline	30ft.
Beam, extreme	11ft.
Depth of hold	4ft. 9in.
Draught without board	4ft.
Draught with board	8ft.
Least freeboard	1ft. 8in.
Displacement	11 tons.
Ballast	6 tons.
Length of cockpit	8ft.
Length of cabin	12ft.
Width floor, side of trunk	2ft.
Width of berths	2ft.
Headroom	5ft. 3in.
Mast, deck to hounds	29ft.
Pole topmast, hounds to truck	18ft.
Boom	24ft.
Gaff	16ft. 6in.
Bowsprit outboard	11ft.
Mizzen mast, deck to truck	28ft.
Mizzen boomkin outboard	5ft.
Mizzen boom	15ft.
Diameter mast at partners	6¼in.
Diameter boom in center	4½in.
Diameter gaff in center	3¾in.
Diameter mizzen mast at deck	5in.
Diameter mizzen boom in center	2¾in.
Area mainsail	536sq. ft.
Area jib	308sq. ft.
Area mizzen	161sq. ft.
Area jib topsail	120sq. ft.
Area gaff topsail	145sq. ft.
Total plain sail	1170sq. ft.
Area mainsail reefed	366sq. ft.

Keel of oak, 6in. moulded alligator style. Stem and post of oak 3½ to 4in. sided. Frames all steam bent, 1x1½in., spaced 10in. between centers. No floors are used in this construction, the heels of the frames overlapping instead. A keelson plank 6x2in. is worked fore and aft, in wake of centerboard casing the frames are mortised into the trunk logs. Plank of Mendocino pine 1in. thick. Ceiling ⅛ and ¾in. thick. Deck beams of Oregon pine 2x4in., ends lodging on clamps. Deck plank of Oregon cedar 2x1½in. The mizzen steps on the deadwood knee and passes up through the broad, flat end of the boomkin which is made to do duty as mast partners. House top canvassed and painted, the beams well crowned. Spars of spruce.

A CARD.

Editor Forest and Stream:

Will you permit me again to say through your columns that the undersigned is not engaged professionally in yacht designing, and has not the time to meet demands for plans or drawings of any kind. This intimation will save the public and myself a good deal of useless correspondence. Those in search of designs are referred to your advertising columns and to the various professional gentlemen mentioned from time to time in your paper.

C. P. KUNHARDT.

NEW YORK Y. C.—At the last meeting the committee on club house had nothing to report. It was decided to abandon the project for the present. A vote of thanks was tendered to Commodore Jas. D. Smith for his services in contributing to the success of last summer's cruise. Ordered on the minutes. It was also decided to retain the landing stage at Newport.

HANDICAPS.

Editor Forest and Stream:

Will you explain why you do not look with favor upon handicaps?

A COMMITTEE MAN.

BROOKLYN, Nov. 30.

[We will. Handicaps are charitable grants by fast yachts to slow ones. For that reason it is very plain that they are not equitable. Making a fast yacht pay because she is fast is diametrically opposed to the prime object of racing, which implies a reward to the boat showing most speed. Rob her of that reward and turn it over to a boat not entitled thereto upon merit, with no better excuse than to "divvy" all around, and what object can there be in racing, and worst of all, what is there to induce the fast yacht to come to the line? Where is the logic of giving a bonus to me at the expense of another, when the race is instituted with no other purpose than to determine which is the fastest yacht and to reward her accordingly? And how much satisfaction, glory or benefit can there be to a slow yacht to win with such an indulgence of pap? What instruction can be drawn from a result brought about not by real deserts, but by imposition? How long would there be any incentive to race with the knowledge that the whole thing is cooked and dried beforehand, and that the spoils are not to be wrested from competitors in fair, square fight, but are to be apportioned all round like mamma divides a stick of candy among her crew of gosslings? Do we race to give everybody something to take home from the party? Are we a set of infants to go home crying because the best fellow got the swag? If advisable to boost up racing by giving everyone a share of the prizes, divide the cups and lucre all round at once, and save the idle sham of a race which is no longer a race in earnest. Handicaps occasionally offered as a rough and tumble go-as-you-please, a general scrabble for the fun of the scramble, are good enough, it is true, and for variety indulgence in a side show of baby's play is not to be interdicted. But once venture upon substituting the mere by-play of handicaps for legitimate allowances and let it be understood that penalties at the discretion of committees are to be imposed and a dead failure of racing must be the inevitable result. Apart from this altogether, handicaps can never be practicable much less become popular. Supposing a case. Here we have Bedouin with 105 tons displacement racing Gracie with about 60. Those who take bulk as the standard for comparison would saddle Bedouin with an autocratic tax. Both yachts are about of a length. Those who think they ought to be matched on that for competition would declare no handicap in order. Again, those who would rate according to record and performance might insist upon blackmailing Gracie. Finally, who can decide to the satisfaction of all, which is, and which is not the best of any two, or where is the committee of sages who will undertake to hit off the capacities of yachts under varying conditions of wind and sea down to the seconds which often decide the events of the day? Here, then, we have every conceivable style of handicaps under the sun, any one of which can be urged with as much show of justice as any of the rest or all of the rest put together, and an attempt to permanently engraft such a scheme upon yacht racing can only fetch up in confusion worse confounded, and the collapse of the club venturing upon a course of such an impracticable mixture of quackery and soft-hearted compassion, with the plugs of the fleet, however well the idea may work as an occasional exception to the rule. Yacht owners want their rights; they will never be satisfied with a concoction of underserved charity and injustice imposed at the sweet will and much varying caprices of any committee or clique of fearfully fallible autocrats assuming the right of taxation without representation. We may excuse exceptional handicaps as exhilarating scrambles which deserve no place in the regular records, but as a permanent substitute for legitimate time allowance for size the proposition is too ludicrous to receive serious attention, and our columns are closed to the useless discussion of such palpable nonsense. Moreover, time allowance for size is not at all the cause of small entries, as the most casual observer will conclude from the races in Eastern waters where, sailing under regular time allowance, the question is not how to induce additional entries, but, on the contrary, how to limit the

vast fleets now coming to the line to numbers within the possibilities offered by the physical conditions necessarily accompanying the successful accomplishment of a race. As long as one hundred yachts can be brought to the line in Boston with time allowance for size, the cry for handicaps in sustenance of yacht racing is as baseless as the notion would be grotesque in its workings. If racing is just at present flat and insipid in New York waters it certainly is not to be traced to time allowance, for racing never flourished in history as it does this day in all other ports up and down the coast. Competition in metropolitan waters may be sluggish just now, but the reasons lie much deeper than in the systems in vogue for allowance, and these reasons it is not necessary to investigate at the present. We are not aware that any serious proposition has been made to substitute handicaps for time on size, but should some such an ill-digested scheme be entertained in desperation as the drowning man clutches at a straw, we trust the foregoing is enough to nip in the bud an absurdity no person of insight would for a moment entertain; and which would rebound in the dry rot of any club stupid enough to give it even the dignity of a hearing. Let us have handicaps for the mere fun of the thing, but let not a temporary flush of success due to its novelty be mistakenly laid to the permanent relinquishment of the common rightsand equities of yacht owners in favor of a childish and fleeting bolstering of racing by artificial tatty to the slow vessels in the fleet.]

THE STEAM YACHT "A. BOOTH."

Editor Forest and Stream:

Along in September the steam yacht A. Booth was launched in Chicago. It was a noteworthy event in yachting circles. The vessel started out on a long cruise and has just returned last Saturday. She was at once boarded at the lighthouse slip by your correspondent, and an inspection tour of this elegant vessel undertaken, and Captain "Tony" Everett, one of the veteran yacht masters from Long Island Sound, was the master of ceremonies, as he is of the yacht. Your correspondent was shown all over the commodious vessel, and sends the subjoined report.

This yacht was built by Mr. J. P. Smith, an old ship builder, whose forefathers, clear back to his great-grandfather, held the same occupation before him. Mr. Smith, however, retired from shipbuilding about twenty years ago, and came West to Chicago. He embarked in the wholesale ice business, and only plans and has built yachts for his friends. It is his recreation and a source of delight to plan a fine yacht.

By side the Booth he has modeled and built the yachts Dauntless, now at Lake Geneva, and which he owns, and the yacht Gauntlet, for Mr. Sturgis, president of the Northwestern National Bank of this city. Both yachts are excellent models and are speedy. He planed the Booth at odd hours, and would frequently arise out of bed at nighttime to draw lines and work at the estimates. The vessel was built for Mr. A. Booth, the famous oyster packer of Chicago and Baltimore. It will be used for pleasure, and next season the work cut out for her embraces a trip from this port to your city via the Erie Canal. Mr. Booth spared no pains to make a perfect vessel. What adds to the interest in the yacht now is the fact that she put to sea from Sheboygan Harbor in the great storm of Thursday, November 23, when every other vessel, both steam and sail, absolutely refused to clear. "Just to test her seegoing powers," as Captain Everett asserted. She came through without the loss of a splinter, or showing the slightest strain. J. P. Smith, A. Booth and several other gentlemen were aboard during this trip, which extended as far east as Lake Erie and the straits. She is reported to have made eighteen knots an hour. She came from Sheboygan down with seventeen inches of her wheel broken off, at the actual rate of sixteen miles an hour. It will be essayed next season to increase this speed.

She is rigged as a schooner with jib, foresail and spanker, the rigging being wire. Her general appearance is like a miniature transatlantic steamer. The length of keel is 95ft. and rake of stem four feet from the perpendicular. Breadth of beam 15ft. over all, and depth of hold 8ft. 6in., thickness of keel 6½in. Keel moulded at stem 9in. and at stern post 18in. The frame is of cedar flitch 3½in. sided, frame double with wrought iron floors between each frame, and stanchions of white oak. She has five keelsons, the main keelson being 14 by 6½in., of white oak, with 2in. lock on the floor timbers. She has four sister keelsons of Norwaypine, 6x10in. The stem and stern posts are of white oak, with a natural knee or crook, with five feet lock scarf on the keel, white oak stanchions running down to the second futtock head. The vessel has 400 steel braces 3x5-16in., running from the floor timber head to the top timber head, and let into the frame. They diagonally cross each other five times in the length of the plate, and each crossing has a screw bolt through planking, frame and ceiling. The deck beams are 4½ by 6in. Her planking is of Kentucky white oak 2½in. thick, 30 to 45ft. in length. The deck is of white pine 1¾in. thick and 2¼in. wide. The covering board is white oak, 3x6½in., molded edges. She has a top-gallant forecastle 10ft. long, with an iron rail forward, molded stanchions, ending at the fore rigging, has wrought iron rudder and rudder post of hydraulic tubing, 8in. in diameter. The cabin is 26ft. long, 7½ft. high, and 10ft. wide. It is elegantly upholstered and finished, and lockers, refrigerators, wine coolers, closets, etc., of the most complete description. She is panel finished in the interior and gilded and handsomely painted outside. The engine house and pilot house is 26ft. long by 8ft. wide and all houses are fastened down to the deck by iron rods passing through the sill and fore and aft carlines in the main deck every 4ft. The forecastle is fitted up for four men, with mahogany companionway, shutters of steel and French plate glass. The deck of the boiler house where all steam pipes and smoke stacks pass through is made of angle iron and boiler plate. The boiler is made of Otis steel, 66in. in diameter and 13ft. long, marine boiler with steam dome 5ft. high and 44in. in diameter, double smoke stack 16ft. from boiler deck. She has two vertical engines, made by Robert Tarrant, 12x14, Delamater wheel 4ft. in diameter. The engine is fitted with the Hexter pony pump inspirator, and all modern improvement, pilot house 8ft. with eight large windows of heavy plate glass and sashes of cherry wood. The steering wheel is one of the finest ever put on a yacht and is of rose wood, mahogany and satin wood, all inlaid with nickel and silver, the wheel post being of solid brass with nickel plate. There is one iron davit forward for catting anchor and two aft on the starboard quarter for swinging the life boat. She has one anchor of 350 pounds with 9/4 inch chain, one kedge anchor 100 pounds and a gypsy windlass. This yacht is certainly the finest and costliest vessel built west of the Atlantic Ocean.

WEATHERLINESS.—The word "weatherliness" signifies closewindedness, and has no connection with a boat's performance at sea. It is not to be confounded with the expression "making good weather of it." A boat may be very weatherly, inasmuch as she is capable of sailing close to the wind and losing little by driving off to leeward, and yet be a very poor sea boat; or she may perform admirably in rough water, and still not be a "weatherly" boat if she cannot lay the wind and shows a disposition to make leeway. We are led to this explanation because a number of readers have misinterpreted our meaning when speaking of some light draft as being very weatherly. A wrong signification is quite commonly attached to that word in yachting circles, and its real import should be kept in mind. The merest trap may be very weatherly in smooth water and yet incapable of facing a trifling sea.

CRUISERS' GUIDES.—According to the latest report of the Lighthouse Board there are in all 7.3 lighthouses, 38 lightships, 64 fog signals, operated by steam or hot air; 115 fog bells, operated by machinery; 780 beacon lights on Western rivers, 345 unlighted or day beacons, 33 automatic whistling buoys, 14 automatic bell buoys and 3,377 buoys of other descriptions. To maintain and attend to all these there are employed 22 steam tenders, 4 steam launches, 2 sailing tenders, 1,269 light keepers, and 686 other employees, including crews of lightships and tenders. The total annual expense of the lighthouse establishment and fog signals is $2,749,000.

PERSONAL.—Mr. John Harvey, the naval architect, left for England by yesterday's steamer. He will be absent for two months to attend to some private business and new yachts in hand. He will then return to finish a number of designs for new cutters and a schooner here, and also to superintend their construction.

WIDE KEEL.—Hatcher, Clifford & Co., of Southampton, England, have just laid the keel for a new forty for Mr. Francis Taylor, for whom the fifteen-ton Maggie was originally built. The new cutter will have steel frames and a keel 3ft. wide.

VAYU.—We are in receipt of many inquiries concerning this Boston cutter, the lines of which were published in our issue of Nov. 9. These we will endeavor to cover in some additional articles of the same nature in coming issues.

NEW YAWL.—We learn that a 50ft. cruising yawl is to be built in Philadelphia for New York owners. She will have something like 14ft. beam. It is stated that bids from Philadelphia were one-third lower than New York figures.

FREDA.—We have to thank some readers abroad for a fine instantaneous photo of the 30-ton cutter Freda, winning the Royal Mersey match in July, 1882. The photo was taken from the committee steamer.

TWO MORE CUTTERS.—A second 5-tonner is to be built from the lines recently got out by Mr. Harvey, and we also hear that a 50-ton cutter is in hand for a Portland yachtsman.

NEW CUTTER.—W. P. Stephens will stretch the keel for another cutter similar to the one now in his shop at West Brighton, Staten Island.

A SPECIALTY.

Special designs furnished on application free of charge.

The Parker Trap Gun.

We are now prepared to supply the **Parker "Trap Gun,"** for which we are sole agents. These guns have top lever, extension rib, rebounding locks, large strikers and pistol grip. They are simply superb. The Parker Trap Gun should not be confounded with the regular Parker top lever guns, which, although excellent guns, differ materially from the Trap. Every genuine Parker Trap Gun has the rubber butt plate with a flying pigeon beautifully embossed upon it, as shown in the above cut.

We have a small remnant of Webley's heavy ducking guns, mostly 10-bore, of various qualities, at about half price. Address

P. O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM GLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators, Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1**, or six for **$5**. **Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business house in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

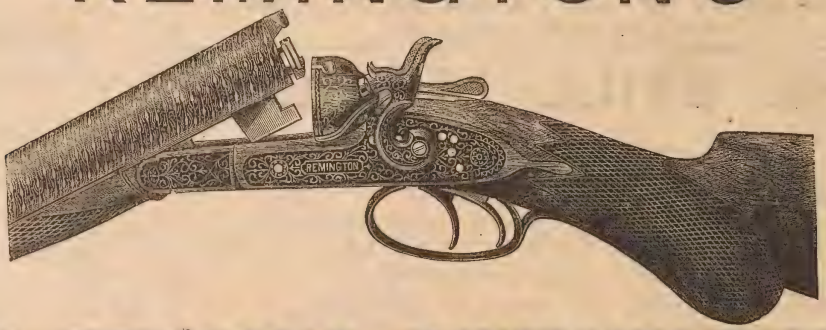
READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as one that cost fifty dollars. You can rely on it every time.
Capt. Chas. B. Rouse, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and wonderfully cheap at two dollars. Geo. S. Parsons, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, in foretelling the weather. It is a wonderful curiosity and works to perfection. F. J. Rosenzweig, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. Pool, on back of Instrument, as below:



J. A. Pool TRADE MARK.

Every Instrument **warranted** *Perfect* and *Reliable*. Size, 9¼ inches long, 3¼ wide. If not satisfied on receiving the Instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is fair reg[illegible] but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

FITS A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS.

From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address DR. AB. MESEROLE, No. 96 John St., New York.

FOR TOWN AND COUNTRY.—1883.

FOREST AND STREAM

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of curren achievements and progress in this important work.

The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

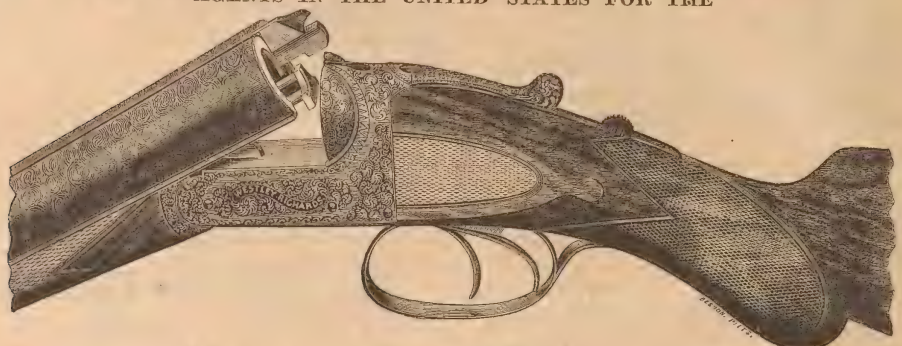
Yachting and Canoeing.

The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N.Y.

J. PALMER O'NEIL & CO.,

68 Fifth Avenue, Pittsburgh, Pa.

AGENTS IN THE UNITED STATES FOR THE

Westley Richards Hammerless Gun.

Manufactured by WESTLEY RICHARDS & CO., London, England. (Established 1820.)

INVENTORS AND SOLE OWNERS OF THE ANSON & DEELEY HAMMERLESS LOCK WITH AUTOMATIC SAFETY BOLT.

Making the Safest, Simplest and Most Durable Breech-Loading Gun to-day in Use.

SAFEST, because the triggers are effectually bolted whenever the lever is moved to open or close the gun. SIMPLEST, because the lock contains fewer pieces (only four) than any other gun. MOST DURABLE, because the four parts are very strong, and the swivel and bridle—the weakest parts in the ordinary lock—is entirely dispensed with.

The Anson & Deeley hammerless lock has been subjected to the severest test, having been fired EIGHTY THOUSAND times in a wear and tear trial without cleaning, and without showing any evidence of wear. The Anson & Deeley action is made in its perfection by Westley Richards & Co.

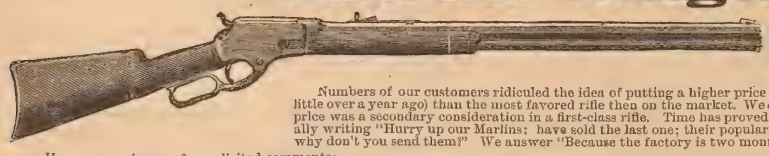
From every quarter unsolicited come testimonials of the excellence of these guns. We quote a few extracts:

"The Westley Richards Hammerless Gun excels any gun that I have ever used."—GEORGE W. BROWN, Connecautville, Pa.

"The action is simply perfect; there is no possibility of accidental discharge."—E. J. CARPENTER, Cincinnati, O.

"The Hammerless Westley Richards works to a charm, and brings the ducks right out of the sky."—CHARLES J. CLARKE, Winnows Point Shooting Club.

"The little seven-pound Westley Richards Hammerless Gun, purchased from you last summer, has given entire satisfaction. For hard shooting, easy manipulation, and perfect safety, it cannot be excelled. I used but three drams of powder and one ounce of shot throughout the entire season, killing my birds as clean in September as first of October."—ALEX. REYNOLDS, JR., Kittanning, Pa.



"The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun to buy a Westley Richards Hammerless."—PATRICK HENRY, Clarksville, Tenn.

"I find perfect ease in manipulating the gun, and absolute safety secured from accidental discharge by the automatic safety bolt, which never fails to go to safety when the lever is moved to open or close the gun. You know how prejudiced I have been against hammerless guns. Well, I am thoroughly subdued, and I unhesitatingly say it is 'the gun of the future.'"—I. R. STAYTON, Secretary Allegheny County Sportsmen's Association.

"I feel as if I ought to let you know how the 10-bore, 9¼lbs., 30in. Westley Richards Hammerless works. At the target with four and a quarter drams of Orange Lightning powder No. 6, and one and a quarter ounces No. 8 shot, I can get over 400 pellets in a 30-inch circle, 40 measured yards, every time, with beautiful distribution and wonderful penetration. With the same charge of powder and one and a quarter ounces No. 5, it is sure death to ducks at fifty yards every time. I made two successive shots at single mallards sitting on the water at 76 and 83 yards, and killed both times, and this with the above light load in paper shells. A mallard flying at 50 yards drops as if struck by lightning. Let me thank you for having furnished me what I have so long been looking for, i. e., a gun that suited me in every way. I've got it now and money cannot buy it."—F. W. COTTLE, Lincoln, Ill.

We have just received a large invoice of these matchless weapons in all grades and gauges, including the smaller bores, 14, 16 and 20-gauge, and can fill all orders promptly, or will import to special order without extra charge. Our stock of Fine Goods is *without exception* the largest in this country. Constantly on hand, bargains in fine second-hand guns with hammers. New catalogue now ready containing illustrations and prices of all new and useful implements.

Marlin Magazine.

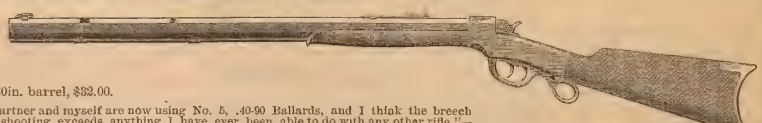
No. 1.—.45 cal., Octagon Barrel, 28in. weight 9¼lbs., using 45 gov't cart..$32.00
No. 2.—.40 cal., " " 28in. " 9¼lbs., .40-60 Marlin cart.. 32.00
No. 3.—.45 cal., " " 30in. " 11¼lbs..... 37 00
No. 4.—.40 cal., " " 30in. " 11¼lbs..... 37 00

Numbers of our customers ridiculed the idea of putting a higher price on the Marlin Rifle (when first brought to the notice of the trade a little over a year ago) than the most favored rifle then on the market. We contended that the best goods were worth the most money, and that price was a secondary consideration in a first-class rifle. Time has proved the correctness of our views, and the same parties are now continually writing "Hurry up our Marlins; have sold the last one; their popularity is increasing. You have had our order for several weeks now; why don't you send them?" We answer "Because the factory is two months behind orders and with all their exertions cannot catch up."

Here are specimens of unsolicited comments:

Flagstaff, Arizona, Sept. 4, 1882.—"The Marlin rifle is the best repeater I have ever seen; for simplicity, durability and accuracy cannot be equalled."—E. E. HAENELT.

Columbia Falls, Me., Sept. 18, 1882.—"The rifles are received and are better than we expected, though from what we had heard our expectations were large. They suit everyone that has seen them, and we expect to sell a number, and are sure we can clean out every other magazine rifle. Duplicate the order."—L. LEIGHTON & SON. Since the above was written the firm have ordered and sold four lots of the rifles.



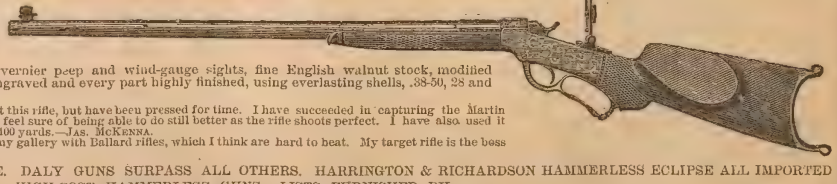
Bear Creek Camp, Wyoming Ter., Oct. 28, 1882.—"My pard and I are now hunting for the Denver market. We have hunted for the past five years, and have worn out five or six guns, and now I want a new one, and I am bound to have a Marlin repeater. The hunters who have them are offered the best rifles and $10 to boot, but dont seem inclined to part with them. In fact they bring $10 more than any other rifle, and I want the very best."—J. L. JOHNSTON.

We beg to call special attention of parties who, have been giving preference to rifles using small charges of powder and light bullets. Experience has demonstrated that the .40 cal. 60 grain cartridge far exceeds the .44 cal. 40 grain in bringing down game at first shot. The trajectory is flatter, the speed of the bullet is much greater, so that less time elapses between the pulling of the trigger and striking the game; the bullet is longer and makes a much larger aperture. Express cartridges can be had for both .45 and .40 cal.

The Marlin Fire Arms Company have just finished an addition to their factory twice the size of their former building, have been putting in new machinery of the latest models, and will soon be prepared to supply the demand.

Pacific Ballard.

No. 5.—Double set triggers, Octagon barrel, cleaning rod under the barrel, with extension rod and brush, Rocky Mountain sights, 26in. barrels, $30.00; 32in. barrels $32.00.



This rifle is made as follows: .40-63, using .40-63 everlasting shells and the new .40-70 Ballard cartridges, .40-90, using everlasting shells, .45-70, using everlasting shells, and .45 government cartridges.

No. 5½.—Same style, weight 14lbs., using Sharps .45-2⅞in. cartridges, 30in. barrel, $32.00.

Kit Carson, Col.—"I have used all the prominent makes of rifles. My partner and myself are now using No. 5, .40-90 Ballards, and I think the breech action the best I have used, and the everlasting shells are perfection, and the shooting exceeds anything I have ever been able to do with any other rifle."—THOS. K. GURNEE.

The Famous 6½ P. G.

This rifle has captured more prizes during the past two years than any other in the country. It fits the form perfectly and any accustomed to an ordinary rifle can improve their shooting three to six points by using this rifle.

6½ P. G. BALLARD.—Rigby pattern barrel, mid-range vernier peep and wind-gauge sights, fine English walnut stock, modified Swiss pattern, pistol grip, Farrow butt plate, finely engraved and every part highly finished, using everlasting shells, .38-50, 28 and 30in., $70.00.

Belfast, Ireland, Nov. 4, 1882.—I intended writing you about this rifle, but have been pressed for time. I have succeeded in capturing the Martin Smith prize, using the regular U. S. Government cartridges, and feel sure of being able to do still better as the rifle shoots perfect. I have also used it with best results as a match rifle, using 90 grains powder, up to 1100 yards.—JAS. MCKENNA.

St. Louis, Aug. 25, 1882.—I send you some targets made in my gallery with Ballard rifles, which I think are hard to beat. My target rifle is the boss of this town. She is a darling.—CAPT. WM. SCHAAF.

Irish Red Setter Dog Glencho,

ELCHO ex NOREEN.

I will allow Glencho to serve three or four bitches of good form and breeding during the present winter. Dr. Jarvis calls Glencho the handsomest Irish setter ever bred in America. He has the size and head of Elcho III., with the coat, color, chest and muscle of Berkly. I have never seen his equal. He is fast, stylish, keen-scented, staunch, and one of the best trained first season's dogs I have ever handled. Fee $20 cash. Address W. H. PIERCE, Peekskill, N. Y. nov30,3t

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

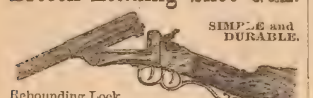
A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, { 30 per cent. less than others. / Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.



In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel-lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets; manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

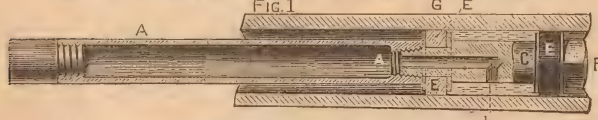
Climax Gun Cleaner.



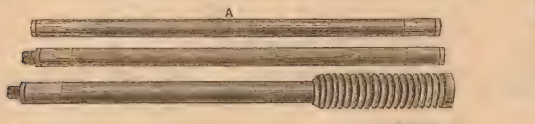


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The ease with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ¼ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Exports.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

ANSWERS TO CORRESPONDENTS.

THE SEA SERPENT.

THE very name of sea serpent is enough to call up the smile of incredulity on most faces, and the average newspaper man will have his joke at the expense of this unknown animal at least once a year. Notwithstanding this general disbelief in its existence, there is no doubt that there dwells in the ocean some marine monster, which, although not a true serpent, is unlike any known living animal inhabiting the sea, and which has the long neck and small head which has given rise to the story of a great snake.

As long ago as the year 1876, we wrote editorially in these columns as follows:

"Does it not seem almost time to look for the capture of this individual or some one of his race? There is really no reason in the uncompromising disbelief with which the name of our friend is always met. It is but a few years since the sea serpent and the Kraken, the giant cephalapod of the north, were classed together, and the two were equally the subjects of pert scoffs and sneers. Now, however, we know all about the latter animal, and half a dozen specimens are at present in our museums, yet for hundreds of years the Kraken was unknown except from an old print and its accompanying description, while almost every summer tourist in Europe has seen, or has had an opportunity of seeing, the great sea snake. We have never had the latter ashore, it is sure, but we take it that this fact alone would be regarded by scientific men as a very poor reason for disbelieving its existence.

"The fact is that the ocean and its inhabitants are as yet but very little known, and there are vast possibilities in the wide extent of waters that surround us. Where there is so much smoke there must be at least a little fire, for it is scarcely to be believed that all those who profess to have seen the monster have been deceivers or deceived. We know that in the distant past, during the cretaceous epoch, giant reptiles of various kinds inhabited the ocean in vast numbers. Some of these, Mosasaurs, were snake-like in form, but possessed fore and hind limbs in the shape of paddles not unlike a whale's fin, and sometimes attained a length of from sixty to seventy feet; others, the Plesiosaurs, were more lizard-like in appearance, but had a long, swan-like neck and a small head. These latter could no doubt have raised head and neck high above the water without showing any part of the body, except perhaps the back just flush with the waves.

"Now why is it not possible that some of these animals may have continued to exist either in the same or in some modified form until the present time? We know of no reason for supposing that the conditions of marine life were any more favorable to the existence of such animals in the past than they are at present, unless possibly food may have been somewhat more abundant then than now. Their enormous abundance in the cretaceous of the West warrants us in believing that during that period they were among the most numerous of all the strange forms that inhabited the sea. Dreadful creatures they must have been and terribly destructive to their neighbors in this ancient ocean.

"That sea serpents exist at present is a well known fact, but they are pigmies beside the monster which causes the periodical sensations of which we have spoken. About the islands of the Indian Ocean there are several species of marine snakes, characterized by flat tails and a venomous bite, but which never attain to a greater length than eight or ten feet. They are an interesting class of ophidians, and with their rough and barnacle-covered skins would, except in the matter of size, answer very well to the description ordinarily given of *the* sea serpent."

Scientific men have long been on the lookout for specimens of this animal, but none have yet come to light. Instances of its being seen, the authenticity of which cannot be doubted, continue to be reported.

We shall have the pleasure next week of laying before our readers an illustrated article on this subject, which will, we think, be of great interest to all. Three instances of the appearance of the sea serpent will be cited, and illustrations, not exactly from life, but from memory, will assist the reader to form an idea of the monster as he really is.

DANGEROUS DELAY.

WHEN defeat came to the American Rifle Team in September last there was a general agreement that if the match of 1883 was to score another American victory then prompt and vigorous work was required on the part of the riflemen and rifle makers of this country. Months have since slipped by, and so far as can be ascertained by any official reports, no effective results have been reached in the way of preparation. If an American rifle is to be produced capable of such work as was shown at Creedmoor by the English rifles last fall, it is about time that the weapon was forthcoming. It may be that in some armory or shop such an arm is in process of manufacture, but if it were it is not unlikely but it would have been heard of ere this. In the ranks of the National Guard it may be that there is work going on and very energetic practice under way, but there is certainly little or no enthusiasm, and over the whole field, look in whatever direction, there is little at present to encourage a belief that the match of July next is to be more than another defeat for American arms.

If the match is to be won, it cannot be by a grand hurrah and a great scurrying around for points at the last moment. The team must be so strong as to have a reasonable prospect of success before sailing from this side, since it is quite out of any reasonable hope that much improvement will be made by drill on the English ranges. There is no reason why a large amount of excellent preparatory work should not go on during the winter in the way of position drill, with some general experiments on the matter of ammunition and rifles during the fine days on some armory range. There is no time for enjoying a long winter hibernation, else the spring will open and the day of sailing be upon the committee without having any thoroughly equipped and carefully trained team ready to send abroad as the representatives of American skill with the rifle.

As yet no programme of selection has been made out, and guardsmen do not care to undertake the labor and expense incident to preparation for a place on a team until they know just what their chances are of getting on that team. Then there is always a great deal of anxiety felt as to how the captain of the team is to be chosen. He is largely responsible for the results which the team accomplish, and unless he has the hearty support of the members of the team and enjoys in return from them a readiness to obey his orders to the very letter and with alacrity, there is a great deal of waste effort, and the team go into the contest largely handicapped by want of proper organization.

There has been time enough already spent for all necessary consideration of the many questions incident to the gathering together of a team. If anything is to be accomplished it must be by direct effort in fields where some result is promised. The committee ought by this time to know pretty well just what is to be expected from this or that militia organization; whether there are eligible material in it for use in making a team. To depend on the sending out of circulars pell-mell, aiming at everybody and hitting nobody, will not do. It has been tried in the past and found to be utterly valueless in results. Just at present, for instance, the National Guard of Louisiania is busy with a possible match with the French team which has been invited and is expected. It is a question whether a guardsman from California can be induced to undertake so long a journey as that from the Pacific to England with the chances of not getting on the shooting team after all. It is pretty positive that the coming team is to be drawn from a small number of contestants for places, and it is a matter of policy for the managers of the committee to start the process of selection as soon as possible. The delay thus far has been foolish and unwise, further delay will be worse, for it will be fatal to any chances of success. The annual meeting of the National Rifle Association takes place in a few days, and it will be an entirely pertinent point of information for any life member to ask for an explanation of this prolonged tardiness in making up the programme of the attack which is to be made next summer for the recovery of the palm of victory in rifle shooting which now rests too securely in British hands.

No doubt the committee have been in some measure embarrassed by the non-receipt from England of the amended conditions of the match. There has been ample time for the secretary of the British Council to have informed the American committee of the decision on the several points submitted. It has been understood unofficially for some time past that the extension of time to January 1, 1883, for enlistments in the National Guard had been granted, but no civilian marksman wishes to join an organization without some official guarantee that it will give him the right to compete for a team place. To get an official letter next month informing the committee that the British Council have been graciously inclined to grant the extension of time would be little more than a mockery. There is a measure of mitigation in this neglect of the British rifle managers to respond, and due allowance should therefore be made in this direction for the tardy way in which our committee have worked, still there is a vast deal which should have been done ere this which has been left undone.

WHAT WILL YOU DO ABOUT IT?

THE question as to what methods shall be employed in the coming session of the New York Legislature is now exciting much interest. There are probably more plans being devised for the improvement of the game laws and the better protection of our *fere naturæ* than ever before, because each year more people see the urgent necessity of doing something in this direction. A time will no doubt come, when a majority of the population of this country will appreciate the importance of the subject, and then, if this appreciation does not come too late, proper measures will be taken for restoring to our deserted fields and woods their whilom inhabitants. But the chances of accomplishing much during the present winter are not encouraging, unless all who are interested in the subject work together, and having discovered what it is that they want, put forth the most strenuous endeavors to obtain it. In a recent editorial we briefly set forth our views with regard to this matter, and in another column of the present issue may be found communications responsive to our remarks. These letters come from men of age and experience, and their voices should carry weight with all our readers.

It is, as Mr. Hoard says, not only almost, but quite time that the tinkering was ended, but we fear that the usual crop of bills will make their appearance with the opening of the present session, and if an attempt is made to alter the laws, is it not more than probable that from a dozen counties, towns and hamlets will appear representatives who wish to have exceptions of some kinds made for their section? The legislators do not appear to have the backbone to stand up against the persistent pleadings of such people, or perhaps, and this is more likely, they do not know enough to stand firm in the position which they have taken. No better commentary on this feebleness of purpose is needed than that shown last year by a legislative committee, and a committee of supposed representative sportsmen appointed by the State Association. This last body of men comprised a large number of gentlemen who undoubtedly understood fairly well, some of them as well as anyone can, just what should be done, but there were among them a few individuals, like the delegate from Wild Rose Point, who thrust themselves

forward and would be heard, and who finished by carrying their point. These people were working for their pockets and the others only in support of a sentiment. A curious hodge-podge of ridiculous amendments were ultimately recommended for adoption, but happily failed of becoming a part of the law of the State. Anyone who will read over the report of this meeting in FOREST AND STREAM of March 23, will see, however, that too many of the delegates thought very little about protecting the game, but a great deal about their chances of getting a shot at it. In fact, not to put too fine a point upon the matter, there was a very unpleasant manifestation of selfishness on a part of a number of the delegates.

Now, if the inhabitants of every county in the State insist that in their section it be lawful to take fish all the year around, to shoot the ruffed grouse and woodcock when the young are too small to fly, and to run does heavy with young into the water; but feel anxious that, in every other section but theirs, the lakes and streams and fields and woods shall be carefully protected during all except a brief open season at the proper time, if, we say, such views are held by any considerable number of people, it may be left to the intelligence of our readers to say what the result will be.

If anything is to be done in the way of proper protection, each one of us must be willing to sacrifice the chance of taking a few fish or of getting some shots at birds for the common good. In other words, there must be more public spirit displayed in the matter than we are accustomed to see. A man must not object to the abolition of spring shooting on the ground that the ducks and snipe if they are not shot in New York will go to Nova Zembla and be killed there. If one State takes the right step of abolishing spring shooting others will follow promptly in the path thus pointed out,

The number of game protectors which New York now has is just enough to emphasize the absurdity of attempting to accomplish anything with an utterly inadequate force. One or two of them we believe to have done good work and to be deserving of honorable mention therefor, but with these exceptions their duties appear to have been limited to drawing their pay. There should not be less than one game protector, warden, constable, or whatever it may be thought proper to call him, for each county in the State, and in many it would be better to have two. The utter folly of attempting to protect game by means of eight wardens in a State as large as New York is too patent to require comment.

Whether the incoming executive will prove himself any more inclined to co-operate with the sportsmen of the State than the outgoing Governor has been is a question which time alone can answer. One thing, however, appears certain, and from it we may draw some encouragement. There never has been a time when so much interest was shown in the preservation of game as now. The subject is growing in interest and this interest is daily extending. People talk and think more about it than they used to. The growth is steady, but we are sorry to say that it is very slow.

NON-EXPORT GAME LAWS.

THE Indiana test-case has been decided, Judge Field rendering an opinion that the non-export clause of the game law of that State is unconstitutional. He reasons that the game, having become by capture the absolute property of the individual, is thereby taken out of all further control of the State. Whether or not the sportsmen of Indiana will accept this decision as final, and make no further efforts to prohibit the exportation of game from the State, we are not at present informed.

There are in several other States non-export clauses of a similar nature, and if the decision of Judge Field be not reversed, they will be futile to accomplish the desired end. These laws, which forbid exportation of game after it may have become the lawful property of the individual, obtain in Dakota, Colorado, Minnesota and Nebraska.

In Connecticut and Michigan, the non-export laws are worded differently, and in such a way, it is claimed, that the point of constitutionality is in no wise involved. These laws do not relate to the game after it may have lawfully come into possession, but prescribe a certain purpose, namely, exportation, for which game shall not be killed, and make the subsequent exportation of the game *prima facie* evidence that it was killed for that purpose. Thus the Connecticut law reads:

SECTION 1. No person shall at any time kill any woodcock, ruffed grouse, or quail, for the purpose of conveying the same beyond the limits of this State. Section 2. No person, corporation, or company shall transport or convey any woodcock, ruffed grouse, or quail killed within this State beyond the limits thereof, or sell or have in his or their possession any of such birds with the intention to procure the same to be conveyed or transported beyond the limits of this State. Section 3. The reception by any person, company, or corporation within the limits of this State of any quail, woodcock, or ruffed grouse for shipment to a point without the State, shall be *prima facie* evidence that the said bird or birds were killed within the State for the purpose of conveying the same beyond the limits of this State. Section 4. Any person violating any of the provisions of the preceding sections shall be fined not less than seven nor more than fifty dollars and costs of prosecution.

In Iowa the law is a combination of both of these forms; it provides that certain game shall not be exported and that certain other game shall not be killed for traffic. In Missouri it is declared unlawful for non-residents to kill game for export; and there are various other laws, worded to suit the fancy of their originators, and without much regard to their constitutionality or the ability to enforce them.

Several more non-export laws are in contemplation. It would be well for their framers to adopt a wording similar to the Michigan and Connecticut laws, which have not been assailed.

THEIR LAST REFUGE.

THE time is coming when the large game of the West will no longer exist in any considerable numbers, when so far as the hunter is concerned it will be practically exterminated. The rapidity with which the Rocky Mountain region is being settled up is astonishing to any one who has for years been familiar with it, and who remembers a time when it was a simple wilderness, whose only tenants were the wild beasts or still wilder men. Rapid and general as has been the influx of population into this section, and vast as has been its improvement from an economic point of view, these changes are only a hint of what is yet to come. For the first few years after the country became accessible by rail, the march Westward of the agriculturist and farmer was comparatively slow. But people continued to pour in, and the settling up of the country went on with a constantly increasing speed. The ratio was geometrical, immigrants came faster and faster. Arable lands were taken up, the stock grower scattered his herds everywhere, while with pick, pan and drill the hardy prospector brought to light the mineral treasures alike of the foothills and the snow-crowned mountain top. For years the change has been going on which is transforming the wilderness of yesterday into the bustling, thriving settlement of to-morrow. Each year, nay, each day, sees more settlers pouring in, new towns formed, ranches established on streams far back in the mountains; waters which since the beginning of time have murmured only to the deer and elk, or to the red masters of the soil, but which will now echo to the laughter of the settler's children and tremble responsive to the strokes of his ax.

With such changes in the conditions of the country it may be supposed that its indigenous inhabitants will suffer. The Indian, the buffalo, the elk, deer and moose will disappear; from many sections they have already done so. This was to have been expected, and while it may be deplored, it cannot be avoided. The interests of civilization demand that the country shall be settled and improved, and a sentiment cannot be permitted to stand in the way of such improvement. Lamentable as it is to see these superb animals swept off from the face of the earth, it is something to which we must submit. All we can do is to exert ourselves to render this extermination as gradual as possible.

Over twelve years ago an act was passed by Congress, which, it was then hoped, would provide a refuge for this game, a place where for all time the different animals might remain undisturbed by the hunter, might propagate their species, and might show to the grandchildren of the present generation the game that their forefathers used to hunt. The Yellowstone National Park was established in the following language:

ACT APPROVED MARCH 1, 1872.

(*Revised Statutes of the United States, sections* 2474 *and* 2475.)

SEC. 2474. The tract of land in the Territories of Montana and Wyoming, lying near the headwaters of the Yellowstone River, and described as follows, to wit, commencing at the junction of Gardiner's River with the Yellowstone River, and running east to the meridian passing ten miles east of the most eastern point of the Yellowstone Lake; thence south along said meridian to the parallel of latitude passing ten miles south of the most southern point of Yellowstone Lake; thence west along said parallel to the meridian passing fifteen miles west of the most western point of Madison Lake; thence north along said meridian to the latitude of the junction of the Yellowstone and Gardiner's Rivers; thence east to the place of beginning, is reserved and withdrawn from settlement, occupancy, or sale under the laws of the United States, and dedicated and set apart as a public park or pleasuring ground for the benefit and enjoyment of the people; and all persons who locate or settle upon, or occupy any part of the land thus set apart as a public park, except as provided in the following section, shall be considered trespassers and removed therefrom.

SEC. 2475. Such public park shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be, as soon as practicable, to make and publish such regulations as he may deem necessary or proper for the care and management of the same. Such regulations shall provide for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonders within the park, and their retention in their natural condition. The Secretary may, in his discretion, grant leases for building purposes, for terms not exceeding ten years, of small parcels of ground, at such places in the park as may require the erection of buildings for the accommodation of visitors; all of the proceeds of such leases, and all other revenues that may be derived from any source connected with the park to be expended under his direction in the management of the same, and the construction of roads and bridle-paths therein. He shall provide against the wanton destruction of the fish and game found within the park, and against their capture or destruction for the purpose of merchandise or profit. He shall also cause all persons trespassing upon the same to be removed therefrom, and generally is authorized to take all such measures as may be necessary or proper to fully carry out the objects and purposes of this section.

The passage of this act was generally approved. The territory set apart for the Park contains natural wonders which are unequalled anywhere in the world, and which, if left to private settlement, would simply be used by their future owners as money-making shows. The region offers no inducement to the farmer, for it is rugged and mountainous, nor to the stock raiser, for the altitude of a large portion of it is so great, that cattle cannot be grazed there in winter. It was hoped and believed that here was a reservation which would be protected from the inroads of the skin hunter, where game might be free from molestation, and so add to the attractions of the Park. The language of the statute quoted above warranted such a belief.

How have these hopes been fulfilled? Why, in the usual way, to be sure. This "great and glorious government" has again stultified itself by enacting laws without supplying the means to enforce them. The Park is overrun by skin hunters, who slaughter the game for the hides, and laugh defiance at the government. The Park is a pleasant summer resort for the Secretary of the Interior, whoever he may be, who makes his jaunt thither, wonders greatly at what he sees, and returns to Washington. The curse of politics has entered into the management of the reservation, and the little money appropriated for its maintenance is wasted by incompetent and ignorant officials. It is leased to private parties, who desire to make a peep show of its wonders.

It is many years since we first visited the Park and became familiar with its wonders. Since then we have many times called attention to the fact that in the reservation the people of the United States have a game preserve of great extent, the natural home of all our varieties of Western large game, which, by the expenditure of a few thousands of dollars annually, in thorough policing by good men, could be made a permanent breeding place for the larger wild animals which will, otherwise, before long, become extinct. More than once the game has been nearly or quite driven from the Park, but as it remains unsettled, while the neighboring country is filling up, it will be for years to come a place where the animals will gather for safety.

The importance of this subject has long been appreciated by many of those who are familiar with the Park and its capabilities, and army officers of high rank have been shocked by the destruction of our game in this particular locality, where it should be safest from the greed of butchers. In a report to the War Department, presented in 1876, Col. William Ludlow, U. S. Engineers, drew special attention to this subject in the following language. He says:

> Hunters have for years devoted themselves to the slaughter of the game, until within the limits of the Park it is hardly to be found. I was credibly informed by people on the spot, and personally cognizant of the facts, that during the winter of 1874 and 1875, at which season the heavy snows render the elk an easy prey, no less than from 1,500 to 2,000 of these, the largest and finest game animals in the country, were thus destroyed within a radius of fifteen miles of the Mammoth Springs. From this large number, representing an immense supply of the best food, the skins only were taken, netting to the hunter some $2.50 or $3 apiece; the frozen carcasses being left in the snow to feed the wolves or to decay in the spring. A continuance of this wholesale and wasteful butchery can have but one effect, viz. the extermination of the animal, and that, too, from the very region where he has a right to expect protection, and where his frequent inoffensive presence would give the greatest pleasure to the greatest number.
>
> The cure for these unlawful practices and undoubted evils can only be found in a thorough mounted police of the Park. In the absence of any legislative provision for this, recourse can most readily be had to the already existing facilities afforded by the presence of troops in the vicinity and by the transfer of the Park to the control of the War Department. Troops should be stationed to act as guards at the lake, the Mammoth Springs, and especially in Geyser Basin. A couple of signal-sergeants might profitably be employed in keeping meteorological and geyser records, which would be of great interest and value.

The same officer further says: "Visitors should be forbidden to kill any game. The hunters should have their arms and spoils confiscated, besides being liable to prosecution." One of Col. Ludlow's assistants, in his report to that officer, says, referring to the same subject:

> Buffalo, elk, mule-deer, and antelope are being slaughtered by thousands each year, without regard to age or sex, and at all seasons. Of the vast majority of the animals killed the hide only is taken. Females of all these species are as eagerly pursued in the spring, when just about to bring forth their young, as at any other time.
>
> It is estimated that during the winter of 1874-'75 not less than 3,000 elk were killed for their hides alone in the valley of the Yellowstone, between the mouth of Trail Creek and the Hot Springs. If this be true, what must have been the number for both the Territories [*i. e.*, Wyoming and Montana]? Buffalo and mule-deer suffer even more severely than the elk, and antelope nearly as much. The Territories referred to have game laws, but, of course, they are imperfect, and cannot, in the present condition of the country, be enforced. Much, however, might be done to prevent the reckless destruction of the animals to which I have referred, by the officers stationed on the frontier, and a little exertion in this direction would be well repaid by the increase of large game in the vicinity of the posts where it was not unnecessarily and wantonly destroyed. At one or two points, notably Camp Baker, efforts have been made to drive off the skin hunters, and with such success that the officers have very fine hunting within easy reach. The general feeling of the better class of frontiersmen, guides, hunters, and settlers, is strongly against those who are engaged in this work of butchery, and all, I think, would be glad to have this wholesale and short-sighted slaughter put a stop to. But it is needless to enlarge upon this abuse. The facts concerning it are well known to most army officers and to all inhabitants of the Territory. It is certain that, unless in some way the destruction of these animals can be checked, the large game still so abundant in some localities will ere long be exterminated.

These recommendations were made nearly seven years ago, but were unheeded. It is true that for several years past the superintendent of the Park has had in his employ a gamekeeper, but the most careful study of recent reports by that official fails to show that he has done anything whatever in the way of protecting the game, either by arresting or warning off skin hunters or visitors who were disposed to use their arms within the limits of the reservation. The fact appears to be that the Park is, under the present condition of things, a mere loafing place for a lot of people who are paid for spending their summers in journeying about through this beautiful region.

The subject of giving these wild animals protection comes up again now, and attention is called to the ruthless destruction to which they are subjected by the report of General Sheridan, an extract from which we print below. No man is better qualified to speak on this subject than the gallant soldier whom we quote, and we wish with all our hearts that his recommendations might be carried out. We wholly agree with him that the limits of the Park should be extended, and that the duty of policing it should be entrusted to the troops under his command. I seems impossible to hope for anything in the way of assistance from the Interior Department, that sink of corruption which so disgraces our government, but the troops from Custer, Washakie and Ellis could be employed in this duty without the cost of one cent to the government. We bespeak for General Sheridan's recommendation the heartfelt support of every sportsman in the land. He says:

On arriving at the railroad, I regretted exceedingly to learn that the National Park had been rented out to private parties. The place is worthy of being a National Park, the geyser phenomena and the Yellowstone Canyon having no parallel in any nation. The improvements in the Park should be national, the control of it in the hands of an officer of the Government and small appropriations be made and expended each year for the improvement of roads and trails. It has been now placed in the hands of private parties for money-making purposes, from which claims and conditions will arise that may be hard for the Government and the courts to shake off.

The game in the Park is being killed off rapidly, especially in the winter. I have been credibly informed that since its discovery as many as 4,000 elk were killed by skin hunters in one winter, and that even last winter, in and around the edges of the Park, there was as many as 2,000 of these grand animals killed, to say nothing of the mountain sheep, antelope, deer, and other game slaughtered in great numbers. I would like to see the Government extend this Park to the east as far as a north and south line through Cedar Mountain. This would be due east about forty miles, at the same time placing the southern boundary of the Park at the forty-fourth parallel of latitude, which would be due south ten miles. This would increase the area of the Park by 3,344 square miles, and would make a preserve for the large game of the West, now so rapidly decreasing. This extension would not be taking anything away from the people, as the territory thus annexed to the Park can never be settled upon. It is rough mountain country, with an altitude too high for cultivation or winter grazing for cattle. The game is now being driven toward the Park, and if we keep out the skin hunters the game would naturally drift to where it can find protection. This year I noticed that buffalo were on the edge of the Park, and the elk, deer, antelope, and big-horn sheep, from the Big Horn Mountains, are all drifting to the section of the country which would be included in the National Park if it were extended as I recommend.

I respectfully make an appeal to all sportsmen of this country, and to the sportsmen's clubs, to assist in getting Congress to make the extension I describe, thus securing a refuge for our wild game. If authorized to do so, I will engage to keep out skin hunters and all other hunters by the use of troops from Fort Washakie on the south, Custer on the east, and Ellis on the north, and, if necessary, I can keep sufficient troops in the Park to accomplish this object, and give a place of refuge and safety for our noble game. If any of the game which will naturally drift to this place of safety break out again, let it be killed, but let its life be made safe while in the National Park; it will then soon learn to stay where it will be unmolested.

It might be imagined that the inhabitants of Montana would be far-sighted enough to take into their own hands the enforcement of the game laws which exist on the statute books of the Territory, and thus preserve to the Park, which annually draws so many strangers to their land, one of its greatest attractions, but in our ever-busy, bustling West every man is so intent on the accomplishment of his own private business ends, that he has little or no time to devote to the public good. Still, it would pay the citizens of Bozeman and Virginia, the two cities from which most of the parties who go to the Park start, to hire half a dozen good men, to do the work which the government will not do. Better than this, however, far better than anything else that could be done, would be the accepting and carrying out, in detail, the recommendations of General Sheridan.

The Park should undoubtedly be extended as advised by him, and this should be done at once, before any settlers' claims are taken up within the proposed new boundaries. Such an extension would give to this public pleasure ground an area of about 7,000 square miles, as against the 3,700 which it at present contains, an increase which it is now perfectly practicable to make without interfering with the rights of any citizen. The people of the United States would then have a public preserve and pleasure ground which for extent, for beauty of scenery, for natural wonders, and for the variety and interest attaching to the indigenous life within its boundaries, would be unequalled by anything in the world.

For many years we have hunted and traveled and fished and trapped and mined and fought Indians over the length and breadth of the great West. We have seen it when it was, except in isolated spots, an uninhabited wilderness; have seen the Indian and the game retreat before the white man and the cattle, and beheld the tide of immigration, once small, like a tiny mountain stream, move forward, at first slowly, and then, gathering volume and strength, advance with a constantly accelerated power which threatens before long to leave no portion of our vast territory unbroken by the farmer's plow or untrodden by his flocks. There is one spot left, a single rock about which this tide will break, and past which it will sweep, leaving it undefiled by the unsightly traces of civilization. Here in this Yellowstone Park the large game of the West may be preserved from extermination; here, like the almost extinct aurochs of Lithuania, it may be seen by generations yet unborn.

It is for the Nation to say whether these splendid species shall be so preserved, in this their last refuge.

OUR HOLIDAY NUMBERS.

THE Christmas number of the FOREST AND STREAM, that of December 21, will contain the following, written specially for it:

I. "THE SEA SERPENT,"

An illustrated article, by Dr. W. O. Ayres, of New Haven, Conn.

II. HOLLYWOOD MANOR.

A reminiscence of the Devonshire coast. By "John Aldergrove."

III. "ANY LETTERS FOR ME?"

A stirring tale of adventure in New Mexico. By H. P. Ufford, whose sketch entitled "The Big Bear of Hermosa," in our last Christmas number, was received with so much favor.

The New Year number, that of December 28, will contain, among other good things:

CRUSOES OF THE ANTARCTIC,

A deeply interesting narrative of the experience of the crew of the bark Trinity, cast away for fifteen months on a desert island in the South Seas. Written for the FOREST AND STREAM by John Easmond, second officer of the Trinity.

ADIRONDACK SURVEY NOTES.

XIV.—WORK OF THE SURVEY.

THESE rambling papers have touched upon many things and have avoided reference to the work of the survey party. There are several reasons for this; among them may be named the fact that I am merely a kind of an attaché, looking after the fishes, with a sort of roving commission to go where there promises to be anything of interest in that line, and consequently I am with the working party but a small portion of the time. Again; I do not pretend to know a great deal about the work and might mix things up, and besides this I do not care to anticipate any portion of Mr. Colvin's report. By the way, those reports, made to the Legislature of New York, are most excellent reading, and give one a better idea of the Adirondacks than he can gain in any other manner, unless he devotes years to actual travel there.

In paper No. XII. of this series, I referred to the working parties then on Raquette Lake. This might give the impression that all the work this season had been done there. This is not the case. Since July Mr. Colvin has had some fifteen separate surveying parties in the field, some on the Schroon waters, some on the St. Regis, some in the Saconaga country, some among the West Canada lakes, and others on the Independence River; in fact, he has had a party in nearly every county here, and several in Hamilton county, all at the same time. His headquarters at West Mountain, on Raquette Lake, were so situated that he could oversee those nearest him, and also readily communicate with the others. His tent is now (Nov. 22) at a height of about three thousand feet above the sea, with snow and ice all around. The lakes are frozen and at night the thermometer is often about, or below, zero.

Since I have learned how necessary this work is in order that the State may know what land it owns and also be able to define the boundaries of tracts that it has sold, I have wondered that the survey was not undertaken years ago: It is just as well, however, for if it had been attempted with the appliances of fifty years ago it would not have been as thoroughly done as it will be now. The old lines have been nearly obliterated, posts have rotted, and witness-trees have grown so that the old marks are either covered or the tree has reached the limit of its life and fallen. The old compass lines ran from side to side and were anything but straight, being inclined to travel in circles about deposits of ore which coquetted with the magnetic needle, so that what was mapped out on paper as a straight line was apt to resemble the wanderings of a bear hunting for beech nuts.

The exact work, now done with instruments wholly independent of the magnetic compass, will be, when completed, of great value for all time. The monuments are of copper set in the rock, where the conditions will admit of it, and in cases where there is no solid rock, large boulders are buried, and the copper bolts in them can be readily found. County and township lines are firmly established, and there will be no more evasion of the payment of taxes on the plea that certain property is incorrectly mapped or described. When it is known that an ordinary compass is entirely useless in many parts of the Adirondacks, owing to the immense deposits of magnetic ore found here, in consequence of which the variation of the needle is so great as to cause it to point in many directions, including due south, then the unreliability of the old compass surveys will be understood. The old maps show level ground where some of the highest mountains are found to-day, and, unless some malicious person has since placed those great hills there to puzzle engineers, the maps must be incorrect. Yet tracts containing thousands, and even a million, of acres have been sold on the basis of the surveys made seventy years ago by compass lines and which, as before stated, are almost as crooked as the traditional ram's horn.

The work of the survey goes on all the year round, and consequently it brings much exposure to the weather. Taking observations from mountain tops in the Adirondacks at any time from November to April is not boy's play, or man's either, and there is no lack of winds which blow all the cold air that most people would ask for. In the summer the flies and their companions in crime make life a torment near the streams, and a month in the spring and two in the fall is all the surveyors have of comfort, in the shape of weather and relief from insects, throughout the year. Men who go to the woods in summer to fish expect the flies, so do the surveyors, too, for that matter, but it makes much difference whether an annoyance is a daily accompaniment of one's business or whether he can escape by leaving when he pleases, if his tormentors come too thick. At present writing snow-shoes are in fashion, and are not liable to be superseded before March or April.

The still-hunters are out in force now and the season for driving deer with dogs is past. The music of the hounds no more rings through the forest. This suggest the line: "The horn of the hunter is heard on the hill." I have never heard this, but I saw a hunter have one last week. It was not "the merry winding horn" that poets rave of, the horn I saw him have was "straight," and about three fingers.

F. M.

THE NEW YORK MILITARY STAFF.—Governor-elect Grover Cleveland, of this State, has made up an excellent military staff of young men, energetic and ardent, and the old-fogy blood which the late administration inflicted upon the National Guard will be allowed to congeal in private. The selection of Capt. Chas. F. Robbins for the post of Inspector General of rifle practice could not have been bettered.

THE CHILDREN'S AID SOCIETY has issued its annual appeal for remembrance at the Christmas season. The efforts of this society are worthy of the highest praise and of substantial support. The secretary's address is C. L. Brace, No. 19 East Fourteenth street, New York.

The Sportsman Tourist.

ONE DEER.

DICK and I were camping at a beautiful lake in the Adirondacks. It was rather late in the season and the deer that a few weeks previously had been in the habit of coming to the edges of the streams and lakes to nip the lily-pads and wade about in the shallow water were seldom seen. Occasionally an old buck would come out at evening and take a stroll along the sandy margin of the lake, adding for the moment a touch of wilder beauty to the dark forest background, and after standing proudly at some rocky point and surveying the scene would disappear again into the woods.

A small bay half way up the lake seemed to be a favorite place for the deer, as innumerable tracks were always to be seen in the sand along the shore, and one afternoon when we were almost out of venison in camp I suggested to Dick that it would be the proper thing for us to make a trip in the evening to this place.

The wood for the camp fire was cut and piled at a convenient distance from the mouldering back log all ready for a glorious blaze on our return, and just before sundown I took my place in the bow of our little boat with the Ballard across my knees, while Dick took the stern with the paddle.

Long shadows were reaching out from the big pines and hemlocks on the west shore, the valleys were already in darkness, and the long red rays of the fast setting sun streaming through the tree tops illumined the rest of the forest with a hazy evening light. Great tree trunks lay half sunken in the dark clear water, their arms reaching grimly out, and quiet reigned over all, the paddle in Dick's skilled hand making not the slightest sound.
